I should like to point out in this connection that the prices of gas and oil are interconnected, and that if the price of gas rises as a result of this bill, we may expect, in all probability, an increase in the price of fuel oil, so that States which at the moment seem to be economically remote from this struggle will be very seriously affected. I call this fact also to the attention of the distinguished Senators who represent those States.

In all, there were some 19.9 million households in 1953 and some 21 million households in this country in 1955 which burned natural gas. There are not far from 5,000 producers in this country who sell gas in interstate commerce; and in the debate which will open next week on the floor of the Senate, I shall point out who some of those producers are.

The truth is that, although there are 5,000 producers, the vast majority of them are small producers who can produce very little gas. Twenty-three hundred of them are in the States of Pennsylvania and West Virginia in the so-called Appalachian gas field, which is now a relatively small field, quantitatively speaking.

I have a bill before the Senate, which, at the proper time, I intend to submit as a substitute for the Harris-Fulbright bill. It would exempt from regulation the small producers who produce less than 2 billion cubic feet a year. It would exempt all but 197 producers. Thereby it would make the problem of regulation a manageable one. However, it would exempt from regulation only approximately 10 percent of the natural gas. Ninety percent of the gas is produced by the 197 producers who produce and ship in interstate commerce more than 2 billion cubic feet.

Therefore, Mr. President, I venture to express the pious hope that these figures, which I believe to be approximately accurate, and which have been computed with, I assure the Senate, a great deal of care from a volume of gas facts and from studies of the Federal Power Commission, will be studied, not only by the Senators representing the 48 States, but by the newspapers and by the general public, so that we may find out where the real interests of the American people lie.

ADJOURNMENT TO MONDAY

The PRESIDING OFFICER. What is the pleasure of the Senate?

Mr. DOUGLAS. Mr. President, in accordance with the order previously entered, I move that the Senate adjourn until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 6 o'clock and 33 minutes p. m.) the Senate adjourned, the adjournment being, under the order previously entered, until Monday, January 16, 1955, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate January 12, 1956:

DEPARTMENT OF STATE

The following-named persons, who were appointed during the last recess of the Senate, to the offices indicated:

Herbert V. Prochnow, of Illinois, to be a Deputy Under Secretary of State.

Robert R. Bowie, of Maryland, to be an Assistant Secretary of State.

Isaac W. Carpenter, Jr., of Nebraska, to be an Assistant Secretary of State.

DIPLOMATIC AND FOREIGN SERVICE

Wiley T. Buchanan, Jr., of the District of Columbia, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Luxembourg.

John D. Hickerson, of Texas, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Finland.

Thomas C. Mann, of Texas, a Foreign Service officer of class 2, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to El Salvador.

Robert H. Thayer, of New York, to be Envoy Extraordinary and Minister Plenipotentiary of the United States of America to Rumania.

The following-named persons, who were appointed during the last recess of the Senate, to the offices indicated:

Elbridge Durbrow, of California, now a Foreign Service officer of the class of career minister and a secretary in the diplomatic service, to be also a consul general of the United States of America.

Tyler Thompson, of Maine, now a Foreign Service officer of class 1 and a secretary in the diplomatic service, to be also a consul general of the United States of America.

FOR APPOINTMENT AS FOREIGN SERVICE OFFICERS OF CLASS 1, CONSULS, AND SECRETARIES IN THE DIPLOMATIC SERVICE OF THE UNITED STATES OF AMERICA

William S. B. Lacy, of Virginia.
Edwin M. Martin, of Maryland.
Frederick E. Nolting, Jr., of Virginia.
David W. Wainhouse, of the District of Columbia.

NOW FOREIGN SERVICE OFFICERS OF CLASS 2 AND SECRETARIES IN THE DIPLOMATIC SERVICE, TO BE ALSO CONSULS GENERAL OF THE UNITED STATES OF AMERICA

Mallory Browne, of Virginia.
Lionel M. Summers, of the District of Columbia.

FOR APPOINTMENT AS FOREIGN SERVICE OFFICERS OF CLASS 2, CONSULS, AND SECRETARIES IN THE DIPLOMATIC SERVICE OF THE UNITED STATES OF AMERICA

Robert W. Barnett, of New York.
William O. Baxter, of the District of Columbia.
Edward A. Bolster, of Virginia.
Richard C. Breithut, of Maryland.
Henry Brodie, of Virginia.
Seaborn P. Foster, of North Carolina.
James Frederick Green, of Maryland.
John W. Harrison, of Virginia.
Ralph Hilton, of Mississippi.
Edward Poor Montgomery, of the District of Columbia.
Howard L. Parsons, of Iowa.
Richard H. Sanger, of Maryland.
Alfred G. Vigderman, of Maryland.
Barr V. Washburn, of Utah.
Lincoln White, of Maryland.
David Wilken, of New Jersey.

NOW FOREIGN SERVICE OFFICERS OF CLASS 3 AND SECRETARIES IN THE DIPLOMATIC SERVICE, TO BE ALSO CONSULS GENERAL OF THE UNITED STATES OF AMERICA

Eldred D. Kuppinger, of Ohio.
Paul H. Pearson, of Iowa.

FOR APPOINTMENT AS FOREIGN SERVICE OFFICERS OF CLASS 3, CONSULS, AND SECRETARIES IN THE DIPLOMATIC SERVICE OF THE UNITED STATES OF AMERICA

Morris Allen, of Rhode Island.
Kenneth B. Atkinson, of Virginia.
Louis F. Blanchard, of California.
Frank W. Blanchette, of New York.
Francis Boardman, of the District of Columbia.
R. Bernard Crowl, of Virginia.
Leroy F. Day, of Maryland.
Paul C. Domke, of Virginia.
Halvor O. Ekern, of Montana.
Arnold Fraleigh, of Virginia.
William L. Franklin, of Virginia.
William J. Galloway, of Texas.
Walter B. Gates, of Texas.
Edward J. Gaumond, of Illinois.
Edmund E. Getzin, of New York.
Robbins P. Gilman, of Virginia.
Robert E. Hoey, of Virginia.
Judson C. Jones, of the District of Columbia.
F. Patrick Kelly, of Virginia.

Millard L. Kenestrick, of Indiana.
Alexander F. Kiefer, of New York.
R. Clyde Larkin, of Maryland.
Orion J. Libert, of Wisconsin.
J. David Linebaugh, of the District of Columbia.
Sylvain R. Loupe, of Louisiana.
Jack W. Lydman, of New York.
Bruce L. McDaniel, of Texas.
John F. McJennett, Jr., of Massachusetts.
Melvin L. Manfull, of Utah.
John P. Meagher, of Illinois.
Miss Dewilda E. Naramore, of the District of Columbia.
Robert B. Parke, of Nebraska.
David Persinger, of Virginia.
Oliver A. Peterson, of Maryland.
Donald M. Ralston, of California.
Frederick T. Rope, of New York.
Henry J. Sabatini, of the District of Columbia.
Fred H. Sanderson, of Virginia.
Henri Sokolove, of Pennsylvania.
Robert Adams Thayer, of Virginia.
Lawrence W. von Hellens, of Washington.
Victor E. von Lossberg, of New York.
Herman Walker, Jr., of Maryland.
Grant G. Hilliker, of Virginia, for reappointment in the Foreign Service as a Foreign Service officer of class 4, a consul, and a secretary in the diplomatic service of the United States of America, in accordance with the provisions of section 520 (a) of the Foreign Service Act of 1946.

FOR APPOINTMENT AS FOREIGN SERVICE OFFICERS OF CLASS 4, CONSULS, AND SECRETARIES IN THE DIPLOMATIC SERVICE OF THE UNITED STATES OF AMERICA

Henry W. Allen, of Virginia.
Rudolf O. Altroggen, of Virginia.
William O. Anderson, of Indiana.
Powhatan M. Baber, of West Virginia.
Stuart Blow, of Virginia.
Philip S. Bogart, of New York.
Edward T. Brennan, of Massachusetts.
Allan Chase, of Virginia.
Albert J. Ciaffone, of Virginia.
Mario R. DeCapua, of Connecticut.
Gordon Donald, Jr., of Virginia.
Lester E. Edmond, of Maryland.
Miss Virginia Ellis, of the District of Columbia.
Louis C. Feffer, of Maryland.
Harry Feinstein, of Georgia.
Joseph Fernandez, of Pennsylvania.
Mrs. Magdalen G. H. Flexner, of the District of Columbia.
Ronald A. Gaiduk, of California.
Russell L. Gibbs, of Michigan.
Walker Givan, of the District of Columbia.
Juan L. Gorrell, of New Hampshire.
Joseph A. Greenwald, of Illinois.
Martin Y. Hirabayashi, of Maryland.
Herschel Hancock Helm, of Kentucky.
H. Franklin Irwin, Jr., of New Jersey.
William G. Keen, of Tennessee.
Miss Eleanor V. Levy, of the District of Columbia.
Robert S. Lindquist, of Michigan.
Michael B. Lustgarten, of New York.
Mrs. Mary D. Mack, of Virginia.
Martin G. Manch, of Virginia.
G. E. Robert Meyer, of Ohio.
Harry J. Milton, of Pennsylvania.
Virgil L. Moore, of Virginia.
Bernard Norwood, of New Jersey.
Richard F. Pedersen, of California.
Jack R. Queen, of Ohio.
Peter Roberts, of California.
William T. Sandalls, of Colorado.
Cecil B. Sanner, of Florida.
Curtis C. Strong, of Oregon.
Frank D. Taylor, of Maryland.
Henry L. Taylor, of Washington.
Conrad J. Thoren, of Illinois.
Thomas C. Tilson, of Virginia.
John Edwin Visher, of Virginia.
George D. Whittinghill of New York.

Robert W. Weise, Jr., of Minnesota, now a Foreign Service officer of class 5 and a secretary in the diplomatic service, to be also a consul of the United States of America.

FOR APPOINTMENT AS FOREIGN SERVICE OFFICERS OF CLASS 5, VICE CONSULS OF CAREER, AND SECRETARIES IN THE DIPLOMATIC SERVICE OF THE UNITED STATES OF AMERICA

Elwood B. Acker, of Connecticut.
Frederick O. Beattie, of Virginia.
Arnold K. Childs, of Ohio.
Norbert Chwat, of Virginia.
John Dubois, of Massachusetts.
Athol H. Ellis, of Maryland.
Arthur W. Feldman, of Washington.
William C. Hamilton, of Connecticut.
Tobias Hartwick, of Montana.
Robert A. Jackson, of Michigan.
William R. Jochimsen, of California.
William C. Jones, III, of Texas.
Henry A. Lagasse, of New Hampshire.
Charles A. Lemmo, of Pennsylvania.
John L. Loughran, of Pennsylvania.
Miss Margaret J. McClellan, of Pennsylvania.
John F. McDermott, of Massachusetts.
Warren H. McMurray, of Georgia.
Ernest J. Mansmann, Jr., of Massachusetts.
Curtis L. Mills, of West Virginia.
Gordon K. Mott, of Ohio.
Paul Moy, of Illinois.
Miss Alice G. Mulhern, of Massachusetts.
Anton N. Nyerges, of Indiana.
David B. Ortman, of Maryland.
John Marshall Pifer, of Virginia.
Woodward Romine, of Maryland.
Arthur H. Rosen, of Missouri.
Edward W. Schaefer, of Connecticut.
Robert W. Schleck, of the District of Columbia.
Thomas P. Shoesmith, of Pennsylvania.
Denman F. Stanfield, of California.
Joseph M. Swing, of Washington.
Jacob Walkin, of New York.
George J. Warren, of Florida.
Richard W. White, of Maryland.

FOR APPOINTMENT AS FOREIGN SERVICE OFFICERS OF CLASS 6, VICE CONSULS OF CAREER, AND SECRETARIES IN THE DIPLOMATIC SERVICE OF THE UNITED STATES OF AMERICA

Robert B. Allen, of Virginia.
John A. Anderegg, of New Jersey.
S. Morey Bell, of Virginia.
C. Arthur Borg, of New York.
Donald W. Born, of Massachusetts.
Merritt C. Bragdon, Jr., of the District of Columbia.
Edward J. Chesky, Jr., of Kansas.
Herman J. Cohen, of New York.
John G. Day, of New York.
Anton W. DePorte, of Oklahoma.
Jacques M. Downs, of California.
Harland H. Eastman, of Maine.
Harold F. Eberle, Jr., of California.
Michael E. Ely, of New York.
Hunter L. Estep, of New Mexico.
Fred Exton, Jr., of the District of Columbia.
Gerald A. Friedman, of Massachusetts.
Mark J. Garrison, of Indiana.
Miss Joan Gillespie, of Connecticut.
Wever Gim, of Utah.
Meyer Glickman, of California.
Ralph H. Graner, of New York.
John E. Guendling, Jr., of Indiana.
James D. Hataway, Jr., of Georgia.
Miss Theresa A. Healy, of New York.
Theodore J. C. Heavner, of Ohio.
Erland H. Heginbotham, of Utah.
William A. Ispirian, of New York.
Ralph T. Jans, of Michigan.
Lee R. Johnson, of Ohio.
Ellis O. Jones III, of Connecticut.
Dennis H. Kux, of New York.
Owen B. Lee, of Massachusetts.
John Donnelly Leonard, of Michigan.
John M. Lord, Jr., of Massachusetts.
Walter H. Lubkeman, of New York.
John W. MacDonald, Jr., of New York.
James W. Mahoney, of Indiana.
Frazier Meade, of Virginia.
Will S. Myers, Jr., of Kentucky.
William C. Nenno, of New York.
Gerald R. Olsen, of Michigan.
Lorin N. Pace, of Utah.
Chris C. Pappas, Jr., of New Hampshire.
J. William Piez, of Rhode Island.
Arthur L. Price, of Illinois.
Russell A. Price, of California.
Glenn R. Ruihley, of Ohio.
Howard B. Schaffer, of New York.
Joseph G. Simanis, of Connecticut.
William N. Simonson, of Virginia.
Clyde H. Small, of California.
Peter F. Warker, Jr., of Pennsylvania.
John P. Wentworth, of Washington.
Robert E. White, of Massachusetts.
Miss Suzanne White, of Illinois.

FOREIGN SERVICE STAFF OFFICERS TO BE CONSULS OF THE UNITED STATES OF AMERICA

Gilbert E. Bursley, of Michigan.
Howard W. Calkins, of Ohio.
Robert G. Glover, of Oregon.
Alfred L. Grigis, of New Jersey.
Joseph A. Horne, of the District of Columbia.
Robert H. Marsh, of California.
Marshall W. S. Swan, of Maryland.

FOREIGN SERVICE RESERVE OFFICERS TO BE CONSULS AND SECRETARIES IN THE DIPLOMATIC SERVICE OF THE UNITED STATES OF AMERICA

L. Eugene Milligan, of Missouri.
John H. Richardson, of Maryland.

FOREIGN SERVICE RESERVE OFFICERS TO BE CONSULS OF THE UNITED STATES OF AMERICA

Robert D. Gahagen, of Kansas.
James Moceri, of Washington.
Sam H. Wright, of Tennessee.

FOREIGN SERVICE RESERVE OFFICER TO BE A VICE CONSUL AND A SECRETARY IN THE DIPLOMATIC SERVICE OF THE UNITED STATES OF AMERICA

Thomas J. Flores, Jr., of New York.

FOREIGN SERVICE RESERVE OFFICERS TO BE VICE CONSULS OF THE UNITED STATES OF AMERICA

John K. Allen, Sr., of Delaware.
Bertram C. Cooper, of Virginia.
John L. Leader, of New York.
George B. Lester, of Connecticut.
Rudolph Marinette, of New York.
Vivian L. N. Parker, of California.
Frederick C. Randall, of Maryland.
Walter Trenta, of New York.

FOREIGN SERVICE RESERVE OFFICERS TO BE SECRETARIES IN THE DIPLOMATIC SERVICE OF THE UNITED STATES OF AMERICA

Morrill Cody, of the District of Columbia.
J. Foster Collins, of Virginia.
Raford W. Herbert, of Mississippi.

DEPARTMENT OF DEFENSE

Mansfield D. Sprague, of Connecticut, to be General Counsel of the Department of Defense.

DEPARTMENT OF THE AIR FORCE

Donald Aubrey Quarles, of New Jersey, to be Secretary of the Air Force.

DEPARTMENT OF THE INTERIOR

Wesley A. D'Ewart, of Montana, to be an Assistant Secretary of the Interior.

DEPARTMENT OF COMMERCE

Harold Chadick McClellan, of California, to be an Assistant Secretary of Commerce.
Louis F. Kreek, of the District of Columbia, to be an Examiner in Chief in the Patent Office, Department of Commerce.

POST OFFICE DEPARTMENT

Maurice H. Stans, of Illinois, to be Deputy Postmaster General.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Herold Christian Hunt, of Massachusetts, to be Under Secretary of Health, Education, and Welfare.

VIRGIN ISLANDS

Walter A. Gordon, of California, to be Governor of the Virgin Islands.

RAILROAD RETIREMENT BOARD

Thomas M. Healy, of Georgia, to be a member of the Railroad Retirement Board for the remainder of the term expiring August 28, 1958.

SUBVERSIVE ACTIVITIES CONTROL BOARD

Francis Adams Cherry, of Arkansas, to be a member of the Subversive Activities Control Board for a term expiring March 4, 1960.

EXPORT-IMPORT BANK OF WASHINGTON

Samuel C. Waugh, of Nebraska, to be President of the Export-Import Bank of Washington.

FEDERAL TRADE COMMISSION

Sigurd Anderson, of South Dakota, to be a Federal Trade Commissioner for the unexpired term of 7 years from September 26, 1952.

COAST AND GEODETIC SURVEY

Rear Adm. H. Arnold Karo, to be Director of the Coast and Geodetic Survey for a term of 4 years.

ATOMIC ENERGY COMMISSION

Harold S. Vance, of Indiana, to be a member of the Atomic Energy Commission for the term expiring June 30, 1960.

MISSISSIPPI RIVER COMMISSION

Col. John L. Person, Corps of Engineers, to be a member of the Mississippi River Commission, under the provisions of section 2 of an act of Congress, approved June 28, 1879 (21 Stat. 37) (33 U. S. C. 642).

ASSAYER OF THE MINT

S. Power Warren, of Colorado, to be assayer of the Mint of the United States at Denver, Colo.

TAX COURT OF THE UNITED STATES

John Edward Mulroney, of Iowa, to be a judge of the Tax Court of the United States for the unexpired term of 12 years from June 2, 1944.

UNITED STATES DISTRICT JUDGES

Simon E. Sobeloff, of Maryland, to be United States circuit judge, fourth circuit, vice Morris A. Soper, retired.

Warren E. Burger, of Minnesota, to be United States circuit judge, District of Columbia Circuit, vice Harold M. Stephens, deceased.

John M. Cashin, of New York, to be United States district judge for the southern district of New York.

William B. Herlands, of New York, to be United States district judge for the southern district of New York.

Frank M. Johnson, Jr., of Alabama, to be United States district judge for the middle district of Alabama.

Ewing T. Kerr, of Wyoming, to be United States district judge for the district of Wyoming.

C. William Kraft, Jr., of Pennsylvania, to be United States district judge for the eastern district of Pennsylvania.

Joseph P. Lieb, of Florida, to be United States district judge for the southern district of Florida.

R. Dorsey Watkins, of Maryland, to be United States district judge for the district of Maryland.

UNITED STATES ATTORNEYS

Henry J. Cook, of Kentucky, to be United States attorney for the eastern district of Kentucky, for a term of 4 years, vice Edwin R. Denney, resigned.

Ruben Rodriguez-Antongiorgi, of Puerto Rico, to be United States attorney for the district of Puerto Rico, for a term of 4 years, vice Harley A. Miller, resigned.

UNITED STATES MARSHALS

John Wesley Thompson Falkner IV, of Mississippi, to be United States marshal for the northern district of Mississippi, for a term of 4 years. (Reappointment.)

Gerald Francis Bracken, of Maryland, to be United States marshal for the district of Maryland.

James F. Brophy, of Georgia, to be United States marshal for the southern district of Georgia.

Santos Buxo, Jr., of Puerto Rico, to be United States marshal for the district of Puerto Rico.

Albert Di Meolo, of Pennsylvania, to be United States marshal for the western district of Pennsylvania.

Oliver H. Metcalf, of Pennsylvania, to be United States marshal for the middle district of Pennsylvania.

Donald C. Moseley, of Louisiana, to be United States marshal for the western district of Louisiana.

COLLECTORS OF CUSTOMS

Wilbert H. Beachy, of Pennsylvania, to be collector of customs for customs collection district No. 12, with headquarters at Pittsburgh, Pa.

Frederick C. Peters, of Pennsylvania, to be collector of customs for customs collection district No. 11, with headquarters at Philadelphia, Pa.

Charles J. Walker, Sr., of Texas, to be collector of customs for customs collection district No. 22, with headquarters at Galveston, Tex.

Frank D. Yturria, of Texas, to be collector of customs for customs collection district No. 23, with headquarters at Laredo, Tex.

DISTRICT OF COLUMBIA REDEVELOPMENT LAND AGENCY

James E. Colliflower, of the District of Columbia, to be a member of the District of Columbia Redevelopment Land Agency, for a term of five years. (Reappointment.)

HOUSE OF REPRESENTATIVES

THURSDAY, JANUARY 12, 1956

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D. D., offered the following prayer:

O Thou blessed Lord, as we again engage in a moment of prayer, wilt Thou make our souls the sanctuaries of Thy presence and Thy peace.

Lo, Thou art here and Thou art everywhere, waiting to be welcomed and trusted and seeking to inspire us with a nobler and more magnanimous spirit.

Grant that Thy holy and divine will may be resident and regnant in our minds and hearts, constraining us to walk the highways of honor and integrity, of goodness and helpfulness.

May our faith in Thee be manifested and fulfilled in faithfulness and our love for humanity reveal itself in deeds of kindness and friendship.

Hear us in the name of the Master who went about doing good. Amen.

The Journal of the proceedings of Monday, January 9, 1956, was read and approved.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the House by Mr. Tribbe, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Carrell, its clerk, announced that the Senate had passed without amendment a concurrent resolution of the House of the following title:

H. Con. Res. 199. Extending the felicitations of the Congress to those participating in the celebration of the 250th anniversary of the birth of Benjamin Franklin.

The message also announced that the Senate disagrees to the amendments of the House to the bill (S. 1287) entitled "An act to make certain increases in the annuities of annuitants under the Foreign Service retirement and disability system, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. SPARKMAN, Mr. MANSFIELD, and Mr. KNOWLAND to be the conferees on the part of the Senate.

FEDERAL AID TO EDUCATION—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 292)

The SPEAKER laid before the House the following message from the President of the United States, which was read, referred to the Committee on Education and Labor, and ordered printed:

To the Congress of the United States:

For several years now, our educational system has been the object of intensified appraisal.

Signs of heartening progress have come to light. Among these are: Classroom construction at a higher rate than ever before; teachers' salaries increased in many communities; the number of small, uneconomical school districts reduced; substantially more young people preparing for the teaching profession; private gifts to higher education at new heights; support of education at all levels greater than ever before.

Encouraging as these advances are, they are not enough to meet our expanding educational needs. Action on a broader scale and at a more rapid rate is clearly imperative.

We still do not have enough good classrooms for our children. There is insufficient emphasis on both short-range and long-term research into the core of educational problems. We need examination and study, from a broad viewpoint, of the increasing needs of higher education. These lacks are magnified by an ever-increasing stream of student enrollment and the increasing complexity of modern society.

THE WHITE HOUSE CONFERENCE ON EDUCATION

Two years ago, the Congress approved my recommendation of a program to direct nationwide attention and action to our educational problems and opportunities. As a consequence, more than 4,000 State and local conferences were held throughout 1955. The White House Conference on Education, the first such Conference in our history, was held last November. The work of the conferences has aroused the Nation. The final report of the White House Conference Committee should receive wide and serious attention.

Benefits already are apparent. About half a million people across the Nation,

representing all segments of life, came to grips with the problems of education. The status of American education—where it is; the future of American education—where it should and can go—have been illuminated as perhaps never before. Most important of all, there has been a reawakening of broad public interest in our schools. The conferences helped to erase the corroding notion that schools were the other person's responsibility.

In our society no firmer foundation for action can be laid than common understanding of a problem; no more potent force can be devised for assailing a problem than the common will to do the job. For the improvement of our educational system, the people themselves have laid the foundation in understanding and willingness.

THE NEED FOR FEDERAL AID IN MEETING THE CLASSROOM SHORTAGE

The responsibility for public education rests with the States and the local communities. Federal action which infringes upon this principle is alien to our system. But our history has demonstrated that the Federal Government, in the interest of the whole people, can and should help with certain problems of nationwide scope and concern when States and communities—acting independently—cannot solve the full problem or solve it rapidly enough.

Clearly, this is the kind of situation we face today in considering the school classroom shortage. In the war and postwar periods, school construction was drastically curtailed by shortages of materials. And then schools were filled to overflowing by the largest, most rapid enrollment increase in history. Today, hundreds of thousands of children study under overcrowded conditions, in half-day or doubled-up school sessions, or in makeshift buildings not designed as schools. Further, many classrooms in use today are obsolete, inadequate—and each year more rooms become so. School enrollments will continue to increase rapidly over the years ahead—and this will require still more classrooms.

Against this backdrop of needs, States and communities are substantially increasing their classroom construction. But many communities simply do not have available locally the resources needed to cope both with the legacy of shortages from past years and with future needs. Unless these communities get help, they simply cannot provide enough good schools. The best estimates indicate that, on a nationwide basis, the current rate of construction only a little more than meets each year's new enrollment and replacement needs. This rate barely dents the large accumulation of needs from past years.

The rate of classroom construction must be further increased, as the White House Conference on Education asked, by a greater combined effort of local and State governments. And the Conference concluded that Federal assistance also is necessary. The facts support this conclusion.

THE ADMINISTRATION'S PROPOSALS

A year ago, I proposed a Federal program designed to aid the States and communities in overcoming the classroom shortage. The Congress has not yet enacted legislation. In the light of a full year of further experience and study, in the light of congressional hearings and the White House Conference on Education, I now submit a revised and broadened program to meet our pressing classroom needs. I propose:

A program of Federal grants amounting to $1,250,000,000, at a rate of $250 million annually for 5 years, matched with State funds, to supplement local construction efforts in the neediest school districts.

A program to authorize $750 million over 5 years for Federal purchase of local school construction bonds when school districts cannot sell them in private markets at reasonable interest rates.

A 5-year program of advances to help provide reserve for bonds issued by State school financing agencies. These bonds would finance local construction of schools to be rented and eventually owned by the local school systems.

A 5-year, $20 million program of matching grants to States for planning to help communities and States overcome obstacles to their financing of school construction.

If speedily and fully utilized, this Federal program—added to the increased basic efforts of States and communities—should overcome the Nation's critical classroom shortage within 5 years. Once this shortage is overcome, the Federal grant program can and must terminate. The States and localities should then go forward, without Federal funds, to meet their current and future needs. Present construction levels indicate their ability to do this.

I am confident the Federal Government with this program can help construct schools without in any way weakening the American tradition that control of education must be kept close to the local communities. Any legislation enacted should embody this principle.

ESSENTIAL PRINCIPLES IN FEDERAL GRANTS

I strongly urge the Congress, in providing grants for school construction, to follow certain principles, which are indispensable if Federal aid is to serve the cause of American education most effectively.

The first broad principle is that Federal grants must not reduce the incentive for State and local efforts—but rather should stimulate an increase in such efforts. If Federal funds are used merely to replace funds which otherwise would or could be provided at State and local levels, there is no net gain of schools for our children. I propose, therefore, that Federal grants be matched by State appropriations. Because many of the State legislatures will not have a session this year, I recommend, in order to speed the program at the outset, that during the first year of the 5-year period the matching of Federal funds may be by either the States or by local school districts. The requirement for State matching will result in a larger total program of school construction, and will assure active participation of the States in improving laws relating to financing of school construction, as well as sound administration of the program.

Furthermore, I propose a formula to reduce the proportion of Federal funds for those few States which are noticeably lagging, behind their ability, to support their public schools. This feature should act as an incentive for the lagging States to increase their effort.

Another fundamental principle is that Federal funds, under this type of program, should be distributed according to relative need. We must recognize that some States have more financial resources than others. We must recognize that a weakness in education anywhere is a weakness in the Nation as a whole. Federal appropriations will most quickly accomplish the most good if a relatively larger share of Federal funds is distributed where local and State resources are least adequate to meet classroom needs.

I propose that this principle be fulfilled in three ways. First, in distributing Federal funds; larger amounts per school-age child should be allotted to States with lower income per child. Second, in fixing matching requirements; States with lower income should not be required to put up as large a proportion of funds as higher income States. For the Nation as a whole, the total of State matching funds would approximately equal the total of Federal funds. Third, as the States distribute these funds, the highest priority should be given to school districts with the least economic ability to meet their needs.

CREDIT SUPPORT FOR SCHOOL CONSTRUCTION

Some school districts find difficulty in marketing bonds to finance needed school construction. To meet this situation, I again recommend that the Congress authorize Federal purchase of local school construction bonds unmarketable except at excessive interest rates.

Some school districts, however, are unable to raise capital funds needed for school construction because of bonding limits. To encourage school construction in these districts, as well as in districts where construction would be speeded by the lease-purchase method, I propose again that Congress authorize advances to the States as a reserve for bonds of State school financing agencies.

Several States have made marked progress in building schools through State agencies which issue long-term bonds to finance school construction in the districts. The school district leases the new building. Revenue from rents it used by the agencies to retire their bonds. After the bonds have been paid, title to the school is transferred to the local district. The program of Federal support is aimed at helping more States start such school financing agencies, and thus at helping local districts overcome barriers to building more schools.

The credit support for bonds of communities and State agencies, taken together with the planning grants, should help the States and communities continue their present annual rate of substantial increase in school construction over the next 5 years. The partnership program of Federal grants, matched by the States, should complete the task of

building the classrooms that are critically needed.

AID TO FEDERALLY AFFECTED AREAS

In considering the school construction problem, there is a special, related area which should have the attention of the Congress at this time. The Congress has for some years recognized the responsibility of the Federal Government to aid communities where Federal activities result in excessive burdens on the local school system. Authority to provide Federal funds for school construction in Federally affected school districts will expire next June and should be extended.

EDUCATIONAL RESEARCH

Basic to all endeavors in improving education is a vigorous and farsighted program of educational research. This has been a sorely neglected field.

Such a program should be comprehensive in its approach, planned on a broad scale and executed thoroughly. In this way, educational research can, among other things, point the way to advances in making life more meaningful to more people and in the more efficient use of manpower and funds for education.

To increase the effectiveness of education, national leadership could well be directed to research in such areas as: ways of educating more people to their fullest capacity; staffing and housing the Nation's schools and colleges; educating the retarded child to help him lead a more normal life, and educating the child of special abilities so that he may utilize these abilities more fully; the relationship of schools to juvenile delinquency; educational effects of population mobility; educational needs of low income families. These studies would be conducted through the Office of Education in cooperation with the Nation's colleges, universities, and State departments of education, thus encouraging and strengthening existing research efforts.

It is imperative that we now give renewed attention and support to this arm of education—to the end that the country may have a sound, factual basis for identifying and analyzing problems and finding solutions. For these research purposes, and also to expand and improve other services, I urge the Congress to provide a major increase in funds for the Office of Education.

EDUCATION BEYOND HIGH SCHOOL

Our vision would be limited if we failed at this time to give special thought to education beyond the high school. Certain problems exist now in this field, and already we can foresee other needs and problems shaping up in the future.

Shortages now exist in medicine, teaching, nursing, science, engineering, and in other fields of knowledge which require education beyond the level of the secondary school. Changing times and conditions create new opportunities and challenges. There are new possibilities for older persons—properly trained—to lead more productive and rewarding lives. The tide of increasing school enrollment will soon reach higher educational institutions. Within 10 years, we may expect 3 students in our colleges and universities for every 2 who are there now.

Higher education is and must remain the responsibility of the States, localities, and private groups and institutions. But to lay before us all the problems of education beyond high school, and to encourage active and systematic attack on them, I shall appoint a distinguished group of educators and citizens to develop this year, through studies and conferences, proposals in this educational field. Through the leadership and counsel of this group, beneficial results can be expected to flow to education and to the Nation in the years ahead.

TEACHING

In all our efforts for education—in providing adequate schools, research, and study—we must never lose sight of the very heart of education; good teaching itself.

Good teachers do not just happen. They are the product of the highest personal motivation, encouraged and helped in their work by adequate salaries and the respect, support, good will of their neighbors. The quality of American teaching has never been better. But the rewards for too many teachers are not commensurate with their work and their role in American life.

It is my earnest hope that, along with progress in other aspects of education, the States and communities will give increasing attention to this taproot of all education—good teachers, and hence good teaching.

CONCLUSION

These several proposals are designed, not only to correct current problems, but to build for the future. For today's decisions will influence tomorrow's education—and, hence, the welfare of the Nation.

The actions here proposed, I believe, constitute a sound and realistic approach to those educational problems on which the Federal Government should now act. They have a primary reliance on the private initiative which wells from the free spirit of a free people.

With this program, we can lay the basis for better education in America in the years ahead. In this way we keep faith with our children.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *January 12, 1956.*

ST. LAWRENCE SEAWAY DEVELOPMENT CORPORATION—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 293)

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on Public Works and ordered to be printed with illustrations:

To the Congress of the United States:

Pursuant to the provisions of section 10 of Public Law 358, 83d Congress, I transmit herewith for the information of the Congress the report of the St. Lawrence Seaway Development Corporation covering its activities for the fiscal year ended June 30, 1955.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *January 12, 1956.*

PUBLIC LAW 480, 83D CONGRESS—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 294)

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on Agriculture and ordered to be printed with illustrations:

To the Congress of the United States:

I transmit herewith the third semiannual report on activities under Public Law 480, 83d Congress, as amended, showing operations under the act during the period July 1, 1955, to December 31, 1955.

The administrative arrangements governing the responsibilities of the various agencies of the executive branch of the Government established by Executive Order 10560 of September 9, 1954, continue to function satisfactorily. I believe they have proved effective in accomplishing the purposes of this law.

EFFECTS OF MALNUTRITION AND OTHER HARDSHIPS ON THE MORTALITY AND MORBIDITY OF FORMER UNITED STATES PRISONERS OF WAR AND CIVILIAN INTERNEES OF WORLD WAR II—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 296)

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with the accompanying papers, referred to the Committee on Interstate and Foreign Commerce and ordered to be printed, with illustrations:

To the Congress of the United States:

Pursuant to the provisions of section 203 of the War Claims Act Amendments

of 1954 (Public Law 744, 83d Cong.), I transmit herewith for the information of the Congress the report of the Secretary of Health, Education, and Welfare entitled "Effects of Malnutrition and Other Hardships on the Mortality and Morbidity of Former United States Prisoners of War and Civilian Internees of World War II: An Appraisal of Current Information."

DWIGHT D. EISENHOWER.
THE WHITE HOUSE, *January 12, 1956.*

RUSSIAN RIVER BASIN, CALIF.

Mr. JONES of Alabama. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill (H. R. 7930) authorizing the completion of the initial stage of development for flood control and other purposes in the Russian River Basin, Calif.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

Mr. McCORMACK. Mr. Speaker, reserving the right to object and, of course, I shall not object, because it has been cleared through the leaders on both sides, nevertheless I would like to ask the gentleman from Alabama to give a brief explanation of the bill and also the necessity for consideration at this time.

Mr. JONES of Alabama. Mr. Speaker, this is an amendment to the Flood Control Act of 1950 that authorized a comprehensive flood-control works on the Russian River in California. At the time it was authorized the estimated cost of the project was some $17 million; $5 million was to be used by the local community through the issuance of bonds. The cost of the project has increased about a million dollars by the increased cost of construction that has come about since the time of the authorization in 1950 up until the present moment.

Now, there is some pending legislation in the State courts of California seeking to prohibit the construction of the project due to to the fact that there is an expiration date on the bonds. This amendment does nothing more than to take care of the increased cost of construction of the Coyote Dam on the Russian River that was authorized in the year 1950.

Mr. McCORMACK. It is important that there be early action; is that right?

Mr. JONES of Alabama. In the event that this bill is passed prior to January 16, it means that the litigation now pending in the States, in California, will be abated and the conflict resolved between the local interests and the interests of the Federal Government under the original authorization bill.

Mr. BAILEY. Mr. Speaker, will the gentleman yield?

Mr. JONES of Alabama. I yield to the gentleman from West Virginia.

Mr. BAILEY. Does not the gentleman think it would be an excellent idea to change the name of the Russian River, in this bill?

Mr. JONES of Alabama. There have been several suggestions along that line.

Mr. BALDWIN. Mr. Speaker, reserving the right to object, and I shall not object, this bill has to do with an urgent flood control project which is in the district of the gentleman from California [Mr. SCUDDER] who is now out in California with a special subcommittee of the Committee on Public Works, inspecting flood damage, which was very serious in his district. It has been approved in our Flood Control Subcommittee of the Committee on Public Works. The particular area mentioned by the gentleman from Alabama [Mr. JONES] on the Russian River, was subjected to very severe flood damage Christmas week. This is a most important project and I certainly am greatly pleased that the gentleman from Alabama brought it up today. I would like to urge its immediate passage.

Mr. JONES of Alabama. Mr. Speaker, I would say to the gentleman from California [Mr. BALDWIN] that this has been a bipartisan approach to the tremendous flood control problems that exist in the State of California due to the recent floods. It is further evidence of the fact that the Congress is conscious of its responsibility. Therefore we have acted with dispatch in order to give relief to the people who have suffered as the result of the disastrous floods that occurred recently in that State.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. JONES of Alabama. I yield.

Mr. GROSS. This is strictly a flood-control dam?

Mr. JONES of Alabama. Yes, it is a flood-control dam. Had the project been constructed prior to the recent floods it would have saved some $2 millions. The ratio of benefit to cost is in excess of 2 to 1.

Mr. GROSS. Do I understand that this does not provide for irrigation?

Mr. JONES of Alabama. It does not provide for irrigation. It does provide regulation of flow to preserve the stream flow of the Russian River and for that reason the local interests thought it was necessary to participate in the financing of the project. As a result of that development, the local people raised some $5 million. It is nothing but an obligation of the Congress to recognize its contractual relationship with the people who have raised the money by bonds for the construction of the project.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That in addition to the authorization of $11,522,000 for accomplishment of the initial stage of the plan for flood control and other purposes in the Russian River Basin, Calif., authorized by the Flood Control Act of 1950, there is hereby authorized the completion of the initial stage at an estimated additional cost of $1,165,000.

SEC. 2. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ELECTION TO COMMITTEE ON WAYS AND MEANS

Mr. ROONEY. Mr. Speaker, by direction of the Democratic caucus, I offer a privileged resolution (H. Res. 362), and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That THADDEUS M. MACHROWICZ, of Michigan, be, and he is hereby, elected a member of the standing Committee of the House of Representatives on Ways and Means.

The resolution was agreed to, and a motion to reconsider was laid on the table.

RESIGNATION FROM COMMITTEES

The SPEAKER. The Chair lays before the House the following resignation from committees.

The Clerk read as follows:

JANUARY 12, 1956.

Hon. SAM RAYBURN,
Speaker, House of Representatives,
Washington, D. C.

DEAR MR. SPEAKER: I hereby tender my resignation as a member of the House Committee on Merchant Marine and Fisheries, effective this date.

Very respectfully yours,
THADDEUS M. MACHROWICZ,
Member of Congress.

The SPEAKER. Without objection, the resignation is accepted.

There was no objection.

The Clerk read as follows:

JANUARY 12, 1956.

Hon. SAM RAYBURN,
Speaker, House of Representatives,
Washington, D. C.

DEAR MR. SPEAKER: I hereby tender my resignation as a member of the House Committee on Public Works, effective this date.

Very respectfully yours,
THADDEUS M. MACHROWICZ,
Member of Congress.

The SPEAKER. Without objection, the resignation is accepted.

There was no objection.

AUTHORIZING THE SPEAKER TO DECLARE A RECESS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that it may be in order at any time on Thursday, February 2, for the Speaker to declare a recess for the purpose of receiving the Prime Minister of Great Britain.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

ADJOURNMENT UNTIL MONDAY NEXT—PROGRAM FOR NEXT WEEK

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

Mr. ARENDS. Reserving the right to object, Mr. Speaker, and I shall not object, will the gentleman from Massachusetts, the majority leader, announce any program we may anticipate for next week?

Mr. McCORMACK. I shall be very glad to do so.

I cannot give a definite answer at this time because I am waiting for a report

from the Committee on Rules which had hearings this morning on requests for several rules.

On Monday the Consent Calendar will be called.

There is one bill that will be on the program for next week, although I cannot say now which day. It is H. R. 5649, to amend a section of the United States Code with reference to applications for writs of habeas corpus by persons in custody pursuant to the judgment of a State court. A rule on that bill was reported out of the Committee on Rules in the last session.

On Tuesday the Private Calendar will be called.

Later in the day I will announce the program for next week, but that is dependent on what rules are reported out of the Rules Committee.

Mr. ARENDS. I thank the gentleman.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

COMMITTEE ON RULES

Mr. COLMER. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file reports.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

RESOLUTIONS RECOMMITTED TO THE COMMITTEE ON RULES

Mr. COLMER. Mr. Speaker, I ask unanimous consent that House Resolutions 324 and 325 be recommitted to the Committee on Rules.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

APPOINTMENT OF MEMBER TO COMMITTEE TO INVESTIGATE NONESSENTIAL FEDERAL EXPENDITURES

The SPEAKER. Pursuant to the provisions of section 601, title VI, Public Law 250, 77th Congress, the Chair appoints as a member of the Committee to Investigate Nonessential Federal Expenditures the following member of the Committee on Ways and Means to fill the existing vacancy thereon: Mr. MILLS, of Arkansas.

ADMITTING SINGLE PERSONS TO FEDERALLY AIDED PUBLIC HOUSING

Mr. RODINO. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. RODINO. Mr. Speaker, it is always a real pleasure to raise my voice in behalf of the less fortunate, who by chance or misfortune do not have the American privilege of living in a decent home of their own which bids fair to make them into responsible citizens of their communities. During the last session of Congress, I introduced H. R. 5178, which is designed to meet one important aspect of that problem, namely, the single person in hardship cases who is without adequate shelter.

This bill would authorize the Public Housing Commissioner to enter into agreements with local public housing authorities for the admission of single persons, in hardship cases, to federally assisted low-rent housing projects.

Be it enacted etc., That section 15 of the United States Housing Act of 1937 (42 U. S. C., sec. 1415) is amended by adding at the end thereof the following new subsection:

"(10) The Commissioner shall include such provisions in contracts made pursuant to this act after the date of enactment of this subsection, and he shall negotiate with the public housing agencies involved such modifications of previously existing contracts, as may be necessary (A) to permit single persons whose incomes do not exceed applicable maximum income limits to be admitted to any low-rent housing project in any case where a duly authorized official of the public housing agency involved determines that exceptional circumstances exist which warrant such admission and that such admission will not prevent or delay the admission of any eligible family to the project, and (B) to provide for persons so admitted the same conditions for continued occupancy as apply with respect to family tenants."

We tend to forget the true rule that the Federal Government should play in assisting communities to perform essential public services which are both national and local in scope. It is important, therefore, that we recall once more that we have a general welfare clause in our Federal Constitution. Happily, the preamble to our Constitution expresses this philosophy perfectly when it states:

We, the people of the United States, in order to form a perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

I particularly want to call your attention to the words: "promote the general welfare." These words mean exactly what they state. They cover every section of the United States and they cover every individual who resides therein.

The framers of our Constitution did not intend to promote the welfare of one class and deny it to another. Rather, their intent was to promote the general welfare and the general well-being of all its citizens. Assuredly, this includes single persons as well.

When the Constitution of the United States was drawn, the distinguished statesmen who framed that document were not satisfied with a mere preamble or general philosophy which expressed their feelings and legislative intent. Rather, they did something much more definite about it. Specifically, they gave the Congress the power over taxation to thus promote the general welfare. Permit me to read to you the salient part of the Constitution which covers these vital powers of Congress. I am reading from section 8, clause 1 of the Constitution of the United States:

SECTION 8. The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States.

I particularly want to call your attention to the language that the Constitution gave Congress the clear right to collect taxes in order to "provide for the general welfare of the United States." Here, again, the Constitution means exactly what it says. Congress has the complete right to raise money for those things which are essential in order to promote the general welfare and the general well-being of all the citizens of this country.

I have recited these constitutional provisions in order to lay at rest any doubt that the Congress has full and complete authority to engage in the activities which are the subject matter of my bill.

It is essential also that we consider some other essentials as a prelude to the specific consideration of my bill H. R. 5178, and that is why Congress assists local communities in providing public housing at all. To begin with, we should recognize that Congress has long taken an interest in understanding the problems that afflict local communities in their attempts to eliminate blight, slums, and other forms of dilapidated housing that impoverish the community and lead to ill health, tuberculosis, and a host of other social maladies, including juvenile delinquency and crime. Thus, over 60 years ago, 1892 to be exact, Congress began its first important action in this field. It is a long way from that humble start to the numerous accomplishments in our day.

However, it is necessary to see where we started from in order to appreciate where we are today. In 1892, Congress provided the token sum of $20,000 for the Secretary of Labor in order to have an investigation made of the slums in our large cities. As was expected, the final reports prepared by the Commissioner of Labor disclosed some very bad slum conditions that existed in the blighted areas of the large cities of this country. It revealed plainly what we now know—that there is a close correlation between bad social conditions and slums.

Over 40 years were to elapse before Congress did something specific about relieving such bad housing conditions when it passed the Emergency Relief and Construction Act of 1932. For the first time, Congress authorized one of its Federal agencies, the former Reconstruction Finance Corporation, to make loans to corporations that were formed, in order to provide housing for families of low income, or for the reconstruction of slum areas.

It is instructive to learn that Congress established a genuine partnership policy of the local communities and your Federal Government from the day that the first type of Federal aid was provided the local areas to assist them in providing decent housing. In the above act of 1932, all loans were subject to State and local laws, as regards rents, charges, capital and the rate of return.

This principal is as valid today as it was when Congress first formulated it some 23 years ago.

From this first Federal effort in 1932, there followed the National Industrial Recovery Act of 1933. While the purpose of this law was to stimulate employment during the depression, this act also authorized the use of Federal funds to finance low-cost housing, slum clearance and subsistence homesteads.

Again, in 1935, Congress passed the Emergency Relief Appropriation Act. In its large appropriation for public works, Congress included funds for housing.

It was not until 1937, however, that Congress passed the first legislation to establish a Federal agency that was to deal exclusively with assisting local communities in their public-housing program. The pattern which Congress established then has continued with variations to date. Congress then provided loans and annual contributions to local public-housing agencies for low-rent housing and slum-clearance projects.

The purpose of reciting these pioneering acts showing how the Federal Government has aided the local communities in handling the local housing problem for low-income families, which legislation has been supplemented and amended to date, is to indicate that a legislative program has been evolved by Congress which has for its purpose the providing of decent housing for the neediest elements in our communities who cannot pay prevailing rents, and who are not being supplied by present building groups because they cannot afford to pay the rents.

Once this basic principle is recognized, there is no major distinction that can be made and justified which would differentiate between different kinds of people in the low-income backet who need decent housing. For the object of providing such housing at rents they can afford to pay is to replace despair and dilapidated housing with hope and a decent place where they can afford to live.

Many of the same objections that apply to substandard housing and slum conditions created by bad housing, also apply to single persons and hardship cases when they, too, are not housed decently. I refer to the excessive municipal cost of maintaining such dilapidated housing which results from the low income of such persons which prevents them from becoming responsible tax-paying members of their community. I refer to the dangerous conditions existing in such blighted areas that are the causes of numerous fires which are very costly to the community. I refer to the bad state of their health, which is costly to the community in providing the needed medical services. I refer to the crimes and related conditions that are perpetrated where hope and despondency exist. In short, it is financially profitable for the community—State and Federal—to have all of its citizens housed decently.

Once the Federal Government enters into a genuine partnership with the local communities to assist them in performing an essential public service, the same logic, which led to Federal aid to such communities in the first place, extends logically to aiding any type of person—including single persons—who need and require decent housing. Otherwise, we are in the absurd position of providing aid for one type of individual of low income in the local community, and denying it to another, who should have it for the same reasons.

In various parts of the world where they had the caste system, certain individuals were branded and marked by the community as undesirables. Such a concept is wholly revolting to our American concept of democracy. Under our form of government, no individuals, single or otherwise, are set apart as an object for special discrimination. On the contrary, in law, in our Constitution, and our American way of life, we regard all of them equally. In this American democratic spirit, I express the hope that H. R. 5178—by providing persons with housing whose incomes do not exceed the applicable maximum limits, now provided, be admitted to any low-rent housing project in any case where duly authorized officials of the local public-housing agency involved, determine that exceptional circumstances exist which warrant such admission, and that such admission will not delay the entrance of any other eligible family to that project.

SMALL BUSINESS

Mr. ROOSEVELT. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. ROOSEVELT. Mr. Speaker, I have today introduced a revised bill for freedom of choice in trade and the protection of small business.

I particularly would like to point out to the Members of the House that both parties have from time to time pressed the importance of independent and free small business in our economic society. I think the time has come when we need to do something constructive in order to protect the position of small business. I sincerely hope that the Members of this House will look with favor upon the legislation which has been introduced today.

Mr. Speaker, the studies and investigations of the House Small Business Committee as well as those of other committees of both Houses, have disclosed that a substantial number of small-business men, particularly in the retail field, are controlled and often exploited by dominant firms, which are their suppliers, through the use of such devices as short-term leases, franchises, and contracts, and arbitrary cancellation provisions and refusals to sell. We have found out that while many large suppliers represent to their own dealers and to the public that the dealer is an independent businessman, in practice the supplier denies the dealer the freedom and the rights of an independent businessman. This denial of freedom of choice has resulted in the suppression of competition and the creation of monopoly conditions.

I am therefore introducing a bill for freedom of choice in trade to amend sections 3 and 4 of the Clayton Act to free those in commerce from restraints of trade and to allow small-business men freedom of choice in the conduct of their respective businesses as independent enterprises. This bill supersedes and improves H. R. 7096 which I introduced at the last session.

Section 1 of the bill amends section 3 of the Clayton Act by providing for two subsections, (a) and (b). Subsection (a) makes no substantial changes in the existing law under section 3, as interpreted by the courts. It does, however, strengthen section 3 in several respects which, I believe, are necessary if we are to insure free competition and efficient antitrust enforcement.

"Services or facilities" are added to the type of products coming within the restrictions of the section. The section is further expanded by making illegal not only those acts which prevent a lessee or purchaser from using or dealing in goods of a competitor of the lessor or seller, but also any conduct "which operates against (his) freedom of choice in using or dealing in such goods." This broadening of section 3 is based upon our findings that in many cases the supplier will wink at the handling of a competitor's product on the condition the product is kept hidden, not displayed, and not sold unless the customer demands the product. While short of outright exclusive dealing, this practice has equally serious and pernicious effects upon free competition.

For instance, in testimony before our House Small Business Committee, the president of the Pennzoil Company of California, testified that approximately 65 percent of the gasoline service station dealers who were potential customers for Pennzoil refused to handle the product because of their fear that they would suffer retaliation from their oil company suppliers and landlords. Of the 35 percent of the retail gasoline station operators who did purchase Pennzoil, the majority did not display the Pennzoil but kept it hidden. As stated by the president of Pennzoil:

> In many instances our delivery truck cannot even deliver to their (the retail gasoline dealers) place of business. They are afraid they will be caught by the major company representative and so we deliver oil and it is written right on the order that our delivery truck carries it to a man's home or to a small independent business alongside of him with whom he is friendly. Our oil is stored in the backs of automobiles, is stored in locked-up cabinets, in restaurants * * * it is stored where the major gasoline company representative is not likely to find it.

Finally, subsection (a) amends the present section 3 by writing in the Supreme Court's interpretation of section 3 in the Standard of California case on exclusive dealings so that exclusive dealing practices are specifically defined as illegal where their "effect may be to prevent or eliminate a substantial amount of competition in any section, community, or trading area." This interpretation of the Supreme Court is expressly in-

cluded in section 3 because the Court's decision has been under vigorous attack by those who would like to weaken our antitrust laws.

Subsection (b) of section 3 of the proposed bill is entirely new. Under present short-term leases and franchises, or where there are arbitrary cancellation provisions, the supplier may maintain the legal fiction that his dealer is an independent businessman while in practice he exercises absolute control over virtually every aspect of his business. This subsection does not, of course, interfere with the supplier's contractual right to expressly impose whatever controls he wants over his dealer as long as they are otherwise legal under the antitrust laws and the Federal Trade Commission Act. The subsection does provide, however, that as long as the supplier holds out to the dealer and the public that the dealer is an independent businessman, then in practice the dealer must have all the rights of an independent businessman.

The subsection also provides that the dealer may establish a prima facie case whenever there has been a threat or an act of cancellation, termination, or refusal to renew of a contract to sell, lease, license, or franchise, for reasons not expressly provided for and specified in the agreement, and where the supplier engages in a substantial amount of the trade in the goods in the trading area to which the act or threat of cancellation applies. This provision for a prima facie case is not new to the Clayton Act but follows a similar provision in section 2 where the burden is upon the seller to rebut the prima facie established where he has granted price discriminations between customers. It was felt that this prima facie provision was necessary because of the almost insurmountable burden of proof upon a dealer when the supplier may cancel or refuse to renew on arbitrary grounds. The burden therefore is, in effect, shifted to the supplier to justify a cancellation or a refusal to renew. But the amendment specifically provides that the prima facie case does not arise where the threat or act of cancellation or refusal to renew is for reasons expressly provided for in the contract, and that even though a prima facie case is established it may be rebutted by a showing of justification or good cause. The qualification that the supplier must be engaged in a substantial amount of the trade involved is for the purpose of limiting the use of the prima facie provision to those cases where a significant amount of competition is at stake.

Section 2 of my bill amends section 4 of the Clayton Act in two respects. First, it provides that a private litigant, when he is successful in obtaining equitable relief, shall recover from the defendant his cost of suit and a reasonable attorney's fee. The present law, both to encourage private antitrust enforcement and to impose a penalty for antitrust violations, allows the successful plaintiff in an action at law to recover treble his actual damages. There is, however, no such similar encouragement to the plaintiff or penalty upon the defendant when equitable relief is granted pursuant to section 16 of the Clayton Act. While in an action at law, the plaintiff may recover threefold damages and costs of suit and a reasonable attorney's fee, in an action in equity, the plaintiff not only does not recover damages but is also forced to bear his costs of suit and attorney's fee. Under the present law, therefore, there is a great incentive to the plaintiff to ignore requests for equitable relief and to concentrate upon the recovery of damages. Thus, the unfair competition is not stopped but often continues, while in an equity action the fair competition is automatically restored.

However, both the public interest and the plaintiff's interest is often better served by injunctive relief instead of compensatory damages. If, for instance, there has been a suppression of competition, the public benefits more by a restoration of that competition than by pecuniary compensation to an individual for its suppression. Accordingly, I believe that the amendment allowing the plaintiff his costs of suit and a reasonable attorney's fee in equitable actions is consistent with and strengthens the public policy behind private antitrust enforcement as it is presently expressed in section 4 of the Clayton Act.

The second amendment in my bill to section 4 of the Clayton Act is undoubtedly more controversial. It is, however, based upon the sound principle that one of our best and most efficient means of antitrust enforcement is private antitrust enforcement. At present, however, the cost to the plaintiff of such private antitrust enforcement is so great that it has become out of the reach of the ordinary citizen harmed by antitrust violations and can only be undertaken by the wealthy and affluent plaintiff. The plaintiff's cost of suit and attorneys' fees in an antitrust action may, and often does run as high as one-half million dollars. It takes, therefore, not only a courageous but a rich man to embark upon an antitrust case. The ordinary plaintiff, however, whether courageous or not, has no real choice whatsoever. He does not have the financial resources to bring his case to court.

To bring, therefore, private antitrust enforcement within the reach and means of all, my proposed bill amends section 4 of the Clayton Act by providing that the plaintiff may at any time ask the court to determine and certify whether his cause of action is or is not based upon probable cause. If the court does make a finding and certifies that the action is so based on probable cause, then the plaintiff, even if he should not win the final judgment, is entitled to recover from the United States his cost of suit and reasonable attorneys' fees in the event that such costs would impose undue hardship upon the plaintiff if borne by himself.

I do not believe that this provision is in anyway a radical departure from established antitrust policy. For instance, the Department of Justice or the Federal Trade Commission themselves in practice always make their own determination of whether an antitrust complaint has probable cause by making the decision of whether or not the complaint should be filed. And, of course, if the Government loses the final judgment, the taxpayer or the United States Government must still bear the full cost of the suit. If, of course, the law provided that the Attorney General or the Chairman of the Federal Trade Commission had to pay out of his own pocket for the cost of every suit lost, then we would have no public antitrust enforcement whatsoever. The public is willing and asked to pay for the cost of suits lost by the Government because it knows that once the Government has decided that there is probable cause for the suit, then the same should be diligently prosecuted without fear of what might happen if the final judgment is against the Government.

Under my proposed bill the same decision as to whether there was or was not probable cause would be made in private antitrust suits by the court. And it is clear that once the court has found probable cause, then the plaintiff should be given the means to prosecute his action if he cannot bear the cost himself or if he cannot bear it without suffering undue hardship.

I also think it safe to say that the resulting public antitrust enforcement from private litigation will be just as cheap, if not cheaper than our present Government enforcement. For instance, since 1915, the Federal Trade Commission has expended approximately $22 million on antimonopoly work. Of the cases filed during this period by the Federal Trade Commission, the Government has lost approximately one-half. In other words, the public has paid $11 million for antimonopoly cases, which although based upon probable cause were nevertheless lost by the Government. At the present time the average cost for handling an antimonopoly case filed by the Department of Justice is approximately $125,000. It is difficult to conceive that the average cost under my proposed amendment to section 4 of private antitrust enforcement could equal this amount.

There is another important point to be made in connection with this proposed amendment to give private parties adequate resources to prosecute antitrust violations. It is namely that the present procedures and enforcement policies of the Department of Justice and the Federal Trade Commission are inadequate to achieve effective and permanent relief for the public and for individuals harmed by antitrust violations. For instance, in the petroleum industry complaints by gasoline retail dealers of exclusive dealing and discriminatory pricing practices on the part of the major oil company suppliers have not only persisted over a period of 15 years but have actually increased in volume. I think we must all candidly admit that certainly in this field Government enforcement of the antitrust laws has been a real failure. In some cases, this has been the fault of the Government. For instance, early this spring the Federal Trade Commission advised gasoline operators that they would not even investigate complaints of price discrimination because it felt the Supreme Court in the Standard of Indiana case had declared

such discriminations lawful. Yet when an individual retail operator brought his own action in Connecticut alleging such discriminatory pricing practices, the court found that they were illegal. We must therefore give the greatest encouragement to such private antitrust actions for they are the public's only safeguard against the Government's refusal to take action and vigorously to enforce the antitrust laws.

In other cases, however, the failure of antitrust enforcement cannot be blamed on the Department of Justice or on the Federal Trade Commission. For instance, and again I use the petroleum industry as an example, the Government filed in 1940 a complaint against all the major oil companies and their affiliates alleging comprehensive monopolistic practices and asking for full relief. The complaint was certainly based upon probable cause and the relief was needed. There was, however, one insurmountable problem to the Government in prosecuting its case. There was no convention hall, let alone a courtroom, large enough to hold all of the defendants, their attorneys, and the witnesses. As a result, the Government was finally forced to dismiss its complaint without, of course, prejudice to bringing individual segmentized suits. Yet even now the Government has been unable to prepare or to bring these necessary suits.

I think, therefore, that it is clear that the only way we can get effective public antitrust enforcement and relief in this situation—and in many others—is to give to the thousands of individual complainants harmed by monopolistic practices the ability, resources, and encouragement necessary to enable them to file and diligently prosecute their own private actions.

In concluding my remarks upon this bill for freedom of choice in trade, it might perhaps be helpful and appropriate to state what the bill does not do.

It does not prohibit exclusive dealing contracts or arrangements except where they are already illegal under the present laws.

It does not prohibit a supplier from imposing conditions upon the business operation of a dealer handling the supplier's product. It provides only that such conditions must be expressly stated in the contract, lease, or franchise.

It in no way penalizes a supplier for terminating his relationship with his dealer for good cause.

It does not provide either the plaintiff or his attorney a windfall in the recovery of the plaintiff's cost of suit and attorney's fee, for such a recovery may be denied by the court where the plaintiff would not suffer undue hardship. The amendment does, however, prevent undue hardship upon the plaintiff when the court has certified that his complaint is based upon probable cause and is therefore in the public interest.

Mr. Speaker, I hope that my bill for freedom of choice in trade will not be regarded as partisan in either the economic or political sense. Because I believe it is based upon sound principles and in response to just complaints, I hope it will have the support of both big business and small business, of both Democrats and Republicans.

If this bill is passed, the 84th Congress will have done much to secure the position of independent small business in the framework of free American trade.

JOHN J. FORBES

Mr. KELLEY of Pennsylvania. Mr. Speaker, I ask unanimous consent to extend my remarks at this point.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. KELLEY of Pennsylvania. Mr. Speaker, there departed recently from the service of the Government a most faithful, intelligent, and loyal public servant. I am speaking about Mr. John J. Forbes, who, until recently, was the Director of the Bureau of Mines. Jack Forbes was in the unique position of having the full confidence, admiration, and support of the coal operators as well as the miners. His years of public service have undoubtedly contributed to the saving of many lives and much property in the mining industry.

Mr. Forbes is an educated man through his own efforts, beginning as a young man as a breaker boy in the anthracite mines. There scarcely has been an explosion or major disaster in the last 40 years in which Jack has not contributed and attended rescue work. Many operators and miners look with trepidation upon the approaching appointment of a predecessor. This is an all-important position in the lives and properties of the coal-mining industry and requires a man who will match the intelligence, ability, and qualifications of Jack Forbes.

DEVELOPMENT OF SCIENCE IN THE UNITED STATES

Mr. FLOOD. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. FLOOD. Mr. Speaker, I hold in my hand a news story from the New York Times which says that the Department of State science program launched on an ambitious scale 5½ years ago appears to have totally collapsed. I hear on this floor daily, as a matter of fact over a period of a number of years, and in the press and on the radio the importance of the development of science to this Nation and to national defense, and for our domestic welfare. I hear of the great attention being paid to science by certain behind the Iron Curtain nations and yet, I am sure, you join with me in the grave concern that the Department of State has now totally abandoned the provisions for scientific sections and attachés in the Department in Washington and at the legations and embassies throughout the world.

REMOVE INEQUITIES IN OUR IMMIGRATION LAWS

Mr. DINGELL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. DINGELL. Mr. Speaker, there are many aspects of our immigration policies which are gravely in need of change. I hope to work to supplant each and every one of these inequities as I serve in this great House of Representatives, both by joining in the support of liberal legislation authored by other Members of the House of Representatives and by sponsoring wholesome immigration legislation myself.

One of the most deplorable aspects of the present immigration policies of this country is the practice of placing quotas on the various races and limiting our immigrants according to their place of origin. Not only does this rob our country of many who would be useful citizens, but, the result is that we find ourselves in the position of saying to ourselves and to the nations of the world, friend and foe alike, that some are less fit than others to become citizens of our great country; and that people are worthy of entering our country according to their place of origin and not according to their ability. I abhor discrimination, and this is discrimination in its most vicious and ultimate form.

Since the enactment of the various laws which permitted refugees to enter this country this form of discrimination has become most obnoxious. Refugees are charged off against future quotas of the country of their origin. The result is that many of the already niggardly quotas which we extended to the peoples of Europe, most in need of a place of refuge, are now halved or mortgaged many years into the future. To show how far into the future, Mr. Speaker, the quota of the country of Lithuania is reduced until the year 2090; the quota of Estonia is halved until 2146; that of Greece is halved until 2018; and the Latvian quota until the year 2274. The quota of the country of the origin of my forebears, Poland, is halved until the year 2000. This is an absurdity not to be borne by an enlightened country.

This means that the few people that would be able to come in under those ridiculously small quotas in normal times is reduced by half in time of real need. For example, instead of 308 people of Greek origin, or 933 of Yugoslavian origin, or 6,488 people of Polish origin, only half those numbers could come in. Other peoples find their quotas reduced in the same way. Indeed, Mr. Speaker, with people who flee from the oppression of communism in dire need of sanctuary, and in view of America's ability to absorb far more immigrants, I would strongly urge that this Congress take action at a very early date, not only to repeal the mortgages on the quota system, but to repeal the quota system itself.

For that reason, Mr. Speaker, I have today introduced a bill which is aimed

at removing the mortgage from the quota system. It is my hope that Congress will act in a favorable manner upon this piece of legislation as soon as possible. I am honored that an identical bill is introduced in the House at this time by my distinguished colleague, Congressman THADDEUS M. MACHROWICZ, of Michigan. A like piece of legislation is jointly sponsored in the Senate by the distinguished senior Senator from New York, Mr. LEHMAN, and by the distinguished junior Senator from Minnesota, Mr. HUMPHREY, and by the distinguished junior Senator from my own State of Michigan, Mr. MCNAMARA.

I urge the passage of this bill at a very early date, and I join with the other Members who call upon this House to pass one of the excellent omnibus bills now pending to remove the other inequities in our immigration laws, such as the Lehman-Celler bill, or the Humphrey bill.

COTTON ACREAGE ALLOTMENTS

Mr. ELLIOTT. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. ELLIOTT. Mr. Speaker, I have introduced in the United States House of Representatives today two bills that I consider to be of the utmost importance to the southern cotton farmer.

The first of these bills provides that cotton acreage allotments in each State be frozen at the 1955 levels. Alabama's cotton allotment for 1956 would be increased by approximately 23,000 acres.

In addition, the bill provides for a minimum allotment of 5 acres for each cotton farmer.

An important feature of the bill is a provision that the first 5 bales of cotton grown by any farmer who has an allotment of 11 acres or less shall be supported at 100 percent of parity. Also, it is provided that all bales over 5 will be supported at 90 percent of parity.

The second of my bills provides that the Department of Agriculture measure, at Government expense, the farmer's cotton acreage before planting.

The experience of recent years has indicated that measurement of cotton acreage before planting is absolutely necessary to prevent continued loss of acreage under the allotment system.

A system of minimum allotments is imperative in order to protect the integrity and well-being of the family-sized farm. My bill provides for a 5-acre minimum allotment. It further provides that the first 5 bales grown by a small farmer be supported at 100 percent of the parity price.

There is a lot of talk these days about helping the farmer. My two bills will do it. They meet the problem head on.

I am one of those who believe that the Government should do everything possible to encourage the family-sized farmer to stay in business. He cannot stay in business unless he has some assurance that his efforts will be reasonably rewarded.

If he is a cotton farmer, he must have an allotment large enough to at least contribute something toward the economic well-being of his family. His children have to eat and have clothes, and shelter, and medical care, and schooling—like everybody else's children.

The small farmer has always been an important element in our economic and social structure. Let us make it possible for him to remain such.

A minimum allotment of 5 acres, 100 percent parity price supports on the first 5 bales of cotton produced, and preplanting measurement of his allotted cotton acres are all steps toward a workable and reasonable program for the small cotton farmer.

THE PRESENT FARM CRISIS

Mr. CHELF. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. CHELF. Mr. Speaker, a portion of the President's farm message that was read a few days ago was prepared in secret sessions at the Department of Agriculture, several days before its public release. It was drafted behind the locked door of a conference room—I can call the exact number—in the main Agriculture building with the counsel and assistance of a considerable number of big corporation farmers, the "fat cats" of agriculture. This all happened before Secretary Benson took his cure-all program to the President for clearance down at Key West.

For almost 3 years now, Secretary Benson has made speech after speech that there was nothing wrong with the present farm program. He indicated that if the farmer would be patient, everything would just be wonderful. In the past 3 years, Secretary Benson has issued at least one-half dozen statements about how well off the American farmer really was. Mr. Benson was looking at the world through rose-colored glasses.

Suddenly and without warning, the full impact of the sliding scale slid and hit him squarely between the eyes. While this might have caused him to see stars, it did cause him to see the light like St. Paul on the road to Damascus. Mr. Benson was converted from a pleasant theory he had been expounding to cold, hard facts and a realization that things were not as rosy with the farmer as he had been telling them they were, for it took the good Secretary, his experts, and all of the "fat cats," together, 14 pages of long legal cap, small type to cover the farmers' present dilemma. This was the very problem that he had previously refused to recognize, completely ignored or had even insisted did not exist. He has waited until the patient is almost in the last throes of a death rattle before he has even dared admit that the farmer has a slight financial headache or economic indigestion.

Whether Secretary Benson recognizes it or not, agriculture is seriously and dangerously ill. The patient is "sick to the quick."

Mr. Benson has had the President recommend the soil bank, yet only a few months ago, his Assistant Secretary, True Morse, wrote a letter to Representative COOLEY, chairman of the House Agriculture Committee, saying that such plan was not feasible, that it would cost too much money. Just how did it become palatable, useful and reasonably priced all of a sudden? Maybe the big corporation and agricultural farmers from the Midwest—those "fat cats," smoking big, long, black cigars in the conference room helped to arouse him, especially the big operator from Colorado who was dashing in and out of that meeting. This immortal document that is now simply bursting at its seams, describing the farmer's economic illness, also contains the same old medicine man's antiquated remedies that have the potentials sufficient to cause a 1,200-pound heifer to "upchuck."

This administration is giving to big business various and sundry subsidies, tax bonanzas, tax rebates, tariff protection, and oil depletion rights to the tune of 27½ percent, on the theory that the oil pumped and the rock dug from the ground cannot be replaced. What about the farmer getting this type of tax break? He is depleting his soil every day. He takes something out of it that cannot be restored, not even with fertilizers concocted by modern science. When the farmer's topsoil is washed away, he most certainly ought to have something more than just a soil-conservation program because that good earth is gone for generations to come. Posterity and our children's children will be the losers. After all, we who are here today are merely custodians of the soil of our country for future unborn generations. Therefore, since the loss of topsoil is a most vital and serious thing, the farmer, in addition to help from the soil-conservation program, ought to have compensation, a depletion allowance, if you please, for the very good reason that that soil that has been washed down the Mississippi or some other river is gone forever. If this is not depletion, I do not know what the word means. I am told that it takes several hundred years to recreate, recapture or rebuild any topsoil that is washed away. This in itself is sufficient reason for a depletion allowance to the farmer.

There may be some who would call my suggestion upon this subject matter socialism, subsidization, or regimentation. If this be true, then big business is up to its ears in it. A few years ago when there was some talk here on Capitol Hill of repealing the depletion allowance, every oil company, large and small, beat a path to Washington to plead for its retention. Apparently, they love this particular type of socialism or regimentation.

The farmer is not only depleted but almost completed as well. Another big

reason why the farmer is having troubles is due to the labor situation. He simply is not in a position to compete with the wages paid by factories located in the metropolitan centers. For instance, a good portion of the Fourth Congressional District of Kentucky, which I have the honor to represent here in Congress, is contiguous to Jefferson County, in which Louisville is located. In the counties of Oldham, Shelby, Spencer, Bullitt, Nelson, Hardin, and Washington, there is an average of approximately five to six hundred per county who commute daily to Louisville and the General Electric and other factories there. To show how desperate the situation is with respect to the little farmer and the tenant farmer, there are over 700 from my hometown of Lebanon and Marion County that have been driven from the farm because of their inability to make a living. The fact that Lebanon, Ky., is 67 miles south of Louisville is a positive indication how tragic, desperate, and serious the situation is.

If this trend of leaving the farm continues, the country, as a whole, is in for much trouble. There are those who believe that Mr. Benson is delighted with this migration to the city on the theory that if there are fewer people on the farm, less will be produced. However, it has gotten far beyond that stage for the very good reason that I do not know of a single farmer in my entire county who is not having a great difficulty in locating a tenant. There just are not any.

The do-nothing attitude of the Department of Agriculture, while our farmers' income goes down, is about as popular to the American farmer as a payment due on his mortgage when he is overdrawn at the bank. Every moment the purchasing power of the farmer goes lower while the cost of his basic needs soars higher. While the farmer's troubles mount and his income dwindles, the dividend checks for big business get bigger and bigger from their many hidden Government subsidies.

What would I do about it? I would propose that the farmers of this country, and especially the small farm owner, be given by law the same tax benefits and credits that are now being bestowed upon the barons of big business. I propose also that farmers who owe a debt of any kind to any governmental agency be given a moratorium, and that any interest due and payable shall likewise not be charged to the farmer, at least until this emergency is over. If we are really going to do something about helping the farmer, let us do it without taking 14 pages to remind the farmer how bad off he is.

President Lincoln once said that this country cannot long endure half slave and half free. If I may be permitted to do so, I would paraphrase that statement today by saying: This country cannot continue to grow, develop and prosper with one-half making a financial killing, all at the expense of the other half, with one segment getting all the breaks and the other getting none, one-half getting richer and fatter while the other gets poorer and thinner. Something must be done about it now.

In the last quarter, the earnings of big business went from $3,800,000,000 to $5 billion and dividends were the highest in history but during the same period of time, the farmer's income dropped another 8 percent. I am no agricultural expert or economist but if the present predicament of the farmer continues, we are headed for the biggest bust in our entire history. The bottom will fall out of our economic basket with such force that it will make the black thirties look like a gold rush, an oil strike or a Florida real-estate boom.

I shall support that portion of the President's proposal to repeal section 304 of Public Law 480 that prevents us from selling food and commodities to Russia or her satellites. We must export in order to get rid of our surplus. As long as we do not export guns, planes, tanks and other crictical materials to Russia, I am of the opinion that the shipment of food is strictly all right and will benefit us.

I shall also vigorously support the repeal of the Federal tax on the gasoline used by our farmers in their farm equipment. We already have this law in Kentucky and it is not only a fair one but it is working out very well indeed.

I am informed that Representative HAROLD COOLEY, chairman of our House Agriculture Committee, has recently stated that no new law is needed for the administration of the so-called soil bank proposal. Mr. COOLEY, I am advised, believes that Mr. Benson has the power already to act. Frankly, I am not surprised because this is another concrete example of the incompetence of Mr. Benson as an administrator, and it is further proof of his not being in sympathy with the entire farm program. I really do not believe that this good man knows what is going on. If he has the authority and has refused to act, then he is guilty of nonfeasance in office. It would appear that he is not only violating the law but is showing an utter contempt for the representatives of the people of this Nation. If, on the other hand, he does not have the authority and now seeks it, he is guilty of neglect of duty for not doing something that he ought to have done in order to carry out the primary object, intent, and purpose of the office of a Secretary of Agriculture. If it should develop that the experts who have analyzed the present law are wrong and legislation is needed, I shall definitely support it.

Let us go back to the 90 percent rigid parity supports—I voted for 90 percent parity passed at 206 to 201 in the House over Mr. Benson's stubborn opposition in the 1st session of the 84th Congress—because most of this mess the farmer is now in really started when this administration passed its sliding scale. The full impact of that legislation is just beginning to hit with all its fury. The sliding scale has slid clear out of sight. The farmer today is not the rugged individual that Secretary Benson said he was. Without any aid or consideration, coupled with Mr. Benson's inactivity, disinterest, and his disbelief in the entire program, the poor farmer has become a ragged individual.

When the patient is as ill as the agriculture of this Nation is at the present time, we need to bring in the best doctors and the latest and best medicine in order to cure him. I am not a doctor, but I sincerely believe that, for the present at least, the best possible medicine for the patient is a good big dose of 90 percent parity, a prescription of 27½ percent depletion allowance, a large-sized dose of debt moratorium, without interest, some pills containing soil-bank ingredients, a few powders of surplus exports, together with a good healthy swig of increased income-tax exemptions, especially for the little farmer.

If we do this, I have a feeling that the patient may have a chance to recover fully. This is not the full and complete solution or cure, but it surely will help. There is nothing wrong with the farmer that a good, big financial "shot in the arm" will not cure. This treatment will surely bring him bouncing out of his sick bed. Then with care, diet, and proper treatment—such as big business has been and is now getting—he should remain strong and healthy.

ADMINISTRATION OF KOREAN PRISONER OF WAR BENEFITS (PUBLIC LAW 615, 83D CONG.) BY FOREIGN CLAIMS SETTLEMENT COMMISSION

Mr. ASHLEY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. ASHLEY. Mr. Speaker, I rise on this occasion to call the attention of Congress and the American people to the dangerous development of a new kind of criminal law wherein American citizens are tried and convicted by administrative star-chamber bodies, without enjoying any of the rules of due process, without having the right to confront and to cross-examine their accusers, and above all—if we are to accept the contention of the star-chamber judges—without having the right to appellate review in the courts.

Specifically, Mr. Speaker, this noxious legal development can be traced to the quasi-judicial Government agencies, particularly those concerned with veterans benefits. As a result of loosely worded and administratively construed statutes, these agencies have asserted the power to withhold benefits on the basis of secret allegations of wrongdoing or disloyalty which the claimant has no adequate opportunity to rebut. Even the most cursory examination of a typical case history will show that the administrative withholding of a grant or benefit under these conditions is tantamount to a conviction in a court of law. It fastens what the Supreme Court has called a badge of infamy upon the denied claimant which stays with him for the rest of his life.

The press recently has carried the fantastic story of an attempt by the Veterans' Administration to rescind the dis-

ability pension of a legless veteran of World War II because of alleged utterance in 1950 and 1951 which some bureaucrat thought rendered the veteran "guilty of rendering assistance to an enemy of the United States." This attempt was scotched by the veteran's insistence on trying his case in public so the press could take down in print such astounding maxims of the new jurisprudence as "I'll make the rules as we go along."

After a careful study of the facts, Mr. Speaker, I have come to the conclusion that what the Veterans' Administration has been doing in retail fashion, the Foreign Claims Settlement Commission has been and is doing in wholesale lots. This Commission is charged with the responsibility of administering claims for Korean prisoners of war benefits. You will recall that the law authorizing these benefits provides for the payment of compensation to eligible claimants at the rate of $1 for each day of detention that the ex-prisoner of war failed to receive the quality or quantity of food prescribed by the Geneva Convention of 1929, and an additional $1.50 per day for each day that the hostile force which held him failed to meet the standards outlined by that convention with respect to labor of prisoners and inhumane treatment. The law voting these benefits also contained a provision defining a prisoner of war as one who did not "voluntarily, knowingly, and without direct duress" give aid to or collaborate with the enemy.

I consider this latter provision unfortunate, not because I disagree with its intent to withhold benefits from collaborators—on the contrary I believe that the intent was admirable—but because no proper machinery was provided for fair adjudication of this provision. While its insertion in the law may be unfortunate, certainly this is no excuse for the unbelievable and hypercritical botch the Commission has perpetrated in administering the provision.

To understand the present policy of the Commission, it is necessary to keep in mind that the law requires each claimant to satisfy the Commission as to the exact number of days he received insufficient food or was subject to inhumane treatment. This provision has always been interpreted by presumption—that is to say, the Commission would presume on the basis of general facts that all the prisoners of war in a given camp or in a given country were insufficiently fed and inhumanely treated during their entire period of captivity. The Foreign Claims Settlement Commission is still making this presumption in the case of all Korean POW's against whom no allegations of collaboration have been brought. In short, these claimants receive benefit for the entire period of their captivity at the rate of $2.50 per day without having to actually prove their eligibility.

A very different situation exists, however, in the processing of claims of prisoners of war against whom derogatory information, secret and unsubstantiated, has been received relating to the activity, treatment and attitude of the POW during his captivity.

Upon receipt of this secret and often hearsay information against a claimant, the presumption that he received substandard food and inhumane treatment is immediately "suspended" and the claimant is thereupon required to establish his eligibility by affirmative proof. In short, where the Department of Defense furnishes the Commission with secret, unsubstantiated and derogatory information against any claimant, the Foreign Claims Settlement Commission, upon primary examination, disallows the claim, and in effect imposes the presumption either that the claimant was guilty of knowingly aiding and collaborating with the enemy, or else that he did not, in fact, receive bad food and inhumane treatment. Thus, when a claim has been turned down after primary examination, the claimant is then allowed a hearing in which the burden of proof is upon him to establish either that he received substandard food and treatment each day during his imprisonment or that he was not a collaborator.

Now let me point out two important considerations. In the first place, the presumption which the claimant must rebut in order to establish his claim after it has been disallowed is not based upon fact, but rather upon charges which have not been substantiated either by the Army or the Commission—raw charges that are thrown at the claimant without benefit of source and hence without benefit of the time-honored right of the defendant to face his accuser.

In the second place, a claimant is completely in the dark, under this misplaced burden of proof, as to whether he must affirmatively prove that he was subjected to bad food and inhumane treatment or whether he must prove that he was not a collaborator with the enemy—or whether he must prove both.

This is the grisly and confused position which hundreds of American veterans have been subjected to by a procedure which denies the very rights, basic to our very system, which these veterans themselves have suffered and fought to defend.

There can be no doubt of the slippery and shameful rationale devised by the Foreign Claims Settlement Commission in administering the payment of these claims. Instead of tackling the issue of collaboration separately and on its own merits, the Commission worked out an ingenious policy—and in my considered opinion a dishonest policy—of shuttling back and forth between the question of collaboration and the question of eligibility on a mathematical showing of number of days of ill treatment and improper food. The General Counsel of the Commission stated the policy in these words in a memorandum to the members of the Commission:

> It is suggested that in the disallowance of claims under section 6 (e) of the act in which collaboration is an issue, the decision be based upon the finding that the evidence is insufficient to warrant the conclusion that the claimant, while imprisoned, was not fed or treated as provided in the Geneva Convention of July 27, 1929. No reference, expressed or implied, need be made therein to any official document or report which the Commission may have considered.

In the same memorandum, the counsel forces the Commission to rule that "the claimant shall not have recourse to the confidential records or reports furnished to the Commission by the Department of Defense." What the counsel's memorandum says is that the Commission may come to its conclusion on the basis of the issue of collaboration, and then write up its decision, in the same case, on the basis of another issue entirely, namely, the mathematical lack of eligibility; and further, that the Commission in determining the issue of collaboration can use the unevaluated derogatory information of the Department of Defense, hide this information from the claimant, and then pretend that this information never entered into its decision.

That the Commission is following this outrageous policy is confirmed by a letter I have just received from Mr. Whitney Gillilland, Chairman of the Foreign Claims Settlement Commission, a copy of which I have before me and which I request unanimous consent to insert in the RECORD following my remarks. In his letter, Mr. Gillilland states that—

> In order to expedite and uniformly process this claims program, the Commission established certain presumptions concerning the failure of the hostile forces in the Korean conflict to observe the standards set forth in the Geneva Convention of 1929 respecting food furnished to and humane treatment of prisoners of war * * *. These presumptions, however, are rebuttable. If, during the course of the settlement of a claim, the Commission receives information to the contrary which appears to be credible, the presumption is then suspended and the claimant is thereupon required to establish his eligibility as required by the act.

Mr. Speaker, I am no great student of the law, but on the basis of the legal training which I have had, I am completely in the dark as to what Mr. Gillilland means by the phrase "the presumption is then suspended." I have never heard of a presumption relegated to this state of limbo. A presumption is either rebutted or unrebutted, and the burden of proof depends on which. If the presumption is suspended, then why does the burden of proof shift to the claimant?

What Mr. Gillilland is saying, of course, is that because of unevaluated, derogatory information supplied by the Army—and the Army alone of all the services has entered objections to the payment of prisoner-of-war claims—a veteran finds himself at the last minute deprived of his benefits and given a false reason, to boot.

At no time has the Commission requested a claimant to furnish mathematical proof of the number of days of improper food and inhumane treatment. When he files his claim, he is asked only to certify his noncollaboration. But when the claim is denied, he is given an enigmatic and inaccurate statement that after consideration of all the evidence of record, including a summary of information from the Department of Defense, the Commission has decided that the claimant has failed to sustain the burden of proof as to his eligibility. The statement is enigmatic because it does not tell the untutored veteran what precise burden of proof he has failed to sustain. And the statement is inaccurate because

it says that the Defense Department's summary of information is evidence of record. Clearly, if it is evidence of record, it should have been shown to the claimant. When a veteran appeals from the primary examination denying his claim, he is given an abbreviated, noninformative list of charges based on the secret summary of information having to do with the issue of collaboration. He is asked to defend himself on these charges and he is encouraged to bring affidavits as to his noncollaboration. At the hearing, the claimant may be asked vaguely as to what the food and treatment conditions were in various camps and during various periods. But since he has not been advised to supply detailed information on bad food or improper treatment, he can only reply to vague questions with equally vague replies. And it is on this farcical basis that a claimant can be denied his appeal and given the excuse that he failed to supply proof of his suffering.

Mr. Speaker, it is outrageous to apply this kind of shell game to anybody. It is unbelievably outrageous to apply it to men who have gone through all the horrors of hell in the Communist prison camps.

Let me give you just a few facts on the case of a Korean veteran who has just had his appeal denied and his petition for a rehearing rejected out of hand. He is Joseph Hammond, of 415 Ascot, Toledo, and one of my constituents. He draws 40 percent disability compensation—10 percent for gunshot wounds sustained during his capture, and 30 percent as a result of suffering during his imprisonment. He is a holder of the Bronze Star. After his release he was questioned at length by G–2, as were all POW's. Subsequently, he received an honorable discharge from the Army and returned to civilian life.

Hammond filed his application on December 23, 1954, for Korean prisoner-of-war benefits. The claim was denied at the end of November 1955, 1 month before the deadline for the final determination by the Commission. He wrote and asked for a hearing and a statement of charges. The hearing was scheduled on December 19, but the statement of charges was lost in transit so that Hammond actually did not receive them until December 16, 3 days before the hearing. At the hearing he was defended by Charles W. Stevens, assistant director of the national rehabilitation commission of the American Legion. Mr. Stevens has personally assured me, as he assured the commission, that he is convinced of Mr. Hammond's innocence of any activities of voluntary collaboration.

The hearing was held in Washington before a hearing officer, a certain Mr. Colish, and according to both Mr. Stevens and Mr. Hammond the hearing was terminated before Mr. Hammond and his witness had presented all the evidence they intended to present. It was terminated with the remark by the examiner: "There is enough in the record now." This remark gave everybody the impression that Mr. Hammond had successfully made his case.

On December 23, the Commission voted to deny Mr. Hammond's appeal. And yet it is an uncontested fact that at the time of the Commission's decision, no transcript of the hearing had been written up. The Commission's own rules provide that "hearings shall be stenographically reported and a transcript thereof shall be a part of the record." But Mr. Gillilland writes me that the absence of a stenographic transcript is of no importance to the Commission in reaching its decision. I would like to know how a decision can possibly be made on the basis of the record, when the record didn't exist until about 2 weeks after the decision.

Mr. Gillilland answers this by saying that "Mr. Colish"—the hearing examiner—"and the stenographer who reported the testimony were available to advise the Commission as to what transpired at the hearing."

I suppose, Mr. Speaker, that it should come as no surprise that a Star Chamber body which accepts secondhand and hearsay information as evidence should also come to its decision on the basis of the secondhand and hearsay report of its hearing examiner.

Last week a petition for a rehearing was filed on behalf of Mr. Hammond by his counsel, Joseph L. Rauh, Jr. The petition has now been rejected on the ground that the 12-month period for the consideration of Hammond's claim expired on December 23, 1955, and that the Commission therefore has no discretion in affording Mr. Hammond any further consideration. This statement is made in the face of the fact that the 12-month provision was written for the benefit of claimants in order to assure expeditious adjudications, and that it was the Commission who, by using up eleven and a half months in preliminaries, turned the 12-month provision into a device for denying Mr. Hammond a fair and proper hearing and a fair and orderly adjudication.

I would like to point out in all justice to the members of the Foreign Claims Settlement Commission that not all of them agree with Chairman Gillilland's views. Commissioner Clay in particular has been quoted in the New York Times and at a semipublic hearing to the effect that he considers the denial of claims under these conditions to be an outrage because it brands the claimants for life as collaborators. He blames the outrage on the fact that the Army has set the ground rules for this claims operation. The law, however, has not given any responsibility to the Army, but has concentrated all responsibility in the hands of the Commission.

I do not need to dwell on the dangers of letting this type of claims adjudication get rooted into our law and practice. I think we must put a stop to it now—not merely in order to render justice to the brave and loyal veterans involved, but in order to cut out this cancer from our law before it poisons the whole body and destroys the principles of our traditional jurisprudence.

The Senate Subcommittee on Constitutional Rights has already announced that it has launched an inquiry into the administration of the POW claims. I have requested Senator HENNINGS to schedule early public hearings on the subject, and to call before the committee the victimized POW's, the representatives of all veterans organizations, the members of the Foreign Claims Settlement Commission and the representatives of the Defense Department dealing with this problem.

I have also asked Representative PERCY PRIEST, chairman of the Interstate and Foreign Commerce Committee—the committee which handled POW legislation in the House—to schedule hearings with a view to framing new legislation.

It is my further intention, in the immediate future, to introduce corrective legislation myself—legislation which not only will afford an opportunity for justice for those POW's whose rights have been denied, but which will afford protection to the rights of servicemen whose claims have not yet been decided.

I am confident that, with your support, these efforts will bring beneficient results. We must act quickly—we must act before the cancer of criminal administrative law spreads too far and makes a cure impossible.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 6, 1956.

Mr. WHITNEY GILLILLAND,
Chairman, Foreign Claims Settlement Commission, Washington, D. C.

DEAR MR. GILLILLAND: I am writing you in the matter of Mr. Joseph Hammond of 2347 Auburn Avenue, Toledo, Ohio, (FCSC Claim No. 251435), who has petitioned your Commission for a rehearing in connection with his prisoner-of-war claim.

I respectfully submit that ample reason exists for allowing this petition. On the basis of the record and all that I have been able to learn in connection with the December 19 hearing, it appears to me that no actual evidence has been introduced against Mr. Hammond. It is certainly a matter of record that Mr. Colish, the hearing officer, terminated proceedings prior to the conclusion of the presentation of Mr. Hammond's case.

It also comes to my attention that the decision of the Commission on December 23, 1955, denying Mr. Hammond's appeal was made before a transcript of the hearing was available to the Commission. Inasmuch as the Commission was not present at the December 19 hearing, it would appear that your decision served to deprive Mr. Hammond of the kind of hearing to which he was and is entitled, not only by the Constitution and the statute, but by the Commission's own rules.

I think that a careful review of the entire record, Mr. Gillilland, will reveal that it has been impossible for Mr. Hammond to know whether his claim was initially refused because of failure on his part to prove that he was, in fact, the recipient of inhumane treatment by the hostile forces, or whether the claim was denied because of secret, unsubstantiated accusations that he collaborated with the enemy. I feel very strongly, as I am sure you do, that Mr. Hammond should be specifically informed of the grounds for the denial of his claim.

For these reasons, I submit that Mr. Hammond is entitled to a public hearing at which the Commission's interpretation of the law is made known and at which the claimant is given an opportunity to confront his accusers and to answer specific charges against him. I do not believe, on the basis of facts and information available to me, that Mr. Hammond has had a true hearing and a fair adjudication of his case, and it

is for this reason that I request that immediate attention be given his petition for an early hearing on the merits.

Very truly yours,

THOMAS LUDLOW ASHLEY,
Member of Congress.

FOREIGN CLAIMS SETTLEMENT
COMMISSION OF THE UNITED STATES,
Washington, D. C., January 10, 1956.

Re FCSC claim No. K–251435, Hammond, Joseph.

Hon. THOMAS LUDLOW ASHLEY,
House of Representatives,
Washington, D. C.

DEAR MR. ASHLEY: This will acknowledge receipt of your letter dated January 6, 1956, relative to the claim of Mr. Joseph Hammond, 2347 Auburn Avenue, Toledo, Ohio (FCSC claim No. K–251435).

Pursuant thereto I have inquired into the background of this matter. At the outset, with respect to the petition for a rehearing, let me explain that Mr. Hammond's claim was filed with the Commission on December 23, 1954. By virtue of a mandate contained in the statute which provides these benefits to former prisoners during the Korean conflict (Public Law 615, 83d Cong.), the Commission is required to complete its determinations in each instance within 1 year from the date upon which the claim was filed. Accordingly, the Commission was bound to finally dispose of Mr. Hammond's claim on or before December 23, 1955, and it is without jurisdiction and has no discretion to afford Mr. Hammond further consideration of his claim at this time.

I have particularly inquired concerning your suggestion that Mr. Colish, who conducted the hearing as the representative of the Commission, terminated the proceedings prior to the conclusion of the presentation of Mr. Hammond's case. In that respect let me first say that Mr. Hammond specifically requested that the hearing be closed and private. In that sense, at very least, I do not feel at liberty to discuss the merits of his claim. Moreover, I have examined most carefully the 25-page transcript of the hearing and at no place do I find that there was any attempt to restrict the introduction of evidence. Mr. Colish advises that at one point during the testimony of Mr. Salvadore Conte, he, Mr. Colish, in an aside to Mr. Stevens, who represented Mr. Hammond, asked if Mr. Stevens thought he had adduced sufficient testimony. Thereafter, Mr. Conte continued to testify at length, and the record discloses that all participants were specifically asked if they had anything further to add before the hearing adjourned.

You also suggest that the Commission in its deliberation on the claim did not have the transcript of the testimony before it. This may, of course, be true, but I am sure you understand that there is no legal requirement that it specifically be considered. The Commission did have available to it the entire record, including Mr. Hammond's testimony in the general court-martial of Sergeant Olsen which was introduced by Mr. Hammond. Moreover, Mr. Colish and the stenographer who reported the testimony were also available to advise the Commission as to what transpired at the hearing. There is no doubt in my mind but that the Commission was fully informed concerning the evidence introduced in support of Mr. Hammond's claim.

Concerning your suggestion that Mr. Hammond be informed of the information before the Commission, you may be interested to learn that in order to expedite and uniformly process this claims program, the Commission established certain presumptions concerning the failure of the hostile forces in the Korean conflict to observe the standards set forth in the Geneva Convention of 1929 respecting food furnished to and humane treatment of prisoners of war. In establishing these presumptions that the North Koreans and Chinese Communist forces failed to observe these conditions and requirements, the Commission relied among other material to a very great extent upon Senate Report No. 848, 83d Congress, 2d session (frequently referred to as the Potter report), which was prepared by the Subcommittee on Korean War Atrocities of the Committee on Government Operations. These presumptions, however, as other legally established presumptions, are rebuttable. If, during the course of the settlement of a claim, the Commission receives information to the contrary which appears to be credible, the presumption is then suspended and the claimant is thereupon required to establish his eligibility as required by the act.

Mr. Hammond's claim falls into this category. His claim was denied on primary settlement and in accordance with the provisions of the act he was afforded the opportunity of a hearing. Upon his request for hearing, he was furnished a detailed summary of the information before the Commission in relation to his claim. Much of the material before the Commission because of security purposes is classified under the law and for this reason the Commission is not at liberty to make it available. You may be assured, however, that in every instance the Commission seriously weighs all of the evidence before it in arriving at its determinations.

I note in your letter that you make reference to "accusations" and "charges" and the like. In the administration of this type of legislation there is no adversary aspect. No one prefers charges or makes accusations. The legislation is of a beneficial nature and the determinations of the Commission are based solely upon whether or not a claimant factually meets the eligibility requirements.

Let me further assure you that the Commission has absolutely no desire to be arbitrary in this or any other matter. It is, however, bound within the limitations of the laws which it has been established to administer.

I appreciate the seriousness of matters of this kind and I think I made my views in that regard quite clear at the time this legislation was being considered by the House Committee on Interstate and Foreign Commerce. I also fully appreciate your interest in the matter and the position you have taken. I can only hope that this response to your inquiry may in some measure serve to clarify in your mind the bounds within which the Foreign Claims Settlement Commission must operate. Any further information you may require will be readily furnished.

Sincerely yours,

WHITNEY GILLILLAND,
Chairman.

FISH AND WILDLIFE SERVICE

Mr. BONNER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

Mr. BONNER. Mr. Speaker, the Committee on Merchant Marine and Fisheries held its initial meeting today to discuss its program for this session and to establish the framework of a working agenda which would permit us to handle expeditiously and effectively the important legislation and other matters under our jurisdiction. We will continue to watch carefully the administration of all laws covering matters within the jurisdiction of the committee in accordance with the mandate laid down by section 136 of the Legislative Reorganization Act of 1946. Such a program was initiated in the first session and extensive hearings were held on the subject of the administration and operations of the Maritime Administration and Maritime Board, Fish and Wildlife Service, Coast Guard, Coast and Geodetic Survey, and the Panama Canal Company.

My remarks today, however, are directed primarily to the administration and operation of the Fish and Wildlife Service of the Department of the Interior. During the course of extensive hearings in connection with the operations of the Fish and Wildlife Service conducted by this committee early last year, I became convinced that the taxpayer, the sportsman, the commercial fisherman and the nature lover of this country are not receiving for their investment the benefits and value which they have the right to expect from the vital work of this agency of the Department of the Interior.

Accordingly, I instructed our committee staff to continue to study, during the adjournment period, the various phases of the Fish and Wildlife Service operations and the laws under their administration.

Let me mention the sort of thing which I find disturbing:

Only yesterday there appeared in the Washington Post and Times Herald a story quoting the distinguished former Chief Judge William C. Coleman of the United States District Court in Baltimore, to the effect that conflicting Federal and Maryland laws on baiting of migratory fowl were senseless. Judge Coleman said:

> The sport is in a deplorable muddle due to the existence of the two sets of regulations * * *. It is incredible that the Federal and State authorities have not been able to get together.

He pointed out that the existence of the dual regulations has led hunters to violate both regulations and that neither set of rules is adequately enforced; he urged that the dual system be abolished, and that Congress provide more inspectors to enforce the anti-baiting regulation.

This very subject was brought up during our hearings last year. At that time, the Director of the Fish and Wildlife Service seemed to brush off the entire problem by stating that there had been only 1 or 2 cases which had arisen, those only in the State of Maryland. In those same hearings, I was told there was no way that the Federal Government could enforce sanctions by way of withholding funds for conservation projects from the States. I consider this almost unbelievable that the Federal Government, which advances large amounts of money to the States for the development of conservation projects is virtually powerless to assure observance of the Federal laws in the States receiving such aid.

Therefore, I have been having our Committee staff prepare a bill which will provide that no State having regulations more liberal than the Federal regulations concerning the taking of migratory birds under the Migratory Bird Treaty

Act shall be eligible to receive Pittman-Robinson funds. Perhaps that will provide some check to the defiant attitude of States who are willing to accept Federal money but who are unwilling to observe measures designed to protect and conserve the migratory birds.

Another subject, Mr. Speaker, is the handling of our wildlife refuges throughout the country. In the last session, bills were before our committee which stated the long-established policy of the Congress to maintain and preserve the areas of our National Wildlife Refuges and to this end provided that—

> The Secretary of the Interior shall not dispose of, or relinquish any of the National Wildlife Refuges, or parts thereof, without the prior approval of the Congress.

Unfortunately, the committee's agenda was so full during the weeks immediately preceding adjournment that we were unable to hold hearings on these bills. However, in order to forestall any action by the Department of the Interior in disposing of refuges while these bills were pending, I asked for and received assurances from the Director of the Fish and Wildlife Service that there were no plans for disposing of any wildlife refuge at that time; that I would be informed of any proposal for the disposal of any refuge; and that no action would be taken on such proposals without a thorough review of the proposal, including appropriate public hearings. In other words, I was assured that the committee would have a reasonable opportunity to consider the legislation and the wildlife refuge program before any disposal action would be taken by the Department. Therefore, I was shocked when on December 2, 1 month before this session convened, I received a letter from the Fish and Wildlife Service advising me of the transfer of the Lenore Lake National Wildlife Refuge in the State of Washington from the Fish and Wildlife Service to the Washington State Game Department. Not only was this a notice of an accomplished fact rather than advance information regarding a contemplated action, but to add insult to injury, I later discovered that the Department of the Interior had issued a press release announcing the disposal of the Lenore Lake Refuge a full week before I received their letter. In this instance, I immediately advised the Director of the Fish and Wildlife Service that I felt the action taken was contrary to the clear understanding I had had with him last summer and advised him of my intention to hold hearings on this subject immediately after Congress reconvened. Notwithstanding the action taken by me in this instance, I received three more notices regarding disposals of wildlife refuges between December 8 and January 3.

I do not mean to imply that the disposals in question were necessarily unjustified, but I feel very strongly that the Congress is entitled to know what the circumstances are and to have a full and complete explanation of the urgency which has brought about these actions contrary to earlier assurances and immediately in the face of the convening of this session of Congress.

I need not prolong this statement by going into the details of the recent opening of the National Wildlife Refuges to oil and gas leasing. The papers have been full of this subject and I am sure all are acquainted with the existence of the situation.

However, I have cited these three instances merely to call attention to the broad scope of the problems which I feel we must take up immediately.

Where there is smoke, there may be fire, and all signs point to the possible existence of unsavory conditions down there in the Fish and Wildlife Service which ought to be brought into the open. The committee is prepared to devote considerable time and attention during this session to these problems.

THE FARM PROBLEM

Mr. WIER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. WIER. Mr. Speaker, I suppose that we can be grateful that the President has finally conceded that the problems facing American farmers need the urgent attention of the Congress. The farmers of my district, I think, would have said this last year or the year before.

Like the state of the Union message, however, this belated message on agriculture seems to arouse more questions than answers.

The most obvious question, of course, is: Why so little, so late?

When the administration was shouting prosperity from the treetops, was it unaware that farmers were being caught in a cost-price squeeze that could only lead to disaster?

But more specific questions are raised by the recommendations of the message for new authority where authority already exists. It asks for action in areas so far characterized only by inaction.

The so-called soil-bank proposal is hailed as an "immediate need." Is the administration unaware that this plan was introduced by my colleague the gentleman from Minnesota [Mr. MARSHALL] on February 2, 1954, and reintroduced on January 17, 1955? Is the President unaware that the Department of Agriculture submitted an unfavorable report on the bill to the House Committee on Agriculture as late as July 27, 1955?

We are naturally glad to see that the merits of this plan have finally been recognized by the administration, but we fear that the recognition may be too late.

In outlining his suggestions for surplus disposal, has the President failed to read the Commodity Credit Corporation Act which already provides authority for export subsidies, donations to relief agencies, the school lunch program, and so forth?

The tools for strengthening commodity programs under point 3 of the message exist in present law. Surely, failure to administer existing law does not demand new law to be administered by the same people.

The President now asks for an expanded school milk program. Yet the Agricultural Appropriations Subcommittee of this House a short time ago had to insist that the Secretary of Agriculture accept and use the funds it made available for the program.

We also note a belated concern for small farmers under point 5 of the message, yet the Organic Act establishing the Farmers Home Administration has been the law of the land during this administration. Again we ask, Why have the tools provided been unused so long?

Surely no one can deny that the Congress has been more than liberal in providing funds for agricultural research. The question now is: When do we see the results?

Again, we all agree that sound and reasonable credit must be made available, particularly to small farmers. How has the administration pursued this goal? By increasing interest rates?

And finally, we again welcome the President's change of heart on repeal of the Federal tax on gasoline used on farms. As late as October 1955, administration spokesmen were opposing the bills pending before the House Committee on Ways and Means which were specifically intended to do this job. The administration, I trust, will accept the President's recommendation and revise its own recommendations to the committee in order to support the bills which have been pending so long.

All in all, Mr. Speaker, the message is a statement of pious intentions to carry out old laws, but it proposes little of value to the dairy farmers and small farmers of my district who are concerned with maintaining a decent family income.

THE FARM PROGRAM

Mr. MARSHALL. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. MARSHALL. Mr. Speaker, I find it necessary to rise in order to disavow a well-intentioned rumor circulated by some of my colleagues charging me with writing planks in the President's farm program.

It is true that on February 2, 1954, I introduced H. R. 7662, a bill to authorize the Secretary of Agriculture to establish policies and programs for use of acreage diverted from production by the establishment of acreage allotments.

It is true that on April 6, 1954, the Department of Agriculture wrote a letter to the respected chairman of the House Committee on Agriculture, at that time, the gentleman from Kansas [Mr. HOPE], recommending against passage of the bill.

It is true that I reintroduced this plan as H. R. 2420 on January 17, 1955.

It is also true that on July 27, 1955, the Department of Agriculture wrote a letter to the present chairman of the House Committee on Agriculture, the gentleman from North Carolina [Mr. COOLEY],

again recommending against passage of the bill.

While I cannot accept credit for the change of heart undergone by the administration in the past 5 months, it is gratifying to know that the President felt the plan worthy to be included in his special message to the Congress on agriculture.

This gratification is tempered, however, by two factors. One is that the situation has become considerably worse in the last 2 years and failure to adopt the plan promptly must necessarily handicap its operation.

The other factor that disturbs us, Mr. Speaker, is that this plan will have to be administered by the very officials of the Department who twice recommended that it not be enacted by the Congress.

We sincerely hope that the present conversion, though late, is a sincere one. No petty pride of authorship could prompt us to wish ill to the President's proposal at the expense of the farm people whom we both serve.

I also want to state emphatically that this plan, as we conceived it, was never intended to be a cure-all for the many problems causing so much distress among farm families today. It was intended as one part of a well-rounded and realistic farm program designed specifically to maintain farm income during a period of adjustment.

It was not intended merely as a negative approach—to reduce acreage and cut production. Instead, it was intended as a positive approach—as an investment in the fertility of our precious soil resources and our food supply for the future.

Administered honestly and with this goal in mind, it could become an important part of the long range farm program so sorely needed. We only wonder what the delay has cost us so far? And certainly we can be forgiven for wondering how men who opposed it 5 months ago can now wholeheartedly accept its administration?

The distress in agriculture is a national ailment and it demands the best efforts of all of us. Therefore, we are glad to have the President's cooperation and want to assure him of ours.

FORTY THOUSANDTH VISA ISSUED FOR ITALY UNDER REFUGEE RELIEF PROGRAM

Mr. MORANO. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. MORANO. Mr. Speaker, I am sincerely pleased that this week the 40,000th visa was issued for Italy under the refugee relief program.

Nicolo Calabrese, of Naples, received this prize visa. He will come to the United States within the next 2 months with his wife Maria, and their 3 year old daughter Poala. The entrance of this family to our country was sponsored by 2 Americans: Raffaele Calderone, of Newton, Mass., the principal sponsor providing the housing assurance and the assurance against becoming a public charge; and Abraham Levine, also of Newton, has provided the employment assurance. This is a sterling example of the principles of brotherhood as practiced in America.

In view of the fact that the refugee relief program is under the direction of my distinguished friend and constituent, the Honorable Pierce J. Gerety, of Southport, Conn., I would have been delighted to have this honored refugee family settle in my district. I regret that this is not so. They are going to Massachusetts. My consolation, however, is that they will be in good hands in the district of my colleague from the 13th Congressional District of Massachusetts, RICHARD B. WIGGLESWORTH.

While the issuance of the 40,000th visa is a happy and important milestone in the refugee relief program as applied to Italy, Mr. Speaker, I feel compelled to call to the attention of my distinguished colleagues other facts with regard to Italy.

We now know that the 60,000 visas allocated for Italy under the Refugee Relief Act will be used by the end of 1956. So many applications are now on file that the cut-off date was announced as of December 28 and no new cases are being accepted for processing. This means that for all practical purposes we will be clamping down on immigration from Italy unless we give prompt consideration to the recommendations of the President in his state of the Union message. He has recommended that the unfilled opening from various countries under the Refugee Relief Act be distributed to Italy, Greece, and other areas of need.

SCHOOL-LUNCH PROGRAM

Mr. LAIRD. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. LAIRD. Mr. Speaker, I take this time to inform the House that I have introduced H. R. 8373, which provides for an additional $10 million for this fiscal year for the school-milk program.

There are 12 States in which additional funds are needed during the fiscal year 1956.

In addition to this, this bill provides for an additional $4,500,000 for the brucellosis-control program. There are 22 States that need this additional $4½ million. I hope the House and the Senate will take action on this bill, as it is important and immediately needed in these 34 States.

DISASTER RELIEF

Mr. McDONOUGH. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. McDONOUGH. Mr. Speaker, I am taking this time to call your attention to a bill which the House Banking and Currency Committee has reported out and on which a rule has been granted. I understand that this bill will be called up for consideration next week. It has to do with the increase in the authorization of funds for disaster loans under the Small Business Administration.

The amount authorized in the bill is $50 million. I do not think this is enough, and I hope the House will consider seriously increasing it to $100 million, because this is not an addition to the national debt, it is a loan; it is money loaned at 6 percent interest to small business that is injured as a result of disasters such as floods, hurricanes, droughts, or earthquakes.

I think because of the disasters we have had in various parts of the Nation during the last year we should provide in this bill an adequate amount to meet any contingency that may result from disasters in the future.

AGRICULTURAL CONSERVATION POLICIES

Mr. HOSMER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. HOSMER. Mr. Speaker, the President has made a very commendable proposal to relieve our farm problem by placing some 40 million acres of farm land in a soil bank. Few people know that we already have some 21 million acres of good land in such a bank right now, comprised of idle farmlands in the Midwestern States, southern, and southeastern sections of the country.

The effectiveness of these two soil banks and the interest that the Nation and its taxpayers might receive from these soil-bank accounts should not be diminished by inconsistent proposals for reclamation programs, such as the upper Colorado River storage project, which would put large amounts of agricultural land into production.

I will discuss this matter in detail at the conclusion of today's legislative business and special orders, and take this opportunity to call your attention to the location in this RECORD of the full discussion.

THE ISRAEL-ARAB SITUATION

Mr. LECOMPTE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and include a newspaper article.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. LECOMPTE. Mr. Speaker, Prof. Joseph Dunner, chairman of the political

science department of Grinnell College, is honorary president for the Central States area of the Zionist organization of America. An article he wrote recently appeared in the Des Moines Register of November 25, 1955, and believing that his ideas on turning Israel into a Jewish-Arab State are worthy of consideration, I include his article in the RECORD:

DUNNER ADVOCATES TURNING ISRAEL INTO A JEWISH-ARAB STATE

(By Joseph Dunner, chairman of the political science department of Grinnell College, honorary president for the Central States area of the Zionist Organization of America)

A new war between Egypt and Israel can only be deterimental to the social and economic aspirations of all middle eastern countries.

Egypt's case, as that of all Arab nations against Israel, includes these points:

1. In order to accommodate the Jewish refugees from Europe, Israel, with the help of the U. N., has created an Arab refugee problem. It is, therefore, Israel's and not the Arabs' task to solve that problem.

2. In the Arab-Israeli war of 1948–49 the Israeli conquered territory which was not allocated to them by the U. N. As the mediator in the Palestine conflict, Count Bernadotte, suggested in his report to the U. N. Security Council on September 18, 1948, part of the Negev should be defined as Arab territory, the port of Haifa should be declared a free port, the city of Jerusalem should be placed under U. N. control.

3. Arab leaders justify Arab arming and the recent Egyptian arms purchases in the Soviet orbit by pointing to Israel's "aggressive" aims.

A HOME FOR MILLIONS

They cite Ben Gurion's assertion that the doors of Israel must remain open for the millions of Jews from the Soviet Union who might some day be allowed to emigrate to Israel, and the statements of the Herut, the party of the former Jewish terrorists, that the Jews should by right occupy all of historic Palestine—inclusive of today's Kingdom of Jordan.

Israel's case rests on the claim that the Jews, exiled from Palestine by the Roman legions in A. D. 70, have never given up their hope to live in the birthplace of the Jewish people.

PERMITTED TO RETURN

When at the end of the nineteenth century, the Turkish rulers of Palestine allowed the Jews to return in ever larger groups, they reclaimed the soil abandoned by the Arabs for centuries, transformed desert wastes into oases, built modern cities and villages, revived the Hebrew language and brought the blessings of western progress to all the inhabitants of the Holy Land.

The claim of the Jewish Zionists was the more readily recognized by both the League of Nations and the U. N. since the Arabs themselves had come as conquerers to Palestine in the eighth century A. D. and, unlike the Jews, had never considered Palestine their national or religious center.

RIGHT TO STATEHOOD

From the point of view of traditional power politics, and particularly in view of the rich oil resources of the Arab territories, United States policy makers would be foolish to oppose the wishes of the Arab leaders.

From the point of view of international morality which has a curious way of asserting itself in history, the United States would be well advised not to sacrifice a democratic and courageous Israel to Arab intimidation and the agitation of the oil lobby.

On the basis of international law and morality, the Jews of Israel have a perfect right to their statehood in a land which they built with their own labor.

INVASION IN 1948

The Arab nations invaded Israel in 1948 and called on the Arabs of Palestine not to cooperate with the Jews but to leave the area. Israel, legally speaking, has a good case for refusing to repatriate all those Arabs who left the country under the pressure of Arab propaganda.

But it is at this point that this writer disagrees with the policymakers of Israel and many of his fellow Zionists in this country.

The Arab States have refused to absorb the Palestine refugees.

FOR LIVING JUDAISM

Israel was created not only as a physical abode of the persecuted and homeless of the Jewish people but primarily as a center of a living Judaism based on the message of the Hebrew prophets.

No Jew who wants to be true to his traditions can forget that there are some 900,000 human beings at Israel's frontiers who live in a no-man's land and without hope. Jews know what it means to be refugees.

Why should the Palestine Arab have less of that attachment to Palestine than a European Jew?

There is room in Galilee and in the Negev. The United States has declared its willingness to help financially in any scheme which removes the clouds of war from the horizon of the Middle East.

THE BIG CLOUD

No other problem beclouds that horizon as much as the problem of the Arab refugees. Since Israel fears that these refugees once repatriated might constitute a formidable fifth column and conspire with the Arab States for the destruction of the Jewish Republic, the big powers would have to give ironclad guaranties for the protection of Israel's integrity.

Minor frontier rectifications should take place under the auspices of the U. N. There is no good reason why a peaceful Jordan should not be given access to Haifa as a free port.

There is no good reason why all the holy places in Arab as well as Jewish-held Jerusalem should not be internationalized.

Israel's doors should, of course, be open to any Jew who is persecuted because of his religion or race. But unless the Arabs are prepared to push the Jews out of Morocco or Egypt, no further large-scale immigration of Jews to Israel can be assumed. The chauvinistic claim of some Fascist-minded Israeli, fortunately but a handful, that Israel should occupy all of Palestine, must be silenced once and for good.

CULTURAL PROBLEM

There remains the cultural problem. The absorption of the Palestine refugees with their offspring born since 1948 will make of Israel a country half Jewish, half Moslem-Arab. Given equal chances for education and advancement, many cultural differences between both groups will disappear. Both Hebrew and Arabic could well be the official languages of the land. Both groups could have the fullest freedom to develop their religious institutions.

A binational Israel could teach the world racial, national, and religious harmony. As things stand, Israel is forced to stress military preparedness and all the other paraphernalia of a modern nation state. This was never the objective of Zionism which hoped to make of Zion a house of God.

MESSAGE FROM HIS EXCELLENCY HAILE SELASSIE I, EMPEROR OF ETHIOPIA

Mrs. FRANCES P. BOLTON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentlewoman from Ohio?

There was no objection.

Mrs. FRANCES P. BOLTON. Mr. Speaker, it was my privilege during the past months to make a very exhaustive trip to Africa. During that time I had the pleasure of talking at some length with Emperor Haile Selassie, of Ethiopia. He expressed himself as being very appreciative of the courtesies extended to him in this country, particularly that of addressing this great democratic legislative body. He asked me if I would at the earliest possible moment extend to the Members a message of goodwill.

I ask unanimous consent to extend the Emperor's message at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentlewoman from Ohio?

There was no objection.

(The message referred to follows:)

MESSAGE FROM HIS IMPERIAL MAJESTY HAILE SELASSIE I, EMPEROR OF ETHIOPIA, TO THE 84TH CONGRESS OF THE UNITED STATES OF AMERICA

Members of the 84th Congress:

It was, for me, a memorable occasion when I appeared, last year, before the joint Houses of Congress, to testify to my admiration for and confidence in the leadership which the United States, today, is giving to the world.

In so doing, I was expressing, at the same time, the feelings of my beloved people, and, I am sure, of freedom-loving peoples everywhere.

I was deeply touched by the great courtesy which you, Members of Congress, extended to me, and by your attentive and favorable reception of the sentiments and hopes which I voiced on that occasion.

On the opening of the 84th session of Congress, I give expression to the prayer that the Almighty may continue to uphold you in wisdom, in statesmanship and in leadership of liberty—and of the great American people.

DECEMBER 19, 1955.

RELIEVING FARMER OF FEDERAL TAX ON GASOLINE

Mrs. ST. GEORGE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentlewoman from New York?

There was no objection.

Mrs. ST. GEORGE. Mr. Speaker, the President in his recent message on agriculture delivered to the House said the following:

One of the farmer's operating costs is the Federal tax on gasoline. About one-half of the gasoline bought by farmers is used on the farm. I recommend that legislation be passed to relieve the farmer of the Federal tax on purchases of gasoline so used.

Mr. Speaker, I introduced a bill H. R. 7959 to carry out this proposal in the beginning of this session of the Congress. I am reliably informed that many similar bills are still languishing in the Committee on Ways and Means. Some people, who feel they must be critical at all times, like to berate the admin-

istration for not doing certain things, but it might be well if we looked around and found out some of the things that we can do ourselves.

My bill is completely nonpartisan. It will benefit the southern farmer, the northeastern farmer, the western farmer—all farmers in our country. I urge that these bills be given speedy attention and that a bill covering this matter be passed by the Congress in the very near future.

NATIONAL COMMANDER J. ADDINGTON WAGNER, OF BATTLE CREEK, MICH.

Mr. JOHANSEN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include a biographical sketch.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. JOHANSEN. Mr. Speaker, this forenoon, through the courtesy of the House Committee on Veterans' Affairs, I had the high privilege of presenting for the first time to that committee the new national commander of the American Legion, J. Addington Wagner, of Battle Creek, Mich., who gave an able presentation of the Legion's legislative recommendations.

Commander Wagner, who is not only a constituent of the Third Congressional District of Michigan and a fellow townsman, but a greatly respected personal friend, brings to the leadership of the American Legion a wealth of experience, the vigor of youth, a deep-rooted and whole-souled patriotism, and a sincere and proven interest in the welfare of the former serviceman both as veteran and fellow citizen.

In order that this House may become better acquainted with Commander Wagner's distinguished career as an officer in the United States Navy, as a Legionnaire, and as a private citizen, I insert a biographical sketch of Commander Wagner at this point in the RECORD:

J. Addington (Add) Wagner, attorney of Battle Creek, Mich., and a Purple Heart Navy veteran of World War II, was elected national commander of the American Legion by the 37th national convention at its closing session in Miami, Fla., on October 13, 1955.

His rise to the highest office in the American Legion came as a climax to 9 years of outstanding service in his post, his department and in the national organization. At the 34th national convention at New York City in 1952, he was unanimously elected national vice commander for 1952–53. After his term of office as national vice commander, he was appointed chairman of the national Americanism Commission for 1953–54, and vice chairman for 1954–55.

Add Wagner enrolled in General George A. Custer Post No. 54 of the American Legion at Battle Creek, immediately upon his return from his military service in World War II in March 1946. He served in succession as post adjutant, post commander, 3d District judge advocate, member of the department constitution and bylaws and legislative committees and as department commander during 1950–51. He is a member of Voiture 181 of the Forty and Eight.

Wagner was born at Battle Creek, January 22, 1914. He is the son of John A. and Alice M. Wagner. He was graduated from the Battle Creek Central High School in 1932; attended Hillsdale College in Michigan from 1932 to 1934 and received his law degree from the Washington and Lee University Law School in 1937. An outstanding athlete, Add Wagner captained his high school swimming team to a State championship, then as cocaptain at Washington and Lee he led his university swim team to a Southern Conference championship in 1936 and 1937.

Wagner was admitted to the Michigan State Bar immediately after his graduation from college. He has been practicing law with the family firm of Wagner, Wagner & Wagner at Battle Creek since 1937. He is married to the former Virginia Dare Beagle and they have one son, John A. Wagner III.

During 1940–41, Wagner was assistant attorney general for Michigan, and he served also from 1946 to 1948 as chief assistant city attorney of Battle Creek. He has been very active in civic and community affairs. His achievements in this field include membership on the executive board of the Battle Creek Area Council of the Boy Scouts of America; a directorship on the Community Chest; membership on the Greater Battle Creek Industrial Development Committee; affiliation with the Episcopal Church, the Calhoun County and Michigan State Bar Associations, the Battle Creek Chamber of Commerce, the Masons, the Exchange Club, Delta Tau Delta and Phi Delta Phi Fraternities.

Wagner entered the United States Navy, April 6, 1942, and was commissioned as an ensign in the United States Naval Reserve. After completing his training at various centers, he was put in command of an LCI and took this ship for a shakedown cruise via the Great Lakes and the Illinois and Mississippi Rivers to Galveston, Tex. From there he proceeded via the Panama Canal to San Diego, Calif., where his ship became a part of LCI flotilla 36 and proceeded to Pearl Harbor. There the ships were converted to rocket firers for close-up support in amphibious landings. Wagner was wounded during an air attack in the Okinawa operation and sent to fleet hospital III, at Guam. He recovered in time to rejoin his ship to participate in the initial occupation of Japan. He was presented the Purple Heart by Adm. Chester W. Nimitz.

After serving alternately with the 3d and 5th Fleets in the Pacific, Wagner was released to inactive duty on March 23, 1946, as a lieutenant. He was promoted to the rank of lieutenant commander, United States Naval Reserve in 1947. He helped to organize the Naval Reserve unit at Battle Creek and still is a naval reservist.

PETROLEUM PRODUCTS PROFITS DISCLOSURE BILL OFFERED

Mr. HESELTON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD in two instances and to include the text of bills I am today introducing.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. HESELTON. Mr. Speaker, over the weekend the natural gas industry seems to have perfected its latest weapon in its drive to free itself from Federal regulation.

Its attack upon the Washington Gas Light Co. is transparent. The fact that the local company has joined many other distributing companies in opposing passage of the Harris-Fulbright bill must be very disturbing. So, under the guise of requiring disclosure to the consumers of natural gas, we have the spectacle of punishment for expressing an honest opinion as to merits of legislation proposed to Congress.

But the principle of disclosure is one most people can support.

I happen to believe that it can and will be extended. I know of no valid reason why purchasers of gasoline, grease, fuel oils or any other petroleum product should not have the right to know where their dollars and cents go as much as the consumers of natural gas. At this time, when three increases in the cost of fuel oil already have been put into effect, there is more reason for full disclosure than in the case of natural gas.

I regret that the suggested disclosure of the elements of cost of natural gas did not include the amount of subsidy by the Federal Government in the form of depletion allowances, writing off exploration expenses, rapid amortization of plant facilities and the like. I have drafted a bill which covers this as to gasoline and petroleum products. I assume that the sponsors of the disclosure principle in the case of natural gas will promptly offer amendments to their bills to cover this. Possibly other major elements of cost should be specified.

The text of the bill I have filed in the House today follows:

H. R. 8358

A bill to provide that each person selling gasoline or other petroleum products shall make full disclosure to the purchasers with respect to the costs, profits, and Federal subsidies properly allocable to such products

Be it enacted, etc., That this act may be cited as the "Gasoline and Petroleum Products Full Disclosure Act of 1956."

INFORMATION REQUIRED TO BE SET FORTH ON FACE OF BILLS

SEC. 2. Each person who sells any petroleum, gasoline, or other petroleum product which has been transported in interstate or foreign commerce, shall, with respect to such article, set forth on the face of the bill relating to such sale a clear and concise statement of—

(1) the extraction costs,

(2) the refining costs,

(3) the transportation costs,

(4) the sales costs,

(5) any other major item of cost reflected in the price for which such article is being sold, and

(6) the amount of profits received by each person who has handled such article.

In addition, on the face of the bill there shall be set forth a clear and concise statement of the total amount of subsidy under the laws of the United States (whether in the form of the allowance of percentage depletion, in the form of the allowance of exploration expenditures, in the form of tax certificates for the rapid amortization of plant facilities, or otherwise) granted to all persons who have handled such article and which is properly allocable to such article.

INFORMATION WHERE NO BILLS ARE RENDERED

SEC. 3. In the case of any sale described in section 2 for which no bill is to be rendered, the information required by section 2 shall be posted on the fuel pump or other dispenser, or shall otherwise be posted prominently and conspicuously on the premises at which the product is being sold.

INFORMATION TO BE KEPT CURRENT

SEC. 4. The information required to be disclosed by this act shall be revised by each person subject to this act as frequently as may be necessary to ensure full and current disclosure, but in no case shall any such person make such a revision less frequently than once each 6 calendar months.

BASIS FOR INFORMATION

SEC. 5. All information required to be disclosed by this act shall, to the maximum extent practicable, be compiled on the basis of the actual figures. In any case where it is impossible to ascertain any actual figure, there may be substituted for such actual figure a reasonable estimate, but only if such reasonable estimate is arrived at by the proper application of sound principles of accounting.

SPECIAL RULE FOR INDEPENDENT RETAILERS

SEC. 6. (a) Any independent retailer of gasoline or other petroleum products shall be deemed to have complied fully with this act, and shall not be liable for any penalty under this act, if he displays prominently and conspicuously on his premises the information made available to him pursuant to this act as a purchaser of such products.

(b) For purposes of this section, the term "independent retailer of gasoline or other petroleum products" means any person who sells such products at retail other than a person who—

(1) is a producer, refiner, distributor, or wholesaler of such products, or

(2) is directly or indirectly affiliated with a person described in paragraph (1); or

(3) is a lessee of a person described in paragraph (1) or (2).

PENALTY

SEC. 7. Any person who violates any provision of this act shall be fined not more than $100 for each such violation. For purposes of the preceding sentence, each day during which section 3 of this act is violated with respect to any place of business shall be treated as a separate violation.

RESTRAINING VIOLATIONS

SEC. 8. (a) The United States district courts shall have jurisdiction to prevent and restrain violations of this act. The United States attorneys, in their respective districts, under the direction of the Attorney General, shall institute civil actions to prevent and restrain such violations. Such civil actions may be by way of petition setting forth the case and praying that such violation shall be enjoined or otherwise prohibited. When the parties complained of shall have been duly notified of such peition, the court shall proceed, as soon as may be, to the hearing and determination of the case. Pending such petition, and before final decree, the court may at any time make such temporary restraining order or prohibition as shall be deemed just in the premises.

(b) Whenever it shall appear to the court before which any civil action under this section may be pending that the ends of justice require that other parties should be brought before the court, the court may cause them to be summoned, whether they reside in the district in which the court is held or not, and subpenas to that end may be served in any district by the United States marshal therof.

EFFECTIVE DATE

SEC. 9. This act shall take effect on the day which is 90 days after the day on which this act is enacted.

BILL OFFERED TO REQUIRE RAILROADS TO FURNISH ADEQUATE PASSENGER SERVICE

Mr. HESELTON. Mr. Speaker, I have filed in the House today a resolution which would require every common carrier by railroad to render safe and adequate passenger service. The Interstate Commerce Commission would be given jurisdiction and responsibility to require such service and would be empowered to establish penalties and other sanctions for the nonobservance by such railroads of its rules or regulations.

Apparently there is a difference of opinion as to the power of the Interstate Commerce Commission to take any action in this vitally important field of interstate transportation. Since the public utilities commissions of the States cannot take any effective action as to interstate transportation, this leaves a no-man's land in which the traveling public has no protection.

It is gratifying that when Mr. McGinnis sought to withdraw Monday in Boston his effort to become president of the Boston & Maine, Mr. William Griffin, his counsel is reported to have told the ICC examiner that Mr. McGinnis could not be present because he was busy dealing personally with a service breakdown "that I make not the slightest effort to conceal or minimize." However, I believe that the traveling public is entitled to more than that and that the Interstate Commerce Commission should be in a position as soon as possible to act promptly and vigorously in guaranteeing safe and adequate passenger service whenever and wherever responsible railroad officials cannot or will not provide it.

The text of the bill follows:

H. R. 8359

A bill to amend the Interstate Commerce Act to require railroads to furnish adequate passenger service

Be it enacted, etc., That section 1 of part I of the Interstate Commerce Act is amended by inserting after paragraph (4) the following new paragraph:

"(4½) It shall be the duty of every common carrier by railroad subject to this part to render safe and adequate passenger service (including commutation service). The Commission may establish reasonable rules, regulations, and practices with respect to passenger service by common carrier by railroad subject to this part, and the penalties and other sanctions for nonobservance of such rules, regulations, or practices."

SEC. 2. The amendment made by this act shall take effect on the first day of the first month which begins more than 30 days after the date of the enactment of this act.

THE SCHOOL-HOUSING PROBLEM

Mr. RHODES of Arizona. Mr. Speaker, I believe the President has taken the steps that are necessary in solving our school-housing problems. His proposals are in line with the recommendations of the recent White House Conference, and I am sure these recommendations reflect the will of a majority.

I am particularly pleased that the new proposals place the Federal Government in the role of supplementing State and local initiative and resources and that Federal aid will not be permitted to displace State and local effort.

I believe it is absolutely proper that Federal funds be used to help eliminate the existing deficit of classrooms, and, once that is done, to expect the States and localities to keep up with their current needs without the necessity of Federal help.

The President has earned the heartfelt thanks of everyone in this Nation who is concerned about our school-construction problem, for recommending a sound approach to its solution.

ECONOMIC RACE WITH SOVIET RUSSIA

Mr. SMITH of Wisconsin. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. SMITH of Wisconsin. Mr. Speaker, today we are on notice that our Government expects to enter into an economic race with Soviet Russia. To me this is startling news. When we analyze the statement we must realize what is happening to us. It is suggested that every American taxpayer will now compete with the Russian Government, a slave state. If anything will lead to economic collapse in this country, it seems to me that it is this kind of a program. Now that Congress is on notice it seems to me that we have a great responsibility to the taxpayers of this country to make certain that we do not take this first plunge into economic disaster. The Soviet cannot defeat us militarily, but since 1945 they have done it politically, as the continued march of communism will attest. Now our leaders are falling for the propaganda they are spewing on the economic front. We can lose that fight and bankrupt the Nation. Let us use the common horsesense that God gave us.

THE LATE JOHN E. PEURIFOY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to address the House and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, the recent death of our Ambassador to Thailand, John E. Peurifoy, is a personal loss to his many friends and admirers. His tragic death is a great loss to America and to the free world. For John Peurifoy, in his ability to effectively meet and combat communism in the diplomatic field, had made an outstanding name for himself.

He met successfully the destructive efforts of the Kremlin in Greece, later in Guatemala, and at the time of his tragic death, was giving the same type of leadership in Thailand—another danger area of the world.

The life of John Peurifoy is like a Horatio Alger story. There are very few countries in the world where success like his could happen, where real opportunity under the law exists for all. John Peurifoy took advantage of our institutions, and with high-minded ambitions, and his remarkable ability coupled with his determination, advanced step by step to

the high and grave positions of responsibility, and to the one he occupied at the time of his untimely death.

His life is an example for all others to follow, and particularly the youth of America.

It was my pleasure to know John Peurifoy personally and to number him among my valued friends.

Some 3 or 4 months ago, on the occasion of his last visit to Washington, he called in to see me, during which visit we discussed world conditions and southeast Asia, and the Far East in particular.

While he did not tell me in so many words, it was apparent to me that he was concerned with the situation in the Far East. It was clear to me that he had a deep respect and friendship for the government and the people of Thailand. He was warn in his praise of them.

It was also apparent to me that he placed great emphasis on the future of South Vietnam to remain free from Communist domination, and the importance of such freedom to the whole Far East area, from Indonesia to Japan.

In evaluating what he told me, I deducted that it was his opinion that if South Vietnam becomes Communist-dominated, it would be difficult to save Laos and Cambodia from Communist infiltration and control. And if this happened, then Thailand would be directly threatened, which would involve the rest of southeast Asia, with probable effects as far as Japan.

With Thailand strongly anticommunistic and friendly to our country, if South Vietnam, Laos, and Cambodia go to the Communists, both Thailand and the United States will be faced with the making of quick and important decisions. I also drew this deduction from what he had to say.

To Mrs. Peurifoy I extend my deep sympathy in the tragic deaths of her beloved husband and her dear son.

Mr. GARY. Mr. Speaker, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from Virginia.

Mr. GARY. Mr. Speaker, It was my privilege to serve on the subcommittee of the Committee on Appropriations which handled the State Department bill at the time John Peurifoy was serving as Assistant Secretary of State.

I remember quite well that when General Marshall became Secretary of State he selected John Peurifoy for a most sensitive assignment. Secretary Marshall gave him instructions to go through the State Department and weed out any subversive persons. John Peurifoy discharged that duty with great ability. He cleaned up the State Department at that time, as the subsequent record has shown. In fact, the excellence of his work in that assignment has recently been borne out again by published disclosures in the "security risk" controversy. His talents were needed, and his job was well done.

I followed his career with great interest after that, and was indeed pleased to see that the present Republican Administration recognized his abilities. His work in Guatemala and Thailand was brilliant. He was a great American. It was my privilege to know him. I want to pay my respects today to John Peurifoy for his outstanding service to America, and for the great contribution he made toward the promotion of world peace.

His tragic death was a loss to millions of people who may never know his name.

Mr. DORN of South Carolina. Mr. Speaker, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from South Carolina.

Mr. DORN of South Carolina. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD at this point.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. DORN of South Carolina. Mr. Speaker, as a distant relative, personal friend and admirer of the late John E. Peurifoy, I appreciate the kind remarks of the gentleman from Massachusetts and the gentleman from Virginia. Jack Peurifoy was born and reared in South Carolina. He was from a family with a tradition of distinguished service to community, State, and Nation. On the maternal side he was related to the Wrights and Bleases and others prominent in the affairs of Newberry County. On the paternal side his grandfather was Daniel Byrd Peurifoy, a famous legislator of historic Edgefield County. Later that portion of Edgefield County became Saluda.

My father, the late T. E. Dorn, established the first accredited rural high school in Saluda County, at Zoar. Later I was privileged to attend Zoar school which had become famous. Jack Peurifoy's father taught at Zoar school and later became circuit solicitor at Walterboro in the lower part of South Carolina. Ambassador Peurifoy's uncles, Daniel Byrd Peurifoy II and James E. Peurifoy, were distinguished lawyers, the latter becoming circuit judge.

Jack Peurifoy was one of the greatest South Carolinians of all time. He had the love and respect of both political parties in Washington. His service to America in Greece, Guatemala, and Thailand will be long remembered as an example of astute and loyal diplomacy to the cause of freedom. He was not only a great South Carolinian but an outstanding American. His service to democratic principles and ideals is recognized not only in America but throughout the free world. He stemmed the march of communism in Greece and Guatemala and was on the road to doing the same at the time of his untimely death in Thailand.

As Assistant Secretary of State, he will be noted and admired for years to come. Before his death, he had been mentioned prominently as suitable material for Governor of South Carolina, the United States Senate and the Presidency of the United States. By perseverance, determination, courage, and adherence to high ideals, he went from elevator operator to a position of high esteem in the diplomatic world. He was respected and known by all the great leaders of our time. His neighbors, relatives, and friends in South Carolina join me in extending to Mrs. Peurifoy and the surviving son our deepest sympathy. We will miss "Jack" and his lovely little son, Daniel Byrd, whom I remember so affectionately from a wonderful night with them in Athens, Greece.

The cause of freedom everywhere will miss the forthrightness and ability of John E. Peurifoy.

MAJOR ACCELERATION OF FLOOD CONTROL PROGRAMS

The SPEAKER. Under previous order of the House, the gentleman from Mississippi [Mr. SMITH] is recognized for 30 minutes.

Mr. SMITH of Mississippi. Mr. Speaker, sometime within the next few days the President will submit to Congress his budget for the fiscal year 1957. It is probable that the administration will ask for a larger sum for flood control during the coming year than was requested in 1955. Those of us who are concerned about the protection of our natural resources and the lives and property of American citizens are, of course, pleased at the prospective increase.

We are not too happy, however, at the realization that this increase will be forthcoming only because of the flood disasters which struck along the eastern seaboard and in California during recent months. As with agriculture, there are too many indications that those in control of the fiscal policy of this administration prefer to ignore problems until disaster strikes. The Congress must not accept the idea that we can agree to anything short of a major acceleration of our flood control program if our Nation is to be given full protection against this menace.

The Congress has two important jobs to do in the flood control field. First, there must be a major increase in flood control appropriations to meet the immediate needs in this field. There are vast demands for funds for work long overdue. Secondly, the entire authorized flood control program needs to be reviewed, primarily with a view of modifying existing projects to meet changing conditions. Such a review will undoubtedly bring to light many new projects which should be authorized, and it is likely that many will be found to be obsolete.

APPROPRIATIONS

Let us look at the record, for a moment, in regard to this matter of flood-control appropriations. I hope that the Congress will see fit to greatly improve the record of the present administration by the action we take in this session of Congress.

Through the years, Congress has met the responsibility of providing funds for flood control. This was done in increasing amounts until World War II. Only those projects essential to the national defense were carried on during that period of crisis.

Following the war the Corps of Engineers was again able to resume its peacetime activities full-force. Congress resumed its appropriations for flood control. In the fiscal year 1946, $134 million was appropriated for construction

of flood control projects. Appropriations increased annually, reaching a postwar high of $403 million in 1950.

During the Korean crisis appropriations continued at a relatively high level, but fewer new projects were started.

A review of flood control appropriations for the present administration shows a sharp decrease during the 83d Congress and an attempt to restore some the decreases in the 1st session of the 84th Congress. The accompanying table shows graphically what has been done—and what has not been done—on this subject over the past few Congresses. These figures represent the type of expensive economy that the Eisenhower administration has pursued. Healthful progress toward attaining eventual near-complete protection from disastrous floods has been slowed to a snail's pace. The good work of previous administrations, which first recognized and gave form to Federal responsibilities in the area of flood control, is being throttled. If the policy of the 83d Congress in regard to flood control appropriations, on the somewhat specious plea of balancing a budget which never balanced, is continued, many more lives will be lost and much more property will be damaged. Disasters like this can be prevented by a continuation of the policies of previous Congresses.

In his message accompanying the last budget he submitted to the Congress, President Truman said:

> I believe we should no longer defer certain flood-control and power projects which we have repeatedly postponed since the beginning of World War II.

In the message, therefore, he asked for funds for six new starts and additions to projects already in process of construction. In all, funds were requested for 43 projects. In asking for funds for the new projects, he noted that they were required to protect areas which were highly vulnerable. The total requested for construction was some $20 million more than that for the previous year.

EIGHTY-THIRD CONGRESS

However, there was a new administration; new hands were at the helm, and there was another Congress—the 83d. For several months nothing happened in Congress. Then on April 20, 1953, there arrived a supplemental budget with requests for flood-control funds. This request eliminated the six new projects and cut the request for funds for construction from the $116,063,000 proposed by President Truman to $69,669,000. Eliminated also was the highly important item of emergency funds of $6,925,000.

By the time the 1st session of the 83d Congress had finished with even the supplemental budget, the money available for this vital purpose had shrunk to $49,209,000, less than half of what had been requested by the Democratic administration.

That was only half of the darksome tale of the 83d Congress and its ruthless economy.

The following year, in his 1955 fiscal year budget message to the Congress, President Eisenhower included a request for a very modest increase in flood control construction funds. This was for $62,832,000. The opponents of flood control in the Congress went to work. The result—an appropriation of $56,765,000. No new starts were included. No badly neded emergency funds were asked for, nor provided.

A YEAR LOST

The effect of these cutbacks was that the equivalent of a whole year or more has been lost in our ceaseless struggle against the evil forces of nature—a whole year in which many lives could be lost, many homes destroyed, many businesses wiped out, and many jobs lost. In the past few months we have seen floods take their toll. We know that a major part of this damage could have been avoided or sharply reduced.

The 84th Congress in its 1st session has been able to lighten somewhat the otherwise dark picture. Over stormy opposition, the new Congress advanced the total appropriation for flood control construction from the budget request of $85,327,000 to $99,652,000, an increase of 75 percent over the previous year. It is hoped that this trend will continue during the 2d session of this 84th Congress.

Examination of the appropriations of the 83d Congress as they were allocated to the Corps of Engineers for flood control projects is illuminating. What do we find? Bear in mind the disastrous floods in the northeastern States and in California of recent history. In the fiscal year 1954 appropriations, not 1 cent was appropriated for construction of New England flood control projects, and only $290,000 was spent from previously appropriated funds throughout New England. In 1955 only $560,000 was appropriated for this purpose.

Again it is worth noting that for all of the 11 States horribly damaged by the floods following in the wake of hurricane-induced torrential downpours in the past 2 years, the administration requested funds for only a few minor flood-control projects.

BACKLOG AWAITING ACTION

In 1927 when the disastrous flood of that year had created nationwide interest in river control, the total approved program of civil works amounted, in estimated cost, to about $1,200 million, that is, some $1.2 billion. About $800 million had at that time been appropriated to carry out this authorized program, which means that a backlog existed even then of about $400 million worth of work, at 1927 prices.

In 1937, following the increased interest in flood control and waterway development reflected in the passage of the 1936 Flood Control Act—with its declaration of policy that prevention of floods in cooperation with the States and other local political subdivisions was a proper activity of the Federal Government—the backlog of uncompleted projects had grown from $400 million in 1927 to $900 million worth of construction, at 1937 prices. In 1947, after World War II, and when the concept of basinwide development was being generally accepted, the backlog had grown to $5.4 billion, at 1947 prices.

Today the estimated cost of construction of all civil works projects which have been approved for construction by the Congress is approximately $19 billion, of which a total of less than $7 billion has been appropriated; thus, there exists today a backlog of projects, either not started or not completed, of about $12 billion worth of work, at today's prices.

Admittedly many of the projects in this backlog have now become obsolete, or for some other reason should not be built. For the sake of discussion, let us assume that one-third of all the work represented by today's accumulated backlog should, for some reason or another, never be built. Even so, there would still remain $8 billion worth of economically sound, urgently needed, congressionally approved work either not started or not finished. This amount—$8 billion—is greater than the accumulated total of all appropriations made since 1824 for new construction for the Corps of Engineers' civil-works projects.

Now certainly, Mr. Speaker, if there is any statistical support needed for my belief that our water-resources program is critically lagging, it can be found in this ever-mounting backlog of from $400 million in 1927 to the $8 billion of today. I submit that this is at least a red flag we must heed in connection with our endeavors to insure the welfare and even the survival of future generations.

EXAMINATIONS AND SURVEYS

A minor but vastly important failure of the Congress in the matter of appropriations in the past few years has been the drastic reduction in the funds for examinations and surveys. These funds have been reduced so greatly that any major surveys must receive special earmarking from the Bureau of the Budget and the Congress. The reduction in survey funds has been defended with the false logic that there is such a huge backlog of already authorized projects that there is no point to allowing further studies for any new project that might be authorized.

This is a splendid example of that overworked term "false economy." It means that the Corps of Engineers is prevented from making adequate studies of any flood-control problem until some major or minor disaster occurs in the area, bringing sufficient pressure upon the Bureau of the Budget and/or the Congress to make special funds available for the study. It means the corps is barred by lack of funds from exercising the normal review of the worth of existing projects which should be carried on at all times. I hope that Congress during this session will rid itself of this burden of sharply restrictive survey funds.

According to the United States Weather Bureau, the climatic patterns of the Northern Hemisphere are undergoing a change. It is believed that our country will be more and more affected by tropical hurricanes. More in recent years, and even more in the near future, it is believed, of these dreaded hurricanes will strike the United States main-

land with their unleashed fury. Most of them bring torrential downpours. Since the newly developing patterns carry the hurricanes through the most highly industrialized and densely populated sections of the country, the awful possibilities, nay, probabilities, for disastrous catastrophies are truly frightening. Already this new pattern has cost the country 500 lives and an unknown amount of property damage variously estimated at between $1 and $2 billion.

RECENT FLOODS

What is true of the Northeastern States is in varying degrees true of the entire Nation. There have been floods of major proportions elsewhere, too. In 1952 the upper Mississippi River Basin was the scene of a flood of disaster proportions; this and lesser floods throughout the Nation snuffed out lives of 54 human beings and wreaked damage up to an estimated quarter billion dollars. Again in 1953, the State of Maine experienced a sudden thaw which swelled most of its rivers out of their banks; northwestern Iowa and most of the State of Louisiana were the scenes of major flooding. These and numerous smaller floods cost 40 lives and over $120 million in property damage.

In 1954 the Midwest suffered three major floods, the Des Moines River, the Ohio River Valley, and the Chicago area were the worst sufferers. In the same year the Rio Grande Valley was a heavy sufferer from flood waters. High waters in the wake of Hurricane Hazel wreaked considerable damage to the northeastern section of the country. Total damage last year amounted to over $1.6 billion and 44 people lost their lives. As yet, the final toll of the Christmas disaster in California has not been determined.

DISASTER PROGRAM

Special emphasis has been given by the administration and many Members of Congress toward developing some type of disaster-insurance program to cope with situations such as developed in New England last year. I hope that some program can be worked out to alleviate the financial hardship brought on by tragic disasters which cannot be prevented by man, such as hurricanes which come in from the sea. Perhaps there is even some way of helping to establish some reasonable type of flood insurance.

It would be a legislative disaster, however, if the Congress were to accept the idea that the only help we can give the country in our fight against floods is some type of insurance to compensate for damage. The only real insurance there can be is in the form of flood-control projects which will prevent floods. It will be far cheaper in the long run and it is the type of forwardlooking, affirmative approach to the problem which is consistent with every ideal of our American economy.

Our country should no more turn to insurance as a remedy for floods than it should turn to insurance for polio victims instead of devoting the funds to study and research for the development of the Salk vaccine to prevent the disease. Our primary job with floods should be to prevent them, not to alleviate the suffering they cause, as much as we want to do this when a disaster does strike an unprotected area.

REAUTHORIZATION PLAN

The Committee on Public Works hopes to play an active role in the reexamination of our entire national flood-control program that is obviously needed today. Our chairman, the Honorable Charles A. Buckley, has given full rein to Representative CLIFFORD DAVIS, chairman of the Flood Control Subcommittee, and the members of that group to conduct the hearings and studies that are needed.

The reexamination is called for, not because of any failure of the existing program, but because it is obvious that changed conditions and the continual expansion of the American economy make imperative revisions and expansions of currently authorized projects, and necessitate new authorizations that were not considered feasible when the first nationwide surveys were made some 20 years ago.

I am confident that the Congress will be glad to accept sound legislation designed to meet the needs for changes in the authorizations. These new authorizations cannot be properly studied, however, unless there is a change in policies allowing greater funds for examinations and surveys, a problem to which I referred a few minutes ago.

I hope the Congress will meet the challenge brought home to us by the flood disasters over the country last year. We will be derelict in our duty if we attempt to cover up the trouble with some patchwork designed to meet a few of the more publicized needs rather than by providing for new, basic, acceleration in our nationwide flood-control program.

We must provide an adequate and complete flood-control program for the entire United States. To accomplish this program before further major disasters strike, we must sharply accelerate the rate of flood-control appropriations. The program is going to cost money, but it will cost far less to appropriate money for flood-control measures than to pour vast sums into flood relief and subsidies for insurance programs. Beyond that, the cost of flood control is an investment in our national economy that is already yielding dividends in increased national income. The same and an even greater proportionate return can be expected as we complete the program over the country.

Nature will not wait for appropriations. Floods continue, the winds blow, and our loved ones will continue to lose their lives, or their homes, or their jobs, unless the finest and most competent minds, and ample funds, are concentrated on putting a stop to these dreadful things.

One cannot put a dollar value on human life, but the economic loss is measurable and cries for a cessation.

The record of niggardliness in this regard by the 83d Congress must not be repeated. The combination of lessened efforts to control floods and the increased losses calls for, at the very least, a reexamination of policy. It calls for forthright facing up to the problem, a positive and vigorous attack to end as soon as possible the dread fear of roaring, destructive waters on their rampage of wanton destruction. It calls for these things now, before it is too late.

Appropriations for flood-control construction, including multiple purpose projects, fiscal years 1946–56

	Millions
1946	$142.9
1947	166.1
1948	269.7
1949	385.3
1950	403.6
1951	391.2
1952	352.5
1953	288.0
1954	174.2
1955	177.0
1956	224.6

PROGRAM FOR NEXT WEEK

Mr. ARENDS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. ARENDS. Mr. Speaker, I asked for this time in order to inquire of the majority leader if he can tell us the program for next week.

Mr. McCORMACK. I am now in a position to do that.

Monday: Consent Calendar—H. R. 1614, veterans, increased compensation, service-connected disabled; H. R. 1821, checks forwarded, Veterans' Administration.

Tuesday: Private Calendar—H. R. 5055, veterans, cadets, and midshipmen in Spanish War and World War I, benefits.

Wednesday: H. R. 7871, Small Business Act, Sec. 204 (b) Increase Amount; H. R. 6376, Alaska, Hospitalization of mentally ill.

Thursday: H. R. 5649, restrain abuse of habeas corpus; S. 180, construction, operation, and maintenance of Washita River reclamation project, Passamaquody inquiry.

Any further program will be announced later. Conference reports may be brought up at any time.

It is understood by the leadership on both sides that if there are any rollcalls on Tuesday or Wednesday, and I doubt there will be any rollcalls on Tuesday, they will go over until Thursday, because there is a gubernatorial contest in Louisiana. I want the House to be informed on that understanding.

Mr. ARENDS. I thank the gentleman.

CALENDAR WEDNESDAY BUSINESS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the business in order on Calendar Wednesday of next week be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

THE FARM SITUATION

The SPEAKER. Under previous order of the House, the gentleman from Missouri [Mr. CHRISTOPHER] is recognized for 40 minutes.

Mr. CHRISTOPHER. Mr. Speaker, I have sought this time to analyze the farm situation, not to deal with theory but to bring some facts to the Members of this House.

We hear it on every hand that the Democrats should approach farm legislation in a nonpartisan manner, that we should seek to keep politics out of the farm problem. In my opinion, the present farm problem is due to politics, poor politics.

It is not the first time we have encountered this situation. I do not know how many actual farmers are serving on the floor of this House but I myself am a farmer. I have always been a farmer. I am still a farmer. My farm has never had anything to support it and my family except the products of the soil on that farm. I will admit that at the present time it is taking most of my congressional salary to keep that good farm out of the red, but until we get around to the place of changing administrations I do not know whether or not anything will be done about it. I am rather helpless along that line.

As far as the Republican Party is concerned, I think we Democrats will go along and help them enact a good farm program even though they propose it themselves. We Democrats have never had a dog-in-the-manger attitude. As far as I am concerned, I do not care who the author of a good farm program is if it is practical, workable, and will lift the American farmer out of the depression he is in. I do not care who brings this program before the Congress of the United States. Whoever proposes the legislation, I will support it.

That attitude has not been demonstrated by the Republican leadership of the House in this Congress or in past Congresses. I remember back in 1919 when the people wanted a change in the United States and they went to the polls and voted for it and got it. The same thing happened then that is happening now.

In June of 1921, corn in Missouri was worth $1.80 a bushel. In November of that same year, corn was worth 46 cents a bushel. I remember it so very well because I had 3,000 bushels of corn that I wanted to sell. I said, "No, I cannot take 46 cents a bushel for this corn. It was worth $1.80 a bushel last June." So I kept it until the following August and then I sold that corn for 26 cents a bushel instead of 46 cents a bushel. That was in November of 1921. We never have had a Republican victory at the polls in the United States which has not resulted in five things: Lower prices for the food and fiber produced on American farms, higher interest rates, tighter credit, a stock market that broke right out through the ceiling, and a tax cut, 95 percent of the benefits of which went to the superrich and the giant corporations. I ask you, "Does this administration qualify on those 5 counts or does it not qualify on those 5 counts?"

Mr. ARENDS. Mr. Speaker, will the gentleman yield?

Mr. CHRISTOPHER. I yield.

Mr. ARENDS. I was very much interested when the gentleman said that he wanted politics left out of the farm problem.

Mr. CHRISTOPHER. No; I did not say that—I said that the farm problem is full of politics.

Mr. ARENDS. Let us set all politics aside, and let us get the farm problem solved. I want to try to do something to get the farm problem solved for both Democrats who are my friends, as well as Republicans. We are not going to cure it by making political potentials rather than economic realities our approach to this vital question. The question is not so much who is responsible, for each blames the other, but rather how to meet the question before us. Let us try to make suggestions which are objective and constructive, based on economic realities, causes, and effect. I do not care who gets the credit for the solution just so long as we reach a sound solution.

Mr. CHRISTOPHER. I yield to the gentleman to ask a question of me. Now will the gentleman answer this question?

Mr. ARENDS. Yes, I will try.

Mr. CHRISTOPHER. What law can the gentleman point to that has been passed since the turn of the century, which was passed by a Republican House and a Republican Senate and signed by a Republican President that has been good for the farmers of the United States? Will the gentleman tell me of one and what it provided?

Mr. ARENDS. Now the gentleman is getting right back into the question of political credit and political responsibility that I have asked him not to get into. This is not a political question. The farm problem is an economic one.

Mr. CHRISTOPHER. Certainly, your party has never done anything for agriculture except to drive it into bankruptcy.

Mr. ARENDS. Now will the gentleman wait just one moment. There are many factors that have operated to adversely affect agriculture.

Mr. CHRISTOPHER. Oh, yes, European finance and all that kind of stuff.

Well, first you have to get a diagnosis of what ails the patient before you can prescribe a cure.

Mr. ARENDS. The gentleman is just trying to prod me into saying something that I do not want to say.

Mr. CHRISTOPHER. I do not mean to lead the gentleman into saying anything that goes against the dictates of his conscience. If you do not want to say it, do not say it. The gentleman must follow the dictates of his own mind and conscience. Do not pay any attention to me. I can take it.

Mr. ARENDS. Let us try to find a cure for the problem if we can. You are of agriculture and so am I. Let us try to find a cure now and let us quit talking about what has happened.

Mr. CHRISTOPHER. All right, then, I am going to diagnose the patient so that we can know what is wrong.

Mr. ARENDS. All right, let us do that.

Mr. CHRISTOPHER. I am going to find out from whom he got the infection that has made the farmer as sick as he is.

Mr. VURSELL. Mr. Speaker, will the gentleman yield?

Mr. CHRISTOPHER. I yield.

Mr. VURSELL. If I understood the gentleman correctly, the statement made a moment ago on the floor of this House is a gross misrepresentation to the effect that the tax bill which was passed benefited only the giant corporations and big business and that it trickled down from the top.

Mr. CHRISTOPHER. General Motors got $192 million of it in 1 year.

Mr. VURSELL. I want to tell you that the figures show two-thirds of the $7.4 billion went to people in the lower tax brackets at the same time that General Motors and all of the corporations had the high excess-profits taxes on them and the other high corporation taxes. And the only people we really benefited which resulted in getting this country on its feet to produce a market for farm products with the prosperity that we have now was through the tax bill that we passed, which gave the green light to small business and gave everyone an honorable and honest tax reduction; and you know that is a fact.

Mr. CHRISTOPHER. I still stand on my statement that General Motors, when you repealed the excess-profits tax, received a tax reduction of $192 million in 1 year. That was 1954. It will exceed that this year. The gentleman speaks of prosperity. Prosperity for whom? How much prosperity does the American farmer have today? Do 10-cent hogs mean prosperity?

Mr. VURSELL. Mr. Speaker, will the gentleman yield just once more?

Mr. CHRISTOPHER. I yield.

Mr. VURSELL. Is it not a fact that the excess-profits-tax legislation, which was passed by a Democratic Congress, was supposed to be taken off, and the Republicans would not allow it to be taken off at that time?

Mr. CHRISTOPHER. I refuse to yield further. You boys would euchre me completely out of my time if I permitted you to do it.

On October 31, 1955, I wrote a letter to the Honorable Ezra Taft Benson, Secretary of Agriculture, United States Department of Agriculture, Washington, D. C.

Let me say in passing that I am tired of having this farm debacle that has bankrupted the American farmer, referred to as the Benson program. Secretary Benson is an estimable Christian gentleman. I consider him such. He has been maligned from one end of this country to the other. I want this farm program referred to as the Republican farm program; yes, the Eisenhower farm program. There was never anybody very careful about criticizing Franklin Delano Roosevelt from the left side of this aisle. Nobody seemed to hesitate on that side of the aisle in criticizing Harry Truman, of Missouri, when he was President of the United States. Ezra Taft Benson is the President's hired man. He does not need to employ him a second month when he does not agree with what Mr. Benson is doing. It is high time we quit blaming Mr. Benson for these things and put

the blame where it belongs, on President Eisenhower and this Republican administration, and let Mr. Benson have a rest.

Now I want to read the letter that I wrote to Mr. Benson:

OCTOBER 31, 1955.

The Honorable EZRA TAFT BENSON,
Secretary of Agriculture,
United States Department of Agriculture, Washington, D. C.

DEAR MR. SECRETARY: The Associated Press report of your recent conference with the President at Denver, Colo., as it appeared in the Kansas City Star of October 30, 1955, has just reached my desk.

Being a farmer myself, I have read this article with a great deal of interest. It is reported that you believe the future of agriculture is bright and that the President shares this belief. You are also reported as having said that farm debts are at a record low level. That statement in no way agrees with the record.

Quoting from Agricultural Statistics, 1954, prepared under the direction of the Yearbook Statistical Committee, Department of Agriculture, page 502, table 619, I find that during the first 2 years of your administration of the Department, namely 1952 to 1954, the total mortgage debt on farms in the United States rose from $6.5 billion to $7.6 billion, or an increase of $1.1 billion.

During the same period, from table 696, page 506, it is shown that farmers increased their bank borrowings from $3.4 billion to $4.4 billion, indicating they were forced to increase their bank borrowings $1 billion during the first 2 years of your administration.

Again this book shows, page 432, table 609, that the inventory value of farmland and buildings decreased from $93.6 billion to $89.8 billion, for an inventory loss of $4.5 billion. During this same period, it is noted on the same page of the above mentioned table, the value of livestock on farms decreased from $19.5 billion to $11.8 billion, for an inventory loss of $7.5 billion, notwithstanding the fact there were more livestock on farms in 1954 than there were in 1952.

The September 1955 issue of Farm Income Situation, Agricultural Marketing Service, shows that total net farm income in 1952 was $14.3 billion, for 1953 it was $12.3 billion, and in 1954 it was $12.0 billion which means a loss of $2.3 billion during that period.

The farmer is spending his savings; he is increasing his bank debt and raising the mortgage on his farm. He is apparently following the same road traveled in the twenties, and unless the trend is reversed, we will all find ourselves in the same national chaos experienced in 1932. If the American farmer is not receiving the cost of production plus a reasonable profit for the food and fiber produced on his farm, he will spend his savings and when that is exhausted, reach up in desperation, lay hold of every segment of our economy, and pull it down to ruin—just as he was forced to do in the early thirties.

Industry has its protective tariff; labor has its minimum wage; the oil and mining industry has its depletion allowance. Every segment of our economy is subsidized and protected to a greater or lesser extent by the Federal Government, and the farmer must have adequate price supports if he is to survive in a protected and subsidized economy.

I would respectfully suggest that as Secretary of Agriculture you cease whistling in the dark and take effective action while there is still sufficient time.

Yours very truly,

GEO. H. CHRISTOPHER,
Member of Congress.

I mailed that letter to the Secretary on October 31, 1955. I quote the first paragraph of his reply to my letter:

The correctness of the figures you quote is hereby acknowledged.

That letter is on file in my office. If anybody doubts it they can come to my office and read it. Those are the figures I just gave you. The Secretary of Agriculture wrote back to me and said:

The correctness of those figures is acknowledged.

Mr. BYRNES of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. CHRISTOPHER. No.

Mr. BYRNES of Wisconsin. Why does not the gentleman read what further the Secretary wrote him? Why not put the whole letter in?

Mr. CHRISTOPHER. It is over in the office. I will lend it to you. You can put it in if you want to. I am not afraid of it.

Yesterday I sent to the Department of Agriculture and got the recent parity index. It shows that corn as of December 15 was selling for 63 percent of parity; barley at 69 percent of parity; cottonseed at 64 percent of parity; flaxseed 64 percent of parity; beef cattle at 64 percent; hogs at 50 percent of parity; lambs at 71 percent of parity; and sheep at 55 percent of parity.

They talk about a sliding scale of price supports. It is contrary to the law of gravity for anything to slide any way except down; when anything goes up it has got to be pulled up or pushed up, it does not slide up. The same is true of the sliding scale of parity.

Now if you want to compare Republicans and Democrats—it would be just as well to get used to doing it because you are going to have to if you survive—we have demonstrated as a fact just last year—I want to apologize for my remarks to the 21 Republicans who stood up on the left-hand side of this aisle and voted for 90 percent price supports last year. It takes more courage to do that on the left-hand side of the aisle than it does on the right. But those 21 stood up and demonstrated by their votes that they cared what happened to the American farmer. One hundred and seventy-two Republicans, however, stood over there and voted the other way. That is a matter of record; that is not propaganda; you can find that in the CONGRESSIONAL RECORD. That is the way it has been all during the history of these programs.

The Republican Party could have given us the Federal land bank. Did they do it? No. A Democratic House and Senate gave us the Federal land bank. Woodrow Wilson, a Democratic President, signed that legislation. Incidentally, those Federal land bank organizations have retired their last Government bonds. They put a stop to the 7, 8 and 9 percent mortgage interest on contracts that became due every 5 years in which the loan company charged 5 percent commission on top of the interest to secure the loan and at the end of 5 years charged a renewal commission of 2½ percent. Did we get Federal land banks from the Republican Party? We did not. We got them from the Democratic Party and over all the opposition that the Republican Party could muster. It was not by and with their consent but in spite of everything they could do to keep us from getting them.

I wonder how we got our bank deposits guaranty? Did they do that? Oh, no. Mr. Alf Landon, at one time Republican candidate for President of the United States, stated in one of his speeches that you could not insure or guarantee bank deposits, and it would not be right to do it if you could. But the Democratic Party under that greatest of all our Presidents, Franklin Delano Roosevelt, not only could do it but did do it and it was right.

Did the Republican Party ever give us a price support program? Did they ever slip a floor under any agricultural prices? Did they give us REA? Did they give us a Securities and Exchange Act to protect the American public against swindlers and speculators? Did they give us TVA? Oh, no. But they gave us Dixon-Yates, do not forget that. They talk about taking politics out of the farm program. I have asked many Republicans the same question that I asked the gentleman from Illinois and I got the same answer that the gentleman from Illinois gave me. No answer. The reason is plain, there is no answer.

Mr. Speaker, the people of these United States received all the good liberal legislation that was ever passed in their favor, not only the farmers but everybody that had to earn a living some way except by clipping coupons, from the Democratic Party.

Texas voted for this administration, believe it or not. I want to just use a few minutes here to show you how this administration rewarded Texas for that Republican victory down there. In 1952 their cattle at inventory value on their farms and ranches was worth $832,200,000. That was the total value of cattle on Texas farms and ranches. Two years later those same cattle were worth $592,000,000, which took $240,100,000 off the price of their cattle in those 2 years. They will not vote for another Republican administration. Well, with that kind of inventory value on their cattle, Texas farmers, instead of paying their mortgages, borrowed $113,600,000 more from the loan companies because they could not make it on their farms and ranches. They went to their bankers for $2,700,000 more money in 2 years. The chattel mortgages on their farms, implements and livestock increased an additional $194,000,000 in 2 years. This administration cost Texas farmers a grand total of $754,700,000 in its first 2 years and the end is not yet.

The authority for the above figures? The Book of Agricultural Statistics of the Department of Agriculture for 1954. That is what the administration Texas voted for did to Texas.

Any time a man that has to earn his living with his hands or his brains votes the Republican ticket he is voting against his own interest, and it is high time the Democrats had the courage to get up and face the public on the floor of this House

and all over this Nation and tell the American people the truth and let the chips fall where they will.

What has happened to the farmers of the United States? I cannot get all the figures for 1955. I hope by April or May I can get them, because the trend in 1955 has been just the same as the trend was in 1954 and 1953, only it has, as it has rolled down the hill, gained much momentum. I wish I had the figures for 1955, with 10-cent hogs. The only reason the grain market has not gone down any more than it has is because there is a little hamstrung, emaciated skeleton of our old price-support program left, and Republicans are seeking to destroy it just as fast as they can. Mr. Eisenhower says that the deepseated farm problem has been attacked with forthrightness. Well, if this is the result of the attack, I wish to God he had not attacked it. In inventory and loss of income this administration has cost the American farmer $14 billion in 3 years, and that is more than they are worth, as far as Ezra Taft Benson and as far as their legislative program is concerned.

"Oh," Republicans say, "all that liberal legislation was passed by Democrats because we never had a chance." They have been in power more years in the last century than the Democrats, and still every piece of liberal legislation that was good for men and women who have to earn their living was passed by the Democratic Party. The Reconstruction Finance Corporation is the only piece of liberal legislation that the Republican Party can claim in 50 years, and that was designed not to help the little businessman but so they could loan Charley Dawes, of Chicago, $90 million. That is why it was designed. Now, I am not saying they should not have loaned Charley $90 million. They had to to save his bank from going broke. But, there were a lot of other little banks all over the country that were just as deserving as Charley and his bank that did not get anything. Not even honorable mention. More than 9,000 banks failed during the period 1920 to 1932 and not a single deposit in any one of them insured.

You know, if I was worth $100 million, I might be a Republican, but I am just too poor to be a Republican, because all they will seek to do is to make me poorer. If I had $100 million, they would seek to make me richer. This is an old story. It is as old as I can recollect. And I can recollect back a long time. I can recollect back to the time that William McKinley lived out here in the White House and Mark Hanna, of Ohio, was Acting President of the United States. Then I lived through the Harding, Coolidge, and Hoover administrations and produced beef and pork and milk and eggs and wheat, and the more of it I produced the poorer I got. And while those three Presidents and their families lived out here on Pennsylvania Avenue in the White House, Andrew W. Mellon was Acting President of the United States, and it is very little commemoration or acknowledgment to just put his name on a postage stamp. Why, for a man that was Acting President of the United States for 12 years and then just honoring him by putting his name on a postage stamp, I do not think they are treating his memory right. Now we have two generals taking care of us: General Eisenhower living in the White House and General Motors running the United States.

What we have to have—and all farmers know it—is a minimum of $20 a hundred for No. 1 butcher hogs; we have got to have a minimum of $30 a hundred for choice, prime cattle; we have got to have a minimum of $2.25 a bushel for wheat, $1.60 for corn, and $6 a hundred for grade-A milk. And if we do not have it, we cannot go anywhere except to a foreclosure sale or a sheriff's sale. Those are the only two things we can attend unless we get those prices.

Whether we get them by price supports, whether we get them by production payments, does not make any particular difference. This heralded soil-bank proposal I am not going to condemn, but the Republicans did not think of it. It is a carryover from our old diverted acres that we had in the corn-hog program. And, just like everything else, if it is put in operation, the big man will get a big payment and the little man will get practically nothing. It is designed for the broad acreage landholder and the rancher. He has more land than he needs so he can rent the Federal Government some. But the little old boy who has only 5 acres in cotton, what is he going to do? The diversified farmer in Missouri and Iowa and Illinois, who has 80 or 120 acres, has not got enough land to operate efficiently as it is. How can he rent part of his land to the Government? It is all right as an adjunct, but prices are the keystone that goes into the top of the arch. Without it, the whole structure collapses. I do not care if you dress it in silk and deck it with diamonds. We have got to have prices.

An Assistant Secretary of Agriculture says that these farmer losses in inventory were just statistical losses. Anything is statistical if you keep a record of it. If you run out of money and go down to the bank, if the banker will still lend you some money, you give him a statistical note. But if you cannot make enough money to pay it, he can statistically sue you for it and then the sheriff can statistically sell your home to satisfy the judgment. It is just that simple.

If the Republican Party wants this farm issue approached in a nonpartisan manner, let them bring out a good farm bill that will do the farmer some good in 1956; not in 1958 or 1959 or sometime away in the future.

The farmer needs a blood transfusion. He does not need orange juice and vitamin pills. He is too far gone for that. If we give him a blood transfusion, then maybe they can feed him some vitamin pills and orange juice and keep him in good health. But for 3 years he has been bled to death. This acreage retirement program, under the soil bank plan, might help him sometime in the distant future. It is not without merit. It is a good old Democratic idea that they have dug up and revived and dressed in a new suit of clothes.

Republicans said all during the first 2 years of this administration we did not have any farm problem. The adjustment was over. We were all right. There was not anything wrong with us.

It is just like that old jingle:

> Last night I saw upon the stair
> A little man who was not there.
> He was not there again today
> Lord how I wish he would go away.

That was their attitude through the first 2 years. But now they admit that the little man is on the stairs. But they want him to jump down. They do not want to put up a ladder to him so that he can get down.

This Congress must do something effective about the agricultural situation; and whatever is done must be effective in 1956. This House voted to restore 90 percent price supports to basic commodities last year. I trust the Senate will pass that bill soon. Equalization payments should be instituted for all other farm commodities, at not less than the difference between the selling price on the open market and 90 percent of parity. Of course, allotments and acreage controls will have to continue. Perhaps the so-called soil bank plan would help. But it is by no means the cure-all which its present sponsors would have us believe.

Look at milk. My farm revolves around a Holstein dairy herd. It says here in this price index put out by the Department of Agriculture that milk was bringing the producer on the farm a price of $3.99 per hundredweight. It says that milk was selling at retail at 21.2 cents per quart during this same period.

Mr. Speaker, there are 50 quarts of milk in a hundred pounds. Half of $21.20 is about $10.60. According to this book, the farmer produced milk for $3.99 a hundred and the milk is being sold to the consumer for $10.60 a hundred. To say that I do not like that is the under statement of 1956 to date. Eight cents per quart to the farmer and 21.2 to the consumer; 8 cents for the farmer 13.2 cents for the distributor. But we get that every time we elect a Republican administration. Do not forget it. You can forget politics if you want to on the floor of the House and in committee rooms and in the handling of this legislation, but whenever you forget politics in the voting booth you are not taking care of your own interests.

THE LATE MORGAN G. SANDERS

The SPEAKER pro tempore (Mr. FASCELL). Under previous order of the House, the gentleman from Texas [Mr. GENTRY] is recognized for 30 minutes.

Mr. GENTRY. Mr. Speaker, it is with great regret that I advise the House of the passing on last Saturday of an esteemed former Member, the Honorable Morgan G. Sanders, of Texas.

Congressman Sanders had a distinguished career, not only in the public service but in the pursuits of private life.

He was born in Van Zandt County, Tex., and that country remained his home throughout his long and useful life. A descendant of a fine, pioneer family, he graduated from Alamo Institute at the youthful age of 17 and immediately became a school teacher, a

profession he followed for 3 years. At the age of 20 he was the owner and publisher of a weekly newspaper, after 4 years of which he resumed his formal education by commencing the study of law in the University of Texas. During his years of attendance at the university he was assistant journal clerk of Texas State Senate, his first position in the service of the people.

In 1902 Mr. Sanders was admitted to the practice of law and in the same year was elected as a representative of his county in the Texas Legislature. That was the beginning of 28 years in elective public office, the last 18 of which were as a Member of Congress. With great distinction he served successively as State representative, county attorney, district attorney and congressman. He was a Member of this House from March 4, 1921, to January 3, 1939. Upon his retirement from public service at the age of 59 he became the senior member of a prominent law firm in his home town of Canton, an association that existed until his death.

A lifetime member of the Baptist faith, he was for many years the teacher of the Morgan G. Sanders Bible class of his home church.

Congressman Sanders was a man of high integrity, tireless industry, and keen intellect. It has often been said to me by those who served with him here that he utilized his great talents both in his labors on the floor of the House and as a member of the Naval Affairs and Ways and Means Committees. He was a gifted speaker, a reminder of the days when he was known as a boy orator, and he was especially effective in the daily rough and tumble of House debate. He had strong convictions and he possessed the courage to frankly express them, a very rare virtue in public life today. One of his greatest virtues was unswerving loyalty to his friends.

Congressman Sanders served faithfully in the great American tradition and he enriched the lives of many devoted friends. While his earthly tenure is ended, the pages of his country's history which he helped write are a rich heritage to be cherished by his family and the many others who admired him.

In addition to his widow, Congressman Sanders is survived by one son and two grandsons, all three of whom are prominent doctors, his son being the mayor of his city.

The people of the Third Congressional District of Texas have lost a most worthy citizen and the Congress an outstanding former Member.

Mr. POAGE. Mr. Speaker, will the gentleman yield?

Mr. GENTRY. I yield.

Mr. POAGE. Mr. Speaker, it was my pleasure to serve with the Honorable Morgan Sanders when I first came to the Congress. In fact, he was the first Member of the Congress I ever had an opportunity to visit and talk to in regard to the workings of the Congress and the mechanics of what was expected of a new Member. I found Mr. Sanders to be one of the most sympathetic and most helpful and most intelligent gentlemen I have ever had the opportunity to associate with. He was an outstanding Member of the House of Representatives. He rendered a great service to his State and Nation. The entire country is a loser as a result of his passing.

WE ALREADY HAVE AN IMMENSE SOIL BANK

Mr. HOSMER. Mr. Speaker, I ask unanimous consent to extend my remarks at the conclusion of today's special orders.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. HOSMER. Mr. Speaker, the President has made a very commendable proposal to relieve the farm problem by use of soil banks. Few people know that the deposits he envisions will be additional to nearly 21 million acres of fine farmland in 19 Eastern, Southern, and Midwestern States already in the bank.

These 21 million acres are good cropland now lying idle in the farms of these 19 States—States and acreage amounts tabulated below. They are not woodland or pastureland. They are good, unused farmland in soil classes I, II, and III.

The interest the Nation will be paid by the existence of these two soil banks should not be diminished by inconsistent reclamation programs, such as the upper Colorado River project, which would bring large amounts of new land into production.

If 40 million acres are to be taken out of production, as proposed by the President, and placed in a soil bank and reserve for future use, then these idle 21 million acres must be added to the total. Thus, the proposed soil bank would have deposited in it a total of more than 60 million acres.

Early last fall I began a study to determine the amount of idle cropland in certain areas of the Nation.

Specifically, the question I wanted answered was this: How much good agricultural land is unused in farms in the humid sections of the United States?

PURPOSE OF SURVEY

Evidence has indicated to me that there was a large amount of good land in eastern, southern, and midwestern farms that was not producing crops.

How much?

In line with my opposition to the proposed multi-billion dollar upper Colorado River project, I considered this a matter of great significance.

The upper Colorado River project would bring into production more than half a million acres of cropland, the major part of which would produce crops of the kind already in great surplus and heavily supported by the taxpayers.

In the present session of the Congress, the problem of our mounting surpluses has priority on the legislative calendar. Congress will consider a plan for decreasing the number of acres producing crops in surplus.

Yet, while Congress is struggling to decrease the number of acres now producing agricultural products, it is being asked to approve a gigantic irrigation project that would bring more acreage into production at extremely high cost.

Data before me at the time Congress adjourned last year showed that large amounts of the acreage contained in farms was literally soil in the bank. That is, we already had a large soil reserve that might be brough into production when and if this country needed it to produce food and fiber.

My observations were begun before any specific soil bank program was officially tendered the Congress for consideration. Now that has been done. However, I shall not dwell on the present legislation designed to curtail our agricultural production and decrease the enormous load of surpluses.

I shall report on the findings of my study of idle land in farms. These findings show us that all during the time we have been burdened with the dilemma of a mounting agricultural surplus, we already had an enormous amount of our best farmland lying completely unused.

Here, on the one hand, are millions of acres of first-class agricultural land lying idle in areas of adequate rainfall. On the other hand, legislation before Congress proposes to spend enormous amounts of public money to bring more acreage into production in such developments as the upper Colorado River project. In addition, the Reclamation Bureau is proposing an extensive program for developing hundreds of other projects, all designed to increase our agricultural production with money from the same taxpayers who are paying heavily to support crops and store them.

IDLE LAND SURVEY FINDINGS

My survey of idle land in farms showed there are nearly 21 million acres of fine farmlands now lying idle in 19 Eastern, Southern, and Midwestern States.

In determining this total—precisely 20,937,153 acres—only agricultural lands in classes I, II, and III, the best farm land, was included in the survey.

The acreage tabulated was contained in privately owned farms.

Woodlands, pasture, or lands owned by the Federal Government, municipalities, or school districts was not considered.

Some of the land tabulated had a history of agricultural usage, but was idle in all respects, according to the latest data available.

Official records of the United States Soil Conservation Service were the basic source of the information obtained. Permission to examine records and to confer with field officials was obtained from Soil Conservation Service headquarters.

A trained researcher visited each of the 19 States in which the survey was conducted, and at State headquarters of the Soil Conservation Service conferred with soil scientists and engineers.

Every effort was made to obtain the most factual data, and no information was included that was not approved by the Service officials.

THE STATES SURVEYED

The States in which my survey was conducted all lie in the humid section of the country, where crops depend upon rainfall, and where irrigation, if used, is supplemental. It is interesting to note that even in these sections of more-or-less dependable rainfall, supplemental

irrigation is being used increasingly to assure annual production. Thus, in the Eastern, Southern and Midwestern areas of the Nation, supplemental irrigation is helping to increase production and contributing to the prevention of crop failures.

The States selected for my study may be divided into three general geographic sections.

Midwestern States: Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri.

Southern States: Arkansas, Louisiana, Mississippi, Alabama, Tennessee, Kentucky.

Southeastern States: Florida, Georgia, South Carolina, North Carolina, Virginia.

Tabulation of idle farm land, in classes I, II, and III only, in the South, Southeast, and Midwest as obtained from the U. S. Soil Conservation Service

SOUTH

State:	Acres
Alabama	823,564
Arkansas	2,723,547
Kentucky	671,673
Louisiana	2,487,300
Mississippi	1,270,691
Tennessee	279,563
Total	8,256,338

SOUTHEAST

State:	Acres
Florida	2,037,392
Georgia	972,748
North Carolina	4,264,763
South Carolina	492,309
Virginia	919,307
Total	8,686,519

MIDWEST

State:	Acres
Illinois	627,185
Indiana	231,780
Michigan	1,761,390
Minnesota	564,702
Ohio	491,098
Wisconsin	124,133
Iowa	50,759
Missouri	143,249
Total	3,994,296
Grand total	20,937,153

CONCLUSIONS

Here is evidence to show that while Congress is being asked to approve enormous costly new irrigation projects, at least 20,937,153 acres of the best American cropland are unused for any purpose.

Right now we have before us in Congress the gigantic upper Colorado River project. Unquestionably the most expensive and unsound scheme yet devised, it alone would bring into production more than half a million acres in high barren, remote areas of Wyoming, Colorado, Utah, and New Mexico.

With millions of acres of the best farmland awaiting the plow in areas where the rainfall is heavy and the growing season long, it is proposed to force this great new burden of the upper Colorado River project on the American taxpayers.

I consider the findings of this survey nothing short of amazing. In addition to the 21 million acres of the best farmland that is now idle in 19 States there are millions of other acres in lower soil classes and in other States that are idle in the humid area of the Nation. Much of this idle lower class land could be improved with little cost and developed into pasture.

These millions of idle acres of the best lands are close to markets, to population centers, with roads and transportation running through them, and with schools and municipal governments established.

Where the multi-billion dollar upper Colorado River project would be built, there is little population, few roads, no metropolitan markets, few towns. The enormous cost of establishing municipal governments, police forces, schools, building of highways and new towns must be added to the cost of developing the arid lands.

It is an unbelievable proposal for the purpose of growing more farm products of the kinds already in great surplus while there are these millions of acres of good idle land in the Midwest, South, and East.

The Bureau of Reclamation would have us believe that we must spend billions to develop projects like the upper Colorado in order to provide food and fiber for our growing population.

That simply is not true. On the presently producing farmlands we are growing so much food and fiber that we cannot find adequate space to store it. The President has asked that 40 million acres of our presently producing lands be placed in a soil bank.

Each year new methods are reported for increasing per acre yields.

Yet the Bureau of Reclamation would have Congress appropriate billions of dollars for such unnecessary and wasteful projects as that proposed in the upper Colorado Basin. This project alone would saddle a new $4 billion tax loss on the Nation's taxpayers. The four States benefiting would pay less than 2 percent of the cost. Taxpayers of the other 44 States would have to pay the balance.

The cost of bringing the millions of acres of good farmland now idle into full production would run from only $15 to $150 an acre—when and if they are needed.

Compare that with the $5,000 an acre cost of building the upper Colorado project and you see how inconceivable the scheme is. Bringing into production the good lands now idle in the East, Midwest, and South would cost the taxpayers nothing. In the upper Colorado project the taxpayers would have to pay not only the excessive cost of building the irrigation projects, the roads, schools and other necessary comunity projects, but then the taxpayers would have to subsidize the crops that would be grown, such as dairy products, grains and wool. The whole thing is nothing short of economic idiocy.

UNITED STATES FISHERIES

Mr. WILSON of California. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. WILSON of California. Mr. Speaker, on January 3 I introduced a bill, H. R. 8001, which had as its purpose the strengthening of the commercial fisheries segment of the national economy. On Monday three of my colleagues introduced identical legislation and I am informed that a number of other members of the House who come from districts around the rim of the country where the fishing industry has its home ports are preparing similar legislation for early introduction.

A press release issued yesterday by the Department of the Interior entitled "Fish Volume and Value Drop Below 1954 Level," highlights the reason why we are all interested in such legislation at this time.

The salmon pack of 1955 was the lowest since 1906 and its value was $10 million less than in 1954. The Maine sardine fishery production was the lowest since 1940. Halibut landings were off six million pounds and earnings to halibut fishermen were down $2.6 million. Shrimp which have recently passed tuna as being the most valuable fishery on the basis of income to fishermen was off in both catch and value. The catch of tuna was down by a full 20 percent and earnings for tuna fishermen were a full $17,000,000 less in 1955 than in 1954.

At a time when the general economy of the country is prospering at record levels, the commercial fisheries section of the Nation is not only not sharing in this prosperity but it is retrogressing in a sharp manner. This is causing distress in thousands of homes in the maritime districts of the country which send their menfolks out to harvest the sea.

These cited figures do not represent a simple short-term variation in the yield of the fisheries. They represent a continuing trend which has been apparent for the past 5 or 6 years and which shows no sign of an upturn. Many of our small fisheries which once contributed so much to so many fishermen have almost or quite disappeared under the crushing weight of cheap imports. Examples of this in my own district are the once prosperous fisheries for bonito, for swordfish and for sharks, none of which are fished any longer because the fishermen cannot afford to go to sea for them.

The great New England fisheries which were the Nation's first industry have been progressively decaying under the crush of cheap imports in the past several years. The salmon fisheries of Alaska, which are by far the most valuable industry of that Territory, have been shrinking steadily in production for many years because a lack of research has made adequate conservation impossible. The shrimp fishery of the gulf and South Atlantic States which has grown sharply in the past 10 years has now leveled off and begun its decline as the production of newly established foreign fisheries begins to be felt in our markets. The crab fishery of Alaska and the Pacific Northwest is hard put to keep alive. The sardine fishery of southern California which was the

largest fishery of the Nation, as short a time as 10 years ago, has reached such a low ebb that it is no longer mentioned among the important fisheries of the country. Monterey, Calif., which for many years was the largest port for fish landing in the country is no longer even among the first 10. The lobster fishermen of Maine can scarcely keep their heads above water in the flood of lobster tails from abroad.

In my district is located the tropical tuna fishery of the eastern Pacific which until the last 2 or 3 years was the most valuable single high-seas fishery that the United States had. It is important in the entire economy of San Diego. The Department of the Interior figures cited above show that the tuna fishermen landed $17 million less tuna in 1955 than in 1954. Nearly all of this drop in value of tuna landings was absorbed by San Diego fishermen.

These cold figures mean little when compared to the national income, but when they are translated into the income of several thousand homes in San Diego they mean a tremendous amount in human values.

The difficulties of the tuna industry have been building up steadily since 1950. They are complex. Their sources are several. The import problem has been a major consequence. The inability of vessel owners to obtain long-term credit for vessel construction and maintenance, lack of oceanographic research to make the catching of tuna cheaper, unpredicted and violent variations in the size of the market, and other causes have contributed to the problems of the industry. This trend is summed up in the fact that in 1951, 214 large tuna clippers operated out of San Diego and at the beginning of 1956 only 158 do so.

In talking with my colleagues from other fishing districts on the west coast, the gulf coast, the east coast, and the Great Lakes, I find that they have the same worries as we do in our area and that the reasons for the decline of the commercial fisheries in their areas is similarly complex and does not arise from the same causes in all areas.

We have considered that these conditions are general in the fishing industries of the Nation and that their solution must be sought in legislation of a general nature rather than specific legislation for each fishery.

We think that the first thing that is needed is for the Congress to state a policy for the commercial fisheries of the country, for the guidance of the Executive, to say that the commercial fisheries make a material contribution to the food-producing segment of the national economy and strengthen the defense of the United States, and to declare that it is the intent of Congress that the fishing industry should be kept in a healthy, prosperous, and productive condition.

Secondly, we believe that there should be created in the executive branch of the Government an office on a policymaking level which will have as its primary responsibility the carrying out of such policy for the commercial fisheries.

Thirdly, we believe that this office should be granted sufficient functions to enable it to carry out such a policy adequately and expeditiously.

These are the three purposes of the legislation which my colleagues and I have introduced. If this legislation becomes law, we believe that the downward trend of this valued segment of our economy will be arrested and that the commercial fishing industry can once more become strong, prosperous, efficient, and thriving and can once more be in an adequate position to contribute to the welfare and defense potential of the country as it has done since Pilgrim days.

FEDERAL AID TO EDUCATION

Mr. SCHENCK. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. SCHENCK. Mr. Speaker, my long experience and close association with public-school problems enables me to carefully appraise the value of any suggested plans for Federal aid to education.

Federal aid to anything is often misunderstood because of the failure to recognize that any aid distributed by our Federal Government must first come from local taxpayers in every community throughout our Nation. Also, the furnishing of Federal aid to education must be carefully done so that complete control of our schools will remain under local boards of education serving in accordance with State laws.

Justification for a national interest in assuring proper educational opportunities for all our children rests, of course, on the knowledge that people and their children move about a great deal in our Nation. Youngsters now of school age will, in an almost unbelievably short time, assume all the responsibilities of citizenship as parents, employees, business and professional people and public officials. Therefore, we must have proper school facilities and well qualified teachers if we are to continue to have a great nation. Children who are denied educational opportunities because of the lack of facilities and well trained teachers can never entirely regain this time lost. We cannot declare a moratorium in the lives of children because they continue to grow and develop one way or another every day.

There is a wide difference of ability throughout our Nation in the ability to provide proper public schools. This can be brought right home to us by even a cursory look at the differences in the financial ability of our school districts within our own area.

Therefore, there is considerable merit in the President's proposal for some Federal aid to provide at least the basic needs for the education of our rapidly increasing number of children.

These needs were clearly pointed up in the White House Conference on Education late last year which was preceded by other conferences held in each State. President Eisenhower's special message follows these recommendations and points up clearly some of the steps which should be taken by Congress. The Committee on Education and Labor in the light of these recommendations will make detailed legislative proposals during this session and I intend to study them very carefully in light of the need and my own experiences with these problems.

It is my earnest hope that no extraneous situations will prevent proper consideration and action.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House following the legislative program and any special orders heretofore entered were granted to:

Mr. WILLIAMS of Mississippi (at the request of Mr. WINSTEAD), for 45 minutes on Monday next.

Mr. SISK, for 45 minutes on Tuesday, January 17, 1954.

Mr. DONOVAN (at the request of Mr. DELANEY), 1 hour on Tuesday next, following the legislative business of the day and any special orders heretofore entered.

Mr. SIKES, for 15 minutes on Monday next, following the legislative business of the day and any special orders heretofore entered.

Mr. BAILEY, for 20 minutes on Wednesday next.

Mr. HILL, for 1 hour on Tuesday next.

Mr. POWELL (at the request of Mr. MCCORMACK), for 1 hour on Wednesday next.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. FISHER.

Mr. VANIK.

Mr. PRICE (at the request of Mrs. SULLIVAN) and to include extraneous matter.

Mr. GENTRY to include a speech made by him before the national convention of the American Automobile Association notwithstanding that the cost is estimated by the Public Printer to be $300.

Mr. LESINSKI.

Mr. GROSS and to include extraneous material.

Mr. PATTERSON and to include extraneous material.

Mr. MCGREGOR (at the request of Mr. SCHENCK).

Mr. MASON on the subject of Federal aid to education.

Mr. JENKINS and include appropriate matter.

Mr. MILLER of Nebraska.

Mr. BETTS and to include excerpts from two agricultural publications.

Mr. HOLT.

Mr. BALDWIN.

Mr. VAN ZANDT (at the request of Mr. ARENDS) and to include extraneous matter.

Mr. MACHROWICZ and to include an address delivered by JOHN W. MCCORMACK.

Mr. DAVIDSON.

Mr. SCHERER (at the request of Mr. ARENDS).

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mrs. GRIFFITHS (at the request of Mr. MACHROWICZ) for 5 days, on account of illness in family.

Mr. POWELL (at the request of Mr. DIGGS), for today and the remainder of the week, on account of illness.

Mr. YATES (at the request of Mr. ANFUSO), from January 12, 1956, to January 20, 1956, on account of illness.

ADJOURNMENT

Mr. MARSHALL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 43 minutes p. m.), under its previous order, the House adjourned until Monday, January 16, 1956, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1349. A communication from the President of the United States, transmitting a report and recommendations relative to a program for the Great Plains (H. Doc. No. 289); to the Committee on Agriculture and ordered to be printed, with illustrations.

1350. A letter from the Comptroller General of the United States, transmitting a report on the audit of Inland Waterways Corporation for the fiscal year ended June 30, 1955, pursuant to the Government Corporation Control Act (31 U. S. C. 841) (H. Doc. No. 290); to the Committee on Government Operations and ordered to be printed.

1351. A letter from the Comptroller General of the United States, transmitting a report on the audit of the Farmers Home Administration, Department of Agriculture, for the fiscal year ended June 30, 1954. This is the third report on the audit of this agency; to the Committee on Government Operations.

1352. A letter from the Comptroller General of the United States, transmitting the annual report of the Comptroller General of the United States for the fiscal year ending June 30, 1955, pursuant to section 312 (a) of the Budget and Accounting Act of June 10, 1921; to the Committee on Government Operations.

1353. A letter from the Director, Legislative Programs, Office of the Assistant Secretary of Defense, transmitting a draft of proposed legislation entitled "A bill to provide for the procurement of medical and dental officers of the Army, Navy, and Air Force"; to the Committee on Armed Services.

1354. A letter from the Sergeant at Arms, United States House of Representatives, transmitting a statement in writing exhibiting the several sums drawn by him pursuant to sections 78 and 80 of title 2, United States Code, the application and disbursement of the same, and the balance, if any, remaining in his hands, pursuant to title 2, United States Code 84; to the Committee on House Administration.

1355. A letter from the Attorney General, transmitting a draft of proposed legislation entitled "a bill to amend section 3 of the act of January 2, 1951, prohibiting the transportation of gambling devices in interstate and foreign commerce"; to the Committee on Interstate and Foreign Commerce.

1356. A letter from the Commissioner, Immigration and Naturalization Service, United States Department of Justice, transmitting copies of orders entered in cases where the authority contained in section 212 (d) (3) of the Immigration and Nationality Act was exercised in behalf of such aliens, pursuant to section 212 (d) (6) of the Immigration and Nationality Act; to the Committee on the Judiciary.

1357. A letter from the Commissioner, Immigration and Naturalization Service, United States Department of Justice, transmitting copies of orders entered in the cases of certain aliens who have been found admissible into the United States pursuant to section 212 (a) (28) (I) (ii) of the Immigration and Nationality Act; to the Committee on the Judiciary.

1358. A communication from the President of the United States, transmitting proposed supplemental appropriations for the fiscal year 1956 in the amount of $60,439,500 for disaster relief, for the Department of Defense–Civil Functions, for the Veterans' Administration, and for the District of Columbia. (H. Doc. No. 291); to the Committee on Appropriations.

1359. A letter from the Chairman, Rubber Producing Facilities Disposal Commission, transmitting a report relative to the disposal of the GR–S copolymer plant at Institute, W. Va., pursuant to Public Law 336, 84th Congress; to the Committee on Armed Services.

1360. A letter from the Director, Administrative Office of the United States Courts, transmitting a draft of proposed legislation entitled "A bill relating to the compensation and term of office of the Judge of the District Court of Guam"; to the Committee on Interior and Insular Affairs.

1361. A letter from the Assistant Secretary of the Interior, transmitting copies of certain laws enacted by the First Legislature of the Virgin Islands, pursuant to section 9 (g) of the Revised Organic Act of the Virgin Islands of the United States, approved July 22, 1954; to the Committee on Interior and Insular Affairs.

1362. A letter from the Secretary of the Navy, transmitting a draft of proposed legislation entitled "A bill to extend the benefits of the Civil Service Retirement Act of May 29, 1930, as amended, to members of the civilian faculties of the United States Naval Academy and the United States Naval Postgraduate School"; to the Committee on Post Office and Civil Service.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

By Mr. BARTLETT:

H. R. 8411. A bill for the relief of Spiridon Todoulos and Kalliroi Todoulou; to the Committee on the Judiciary.

By Mr. BOYLE:

H. R. 8412. A bill for the relief of Michael D. Kiriazis; to the Committee on the Judiciary.

By Mr. BUCKLEY:

H. R. 8413. A bill for the relief of John F. W. Petch; to the Committee on the Judiciary.

By Mr. CUNNINGHAM:

H. R. 8414. A bill for the relief of Anatoly Hoffeins; to the Committee on the Judiciary.

By Mr. DAVIDSON:

H. R. 8415. A bill for the relief of Sylka Goldwag; to the Committee on the Judiciary.

By Mr. DELANEY:

H. R. 8416. A bill for the relief of Diran G. Aivazian; to the Committee on the Judiciary.

H. R. 8417. A bill for the relief of Josip Maracic; to the Committee on the Judiciary.

H. R. 8418. A bill for the relief of Anna Chiodi; to the Committee on the Judiciary.

H. R. 8419. A bill for the relief of Mrs. Georgia Loizos; to the Committee on the Judiciary.

By Mr. DONOVAN:

H. R. 8420. A bil for the relief of Dr. Ying Ming Yen; to the Committee on the Judiciary.

H. R. 8421. A bill for the relief of Giuseppe Favorito; to the Committee on the Judiciary.

By Mr. DORN of New York:

H. R. 8422. A bill for the relief of Mrs. Jane Barnes; to the Committee on the Judiciary.

By Mr. FULTON:

H. R. 8423. A bill for the relief of Maria Febbrara; to the Committee on the Judiciary.

By Mr. GUBSER:

H. R. 8424. A bill for the relief of Han Liang Huang and Zing Wei Tang Huang; to the Committee on the Judiciary.

By Mr. GWINN:

H. R. 8425. A bill for the relief of Ciro Motti; to the Committee on the Judiciary.

By Mr. HAYS of Arkansas:

H. R. 8426. A bill for the relief of Clarence L. Harris; to the Committee on the Judiciary.

By Mr. HAYS of Ohio:

H. R. 8427. A bill for the relief of Domenico Bruno Caruso; to the Committee on the Judiciary.

By Mr. KELLEY of Pennsylvania:

H. R. 8428. A bill for the relief of Gertrud Baxter and son, Helmut; to the Committee on the Judiciary.

By Mr. KEOGH:

H. R. 8429. A bill for the relief of Ethlyn Mae Grant; to the Committee on the Judiciary.

By Mr. KLEIN:

H. R. 8430. A bill authorizing the presentation of the Bronze Star Medal to Sidney Clinton Stern; to the Committee on Armed Services.

H. R. 8431. A bill for the relief of Giuseppe Faraci; to the Committee on the Judiciary.

H. R. 8432. A bill for the relief of Lambert Kwok, Nancy Li Kwok, and Evelyn Chi Ngan Kwok; to the Committee on the Judiciary.

H. R. 8433. A bill for the relief of Emma Brajuha; to the Committee on the Judiciary.

H. R. 8434. A bill for the relief of Helen Lillian Deutsch Lowi; to the Committee on the Judiciary.

H. R. 8435. A bill for the relief of Kalman Berger; to the Committee on the Judiciary.

H. R. 8436. A bill for the relief of Charles Cuni; to the Committee on the Judiciary.

By Mr. LESINSKI:

H. R. 8437. A bill for the relief of Mariko Kimizuka; to the Committee on the Judiciary.

By Mr. McCONNELL:

By Mr. WILSON of California:

H. R. 8453. A bill for the relief of Genoveva Ibarra-Arribeno de Martinez; to the Committee on the Judiciary.

By Mr. WALTER:

H. J. Res. 472. Joint resolution for the relief of certain aliens; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

422. By Mr. BUSH: Petition of citizens of Bradford County, Pa., favoring the passage of legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air; to the Committee on Interstate and Foreign Commerce.

423. By Mr. FORAND: Petition of Mary M. Eldridge, legislative director of the Woman's Christian Temperance Union of Rhode Island and 83 others from Rhode Island, urging enactment of legislation to get alcoholic beverage advertising off the air and out of the channels of interstate commerce and thus protect our people and the rights of States to prevent advertising of commodities which have been declared unlawful by the rights of local option granted them under State law; to the Committee on Interstate and Foreign Commerce.

424. By Mr. HOSMER: Petition of residents of Long Beach, Calif., urging Congress to pass legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce, and its broadcasting over the air, a practice which nullifies the rights of the States under the 21st amendment to control the sale of such beverages; to the Committee on Interstate and Foreign Commerce.

425. By Mr. HOEVEN: Petiton to prohibit the transportation of alcoholic beverage advertising in interstate commerce; to the Committee on Interstate and Foreign Commerce.

426. By Mr. LECOMPTE: Petition of citizens of Grinnell, Iowa, who urge the adoption of legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce, and its broadcasting over the air; to the Committee on Interstate and Foreign Commerce.

427. By Mr. MORGAN: Petition of Mrs. David W. Hughes and 2,497 other residents of Washington County, Pa., urging enactment of legislation which would outlaw all interstate alcohol advertising, including magazines, newspapers, radio, and TV; to the Committee on Interstate and Foreign Commerce.

428. By Mr. MUMMA: Petition of N. J. Zeigler and 28 other residents of Duncannon, Pa., urging enactment of legislation prohibiting the transportation of alcoholic beverage advertising in interstate commerce, and its broadcasting over the air; to the Committee on Interstate and Foreign Commerce.

429. By Mr. SHORT: Petition of Rev. J. W. Dilley and other residents of Springfield, Mo.; to the Committee on Interstate and Foreign Commerce.

430. Also, petition of Mamie Shelton and more than 2,000 citizens of southwest Missouri; to the Committee on Interstate and Foreign Commerce.

EXTENSIONS OF REMARKS

Atomic Energy and Its Future Effects in Industry

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. BUTLER. Mr. President I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a speech entitled "Atomic Energy and Its Future Effects in Industry," which I delivered on September 24, 1955, before the executives' industrial relations conference, sponsored at Valley Forge, Pa., by the Past Presidents Association of the Pennsylvania Industrial Management Clubs.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ATOMIC ENERGY AND ITS FUTURE EFFECTS IN INDUSTRY

(Address by Hon. JOHN MARSHALL BUTLER, of Maryland, before the executives' industrial relations conference, sponsored by the Past Presidents Association of the Pennsylvania Industrial Management Clubs, September 24, 1955, Valley Forge Military Academy, Wayne, Pa.)

It is my intention today to discuss some aspects of the industrial future of atomic energy. This great new source of power and varied tool for industrial applications has received much attention recently. I may be able to suggest very few new uses to a group of informed men who have followed the public press and listened to the radio. But I do have fresh impressions to offer you, based upon my experiences at the Atoms-for-Peace Conference in Geneva. I also can offer some thoughts on the future of the atom from the vantage of the Senate, as I have studied these problems in Washington.

I think it is safe to say that no one can really know what exciting new developments will come from atomic research already completed or underway today. It does seem certain that it is destined to bring about great changes, improving our lives and creating fresh business opportunities. Although life will go on much as it always has, with many serious economic problems remaining to be solved, nonetheless the atomic future shows greater promise than the so-called realists were conceding not so long ago. And these changes are coming sooner than many expected.

We can recall the first announcements of our conquest of nuclear fission made at the close of World War II. Public speculation ran all the way from fearing the world would blow up in some chain reaction carried beyond human control to stories of a world with all goods virtually free. Our automobiles were to run for a year on a small pill dropped in a tank of water. Both the military hazards, great though they may be, and the peacetime uses, promising as they are, were exaggerated in that first flush of excitement.

Then it became popular to debunk the atom. The bombs were shown to do little damage to many types of targets, and to be insignificant as compared with the power of nature on a rampage in a hurricane or a flood. Power costs were demonstrated to be very high and shielding problems of radiation too great to warrant the use of mobile powerplants. While the public debunking became more scientific and conclusive, the secret work in our laboratories and those of other countries continued.

Now a large number of the debunking claims are clearly obsolete just as were the first stories which went to the other extreme. The so-called little bombs which were dropped on two Japanese cities have been superseded by giant fusion weapons of many megaton yields. Their radioactive fallout can destroy great nations. These weapons at first were also "debunked" as nondeliverable, but that has changed, too. There are aircraft in being that can deliver such weapons. We all know these things, and one of the adjustments of our life, economic and political, must be to these realities.

But fortunately, the understanding of the atom has brought great promise of good as well. If we have faith in man's future, and in the future of America, we must believe that its potential for good is even greater than its potential for destruction. Mankind must develop the wisdom to make this true, for it is in his power to do so.

Developments in the laboratories are coming so fast that we cannot now see all the applications which will be made of this new knowledge. It is most important that we sustain our effort in research, to push back the frontiers of the unknown in the basic sciences. This is necessary if we are to achieve the practical applications of the atom which seem to rest in it. For example, one of the most exciting discussions at Geneva involved the possibilities of harnessing the fusion method of the so-called hydrogen bomb to create controlled release of energy. This would be a tremendous step forward. But much hard work will be required to make it a reality, if it can be done. New basic research will have to aid this effort.

But while we are waiting for this kind of development, and others still more startling, there is already available for the taking a tremendous business future in the atomic field. For convenience of discussion, let me suggest by categories some of the opportunities which confront businessmen.

ATOMIC POWER

Large power plants now being built in this country, the United Kingdom, and the Soviet Union will not deliver power at very low cost. This is because they are based upon simple and tested designs of a rather primitive nature. Our first of this type is, of course, here in Pennsylvania at Shippingport. The British equivalent is the plant at Calder Hall which will probably be in operation sooner. The presently operating Soviet plant outside Moscow is only a tenth the size of our plant. But the Russians also seem to be in the preliminary steps of developing some large plants, quite possibly as soon or sooner than this country.

Such plants, whatever their delivered power cost, will give an invaluable amount of experience so necessary to the lowered cost revolution which can be expected. Presently published data indicate that improved breeder and homogeneous reactors offer power prospects whose costs will rival the lowest of modern thermal or hydroplants. We can expect additional powerplant construction to come at an accelerated pace. This may rival the great railway boom of a century ago.

The significance of these developments is at least threefold. In the first place, there is the promise of tremendous capital expenditures which will help to expand our whole national economy. In the second place, the location of new industries will be oriented less by bodies of coal or oil or gas, than by markets and other resources. In the third place, the threat of rising power costs caused by the exhaustion of the most accessible chemical fuels will not be the danger it was.

But probably it is necessary to add one qualification to this very happy outlook. It is apparent that power will not be free. The capital investment in facilities for the preparation of atomic fuels, for the operation of the pile, and for the recycling of spent fuels will be very great. There is also the normal investment cost for turbines and for electric generating and distribution systems. The future is glorious enough without asking the impossible. This means that exploitation of our present knowledge of the atom will guarantee us fresh new supplies of power, soon at competitive costs. But there will not be any revolutionary cost reduction for those areas which already enjoy the advantage of moderate cost chemical fuels or good hydro sources.

One distinct impression I bring back from Geneva is the necessity for speedy development of moderate-sized atomic powerplants which operate with good efficiency. In the United States, our hope for making atomic power costs competitive has been to build much larger plants, in the range of from 50,000 to 250,000 kilowatts. This promises to bring us economies per kilowatt of capacity. Plants of such size at so early a stage of development of the science run the risk of becoming obsolete almost as fast as they can be completed. But we must build them for the invaluable experience they will give us. Only a rich country with very large supplies of both private and public capital can afford this kind of developmental risk.

The many delegates from the smaller countries of the world who came to Geneva were greatly impressed by what they saw and heard. Yet they knew, in many instances, that they will have only limited opportunities to share immediately in this new source of power. This is because they cannot afford to build very large atomic powerplants, and their needs are not yet for such concentrations of power output. They want experimental reactors, which our Government is prepared in the interest of world peace to help them construct.

They also would like moderate-sized plants which will produce usable power at a cost which is lower than they now pay in conventional plants.

It is important to recognize that one reason commercial atomic power in this country may have lagged, if indeed it has, behind that of the United Kingdom and possibly the Soviet Union, is that most of our country already has available fairly cheap power from conventional sources. The business realities of breakeven costs have tended to rule out any rush to build atomic power plants on a purely commercial basis in competition with modern thermal plants or with favorably situated hydro sources. The only hope of breaking even, as I have suggested, has been with very large plants.

In many of these foreign countries, however, the problems are different. The British for example have faced many years of declining availability of cheap coal and rising needs for imported oil. The Japanese will face similar problems. The Russians are notably short of good fuel near their largest industrial cities of Moscow and Leningrad. Many other countries have been held back in their development by either a lack of fuel or by its very high cost. Some of these, then, are places where even a fairly primitive atomic power source which we would not consider competitive would be a great aid

to the users. It is for this reason that some of the first spurts of construction in plants may come in foreign countries rather than in our own.

But we cannot afford to sit back, or to play a passive role in the development of these more modest power plants which other countries could use. We must apply ourselves to increasing the efficiency and lowering the costs of such plants, for they can be useful to us in several ways.

In the first place, such power plants developed by our know-how and our manufacturing companies will keep us in the atomic lead. We must do this in a rapidly changing world, where American strength is so important to our survival. In the second place, unless we demonstrate this kind of progressive cooperation, we are likely to find that foreign rivals both friendly and otherwise, will be taking the orders for equipment, supplying the technicians, controlling the fuel sources. This would isolate us from other peoples with whom we should maintain close relations in the interest of peace and prosperity.

In the third place, we must not neglect the advantages which can accrue to our own country if we develop competitive modest-sized power plants. We know that once electricity has been generated, there are great losses of that power if it must be transmitted any considerable distance. There are many parts of the United States which would enjoy a better development and be able to bring into full use their other resources if they were able to generate power at moderate cost without either long hauls of heavy fuel or long distance transmission of electric power. The established areas of our country should not worry about new home rivals brought by cheaper local power. The whole country can expect to go forward with the general growth and prosperity which is within our reach if we show the right wisdom in ordering our affairs.

For the future, we are faced with more speculative conclusions than the ones I have emphasized. Perhaps we will learn to convert on a large scale, atomic energy directly into electricity without having to go through a steam-turbine, heat-transfer cycle. Perhaps we will learn to control the fusion process. Perhaps there are other even more economical methods waiting to yield to determined research.

RADIOISOTOPES

I am sure that most of you are aware that the byproducts of atomic fission are more than a radiological hazard. These byproducts are some of the most surprisingly important consequences of the new peacetime use of the atom. After all, uranium, thorium, and plutonium are today only different fuels which are used to generate heat to create conventional power no less in cost than that available many places already. But the radio isotopes created in atomic piles have opened up a host of new applications limited only by the ingenuity and inventiveness of our people. There are almost certain to be many new uses for such isotopes in the years ahead; we have barely scratched the surface.

Among my listeners, almost certainly there are some who are making applications of these new tools for research and for production. In manufacturing we see how the introduction of small amounts of radioactive materials into a product can create the means for measuring the thickness of materials with great ease. The uniformity and thickness of coatings can be measured on a production line without taking time out for laborious analyses. With tracer elements it is possible to test the effectiveness of designs, such as internal friction and wear in engine parts. In the chemical industry the movement of catalysts, the travel and behavior of many elements can be identified for the first time.

Biology and medicine are making similar new aplications. Some of these are in basic research, particularly as tracer elements. But, also, anyone of us here may have a better chance to stay alive because of the availability of new tracer elements which can identify the functioning of parts of our bodies and locate troubles within them. An illustration of the dual use of isotopes is the ability of one of these materials to locate a brain tumor if present, and for another radioisotope to serve as a directed source of energy. It can selectively destroy cancerous cells which might be almost impossible to reach through surgery. Our supplies of these isotopes have been the equivalent of an almost unbelievable increase in the amount of radium available to hospitals everywhere. Radium is expensive, and only very small amounts are available. Now, for the same purpose, radio-cobalt can be used with much greater freedom from limitations in cost or quantity.

In the field of agriculture the isotopes are providing much help to research. Serving as tracer elements, it is possible to determine the effectiveness of fertilizers and methods of their use, the importance of specific elements in plant growth, and even to probe the secrets of photosynthesis. If we solve all the mysteries of how plants can create food from sunlight, carbon dioxide, and water we may change the problems of food shortage for those parts of the world which are feeling population pressure. We may be able to create new synthetic foods, industrial raw materials, and chemical fuels which will mean a more abundant life for our people. Many problems promise to yield to research made possible by the new applications of radioisotopes. Controlled exposure of foods to radiation may serve as an efficient substitute for refrigeration.

Some of you probably recall another application of isotopes which is both simple and effective, although one of the surprise bonuses of the new age. Now we control the movement of different batches of petroleum products through pipelines by introducing tracer elements which can be monitored along the way to identify the beginning and end of a particular shipment.

The opportunities for further applications are a matter of individual ingenuity, and many a small business in this country has as much chance to think up and apply these new uses as do the larger corporations. The size of the investment is often not a serious obstacle to success.

MOBILE SOURCES OF ENERGY

Although the day of the atomic-powered automobile is not here yet, there has been significant progress in learning how to use atomic energy to move vehicles. This, of course, has had its initial impetus under the pressures of military rivalry.

The *Nautilus* is now an operating reality, and the *Sea Wolf* will presently join the fleet, too. Not only do these submarines represent a significant advance in naval power to safeguard America, but they have immensely speeded the development of the land-based powerplants which I have discussed earlier. A larger seagoing reactor is likely to be installed in some of the big aircraft carriers of the *Forrestal* class. Not many people doubt that our country leads the world in military applications of mobile powerplants.

But our position as first partner in a world of friendly nations requires that we demonstrate leadership in peacetime use of atomic-powered ships. The President's dramatic plan to build an atomic-powered merchant ship which could tour the world as a floating exhibit of our peacetime atomic progress was a very important proposal.

I was the cosponsor of a bill this year introduced into the Senate to undertake the construction of such a ship. It was a simple and direct plan to give the President the authority he required to accomplish the construction of such a vessel at the earliest practical date. I hope very much that the Congress will again take up this bill and make it law. Such a ship, carrying an atomic powerplant would allow it to cruise for months at high speed without the necessity of refueling. It could give us invaluable experience for the day when perhaps most ships will carry such powerplants and do so with economy. Further, the kind of wonderful exhibits which I saw at Geneva, instead of being limited to the few people who can reach Switzerland would enable millions near the great seaports of the world to share in a glimpse of the new age we are entering so rapidly.

The nuclear-powered aircraft seems destined to come first in a military version, and our step-up of funds for research and prototype building suggests important breakthroughs in our attack on what had seemed like insurmountable problems. One of the most critical has been how to reduce the weight of shielding the airborne atomic pile required for the protection of the human beings in the craft. This problem is being solved, and we should see an atomic-powered plane in the air within a very few years. But here, too, conventionally-powered turbine planes are likely to have a long future, for passenger transports are not yet ready to shift to the newly designed atomic engines.

On land, it is likely that the first practical application of mobile atomic power will be in a railway locomotive. Because shielding is still a problem, few other vehicles are immediately ready to carry the weight that will be involved. Detailed plans for an atomic-powered locomotive have been offered publicly in engineering circles. These designs may be further improved by new principles which allow the moderator-coolant-heat exchanger part of the pile also to serve as its shielding agent. If the concepts proposed for this advance prove successful, the day of both airborne and land-carried atomic power-plants will be greatly speeded.

The exhibits at Geneva were an eye-opener even to the most blase observer. The great variety of applications, the number of firms prepared to manufacture components were a revelation that the atomic age which has been hidden by security is about ready to burst forth with revolutionary swiftness. I have told you I think the atomic-powered ship with its traveling exhibit is a very necessary move in our world relations. I am of the opinion that the American people, even with the splendid coverage our press and radio give the news cannot be fully aware of these great changes until they see such exhibits first hand. For this reason when the Congress convenes again in January, I am going to offer a new bill to authorize the speedy construction of an atomic-powered railway locomotive. This forced development of a vital new device will speed the revolution in domestic transportation, and will also serve the same purposes as the atomic-powered floating museum on the seas.

Such a locomotive could tour the United States pulling an exhibit train which would dramatize the changes coming. Every American could experience the thrill, and gain the vital knowledge good citizenship requires, of the atomic wonders which we can have. Almost certainly such an exhibit train as a result of its tour would stimulate new applications of atomic methods, and increase interest in capital expenditure for new atomic power sources. Thus it could do as much as any single act to spark our expansion in a new economic age.

CONCLUSIONS

Our Government has spent vast sums of money in creating its atomic industry, its nuclear weapons, and its prototype power sources. This has been necessary to launch so revolutionary a change. Government control was necessary, too, because there was a period where a major attempt to maintain security of information was important in a world torn by dissention.

But conditions have changed, and Geneva was living proof of this change. On the one hand, we have learned enough about the workings of the atom to be ready for aggressive development of the science and its engineering applications. Private capital, with opportunities unlimited for both large corporations and many small businesses, must find its own future in this field. It is only as we can make information available, and license more broadly the processes and materials of atomic energy that this American ingenuity can come into play on a broad front. This, it is most important that we do.

On the other hand, Geneva revealed that although our policies were wise at the earlier stage to maintain security of information, conditions in this respect have changed, too. Some of our secrets were stolen by rival powers. But in their own right, drawing upon a common fund of worldwide scientific knowledge and upon the resourcefulness of their own scientists and engineers, other countries are moving rapidly into applications of this atomic know-how. We can no longer pretend to any monopoly of such knowledge. This we must accept, and adjust our policies and our laws accordingly. For it is in our interest not only to share our information on peacetime uses of atomic energy, but to learn from other countries, too. Scientific knowledge has never been the monopoly of any one country, and the exhibits and the technical papers at Geneva certainly made this clear.

Of course, judgment must be used as to what we are to disclose, and we must show commonsense in knowing what is to be left hidden by security rules. We must decide what is to be licensed, and what is to be freely exchanged with other countries for mutual advantage. The reasons for this exchange are many, and some of them I have suggested already in my talk. They are partly military, partly political, and partly technical. Others are a matter of good business. Freedom of access to markets, of availability of fuels, of design competition, offer us the best hopes for rapid atomic development. Such development in turn will help to create a world in which all men including our own people will be more prosperous and contented.

Valley Forge is a name famous in American history. It combines for us memories of our own political revolution and military struggle against heavy odds and great hardships to create the country we love and serve today. It also suggests the industrial beginnings of our country. Now with the passage of time this region is part of the great industrial concentration of the Delaware Valley. In this part of the country, we know that a good future lies ahead, with proper effort made to develop our potentialities.

The facts now are different because we live in another age, but we must have the same spirit of faith in the future of our country and in our own ability to meet the challenges of today. Valley Forge is a fit symbol of the force which must motivate us to continue our development and to take in stride the industrial and political changes which the new atomic era will bring us.

Mental Problems of the Aging

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. SCHERER. Mr. Speaker, there are approximately 14 million persons in the United States today who are over 65 years of age. Their number is increasing at the rate of 400,000 a year.

In view of the growing number of senior citizens in the Nation a symposium on gerontology in Cincinnati today takes on added importance.

The meeting, titled "Constructive Medicine in Aging: Problems of the Mind in Later Life," is the second annual symposium on gerontology sponsored by the Wm. S. Merrell Co., of Cincinnati. Producer of medicines since 1828, Merrell is recognized as a leader in gerontological research. It is directing currently over 50 percent of its research activities toward the development of new and better drugs for our older citizens.

Although gerontological research is comparatively new, several drug discoveries already have been made possible through research activities at Merrell.

The first drug, meratran, was released early in 1955. Dr. Howard Fabing, of Cincinnati, has reported it is highly effective in combating mild depression and emotional fatigue. Since these are often complaints of the older patient, the drug is valuable for geriatric use.

Frenquel, the second drug, was made available in December 1955. It is anticipated that this drug may provide new hope and a return to normal life for many mentally ill patients suffering from acute schizophrenic hallucinations.

Merrell also has produced tace, a unique type of estrogen valuable for treatment of certain ailments striking chiefly our older men and women. The Journal of the American Medical Association recently editorialized on the properties of the ideal estrogen and compared tace favorably with the ideal standards.

Merrell is aiding the medical profession's attempts to meet an impending challenge to our social stability. It is accepted generally that medicine has been largely responsible for prolonging life and now is gravely concerned with finding ways and means to make these extra years productive and enjoyable. Through the combined efforts of the medical and allied professions it is hoped that later years will become golden years.

Thus, this increasingly important challenge of medicine—the search for ways to make the sunset years productive and useful—is bringing several hundred doctors to Cincinnati to hear eight experts tell of the most recent developments in the field of mental problems of the aging.

Paint Mixing Facility at Mare Island Naval Shipyard

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. BALDWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert a statement which I made on Tuesday, January 10, 1956, before the House Appropriations Committee in opposition to the proposed closing of the paint-mixing facility at Mare Island Naval Shipyard, Vallejo, Calif.:

Mr. Chairman and members of the committee, it is my understanding that the Defense Department has provided notice to the House and Senate Appropriations Committees that certain activities of the Navy and Army will be terminated unless an objection is received from the House Appropriations Committee or the Senate Appropriations Committee. It is my further understanding that one of the activities which the Defense Department proposes to terminate is the Navy's paint mixing facility at Mare Island Naval Shipyard, Vallejo, Calif.

I should like to register a strong protest against the proposed closing of this paint mixing facility, and I hope that this committee will disapprove this proposal. In my opinion the closing of this paint mixing facility would be most unfortunate, and would be against the best interests of our national defense.

During World War II the Mare Island paint mixing facility was an essential operation in manufacturing paint for naval use, much of it a special plastic paint for ships' bottoms. This special plastic paint had been developed at Mare Island after more than 7 years of laboratory work and field testing. It is important to note that the paint industry did not develop this formula—the Navy Department did at Mare Island Naval Shipyard.

This bottom paint permits ships to remain at sea in war areas for years without having to leave their station to proceed to a drydock, which may be many days' sailing, and hundreds, or even thousands, of miles away. Before the successful development of this formula, ships had to drydock frequently, as a clean bottom, as you well know, is an important factor in making maximum speed. A foul bottom also means that ships use more bunker fuel per mile, which means more frequent fuelings. The logistics supply of fuel to a fleet at sea over great distances is always a serious problem, as tankers can be sunk.

With the extension of our sea frontiers to far horizons as an implementation of national policy, bases are often inaccessible, and anything which can be done to extend the sea-keeping days of a fleet is vitally important, as I see it. Thus it is important that the bottom paint furnished the fleet be of impeccable quality and in exact conformity to the formula. The Navy's manufacture of its own paint under its own formula has met all service tests. We should not tamper, in my opinion, with a proven system and a proven product. The paint industry, although it has had every opportunity to conduct a similar laboratory and testing program, was never able to develop this bottom paint. The Navy, on the contrary, is consistently experimenting in laboratory and testing facilities to improve paint for the Navy's peculiar need. This was the reason why the Navy established the paint-mixing facility at Mare Island Naval Shipyard. This facility meets special requirements which industry cannot, or at least has not, met.

At the present time, the Mare Island paint-mixing facility is limiting its production to the special plastic paints solely for Government use. If this work were transferred to commercial plants, it would be necessary for the Navy to establish a costly inspection corps at each commercial plant involved, as it is vital to national defense that this paint be manufactured exactly to formula. In addition, such a transfer would mean that the expenditure and investment that the Government has already made for the equipment and buildings occupied by the Mare Island Paint Mixing Facility would lie

idle. It would certainly appear that using plastic paint produced commercially would add to the Navy's costs, rather than being an economy.

I fully understand that it is the Defense Department's desire to stop Government competition with private industry whenever there is no harm to the national defense involved. However, in this case, I am convinced there would be harm to the national defense.

Another factor which to me seems important to national defense is that if the Mare Island paint-mixing facility be closed, the skills of the group of employees which grew up with the development of this paint would be dissipated and lost. Without these skilled men, the paint-mixing facility will be an empty shell when the next national emergency requires its reopening.

It seems to me of essential importance to the Nation that the Mare Island paint-mixing facility be allowed to continue to operate in the modest way in which it is now operating in the manufacturing of special plastic paints, and be allowed to continue its research and tests looking toward the further betterment of this product. It would seem most important that the research and testing which has been in progress for many years be continued.

Of extreme importance is the complete flexibility of this paint-mixing facility. Production of urgently needed paint can be started immediately on receipt of even a dispatch order, with no lead time as commonly required in commercial practice for special type paint.

The Mare Island paint-mixing facility now employs only approximately 50 people, and specializes in this special antifouling and anticorrosion bottom paints and vinyl system paints specifically designed for the Navy's own use. The continuation of this specialized operation certainly can have no great adverse impact on our country's huge paint industry, and yet could have a most unfortunate result on our readiness for the expansion of production of this most essential naval paint in time of war.

In view of these facts, I should like to recommend strongly that the House Appropriations Committee disapprove the proposed closing of this paint-mixing facility. I believe this closing would be a false economy and a definite disadvantage to the Nation's defense.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JOSEPH F. HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. HOLT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

Congressman JOE HOLT, Republican, from California, author of the legislation which created the White House Conference on Education, today issued the following statement:

"President Eisenhower's special message on education fulfills his promise to the White House Conference on Education to give careful consideration to their findings. In almost every instance, his school-construction proposals jibe with the White House Conference recommendations.

"Those who charged that the White House Conference on Education was an administration device for avoiding action have been proven wrong. President Eisenhower has translated the will of the people into a positive, sound program of action.

"The President's school-construction proposals embodies the following principles expressed by the White House Conference on Education:

"1. Federal aid 'Should be granted only on the basis of demonstrated needs.'

"2. 'Federal aid should never be permitted to become a deterrent to State and local initiative in education.'

"3. 'State aid should be increased.'

"4. 'The administration of Federal funds should be through the appropriate State agencies for education.'

"5. 'These State agencies should determine the relative needs of local school districts.'

"6. There should be no 'Federal control or educational use of funds in local school districts.'

"7. 'All States and Territories and the District of Columbia should be eligible.'

"The President's recommendations provides the foundation for much sounder and safer education legislation than the Kelley bill, now before the Rules Committee.

"The need for Federal aid to education, State by State, has not yet been proven to me personally, either by the hearings held before our committee or by the newspaper and oral reports I have heard on the results of the White House Conference on Education. For that reason I have requested the chairman of the Education and Labor Committee to have the officials in charge of the White House conference come before the full committee and give a report on the manner in which the conference was held, delegates selected, the results, and how they were reached.

"As a Representative in Congress from the State of California, there is doubt in my mind whether any Federal-aid legislation will be proven beneficial to our community and State in the long run. We are doing a very good job of solving our own problems. The amount of effort being put forth by other States and the taxes their people are paying for their schools in comparison to the high taxes our people pay for schools must be taken into consideration before any definite conclusions are reached."

Rural Mail Delivery

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. BETTS. Mr. Speaker, on February 7, 1955, I introduced a bill, H. R. 3655, which would extend rural mail delivery to the homes of all persons living on improved highways. Since then I have noted interest in this problem on the part of various farm organizations. At its national convention in Chicago in December 1955 the American Farm Bureau Federation included extension of rural mail delivery among its resolutions. The following was taken from the American Farm Bureau Official News Letter of December 19, 1955:

Rural mail delivery should be made available to every accessible farmstead. We urge that legislation be enacted or administrative action taken to accomplish this. This may necessitate consolidation, extension, or relocation of routes. In some instances it may be advisable to eliminate post offices and replace them with rural routes. It is apparent that many of these changes will come more quickly if rural people take an interest in this problem in their own communities.

The Ohio Farm Bureau endorsed the same policy at its convention in Columbus in November 1955. The following resolution, as adopted by their organization, appeared in the Ohio Farm Bureau News of January 1956:

RURAL POSTAL SERVICE

We insist that rural mail delivery be made available to every farm home on a passable highway. Since direct-to-farm rural mail service is vital to every farm family, we recommend that county farm bureaus give such assistance to farm families as is necessary to bring their problems to the attention of proper postal authorities.

Mr. Speaker, it is my hope that such actions as these will stimulate interest in H. R. 3655.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. MASON. Mr. Speaker, the crux of the recent White House Conference on Education was whether or not the Federal Government should grant more Federal Aid to public education. The central question of all the discussions was, "Shall or shall not the Federal Government launch out on a broader basis than at present in giving Federal Aid to schools?"

One of the pertinent factors in the problem of Federal Aid is the way Federal Aid is being distributed to the schools at the present time. Federal grants-in-aid to schools today are distributed not on the basis of need, not even on the basis of the average pupil daily attendance, as one would expect. It is distributed today in direct contradiction to these three basic criteria.

For example, Federal grants-in-aid to schools during the fiscal year 1954 shows the following inconsistencies:

State	Rank according to State effort	Number of pupils enrolled	Federal grants-in-aid	Average grant per pupil
West Virginia	17	448, 280	544, 963	1. 21
Nevada	39	42, 187	1, 664, 385	39. 45
Virginia	28	702, 671	14, 950, 285	21. 27
Mississippi	16	540, 157	2, 551, 600	4. 73
Illinois	43	1, 490, 000	4, 170, 345	2. 79
Wisconsin	35	561, 000	1, 150, 359	2. 05
Washington	23	490, 184	8, 522, 481	17. 39
Wyoming	1	63, 837	1, 257, 060	19. 69
New Mexico	2	187, 480	5, 003, 917	26. 68
Kansas	20	386, 915	5, 498, 760	14. 21

Mr. Speaker, anyone can readily see from the above table that there is little rhyme or reason in the present method of granting aid. For instance, Nevada, a State that stands high on the basis of per capita income and ability to finance her own schools, stands 39th in her effort to support her schools, yet she receives $39.45 per pupil Federal aid; while West Virginia, a State that stands quite low on the basis of per capita income and ability to finance her schools—her coal

mines, potteries, and glass factories being very hard hit—although she ranks high in effort, receives only $1.21 per pupil in Federal aid. Wyoming, the State that ranks No. 1 in her effort to support her schools, gets less than half the aid given Nevada, the State ranking 39th in effort. If this is a sample of the way Federal aid to education is being distributed today, do we want to extend these basic inequities? What guaranty will there be that the present inequitable method of distribution will be improved or corrected?

Mr. Speaker, three other real factors enter into the problem of extending Federal aid to schools, if Federal aid is for the purpose of equalizing educational opportunities between the States as claimed by its advocates:

First. The problem of segregation in the schools of the South. Will Federal aid accentuate this problem or diminish it?

Second. The problem of Federal aid for our parochial schools. Will Federal aid to education be provided for parochial schools in order to create equal educational opportunities? If not, why not?

Third. The problem of Federal supervision and Federal control of schools that are subsidized by Federal taxes. Federal supervision and control always accompany Federal aid. The present United States Commissioner of Education has said:

> If Federal aid is to bring about better schools, it seems apparent that there must be some Federal control.

Mr. Speaker, Federal aid to equalize educational opportunities is not as simple as it appears on the surface. It is both complicated and controversial. Cautious exploration and consideration are required before a proper solution can be found under our Constitution.

I have been, and still am—because of the above reasons—opposed to Federal aid for schools.

The Polish Daily News of Detroit, Mich.

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. LESINSKI. Mr. Speaker, one of the most familiar objects in the majority of American homes today is a newspaper, either one from the hometown or one from the local area in which one lives. Without a morning or evening paper a family would be lost for complete news of the world or the locality. And in these days it is important that we, as citizens of the greatest nation in the world, keep informed about world and local happenings. I realize, of course, that radio and TV provide a source of news, but this is more or less of an outline coverage. We must depend on newspapers for the more complete details of current events and also for some of the news that is not deemed of sufficient importance to be included in a news broadcast over radio or TV. I believe we are all the more impressed with the part a newspaper plays in our daily lives when suddenly we have no local paper to read.

The majority of the people of Detroit and the vicinity have almost found themselves in such a situation. For over 42 days, since December 1, 1955, the three major newspapers serving the Detroit area, the morning Free Press and the afternoon News and Times have not been issued because of a strike. However, because of the ingenuity of one of the smaller local newspapers, the citizens of the area are still being served. Within 24 hours after the announcement of the strike of the workers on the major dailies in Detroit, the Dziennik Polski, the Polish Daily News, started printing a limited edition in English. Ordinarily, the paper is printed in the Polish language, as it has been since 1904, to serve the Americans of Polish descent. In its English edition, it carries stories of local and national importance and includes a sports page and the radio and TV programs, as well as some advertisements and the funnies.

I want to take this occasion to commend the publisher of the Polish Daily News, Stephanie Januszewski, and her staff for the wonderful public service they are rendering to the people of their community. They are doing a magnificent job in this emergency. They have stepped up at a time of need, as is characteristic of Americans of Polish descent, to lend a helping hand to their fellow citizens. The publisher and staff of the Polish Daily News can, I am sure, take justifiable pride in their accomplishments. I am sure that the people of Detroit are most grateful to them for their efforts.

An Answer to the Unsubstantiated Charge of Giveaway of Our Natural Resources Levied Against the Eisenhower Administration

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. VAN ZANDT. Mr. Speaker, in the interest of the traditional American spirit of justice and fair play I have been greatly disturbed over the unsubstantiated charges of giveaway that are being frequently and recklessly hurled about our natural resources. These politically inspired charges are directed at the record of the Eisenhower administration and as a result of my inquiries I am pleased to furnish the "answer" which in my opinion will permit any fair-minded American to point with pride to the record of the Eisenhower administration in strengthening and advancing the cause of resource conservation. Here is what the record of the Eisenhower administration actually shows:

National park system: the national park system today is larger, more adequately staffed and more efficiently administered than it ever has been. In 1953, the year this administration entered office, 65,000 acres were added to our national park system. The boundaries of the Everglades National Park were extended to take in an additional 271,000 acres. Last year 40,400 acres were acquired. In the first 9 months of 1955, 29,560 acres were added to the park system.

Two new and historically important areas were added to the system with the establishment of Fort Vancouver National Monument in 1954 and Cumberland Gap National Historical Park in 1955. Establishment of Fort Union National Memorial in New Mexico was authorized last year and the National Park Service now is in the process of acquiring necessary lands. The West Virginia portion of the Harpers Ferry National Monument has been accepted for administration pending formal establishment of the area upon tender of the Maryland portion.

Establishment of the City of Refuge National Historical Park, in Hawaii, was authorized in legislation approved by the President in July 1955, and the Department of the Interior has recommended that the Congress authorize establishment of a Virgin Islands National Park. Moreover, the Department has signified its willingness to designate Chimney Rock, Nebr., and Promontory Point, Utah, as national historic sites in non-Federal ownership.

Important progress has been made toward fulfillment of the Cape Hatteras National Seashore Recreation Area project and all but 5,000 of the 28,500 acres within the project boundaries have been acquired. Negotiations for the majority of tracts needed for the Independence National Historical Park are in their final stages.

The integrity of the national park system has been maintained under this administration. Not only have park boundaries been protected and extended but vigorous support has been given the National Park Service in resisting developments which would unjustifiably intrude upon the natural beauty of park areas. Among such proposals which the administration rejected were:

An effort to obtain authority to construct a dam at Glacier View which, if built, would flood 20,000 acres of Glacier National Park. Rejected.

Efforts to obtain permits for construction of tramways at Mount Rainier National Park, Rocky Mountain National Park, Crater Lake National Park, and Grand Canyon National Park. Rejected.

Efforts to modify the newly extended boundaries of Olympic National Park. Rejected.

Efforts to construct a TV transmission tower in Scotts Bluff National Monument. Rejected

Efforts to open Joshua Tree National Monument to mineral prospecting and mining, or to abolish it altogether. Rejected.

Protection of Joshua Tree National Monument was strengthened when 10,000 acres inside the monument boundaries were acquired in exchange for 10,000 acres of federally owned grazing land outside the park.

One of the first acts of this administration was to reverse the unfortunate 15-year cycle of neglect of our parks which was touched off by World War II and prolonged by the Korean conflict. An administration program calling for substantial increases in parks appropriations has been approved by the Congress.

In January 1953 the National Park Service was operating under a fiscal-year budget of $33,162,330.

For the current fiscal year the park budget is $45,029,300—an increase of some 40 percent.

The new budget provides for 4,650 man-years employment in the parks system, an increase of 25 percent over the man years provided in the 1952–53 budget. One result has been to raise the park ranger force to its greatest strength in history.

Increased appropriations have enabled the National Park Service to make a good start on reducing the accumulated backlog of uncompleted and projected projects for road and trail construction and improvement of public facilities and park housing. Working cooperatively, the Park Service and concession operators have made great strides in development of a more realistic program for the modernization of privately operated facilities in the parks. For instance, in Grand Teton National Park, where travel has increased more than 500 percent over 1946, public use facilities are being developed in a program calling for an investment of more than $5 million in private capital; a building and expansion program under way at Grand Canyon National Park calls for expenditure of about $1 million by the concessioner; and similar forward looking programs are either under way or contemplated in other areas.

Gratifying progress is being made in the task of catching up with the demands being made upon the parks today. But that is not enough. The increasing number of visitors to national park areas—21 million in 1946—about 50 million in 1955—demands action on a dynamic program which will place the Park Service in a position to cope with an expected visitor load of 80 million a decade hence.

Such a program is now being formulated by the National Park Service. Its preparation already has revitalized the Service. Called Mission 66, its objective is to fully equip the national park system to carry out its basic purposes by 1966, the 50th anniversary of the Service.

It is the sincere belief that Mission 66 will prove to be the finest contribution to our national parks since the Service was established as a Bureau of the Department of the Interior in 1916.

Sport fishing: Funds for financing the program of Federal aid to the States for fish restoration have been available at record levels under the Eisenhower administration. Under this nationwide program significant progress has been made in Pennsylvania.

The Pennsylvania Fish Commission has emphasized the creation and purchase of public fishing waters. Federal funds have been used to defray 75 percent of the cost of the following projects:

Project:	Cost
Somerset Lake and Dam	$127,042
Glade Run Lake and Dam	66,647
Glade Run Lake and Dam site (Butler County)	21,614
Ice Dale Lake (Chester County)	21,000
Virgin Run Dam and Lake (Fayette County)	68,166
Somerset Lake site (Somerset County)	75,682
Total	380,151

In addition to the foregoing, project plans have been approved for 2 additional projects, which, when completed, will cost an additional $66,300, as follows:

Goldsboro Lake (Wayne and Monroe Counties)	$30,000
Lower Woods Pond (Wayne County)	36,300
Total	66,300

When completed, the work which has been approved to date will have added materially to the recreational opportunities available to Pennsylvania's anglers.

The Fish and Wildlife Service is conducting a nationwide survey to determine the amount of money and time spent annually by American sportsmen afield and on the water. This survey is being undertaken to determine what help the sportsman needs in the form of legislation. It is hoped by this survey to make the public better aware of the sizable contribution of sportsmen to our national income so that greater attention might be focused on their needs.

Wildlife protection: False rumors of a giveaway of wildlife refuges and a land grab of refuge areas by the military have caused sincere conservationists much undue concern. Again, let us examine such rumors in the light of hard facts on the public records.

Not one acre of wildlife refuge area under the primary jurisdiction of the Fish and Wildlife Service has been transferred to the military since the Eisenhower administration took office.

Since January 1953 the Department of the Interior has established 8 new wildlife refuges and 3 more are in the process of being established. During that period the Department acquired 79,946 additional acres for wildlife preservation through purchase, lease, or transfer of federally owned lands.

Under the Eisenhower administration Federal wildlife refuges have been established for the first time in Kansas and Colorado and new lands have been added to the Federal refuge program in Louisiana, North Dakota, Kentucky, Tennessee, South Carolina, Texas, Washington, Florida, Maine, Oregon, Idaho, Michigan, and New York.

During the fiscal year ending June 30, 1955, wildlife refuges received the largest allocation ever made for acquisition, development, and maintenance. This totaled $6,614,200 and was $2 million more than the refuges had been allocated in the annual budget when this administration assumed office.

It is gratifying to know that during the fiscal year ending June 30, 1955, the Migratory Bird Conservation Commission approved purchase of 30,189 acres of refuge lands at a cost of some $645,000—the largest expenditure of duck-stamp funds for refuge acquisition since 1945.

In administration of a national wildlife-refuge program that has been carried out over a period of 52 years, it must be expected that some refuge areas would outlive their usefulness, especially where they were established to meet temporary emergencies until more efficient areas could be acquired.

In the 6 years preceding the Eisenhower administration, for instance, 36 wildlife refuges were abolished. The total Federal wildlife reserves were reduced by 408,527 acres.

The Eisenhower administration has dropped 7 refuges totaling 6,226 acres, made up of small units of low productivity, where administrative costs were not justified.

Secondary use for wildlife of the 56,954-acre Fort Keogh Refuge in Montana, administered by the Department of Agriculture, was relinquished by the Fish and Wildlife Service because of administrative duplication and limited wildlife values. Wildlife potentials of this area will continue to be maintained by the Department of Agriculture.

The Eisenhower administration has not and will not voluntarily surrender any refuge of proven value to wildlife as long as it continues to meet wildlife conservation needs. Wildlife refuges, as well as national parks and forests, are regarded by the administration as irreplaceable national assets whose value is clearly established.

A refuge of proven value is the Wichita Mountains National Wildlife Refuge. Currently, the Department of the Interior is negotiating with the Department of the Army in an effort to maintain the refuge boundaries intact. In 1953, the Department of the Interior, of which the Fish and Wildlife Service is a part, made known its strong opposition to any reduction in the size of the Wichita refuge, and Secretary McKay has reiterated this position.

In the last session of Congress, legislation was enacted authorizing the expansion of Fort Sill, which adjoins the Wichita refuge. The Army's plans, as outlined before congressional committees, called for the acquisition of some 20,000 acres of privately owned lands and the transfer of some 10,700 acres of the Wichita refuge.

The Fish and Wildlife Service has proposed an alternative plan under which the refuge boundaries would remain intact while the Army would be permitted to set up areas within the refuge from which projectiles could be fired to land on target areas within the military reservation.

The Military Establishments have been cooperative in allowing large areas over which they hold primary jurisdiction to be used as wildlife refuges. It is the hope that a mutually satisfactory solution of the problem at Wichita can be found.

In this connection, a significant agreement between the Fish and Wildlife Service and the Corps of Engineers was completed in August 1954. Under this plan, the transfer of wildlife lands to the Service and to the State conservation departments has been expedited. The Service now assists the Corps of Engineers in conducting hearings at which there is full public consideration of the importance of integrating fish and wildlife protection measures into planning for flood control and navigation developments.

The national wildlife refuges, under the programs of this administration, are contributing importantly to the Nation's recreational needs without interfering with the paramount conservation objectives for which the refuges were established. Last year over 5,200,000 persons visited the refuge areas, an increase of more than 11 percent over the 1953 record of visitors.

Public lands and forests: One of the most important conservation measures in many years—Public Law 167—was signed by President Eisenhower on July 23, 1955.

A major provision of this law gives the Department of the Interior authority to control surface resources on mining claims. This is a conservation tool for which the administration worked ever since taking office.

Another major provision removed commonly occurring minerals such as sand, gravel, and cinders from the general mining laws and placed them under jurisdiction of the Materials Act of 1947.

Now, at long last, the Government has authority to end many of the abuses which had developed over the years under the old mining laws. Prior to enactment of Public Law 167, location of a mining claim conferred upon the locator rights of exclusive possession of the surface. It was possible to establish claims for low-value minerals and acquire far more valuable surface resources, such as rich timber stands, or a summer home or business site, or a water hole on grazing land. Many such claims were established in our national forests and under the law the Government was required to honor them.

The Government now has the authority, prior to issuance of a patent on a mining claim, to manage the surface resources of the claim. This includes, of course, the cutting and sale of timber, grazing of livestock, and use of the surface of the claim for access to adjacent lands.

Important measures for the conservation of the open public rangelands of the West have been taken by the Eisenhower administration. The Department of the Interior's new 20-year program for soil and moisture conservation is but one of the progressive steps that have been taken to conserve our important natural resources. Under this program, the Federal range is being reseeded and effective measures are being taken to halt heretofore unchecked erosion of the soil.

Good conservation calls for wise use without abuse of the vast expanses of public domain land beyond the boundaries of national park and wildlife refuge areas. Many citizens do not realize that the Federal Government still retains control of about 1 out of every 4 acres in the United States. As our population expands, so do public demands for use of undeveloped Federal acres. A number of laws provide that public domain lands must be transferred to private ownership when all requirements of those laws are met. The Department of the Interior has the responsibility of so classifying the vacant public land that it is put to its highest use possible under the law. Often when the administration complies with the law—and I am sure that no citizen would want it to do otherwise—the cry of giveaway is raised in some political quarters. It is significant that not one allegation of giveaway has been, or can be, substantiated.

Water resources: Regarding the problem of water as a diminishing resource, the Eisenhower administration has also been moving forward on that front. Realizing the importance of the Nation's water resources and that the conservation and use which we make of them may in large measure determine our future progress, President Eisenhower last year established a Presidential Advisory Committee on Water Resources Policy.

The President realized that policies in this field have been modified repeatedly and that unfortunately the Government has often relied on piecemeal or stopgap measures. Accordingly, he charged the committee with the task of undertaking a comprehensive review looking toward strengthening and modernizing Federal policies and programs in the field of water resources.

The Presidential Advisory Committee's report is now nearing completion and will provide the administration with a sound basis on which to make recommendations for the solution of these tremendously important and complicated problems.

In conclusion this report of progress will do much to convince the American people that the Republican administration is faithfully exercising its stewardship of the Nation's natural resources. Our record is ineed creditable and it is up to us to bring it to the attention of the people thus revealing that the charges of giveaway are wholly unsubstantiated.

Address by Hon. Herbert H. Lehman, of New York, at Civil Rights Rally of the Conference on Civil Rights

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the text of remarks I made at a civil rights rally held at the Manhattan Center, in New York City, on Thursday, December 15, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is my pleasure and privilege to be here tonight at this rally sponsored by the Leadership Conference on Civil Rights, in a cause to which I am committed with all my heart.

I began fighting for Federal civil rights legislation 7 years ago, as soon as I became a Member of the Senate. Your organization, the Leadership Conference on Civil Rights, was brought into being at about the same time. Our efforts, mine in the Senate, and yours, within the framework of this Leadership Conference, have been both contemporaneous and collaborative.

In these 7 years, marked progress has been made toward the goal of equal human rights for all our citizens. Indeed, we have moved steadily forward during the past 30 years.

One redoubt after another has been captured in the assault against the destructive institutions of discrimination and segregation. One area of activity after another has been liberated, or partly so, from these degrading practices. This progress has been made, and continues to be made, as a result of action by State and local law-making bodies, administrative agencies and officials, and by the courts of the land.

This progress has been made possible—indeed it has been forced—by the militancy of the groups you represent, armed with the massive support of public opinion. And to you, and the groups you represent, will belong an important share of the credit for the future progress that will and must be made.

But in giving credit, let us not forget to name one individual—one very dear to me, and to many of you—the founding and driving spirit of the Leadership Conference from its inception until his untimely death—a rare spirit with a dream in his heart and unquenchable courage in his soul—the late, beloved Walter White.

Yes, there has been progress. But the distance left to go is farther—much farther—than that which we have already come.

I believe, with all my heart, that the fight for equal human rights must be pressed, in full vigor, and at all levels—in the executive branch of Government, in the courts, and in every law-making body throughout the land. And I mean to include not only the State legislatures, the city councils, and the school boards, but also, and even primarily, the Congress of the United States.

I believe that the whole struggle for civil rights—for equal treatment under law and equal opportunity for every man, woman, and child, regardless of race, creed, or national origin—must be carried forward relentlessly and tirelessly until victory is won. There must be no delay in this struggle for reasons of political expediency—or any other.

The demand by one-eighth of our population for the full minimum rights of citizenship—and for all the protections which our Constitution affords to each and all—cannot be postponed, denied, or repressed.

The electric shock which passed through a major section of our people as a result of the shameful murder of Emmet Till and the acquittal of his assailants has given new meaning to the demand for equal justice under law for every American.

We must and will demand action in the months ahead, including, as I have said, in the Congress of the United States. That is my forum of action—the Senate. I pledge you my efforts, for what they are worth, up and down the line, on this front.

I have referred to the progress that has been made in the past. Congress has played a role in this progress. Its role has been to supply pressure and to exert, through the threat of national FEP legislation, for instance, a strong impetus for action at other levels and on other fronts.

But it is an astounding fact that Congress has not passed one single piece of major civil rights legislation—not one—not only in the last 30 years, but in the last 78 years. Think of that.

You all know the reason for that—the filibuster, and the threat of the filibuster—in the Senate.

That weapon is still available to those who desperately oppose civil rights legislation.

The only cure for the filibuster is a change in the rules of the Senate—an antifilibuster or cloture rule—a change in rule 22. For the past 5 years we have concentrated on getting such a change in the rules—but, thus far, in vain.

There wasn't much of an effort last year, in the first session of the Congress. I doubt whether there will be much more of an effort in the next session.

I hope that in 1956 a Congress will be elected which will make such an effort, and succeed. But that is up to you and to all the voters of the United States. The civil-rights issue must be framed in 1956, and the voters must give a clear mandate for action by the Senate on, among other things, its own rules of procedure. If such a mandate is given, an effective antifilibuster cloture rule can and will be adopted.

But I want to say a few words about the session of Congress that will meet, not in 1957, but next year—in fact, in about 3 weeks from tonight.

A great number of civil rights bills were introduced in the first session of this Congress which ended last August. These bills are pigeonholed in committee. With some exceptions and modifications, these are the same civil rights bills which have been before the Congress for a number of years. Included among them are FEP bills, anti-poll tax bills, and antilynch bills.

I doubt if any substantial legislation on these subjects will get very far, or even be given much genuine consideration. I hope that my prediction will turn out to be wrong; I will do my best to prove it wrong, but I'm afraid it is going to be sadly right.

There are, however, some less controversial civil rights measures which might be favorably acted on. One is a bill I have introduced to make it a Federal offense for a civilian or group of civilians to attack or assault a GI while on duty. This is a common occurrence in some parts of our country, especially if the GI is of a minority race or national origin. Local sheriffs and police officers are frequent offenders in this regard, and the bill I have introduced would provide GI's with the protection of Federal law. There is some prospect that such a bill might pass since the Defense Department has been in favor of it.

A second measure which might pass is a constitutional amendment prohibiting poll taxes. The majority leader of the Senate, Senator LYNDON JOHNSON, has announced that he will use his influence in behalf of such a measure.

With his support, and that of the majority policy committee, such a constitutional amendment might well pass the Senate, and the House, too. Such an amendment would then require the approval of the legislatures of 36 of the 48 States of the Union. Whether ratification by such an overwhelming number of State legislatures is practically possible, I do not know. It would, of course, be much easier for Congress to pass a simple law outlawing the poll tax. I, myself, would prefer such a course of action, but there is not much chance of that in this session.

But even approval of a constitutional amendment would represent some action on this front by the Congress. As such, I will vote for such a constitutional amendment, if it is, in fact, brought up for a vote. But let me make myself clear.

I am not going to be content—and I don't think you are going to be content—with congressional action on a constitutional poll-tax amendment if such action is offered in satisfaction of our demands for substantial and significant civil-rights legislation.

The time has come for Congress to take some real action on civil-rights legislation, and this Congress, at this forthcoming session beginning in January, is going to be faced, whether some like it or not, with some meaningful honest-to-goodness civil-rights issues.

There is going to be a demand, I am sure, for a strenghening of the civil-rights section of the Justice Department, so that there can be no doubt of the right of the Federal Government to act in such cases as the Emmet Till tragedy.

I favor such legislation, and am a sponsor of a bill to this effect.

There is also the matter of an antisegregation amendment to the school-construction bill.

There are pending in Congress several measures for Federal grants of money to the States to help build more public schools. There is nationwide support for this legislation. We are, indeed, in critical need of more and better public schools for our children.

I strongly favor this legislation, in the version proposed by Senator HILL.

Yes; I favor the principle of Federal aid to help build more and better schools for all our children. But it seems almost elementary to me that for the very purpose of improving and expanding our public-school facilities, it is essential to carry out the decision and decrees of the Supreme Court with regard to school segregation.

The question is: Shall we distribute tax money, raised by taxation of all the people, to States which are trying to avoid, evade, and defy the Supreme Court decree? Shall we help some States and school districts perpetuate segregation and defy the law of the land? Shall we in Congress say that school segregation is not our concern but only the business of the courts? Shall we in Congress stand above the battle and let the issue be fought out exclusively in the courts?

To these questions, I, personally, answer with all the fervor at my command, "No."

I am going to propose an antisegregation amendment to the Federal school construction bill, even if I am the only one in the Senate to support it. I shall offer such an amendment, although I reserve decision as to the time and place for offering this amendment, whether in committee or on the floor of the Senate. And I shall fight for it, with all the strength I have.

But believing with equal fervor in the cause of Federal aid to education, I shall vote for and support a Federal aid to education bill, even if, despite my efforts, the anti-segregation amendment is defeated. I want to be frank with you about that.

Now I said a few moments ago that the kind of Congress that is elected in 1956 will determine the kind of action that is to be expected on major civil rights legislation in the Congress that convenes in January, 1957. And I indicated that the voters and citizens have it in their power to determine the kind of Congress that is elected and the kind of mandate that is given to that Congress.

But I am well aware that in some parts of our country there are large groups of potential voters who are denied the right to register and vote—not by the poll tax, but by naked intimidation—moral, physical or economic.

Among the areas in which this is true are some in the North, but mostly in the South.

This is not democracy. It is a subversion of democracy.

I propose that we remedy this situation. I propose that we establish Federal machinery to insure to every citizen protection against intimidation, direct or indirect, physical or moral, in exercising his constitutional right of voting and participating in the political life of community, State, and Nation.

I propose that a Federal electoral commission with enforcement powers be established for this purpose. I am going to introduce legislation to accomplish this purpose. I have been working on a draft bill. As soon as I perfect it, I am going to introduce it. I don't know how far it will get in the coming session, but such a bill must be passed eventually. I commend this measure to you. I hope that the organizations represented here tonight will consider such a proposal worthy of support.

My friends, I have not given you an optimistic report on the prospects of major legislative action on civil rights in the coming session of Congress. But I have not meant to be discouraging, only realistic. I offer no counsel of despair, but I believe we should see the situation for what it is and commit our forces and energies accordingly.

Speaking for myself, I believe the struggle has got to be waged—not sometime in the distant future, but next year, now, beginning tonight. I believe, and strongly feel, that we need to offer full-scale battle in this good cause, no matter how great the odds, nor how bleak the prospect.

The greater the difficulty, the greater the challenge. Let us hereby resolve with sober and measured determination, that we will not give up, nor diminish our effort, nor lose hope, nor surrender—until victory is ours.

In these efforts, we know we are on the side of right. We know that we are animated by high moral purpose. We know that much of the world watches what we do, and measures our country by the dedication we show in this cause. Let us not flag nor fail.

Address Delivered by Hon. Barry Goldwater, of Arizona, Before the American Mining Congress

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an address I delivered before the American Mining Congress convention, at Las Vegas, Nev., on October 10, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Gentlemen, it's a privilege and a pleasure for me to be here, and to have this opportunity of discussing with you the problem of public relations.

I must admit when I received your gracious invitation, my immediate reaction was: "Who, me?"

This is an opportunity I cherish and shall try to deal with honestly and objectively.

I am not an expert at public relations. There is an old definition that an expert is someone who knows more and more about less and less. But I have lived all my life in a State where mining is a basic industry. During my boyhood, mining was the major source of income. Every student of American history knows that gold and silver and copper built and populated the West.

I am reminded of the experience of a friend of mine who, while driving to work one Friday morning realized he had a scratchy throat. He decided to stop by his

doctor's office and get a shot of a new antibiotic and insure his ability to enjoy the upcoming weekend.

In the doctor's wating room he said to the receptionist: "I'd like to see Joe for just a minute. He knows me and * * * well * * * I'm not very sick. I'd just like to see him for a minute or two if I may."

The receptionist demanded to know his name and all the items they put on the case history sheet.

My friend reluctantly complied with her request. Then she ushered him into a small waiting room. A moment later a nurse came in, told him to stand on the scales, jabbed a thermometer in his mouth, and made her notations on the chart.

When my friend could speak again, he said, "Look, I'm not sick. There is really nothing wrong with me. I know Joe, he knows me, and I just want to see him for a minute. Well, to tell the truth, I have a little scratchy throat and I just want a shot of penicillin or some aureomycin or one of those things to keep me in shape for my golf game tomorrow."

The nurse nodded and ushered him into a second room, and after 4 or 5 minutes a second nurse came in bearing one of those ridiculous little smocks they sometimes give you in a doctor's office.

"Hang your clothes in the closet and put this on," she said and ducked out the door before my friend could object.

He stared at the smock and he stared at the closet and he stared at the door and, finally, he surrendered. He hung his clothes in the closet and put on the smock and stood there feeling quite naked and inadequate.

The nurse returned and ushered him into a third waiting room. Here he found three other men attired in the same smocks. After a moment or two my friend said, "Look, fellows, I'm not really sick. I * * * I shouldn't be here. I * * * I'm kind of embarrassed to be here with you."

Over in the corner of the room a little fellow looked at him, grinned, and said, "You're embarrassed! I just came in to deliver a telegram."

May we consider that I am here to deliver a telegram, a message from one concerned individual to a group of industrial leaders who are also concerned.

This concern of ours must not stop within the limits of our own particular industry or our own job or our own State. You and I are involved in a process far bigger than mining or department stores or politics or the United States Senate. We are involved in the destiny of man, and man is more than just an economic unit or a physical unit or a political unit. Man is also a spiritual entity, destined by Almighty God to enjoy the blessings and the responsibilities of economic, physical, political, and spiritual freedom.

If we are to approach the problem of public relations with any chance of finding a successful solution, we must begin with a clear and basic concept of man.

Public relations is one of those $64 phrases developed by professionals to confuse the layman.

Public relations is not radio or television or newspaper editorials or newspaper news stories or newspaper advertising. Public relations is not gifts to the Community Chest or to the boys club or scholarships to the university. Public relations is not putting a key man from your industry in every service club, or making sure that your men control the board of directors of the chamber of commerce.

Public relations is a person to person acceptance.

And acceptance exists only where there is mutual understanding, mutual respect, and mutual confidence.

Radio, TV, newspapers, service clubs, community organizations, are the tools available with which you can do this job, but they aren't to be used as weapons to force your opinions down someone else's throat.

Every man in this room knows a great deal more than I know about the basic contributions your mining industry has made to the political, economic, social, moral, and cultural development of our society. And I suspect most of you are more keenly aware of the failures of your industry.

For more than 20 years during the great experiment of the New Deal and the Fair Deal, big business was used as a whipping boy by the demogogues and the opportunists.

Following the great depression and under the pressure of political, economic and social change, there was and continues to be a planned program designed to divert the attention of the average American citizen away from the goals and objectives of those men of vision who "dedicated their lives, their properties, and their sacred honor" to the creation of this Republic, and away from the concept of a free society where all men should stand equal, where all men should be free.

Many of these advocates of security from womb to tomb are well motivated individuals, men and women who, recognizing the imperfections in our economy and our society, are attempting to do something about it. And there is little to be gained by dismissing their activities with harsh names and anger.

As you and I grow older we resist change. We cling firmly to the practices of the past. We are inherently suspicious of innovation. Yet in business we constantly contradict ourselves by adopting new production practices, new processes which were completely visionary just a few years ago.

May I suggest that if and when this attitude of eagerness to learn, this willingness to listen, inspect and consider is applied to the problem of public relations, true progress will commence.

Acceptance is a two way street, and when a business or an industry becomes big and important and successful by following a prescribed program, it is dangerously easy for that busines or industry to forget to listen. And when we forget to listen we build a wall around ourselves.

If we want the general public, and this includes our employees, our customers, and our stockholders, to listen to us and to respect our problems, we must break down and destroy every barrier which serves to separate us from them and their problems.

A great many men with more background and more qualifications than I offer you have devoted time and effort to an examination of this problem which confronts us. Immediately upon accepting your invitation to appear here, I directed my Washington staff to make a study of public relations in the mining industry. That study lasted the better part of 4 months and produced a lot of encouraging and inspiring information.

The editorial staff of Fortune magazine addressed itself to this problem. In September 1950, Fortune stated bluntly that American industry was failing to sell free enterprise and to be intelligently and consistently concerned that free enterprise be forever accepted as the only system under which the people of this Republic can prosper.

Fortune said the root of the trouble was a lack of the feeling of participation and the need for self-expression both on the part of the worker and of management.

If you will forgive me, I should like to quarrel with that word "sell" as used by Fortune. It has a connotation which offends me. We think of the supersalesman as a man who persuades you to buy some article, idea, or process which results primarily in a profit for the salesman.

Successful public relations must produce a profit for all participants. Far too many public-relations programs are little more than high-pressure, selling campaigns. You and I know that unless the product itself justifies the purchase, there will be no repeat orders.

In our survey of public relations in the mining industry, we solicited opinions and information from all the major producers and operators. As might be expected, we found the leaders and the laggards. Many of your companies have instituted complete programs with all the outward trappings and a careful exploitation of all the tools available. But we failed to find a united effort equal to the programs of such comparable industries as the railroads and the oil companies.

Everywhere in our world today there is evidence of a desire for political self-determination, a desire for independence. This trend is partially economic, partially political. It provides good use for a word coined by one of my staff members, polynomics, which describes the practical wedding of politics and economics.

You gentlemen are dedicated to free enterprise, to individual opportunity, and to independent action. This is both a political and an economic problem. May I suggest that as free men and women dedicated to the concept of man as a child of God, with an important, individual, immortal soul, it is up to us to preach what we practice as well as to practice what we preach.

In my own State the mining industry has long been interested in politics. And while these political activities may actually be no more than necessary self-protection, the manifest political strength of the industry, coupled with its economic importance, has made it a bigger target for those who preach a planned economic and social state. Because of its size, some of the wildest shots have had a telling effect on some portion of that target.

The mining industry has been politically conscious of taxes for a long time, and necessarily so, because the mining industry pays a substantial portion of the total cost of government in the State in which they operate.

It is quite natural that this political interest should have as its first concern the protection of its sponsor. But I have discovered big companies, contrary to popular conception, are not totally selfish and, in many cases, the mining industry has urged and sponsored development of schools, roads, and local governments with full knowledge that a large proportion of the cost of these improvements will be paid by the industry. For sure industry polices government against harebrained fiscal policies which would result in damage not only to industry but to the economy as a whole. Many times a policeman is not very popular, particularly with vociferous self-seeking minorities.

May I suggest there is no reason for American big business, the mining industry or any other facet of our economic life, to be on the defensive just because it is big.

Certainly you are the target for the demagog, the opportunist who seeks to use envy and discouragement to gain his personal objectives.

Let's get off the defense. Let's put in the first team. Let's tell the story of free enterprise and free political government to all the world, and most especially to our own friends and neighbors, our employees and customers and stockholders.

You and I know the American system of free enterprise has created the greatest opportunity for the individual known to history. We know the American free enterprise

has made possible a higher standard of living for the average American than has ever been possible anywhere else on the face of the earth. You and I know the American system of free enterprise is the only social, political, and economic system which can meet the challenge of tomorrow and still preserve the basic freedoms of the individual.

We know that with all the progress and growth of our Nation, there is still room for improvement and that improvement will never come from the social planners who seek to regiment the lives of men.

Let us forget about defending freedom and begin to proclaim freedom.

Mankind was not destined to be called a class, a collective, or a group. And what we seek is a basic person to person understanding and acceptance, and the place to begin is with the individual.

Let's look at this American citizen for a moment, this individual human unit in the multitude of customers, employees, and stockholders we are trying to serve and whose understanding and acceptance we seek.

I promise you this is going to be the most convenient study we have ever undertaken because our subject is here in this room, a fellow who is already pretty well known to us. He is the engineer, he is the office manager, he is the mucker, he is the shift foreman, he is the clerk, he is the office boy.

This fellow is concerned first of all with his own problems. His own wife and his own kids are most important to him. He'd like to have a little better home than mom and dad had. He wants to advance in his work.

This fellow glows with pride when the boss appreciates him. He wants you to accept and respect him, and in turn he will accept and respect you.

Oh, he's cantankerous at times, at times he's lazy. Sometimes he just doesn't have the ability to do the job the way it should be done. Envy and self-pity will give his thinking a quick twist in the wrong direction. He's more apt to be vocal about his dislikes than his likes.

And when he fails at something, he finds it pretty easy to blame the other fellow.

He has lived long enough to discover that life is a pretty grim struggle, but he has been able to conquer some disappointments.

He may not exactly wear a chip on his shoulder, but he is determined that nobody is going to sell him a bill of goods, and when he listens to you, if he does listen to you, you can bet that behind the appearance of outward attentiveness, he is saying to himself, "What's his angle? What does this guy want from me?"

A proper public-relations program must begin at home with your fellow workers, your own employees. Let them have a share in your problems. Let them work with you and not for you. Let them know you on a person-to-person basis, and take the trouble to know them in the same way.

And when they become convinced that you are concerned with their problems, they will, in turn, be concerned with yours.

By all means participate in community projects and undertakings. But do it on an individual, personal basis. Forget the notion that you are to be treated with respect just because you are the representative of the big XYZ company.

Use radio and TV and newspapers, but don't think you can buy understanding or overpower opposition by the size of your ad or the editorial comment of a company-owned newspaper.

Be willing to listen, to accept suggestions, to make changes, to eliminate company practices which make you vulnerable to the sniper.

When the mining industry developed the West, it was necessary for many companies to build company-owned towns, to operate stores, to provide medical dispensaries and hospital services.

We are all familiar with the company town of 50 years ago with its rows of identical houses, the company store where the mining employee was always in debt, the company doctor whose office bore the stamp of socialized impersonal medicine, the frequently well-intentioned paternal policies which provided a lot of the security the social planners think is a new idea today, but at the same time robbed the individual of his feeling of independence and in some instances of his self-respect.

This human being you are dealing with is an independent creature. He wants and deserves to experience the pride of ownership. He may let his house go to rack and ruin but still it's his. He may be unwilling to provide the same standard of medical care offered by the company, but still he wants and deserves the right of independence in his family living.

This man may buy his groceries from a merchant and pay higher prices for an inferior quality, but his wails of complaint will never match his resentment against the company store and the compulsion implied in that feudal arrangement.

You gentlemen represent a fascinating, dynamic industry. Your investments, your technological know-how, and your management skills have materially contributed to man's progress.

You transform unusable raw material from mother nature into items of utility and beauty to satisfy man's longing for a better world. You have a story of romance and ingenuity and devotion unequalled in history. And the 20th century, with our methods of mass communication gives you the opportunity to make all men everywhere partners in your progress. Begin your public relations programs by granting to all men, to the janitor and the boss, to the stockholder and the customer, the respect you would like to receive.

Dedicate yourself to defending the right of every individual to be free, to cherish ambition, to struggle for advancement and to control his own life. Proclaim your devotion to the concept of man as a child of God, endowed by his Creator with freedom of choice. Demonstrate your willingness to accept every individual on a person-to-person basis.

Our world today is joined in mortal combat which can only end in total victory for one side or the other. The issue is simple: Shall men be slaves or free. The basic premise of communism views man as an economic animal, a social animal, and a physical animal incapable of thinking for himself, or exercising independent judgment, of guiding his own destiny.

Every voice in our Nation today which speaks out in favor of the regimentation of men, every political demagog who denies man the right to think for himself is echoing the thinking of Karl Marx who said: "The democratic concept holds that each man is a sovereign being. This is the illusion, dream and postulate of Christianity."

In this time of peril and crisis let us rededicate our lives, our fortunes, our sacred honor to the perpetuation of the integrity of the individual.

Let us use the skill and the resources and all the technological gains of the 20th century to reaffirm the truth that man's destiny is freedom and that man's obligation is fully expressed in that ancient law:

"Thou shalt love the Lord thy God with all thy heart and with all thy soul and with all thy mind, and thou shalt love thy neighbor as thyself."

I thank you.

The Communist Conspiracy

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD several addresses I delivered on the subject of the Communist conspiracy.

The first was an address I delivered at the Boston Arena, in Boston, Mass., on October 30, 1955.

The second was an address at the annual fall meeting of Sertoma International, in Chicago, Ill., on December 5, 1955.

The third was an address delivered in Tulsa, Okla., on December 7, 1955.

The final one was an address I broadcast on January 8, 1956.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. JOE MCCARTHY, OF WISCONSIN, BOSTON ARENA, BOSTON, MASS., OCTOBER 30, 1955

My fellow Americans, I always like to come to Boston because we don't have to spend our time discussing elementary things. I always feel that Bostonians—unlike some of the people in Washington—have a pretty good understanding of what the Communist fight is all about.

There is no need, for example, to tell a Boston audience that the spirit of Geneva is the spirit of illusion, folly, and appeasement.

In Boston, it is unnecessary to explain that when you propose friendship with tyrants and murderers—however good your intentions—you advance the cause of tyranny and murder.

There is no hesitation in this audience, I am sure, to refer to Communists as the eternal enemies of God and the human race, and to the Soviet Union as an unregenerate international bandit—even though the Paul Hoffmans and the Milton Eisenhowers tell us that the use of such words is a serious breach of coexistence etiquette.

I trust that you good Americans will never lose sight of, or minimize, the central fact of this struggle—namely, that whatever be the current twist of Soviet diplomacy, international communism is irrevocably committed to destroy this Nation and our way of life.

We cannot do business, we can never make friends, with that sort of enemy.

Creating the spirit of Geneva was, of course, a great triumph for Communist diplomacy, and the Kremlin leaders are still exploiting that triumph to the hilt. But we must not suppose the Communists have placed all their bets on their ability to outguess us in the diplomatic chess game. In case they fail to defeat us in this way, they are plotting our military defeat.

It is this aspect of the struggle that I want to discuss with you tonight. Tonight I shall discuss the life-and-death race between the United States and Russia in the intercontinental guided ballistic missile field, and whether at our end of the race we are being sabotaged.

A vital part of the job of destroying us militarily has been assigned to the Soviet Union's undercover agents in this country. The mission of the Soviet fifth column is

twofold: Communist espionage agents are ordered to steal our secrets, and Communist policy-subversion experts are instructed to cause disastrous slow-downs in the development and production of vital military weapons.

We are most familiar with the first type of sabotage—that of stealing our secrets—and most Americans realize how it has jeopardized our national security. We know that had it not been for Communist agents turning over our most valuable secrets to the Soviet Union, the danger to this country today would not be nearly as great as it is. Take, for example, what happened to our atom bomb monopoly.

In the years immediately following World War II—while we had exclusive possession of the atom bomb—it was inconceivable that the Soviet Union would attack the United States. But in 4 short years this magnificent balance of power in our favor evaporated and our own country was in very great peril. And why? Because Klaus Fuchs, the British scientist, and American spies, such as the Rosenbergs, gave the Russians the vital secrets of the atom bomb. The Communists were thus able to produce an atom bomb in 1949, a full 4 years ahead of schedule.

You might think, after the great A-bomb treason, that those who had pooh-poohed the internal Communist threat through the late forties would have learned their lesson. But no: Irresponsible individuals—who pose as intellectuals—started making jokes about hunting Communists in the Bureau of Wildlife and Fisheries, and, at the same time, renewed their smear campaign against those who were trying to tighten up our security system. Those left-wingers are responsible—those scoffing, sneering pseudo-intellectuals, supported by wealthy, tax-exempt anti-anti-Communist organizations such as the Ford Foundation—they are responsible, no less than the Communists themselves, for the fact that many Soviet agents remain unexposed, and to this day have access to our newest military secrets.

According to testimony of former Communist spies, a number of unidentified Communist espionage rings are still operating in the United States Government. Because they are not identified, it is only prudent to assume that Communist agents are gathering information every day about our Military Establishment and sending it to the Soviet Union.

Let me say, in passing, with regard to that fantastic suggestion that we give the Communists blueprints of our Military Establishment, that one likely reason the Communists did not at first accept the plan is that copies of our blueprints are already in Kremlin safes.

But important as it is to protect ourselves against spies, we must not lose sight of the other, and even more important assignment of the Soviet fifth column. If Communists are successful in slowing down the development of new weapons, and the production of already-developed weapons, it won't matter much whether the spies are successful in stealing secrets.

For remember: The Russians have a highly trained scientific establishment of their own, and they employ some of the most efficient methods of mass production. If, through policy sabotage, we are held back in the race to develop and produce a decisive weapon, the Communists can beat us on the strength of their own knowledge and skills.

Today the decisive weapon is the hydrogen bomb; yesterday, it was the atom bomb. Tomorrow—and by tomorrow I mean possibly within the next year—the decisive weapon with be the intercontinental ballistic missile. The race to produce this weapon could well determine the fate of Western civilization. Yet tonight I must report to you that the available evidence is (1) that the Soviet Union is winning that race, and (2) that it is possible that the Soviet Union is winning the race because well-concealed Communists in the United States Government are putting the brakes on our own guided missile program. The Killian report is to the effect that within a short time the Communists will be ahead in the ICBM race.

The subject of the intercontinental missile race is both interesting and frightening, and I want to discuss it with you in some detail. But first, it would be well to square off to that type of thinking that says it is inconceivable that Communists are in such elevated and strategic positions as to effect slowdowns in our secret-weapons program. Nothing could be more dangerous than to rule out the possibility that Communist agents have infiltrated the uppermost echelons in our Defense Establishment—and nothing demonstrates so well an ignorance of very recent history.

In the fall of 1953, you may remember, I was viciously attacked by the left-wing press for stating that certain highly placed individuals in our Government had deliberately caused a slowdown—and for a while, a complete cessation—of the American hydrogen bomb program. You remember the reaction: "McCarthy makes a wild charge"; "a baseless accusation"; "an unfounded smear," and so on. But the truth was known in high places, and the administration, through fear of exposure, was forced to act.

In a matter of weeks, my charge that a slowdown had occurred was verified and the American people finally learned that the man who was primarily responsible for the slowdown—had paid according to his own admission over $1,000 per year to Communist causes up until the very week he was asked to participate in our top secret atom bomb development program. This man was J. Robert Oppenheimer.

Oppenheimer persuaded Harry Truman that it was immoral for the United States to develop the hydrogen bomb—when, as an expert in the field, he knew full well that it would only be a matter of time before the Communists had a hydrogen bomb of their own.

I shudder to think what would have happened had Oppenheimer had his way for another 5 years. The Communists would then have had an H-bomb stockpile, before we had produced a single hydrogen bomb—which means that in 1954, or possibly this year, the Communists could have annihilated the United States.

Of course, today J. Robert Oppenheimer, like Alger Hiss and Owen Lattimore before him, is the darling of the leftwing. Books are written about Oppenheimer's persecution. Edward R. Murrow made Oppenheimer the hero of one of his "unbiased objective" television shows. The Ford Foundation's Fund for the Republic is distributing this Murrow film, free of charge, throughout the country. And, to round out the picture, it has recently been brought to my attention that Murrow's film, eulogizing this man Oppenheimer, was included in an employees' training program in a department of the United States Government—to be exact, the General Services Administration.

The Oppenheimer case is worth keeping in mind on two counts. It shows how easy it has been for men even with the most flagrant Communist backgrounds to rise to the top in our secret-weapons program; and it holds out the prospect, moreover, that the man who deliberately sandbags the development of a weapon on which the survival of this Nation depends will be treated, not as a criminal, not even as a rascal—but as a serious candidate for national sainthood.

When the liberals say that sabotage of the new weapon is inconceivable, my answer to them is that I consider such sabotage not only conceivable but likely because I realize the power and influence of the liberals, and because the manifest purpose of the liberals' pro-Oppenheimer propaganda is to see to it that the next J. Robert Oppenheimer keeps his job.

Now, what about this new decisive weapon—the intercontinental ballistic missile? Most of you have heard vague and mysterious references to the ICBM—and you may have gotten the impression that intercontinental missiles, like spaceships to the moon, are something of the distant future, a Buck Rogers' fantasy. But this is a dangerous illusion. For the scientists have nearly caught up with the science-fiction writers. The development, production, and use of the ICBM as a weapon of war may be—as I indicated earlier—just around the corner.

Work on the ICBM began in Germany during the Second World War. The German V–2 rocket, which was used with devastating, though erratic, effect during the closing months of the war, was an adolescent ICBM. The V–2 lacked the necessary range and accuracy for effective use in intercontinental warfare—and, of course, it did not have a nuclear warhead. But the V–2 rocket embodied the basic principles of the weapon that may decide all of our futures.

The intercontinental ballistic missile will revolutionize warfare in our day—as, in the past, warfare was revolutionized by the invention of gunpowder, later by the airplane, and, more recently, by the atom and hydrogen bombs. And, as always—when one side has the revolutionary weapon and the other does not—the latter is at the absolute mercy of its enemies. If the Communists develop a long-range guided missile before we do, the balance of world power will shift completely, and this country will face the alternative of surrender to the Communists, or utter destruction.

The long-range guided missile will be "the" decisive weapon because there is no known way of defending against it. This is due to the terrific speed that can be generated in a rocket-propelled missile. We tend to think of our present jet planes that travel at or near the speed of sound, as just about the fastest things that man can make. But present estimates indicate that the first intercontinental missiles will travel at least 8,000 miles an hour—or 12 times the speed of sound!

At the present time we are developing means of defending ourselves against hydrogen bombs delivered by planes. Our defenses against bombing attacks are by no means foolproof, but guided missile antiaircraft fire will be able to knock down many—perhaps most—enemy planes before they reach the United States.

For defense against H-bomb attacks, we are now relying most heavily on the Army's famous Nike missile. Should enemy planes approach this country, a Nike installation in the area of the enemy approach will launch a missile into a radar beam with which our plane-spotters are tracking the oncoming aircraft. After the missile has reached the center of the radar beam, an electronic mechanism inside the missile will cause it to "ride" the beam until finally the missile reaches the plane and destroys it. This is not as easy as it sounds because the Communists may have ways of distorting or deflecting the radar beam, and also may be able to concentrate their bombers so heavily as to make it impossible for Nike to knock down all the planes.

Others, and possibly more effective, defensive missile systems are being put into operation. For example, the Air Force has developed an aircraft-to-aircraft guided missile, called the Falcon—which is launched by fighter planes. Air Force detachments in the Arctic are being supplied with the Falcon, so that we will have a fair chance of stopping Communist bombers before they reach continental United States.

We thus have some defense against aircraft-delivered bombs. But against superspeed guided missiles, that can make the trip from Russia in less than half an hour, defense is practically impossible.

The question is often asked: Will Russian missiles, traveling at such speeds, be able to hit American cities and other strategic points with any degree of accuracy? The answer here is, unfortunately, yes. Russian intercontinental missiles will have self-contained guidance mechanisms that will guarantee a hit within 2 to 10 miles of the center of the target area. With hydrogen bomb warheads, the missiles will thus be accurate enough to knock out any metropolitan area at which they are aimed.

The guided mechanism of the Russian missile is a tremendously intricate piece of machinery—but marvelously simple in concept. The guidance mechanism will give the missile a "brain" of its own. By means of an accelerometer, which will tell the missile how far it has traveled, and a gyrocompass which, when corrected by automatic star sights, will "inform" the missile of its course, the missile will "know" where it is at every moment of its flight from Russia to the United States. The missile will also have been "told" by prelaunching instrument settings, the total distance it has to go and the course it must follow in order to reach a given American city. By putting these two pieces of information together—namely, where the missile ultimately has to go, and where it is at the moment—the guidance mechanism "figures out" the direction and distance left to travel, and automatically sets the missile at the proper speed and course.

The grave danger to every American city is, thus, self-evident. As soon as the Russians perfect this guidance mechanism, and develop sufficient range for their rockets, Milwaukee or Washington or Boston can be wiped out by pushing a button.

But the peril is even more imminent than that. American cities may be in mortal danger, even before the era of push-button warfare, because the Russians are now working on an aircraft-to-ground missile that will not require the four to five thousand mile intercontinental range. If this relatively short-range air-to-ground missile is perfected, the Communists will be able to fly their jet bombers up to the outer range of our Nike defenses—say, somewhere off our Atlantic coast—and launch guided missiles from that point. Such missiles will probably have the 8,000 mile per hour speed we mentioned earlier, and thus would be unstoppable before they reach American cities.

Now, my good friends, the best and the only known defense against a Communist guided missile attack is an intercontinental guided missile arsenal of our own. If we get to the finish line in the race to develop this weapon by the time, or before, the Communists do, the fear of retaliation may discourage the Soviet Union from launching such an attack. But if the Communists win the race, it is "curtains" for us all.

How is the race developing? The Communists were given a handicap at the opening gun. In the closing days of the war, two V-2 plants located in Eastern Germany, and 160 German scientists, who had been working on the rocket, fell into the hands of the Red Army. The important machinery from the plants, and the scientists, were promptly toted off to Russia, and put to work for the Soviet Union. Consequently, the Communists got a huge head start in the race to build the intercontinental guided missile. Our most reliable intelligence reports indicate that the Russians have given top priority to their guided missile program ever since, and with the invaluable aid of the German scientists, have taken huge strides toward perfection of the weapon.

But just as top priority has been given to the Russian ICBM program, just so the slow-down of the American program is the top priority mission of Communist agents in this country. That is their most important job. Has the Communist fifth column been successful?

We know this much: Ever since the war, our guided-missile program has been a relatively low-priority project. The program got off to a slow start at the end of the war, and in 1949—just at the time, you will recall, that Oppenheimer was convincing President Truman that the H-bomb was "immoral"—the guided-missile program was cut back even further. Why? That question must be answered—and until it is answered, and until those who were responsible have been apprehended, the security of this country remains in the gravest peril.

Since 1949 the guided-missile program, as a whole, has been stepped up slightly. Guided missiles for defense against jet attack—like Nike, Falcon, and the Navy's Terrier—have finally been developed. But very little, if any, progress has been made in developing the all-important intercontinental ballistic missile.

The American people have a right to know why this aspect of our guided-missile program is moving at a snail's pace. Is it because our scientists are inferior to the Russians? Is it because of innocent bureaucratic bungling? Or is it because highly placed Communist agents have been successful in sabotaging the program?

I doubt that American scientists are inferior. I find it hard to believe that any amount of bureaucratic inefficiency could, alone, and over a long period of time, be responsible for the neglect of our single most important defense weapon. I therefore find frighteningly compelling the alternative that Communist agents are making good on their assignment.

Back in 1950, the leftwingers told us, in effect, that Alger Hiss had been the last Communist in Government. Hiss was gone, they said, so there was no need to continue the so-called witch hunts—we could let down our guard. But the American people, in their wisdom, demanded and got relentless investigations by congressional committees. One traitor after another was exposed, until we began to get some picture of the extent of Communist infiltration. Today, the leftwingers are saying, once again, that all the Communists are gone.

This is an assumption that Americans can never afford to make if they are to remain free. Especially, can we not afford to make it when, for some curious and unexplained reason, some person—or persons—is giving low priority to the weapon on whose rapid and successful development the fate of America rests.

We live in a time of great tension, my good friends, and of great anxiety. We all want to relax the tensions and remove the anxieties. We thus may be tempted to "play along" when wily Communist diplomats turn on the charm. We may be tempted to roll out the carpet when Communist bureaucrats, disguised as "farmers," pay a "good-will visit" to Iowa. We may be tempted to listen to those who tell us we cannot expose and prosecute Communists in Government because this would violate the "spirit of Geneva" and offend the Soviet Union. But nothing could be more foolhardy. If there were no other reason to puncture and deflate the spirt of Geneva, it is enough that this spurious love fest is causing us to let up in our efforts to expose subversion. Since we are losing the race to produce the decisive weapon, the guided missile slowdown must be investigated exhaustively and relentlessly until the culprits are uncovered.

We simply cannot afford to play the game of being "nice" to Communists.

However much we want peace, we must not lose sight of the hard truth that there will be no lasting peace so long as the Communist conspiracy survives.

We must not buy tranquillity today at the price of slavery tomorrow.

We must not forget our solemn duty to leave for our children the blessings that God has given us.

ADDRESS BY HON. JOE MCCARTHY, OF WISCONSIN, ANNUAL FALL MEETING OF SERTOMA INTERNATIONAL, ALLGAUER'S RESTAURANT, CHICAGO, ILL., DECEMBER 5, 1955

My fellow Americans, a little over a month ago, a remarkable event occurred in the city of Milwaukee. In a small, dingy auditorium, known as Wetzel's Hall, some 40 persons gathered to hear an announcement. The 40 shifted in their seats somewhat nervously, as the speaker arose behind a rickety, makeshift rostrum. Many of those in the audience had not seen this man for 5 years.

"I went away," the speaker began, "to carry on the struggle for the rights of the people, for democracy and peace. Where I went and what I did is not important. But what is important is what is happening today at Geneva. I decided to come back."

Who was the speaker? He was Mr. Fred Bassett Blair, chairman of the Communist Party of Wisconsin. And the audience? The 40 persons in the audience were the hard core of a Communist Party unit, who had responded to the party's call to come out into the open again.

"We disappeared," Mr. Blair went on, "because of the people who fostered the menace of McCarthyism. They made it impossible for us to carry on our work."

But now, said Blair triumphantly, with a smile as big as Khrushchev's, there have been wonderful changes. "We are no longer political exiles in our own country. Since the Geneva Conference of the Big Four powers, people are waking up because they realize there is no such thing as a Communist conspiracy. This thinking makes it possible for us to return."

This scene I have just described to you, my good friends, was reenacted in numerous American cities last month, possibly right here in Chicago, as the Communist underground decided to crawl up from under the planks, and renew a public campaign to overthrow our Government. The spirit of Geneva, and the supposed defeat of McCarthyism—these are the things that, according to the Communists, make it possible for them to show their faces again.

The local party leaders did not, of course, make their decisions independently—they were operating under direct instructions from Moscow—instructions that were revealed recently by Mr. Herbert Philbrick, a former FBI undercover agent who still has contacts in the Communist underground. Here is what Mr. Philbrick wrote just a few days before the public meeting in Milwaukee:

"The Cominform, world headquarters of the Communist International, has ordered top Red agents here to bring the Red network in the United States above ground, and to reinstate the American Communist Party as a 'legitimate national political party.' The new instructions, obviously part of the Red pattern, since the Geneva Conference, signals a major and abrupt shift for the Communist movement in the United States, which, for the last 4 years, has operated almost entirely as an underground apparatus."

"Couriers from national headquarters"—and I am still quoting—"are now being assigned to go into some 21 specific areas in the United States. Among the cities pinpointed for district Communist headquarters are Boston, Philadelphia, Buffalo, Pittsburgh, Cleveland, Detroit, Chicago, Minneapolis, Los Angeles, Seattle, and Denver. A target city for a forthcoming party building effort will be Houston, Tex."

The Communists are optimistic about the success of open party activities because they believe—and now Mr. Philbrick is quoting from the Cominform instructions—that "* * * 'attacks and persecution' of party members will come only from 'Fascist and war-mongering reactionary elements,' who are clearly attempting to sabotage President Eisenhower's policies and program for world peace." These "savages," according to the Communist instructions, "are to be 'condemned' as 'enemies of the United States'."

I trust you realize that one such "savage" is speaking to you right now. This point was driven home by the chairman of the Wisconsin Communist Party at the Milwaukee meeting. In explaining the Communists' mission, Blair said: "We are back here to fight against the rise of McCarthyism."

Now, my good friends, I have no desire to exploit the implications of personal flattery contained in that statement. The Communists use the term "McCarthyism"—a word they coined—to describe everything they don't like. They mean by it, not only Senator McCARTHY, but also Congressional investigating committees. They mean the FBI and the Government security program. They mean patriotic organizations who have been striving valiantly over the years to alert the American people to the dangers of communism. They mean those who favor a realistic foreign policy that recognizes the Soviet Government for what it is—a ruthless tyranny whose ultimate aim is the conquest of the United States. It is these people the Communists are going to fight against—and now, fight against in the open.

I first learned of the Milwaukee Communist meeting from a news clipping sent to me by one of my constituents. Across the top of the story I read this note from the sender: "How can they have the nerve?"

How can they have the nerve? What makes the Communists think they can pull off this new campaign to deceive the American people?

Part of the answer is painfully clear. The Communists are bound to be optimistic as long as we try to keep alive the spirit of Geneva—as long as the administration nourishes the myth that the Soviet Union is a peace-loving nation. Why shouldn't the Communists be optimistic when our own Government endorses the principal plank of their propaganda platform?

But there is a further reason for the Communists' optimism, namely, the increasingly successful anti-anti-Communist campaign here at home. This is the matter I want to discuss with you tonight—the efforts to reduce awareness of the Communist menace, to destroy our security program, to whip up public hysteria against anti-Communist measures. This campaign is being waged by the Communists, to be sure; but the heaviest blows are being struck by their numerous, and influential and very wealthy liberal allies, who, I insist, are doing as much damage to this country as the Reds themselves.

Take, for example, the Ford Foundation's notorious Fund for the Republic. Three years ago the Ford Foundation gave $15 million tax-exempt funds to a group of allegedly respectable, and distinguished liberals, and told them to conduct a number of study projects that would advance understanding of civil liberties. After 3 years' performance, it is now plain that this so-called research organization is nothing of the sort: It is a vicious anti-anti-Communist propaganda machine.

Many Americans have by now caught on to the fund's real purposes; but with its tax-exempt millions, and with the unanimous backing of the liberal press, this false-front organization is bound to have a profound influence in creating an atmosphere conducive to a Communist revival.

One of the reasons the fund is so helpful to the Communists is its president, Dr. Robert Hutchins. This so-called scholar, the former head of Chicago University—whose organization is now advising the American people that our security program is too tough—has some rather interesting ideas about those against whom the program is directed.

Let's listen to Dr. Hutchins' views on Communists, as he related them in 1949 to a committee of the Illinois Legislature. This testimony was given under oath.

Question: "So far as those who have stated they are Communists are concerned, do you not assume that their purpose must be subversive by definition?"

Dr. Hutchins' answer: "It is not yet established that it is subversive to be a Communist."

Next question: "There is no doubt in your mind about the Communist Party, itself, being a subversive organization, is there, Doctor?"

Hutchins' answer: "Well, I can't believe that that is true here, or the Communist Party would long since be illegal."

In other words, the man, whose organization is passing judgment on our security program, says that he doubts that the Communist Party is a subversive organization.

I think we should listen to one more observation by Dr. Hutchins.

Question: "Is there any doubt that the Communist Party is a conspiratorial fifth column operating in the interest of a foreign state?"

Hutchins' answer: "I am not instructed on this subject. I understand many Communists say they do not operate under instructions of a foreign state."

Thus, the former chancellor of one of our leading universities, the "boy wonder," as you may recall, of the academic world during the thirties, says he is "not instructed" as to whether the Communist Party is a Moscow-directed conspiracy.

Now, my good friends, let's compare this statement with the recent claim of the Wisconsin Communist chairman that we mentioned a moment ago. Remember: He said the American people "realize there is no such thing as a Communist conspiracy?" This judgment might be a little premature, but why shouldn't they be optimistic when they can count on the Hutchins and organizations like the Fund for the Republic to peddle their line for them?

Incidentally, Hutchins hasn't changed his views a whit since 1949. Last month, at a press conference in New York, he said he would be glad to hire Communists to work for the Fund for the Republic—an organization that is supposed to be fighting communism; also he said that he had no objection to those who take the fifth amendment and refuse to tell whether they are Communists on the ground that the truth might tend to incriminate them.

Another reason the fund can be counted on to give the Communists a helping hand is in the person of its vice president, Mr. W. H. Ferry. "Ping" Ferry, as he is known, used to be director of public relations of the infamous CIO Political Action Committee. The CIO-PAC, as you will recall, spearheaded a Communist-inspired attempt to take over the Democrat Party in the middle forties—and was itself riddled by Communist Party members.

This former PAC propaganda chief, now second in command at the Fund for the Republic, still, evidently, likes the same kind of company. Last year, for example, he joined a host of notorious Communist-fronters to protest the holding of hearings by the Senate Internal Security Subcommittee on the Southern Conference Educational Fund. The subcommittee found that the Southern Conference Educational Fund was, in effect, simply a new name for the Southern Conference for Human Welfare, which was "conceived, financed, and set up by the Communist Party in 1938 as a mass organization to promote communism through the Southern States."

We get an even better idea of the fund's bias by taking a close look at some of its activities over the past year—activities which betray a single underlying purpose: To belittle the Communist menace and to create a fantastically distorted picture of the civil-liberties issue.

Take, for example, the fund's famous study of the Government loyalty-security program. The results of this investigation have now been published in a book entitled "Case Studies in Personnel Security"—a case-by-case story of how harshly our security program deals with suspected Communists.

Now, do you know how the fund went about making this survey? First, it appointed one Adam Yarmolinsky to head up the project. Yarmolinsky then enlisted members of unsuspecting law firms throughout the country to interview the defense attorneys of Government employees who had been fired as security risks, so as to get the defense version of each case. These tales of woe were forwarded, unevaluated, to Mr. Yarmolinsky and his staff. The Yarmolinsky crew then culled from the field reports—still representing only the employee's side of the story—what appeared to be the worst cases, and prepared them for publication. The book is now palmed off to the American people as a balanced study of the Government security program.

It is interesting to note one method by which the fund's propaganda machine accomplishes its mission. In his introduction to the book, Mr. Yarmolinsky is careful—lest the fund be caught with its red underwear showing—not to call these cases typical. However, the claim is made that the cases are representative, in a highly charged emotional article on the Yarmolinsky collection appearing in the Saturday Review of Literature. Copies of this Saturday Review article are now being distributed throughout the country by, guess who?—the Fund for the Republic.

Let's look at another of the fund's projects. Two years ago, the fund appropriated $185,500 for a study of attitudes toward communism and civil liberties. This study eventually begot a book called Communism, Conformity, and Civil Liberties, published this year—the main themes of which are (1) that Communists are merely a "nonconformist" "minority"; and (2) that this country has a distressingly small number of "tolerant" people, as the book describes them, who are willing to let avowed Communists spread Red propaganda in their communities. Incidentally, one of the professors who helped put this book together has a record of 15 Communist-front affiliations.

Take another of the fund's projects. A year ago this month the fund appropriated $75,000 of its tax-exempt money for "awards for outstanding original drama and documentary scripts on civil liberties themes." In September of this year the fund selected 19 prize-winning scripts and offered them to the television industry. As might be predicted, not a single dealt with the threat to civil liberties from communism. Instead, the dramas ridiculed the fight against communism, depicting situations that even the most imaginative Communist would be proud to have dreamed up. Here are some typical award-winners, described in the fund's own language.

"The invisible accuser: The fight of a woman surgeon to clear herself of malicious loyalty charges.

"The burden of the day: A prominent lawyer takes on the defense of a former Communist knowing his act will end his political hopes.

"The claws in the cat's paw: The smear of a teacher as a Communist by economy-minded citizens to forestall spending for school improvements.

"The inner curtain: A practical joke involving communism at a large industrial plant ultimately forces the perpetrator of the joke to resign."

Perhaps, the Communists didn't write these scripts, but they know a good thing when they see it. The Daily Worker devoted several columns in its September 16 issue, to a laudatory discussion of the prize-winning scripts.

Another project of the Fund for the Republic is its financing of the so-called freedom agenda. The freedom agenda has published a series of pamphlets designed to show that Communists are operating in the tradition of Thomas Jefferson, and that measures for protecting our Government against Communist subversion are a violation of Constitutional safeguards for "dissenters."

Still another fund project is its distribution of 35,000 copies of a book called the Fifth Amendment Today, by Erwin Griswold, dean of the Harvard Law School. Dean Griswold attempts through highly selective legal arguments to prove that one may not infer Communist leanings from the fact that a man refuses to answer questions about alleged Communist connections on the ground that a truthful answer might incriminate him. This book is being energetically promoted by Communist Party publications and Communist-front organizations and, of course, by the Fund for the Republic.

One more example: In a recent president's report, Dr. Hutchins states that the Fund for the Republic "has made an expanded version of the television film of Edward R. Murrow's interview with J. Robert Oppenheimer available to educational institutions and groups concerned with public affairs."

This Murrow film, as you may recall, is a thinly disguised attempt to elevate to national martyrdom one of the most dangerous security risks this country has ever known.

I don't think it necessary to go into Oppenheimer's record tonight: suffice it to say that this man admittedly contributed money to the Communist Party right up until the time he was asked to serve in our top-secret atomic-energy program—and then, after he had achieved unrivaled influence in the atomic-weapons field, told Harry Truman it would be immoral for us to produce a hydrogen bomb, knowing full well that the Soviet Union would soon produce an H-bomb of its own. The Fund for the Republic is now spending tax-exempt funds to make this man a hero.

I am sure that you in this audience have as much contempt for the work of the Fund for the Republic as I do. I am sure you are as outraged as I am that the United States Government—through its tax-exemption regulations—is, in effect, subsidizing this brazen campaign to belittle the Communist menace and undermine our security program. Don't you agree that the least we can ask of the "Fund To Destroy the Republic" is that it pay its taxes like everybody else?

Even the Communist Party has to pay an income tax.

I could go on and on, citing examples of how the spirit of Geneva is being implemented here at home—of how liberals are giving aid and comfort to the Communists. If there were time, for example, I would like to discuss the activities of the Senate Subcommittee on Constitutional Rights—so-called—headed by Missouri's contribution to the leftwing bleeding-hearts club, Senator HENNINGS. HENNINGS is operating hand in hand with the "Fund To Destroy the Republic" in trying to persuade Congress to rip the guts out of the Government security program. No wonder the Communists are rejoicing, no wonder the Kremlin leaders are congratulating themselves on their smashing diplomatic victories, no wonder the Communist Party in the United States is coming above ground again. I suggest, my good friends, that it is time the American people start fighting back.

Tonight I want to mention three ways in which we can combat this new offensive by the Communists and leftwingers.

No. 1: We must rise to the defense of an effective security program, and insist that effective security standards be vigorously enforced. We must reaffirm the principle that working for the United States is a privilege and a trust—that it is not a "right," as the Communists and leftwingers claim, that is available to persons who have played ball with the Communists, and thus for all we know may be members of the conspiracy.

If a man has compromised himself in the past by joining Communist fronts and associating with known party members, he must suffer the consequences. If there is reasonable doubt that a man's loyalty is, foursquare, to the United States, the benefit of that doubt must go to the Government and to the American people.

But we cannot save our security system unless we come to grips with those who are attempting to destroy it. We must therefore recognize that our enemies are not only the Communists but their leftwing allies—the Fund for the Republic, the ADA, the anti-anti-Communists in Congress and the executive branch—who are trying to whip up public sentiment against measures that will protect our country.

Some persons say, "Oh, MCCARTHY, aren't you being a little hard on the leftwingers," "Isn't it true," I am sometimes asked, "that the lefties are good Americans, misguided perhaps, but who have been genuinely taken in by the 'civil liberties' red-herring?" My answer is yes, this may be true. But I have neither the patience nor the resources to attempt to find out the inner motivations of every person who helps peddle Communist propaganda. I say, don't call them Communists. Let's concede they are well-meaning people who have been "taken in" by Communist propaganda; but let's also be very clear about what team they are playing on. In terms of the damage they do, they are every bit as dangerous to this Nation as the Communists themselves. This Republic will not last one day longer by being able to say that its destroyers had good intentions.

No. 2, we must show those arrogant, gloating Communists—who say the American people are ready to welcome them back as just another political party—that they are dead wrong. The Communists are hopefully getting under steam a massive propaganda campaign, and a vigorous drive to recruit new party members. Our answer to them should be sharp and decisive. We should outlaw the Communist Party.

I submit that a criminal, conspiratorial fifth column, under instructions by a foreign power to try to overthrow our Government, has no legitimate claim to the protection of our laws. No nation that has any intention of surviving can afford to give legal license to those who, by intrigue, sabotage and lies, seek to destroy its institutions and way of life.

I am aware of the argument that outlawing the party would drive the Communists underground. This argument forgets, however, that the Communists need and desire an open party—as well as an underground. They want to maintain both, an underground of secret party members who do the party's conspiratorial work of sabotage, espionage and policy subversion; and an open party that conducts propaganda and recruiting activities. One effect of outlawing the party would be to block overt efforts to sell to the American people under false and deceptive colors, the Communist package of lies.

And please don't let me hear that old canard about free speech. For one thing, a Communist does not engage in free speech and free thought: He is told what to say and think. For another, Communists are not just carriers of a political ideology: They are criminal conspirators, dedicated to the overthrow of our Government, and must be dealt with as such.

When a man commits a murder you don't, in the name of free speech, present him with a soapbox and invite him to try to win converts to the cause of murder.

No. 3—and this is most important of all—we must puncture and deflate the illusory and farcical spirit of Geneva. This means getting our foreign policy back on a realistic and moral footing—acknowledging that international communism is our implacable enemy, and that world communism will either destroy us or be destroyed.

The spirit of Geneva is the natural consequence of our having taken as our own policy guide the Communist line of peaceful coexistence. I hold that coexistence with communism is neither desirable nor possible nor honorable.

As I said to the Senate on August 1—just 3 days after the Geneva summit meeting, when most of the Senators were gushingly congratulating the President for having made friends with the Kremlin leaders—"Is it not still self-evident that hostility to communism—overt, articulate, unyielding hostility—is both necessary and desirable? We must be hostile to communism for the same reason that good is hostile to evil. Good cannot clasp the hand of evil without becoming evil, and without inviting destruction by evil. You cannot offer friendship to tyrants and murderers without advancing the cause of tyranny and murder."

God gave us these great United States and inlaid on our broad land the peerless gem of freedom. We owe it to God and to ourselves to guard that freedom today against the most monstrous tyranny in history. Let us ask God to give our generation that strength and courage and wisdom with which He has never failed to grace the American people in time of great trial.

ADDRESS BY HON. JOE MCCARTHY, OF WISCONSIN, MUNICIPAL THEATER, TULSA, OKLA., DECEMBER 7, 1955

My fellow Americans, I always like to speak in the Midwest, here in the heart of the United States, because we don't have to spend our time discussing elementary things. You people in Oklahoma—unlike some of the persons I know in Washington—don't need a grade-school education on what the Communist fight is all about.

There is no need, for example, to tell a Tulsa audience that the so-called spirit of Geneva is the spirit of illusion, folly, and appeasement.

In Tulsa, it is unnecessary to explain that when you propose friendship with tyrants and murderers—however good your intentions—you advance the cause of tyranny and murder.

There is no hesitation in this audience, I am sure, to refer to Communists as the eternal enemies of God and the human race, and to the Soviet Union as an unregenerate international bandit—even though the Paul Hoffmans and the Milton Eisenhowers tell us that such words constitute a serious breach of coexistence etiquete.

I trust that you good Americans will never lose sight of, nor minimize, the central fact of this struggle—namely, that however broad the smiles of the Kremlin leaders become, international communism is irrevocably commited to destroy this Nation and our way of life.

We cannot do business, we can never make friends, with that sort of enemy.

Creating the spirit of Geneva was, of course, a great triumph for Communist diplomacy, and the Kremlin leaders are still exploiting that triumph to the hilt. But the spirit of Geneva was not only a diplomatic victory for the Communists, it has had repercussions here at home.

A little over a month ago, an event occurred in the city of Milwaukee that gives some idea of why the Communists were so anxious to create the spirit of Geneva. In a small, dingy, auditorium, known as Wetzel's hall, some 40 persons gathered to hear an announcement. The 40 shifted in their seats somewhat nervously, as the speaker arose behind his rostrum. Many of those in the audience had not seen this man for 5 years.

"I went away," the speaker began, "to carry on the struggle for the rights of the people, for democracy, and peace. Where I went and what I did is not important. But what is important is what is happening today at Geneva. I decided to come back."

Who was the speaker? Who was the man who decided to come back? He was Mr. Fred Bassett Blair, chairman of the Communist Party of Wisconsin. And the audience? The 40 persons in the audience were the hard core of a Communist Party unit, who had responded to the party's call to come out into the open again.

"We disappeared," Mr. Blair went on, "because of the people who fostered the menace of McCarthyism. They made it impossible for us to carry on our work."

"But now," said Blair triumphantly, with a smile as big as Khrushchev's, "there have been wonderful changes. We are no longer political exiles in our own country. Since the Geneva Conference of the Big Four powers, people are waking up because they realize there is no such thing as a Communist conspiracy. This thinking makes it possible for us to return."

This scene I have just described to you, my good friends, was reenacted in numerous American cities last month, possibly right here in Tulsa, as the Communist underground decided to crawl up from under the planks, and renew a public campaign to overthrow our Government. The spirit of Geneva, and the supposed defeat of McCarthyism, these are the things that, according to the Communists, make it possible for them to show their faces again.

The local party leaders did not, of course, make their decisions independently: they were operating under direct instructions from Moscow, instructions that were revealed recently by Mr. Herbert Philbrick, a former FBI undercover agent who still has contacts in the Communist underground. Here is what Mr. Philbrick wrote just a few days before the public meeting in Milwaukee:

"The Cominform, world headquarters of the Communist International has ordered top Red agents here to bring the Red network in the United States above ground, and to reinstate the American Communist Party as a 'legitimate national political party.'"

Philbrick went on to say "the new instructions, obviously part of the Red pattern * * * since the Geneva Conference, signals a major and abrupt shift for the Communist movement in the United States, which, for the last 4 years has operated almost entirely as an underground * * * apparatus."

"Couriers from national headquarters"—and I am still quoting from Philbrick—"are now being assigned to go into some 21 specific areas in the United States * * * among the cities pin-pointed for district Communist headquarters are Boston, Philadelphia, Buffalo, Pittsburgh, Cleveland, Detroit, Chicago, Minneapolis, Los Angeles, Seattle, and Denver. A target city for a forthcoming 'party building' effort will be Houston, Tex."

The Communists are optimistic about the success of open party activities because they believe—and now Mr. Philbrick is quoting from the Cominform instructions—that "* * * 'attacks and persecution' of party members will come only from 'Fascist and war-mongering reactionary elements,' who are 'clearly attempting to sabotage President Eisenhower's policies and program for world peace'." These "savages," according to the Communist instructions, "are to be 'condemned' as 'enemies of the United States'."

I trust you realize that one such "savage" is speaking to you right now. This point was driven home by the chairman of the Wisconsin Communist Party at the Milwaukee meeting. In explaining the Communists' mission, Blair said: "We are back here to fight against the rise of McCarthyism."

Now, my good friends, I have no desire to exploit the implications of personal flattery contained in that statement. The Communists use the term "McCarthyism"—a word they coined—to describe everything they don't like. They mean by it, not only Senator McCarthy, but also congressional investigating committees. They mean the FBI and the Government security program. They mean patriotic organizations, and people, who have been striving valiantly over the years to alert the American people to the dangers of communism. They mean those who favor a realistic foreign policy that recognizes the Soviet Government for what it is—a ruthless tyranny whose ultimate aim is the conquest of the United States. It is these people the Communists are going to fight against—and fight against in the open.

This new Communist declaration of war is one reason that no politician—whether he be Republican or Democrat—can come before the American people in 1956 and, in good conscience claim to have brought peace to the world. There will never be real peace so long as the Communists own one-half of the earth and are determined to enslave the other.

I first learned of the Milwaukee Communist meeting from a news clipping sent to me by one of my constituents. Across the top of the story I read this note from the sender: "How can they have the nerve?"

How can they have the nerve? What makes the Communists think they can succeed in this new campaign to deceive the American people? This is the subject I want to deal with tonight. I want to talk about some recent events that make it all too clear why the Communists are optimistic about the future.

On November 7, just 1 month ago today, a message was sent from Denver, under the signature of President Eisenhower, to Klementi Voroshilov, chairman of the Presidium of the Supreme Soviet of the U. S. S. R. Before reading it, let me say I am reluctant to attribute the inspiration for this message to the President. He was on his sick bed and was probably under the influence of the "palace guard," that shadowy left-wing cabal consisting of the Paul Hoffmans, Harold Stassens, and Milton Eisenhower—men who are masterminding our foreign policy even though they were not elected to office and will surely be repudiated by the American people if they ever become candidates.

Here is what the Eisenhower message said: "On this national anniversary of the Soviet Union, I am happy to convey to your Excellency and the people of the Soviet Union the best wishes of the people of the United States for progress toward a permanent and just peace."

And what was this "national anniversary" that we helped the Communists commemorate? It was the day of the Russian revolution—the day that marks the beginning of slave labor camps, of collectivized farms, of the closing of the churches, of the enthronement of the worst tyranny the world has ever known.

No wonder the Communists are cocky about the future, when our President, in effect, congratulates the Communist leaders on the anniversary of the day they managed to enslave 200 million people.

The incredible thing about this message is that it was sent on behalf of the people of the United States. How many of you people in Tulsa were consulted about it? How many in this audience thought it proper to congratulate the peoples of Russia on the anniversary of the day they were put in chains. Yet this is exactly what was done in your name—and in mine.

The fact that we keep making degrading overtures to the Kremlin is one of the reasons the Communists think they have a rosy future ahead. But there are others. Most important are the increasingly successful attempts to whip up public hysteria against anti-Communists and any effective efforts to protect our Government against Communist subversion. This campaign was inspired by the Communists; but the heaviest blows are being struck by their numerous, and influential, and wealthy liberal allies who, let me assure you, are doing as much damage to this country as the Reds themselves.

Take, for example, the Ford Foundation's notorious Fund for the Republic which claims to be conducting an objective study of the Communist menace and of the Government security program. The other night in Chicago I discussed the activities of this organization in some detail—activities that show it is an anti-anti-Communist propaganda machine.

I wish I had the time tonight to go into the full story of an organization that is spending $15 million of tax-exempt money to help spread the Communist line. But we can get some valuable insights into the Fund for the Republic by taking a quick look at its president, Dr. Robert Hutchins.

In 1949, Dr. Hutchins was asked about his views on communism by a committee of the Illinois Legislature. Here is his testimony given under oath:

Question. "So far as those who have stated they are Communists are concerned, do you not assume that their purpose must be subversive by definition?"

Dr. Hutchins' answer: "It is not yet established that it is subversive to be a Communist." (This was in 1949.)

Next question: "There is no doubt in your mind about the Communist Party itself being a subversive organization is there Doctor?"

Hutchins' answer: "Well, I can't believe that that is true here, or the Communist Party would long since be illegal."

In other words, the man, whose organization is passing judgment on our security program, says that he doubts that the Communist Party is a subversive organization.

Let's listen to one more observation by Dr. Hutchins.

Question: "Is there any doubt that the Communist Party is a conspiratorial fifth column operating in the interests of a foreign state"?

Hutchins' answer: "I am not instructed on this subject. I understand many Communists say they do not operate under instructions of a foreign state."

Thus, the former head of one of our leading universities, the "boy wonder" as you may recall, of the academic world during the thirties, says he is "not instructed" as to whether the Communist Party is a Moscow-directed conspiracy.

Now let's compare this statement with the recent claim of the Wisconsin Communist leader that we mentioned a moment ago. Remember: Blair said the American people "realize there is no such thing as a Communist conspiracy." This judgment might be a little premature, but why shouldn't the Communists be optimistic when they can count on the Dr. Hutchinses and organizations like the Fund for the Republic to peddle their line for them?

With Hutchins feeling the way he does about communism, is it any wonder that the Fund for the Republic's method of "investigating" the security program was to gather together the complaints of dis-

charged Communist suspects, and then palm them off to the American people as an objective account of how the program works.

Is it any wonder that the fund sponsored a book on communism the main themes of which are (1) Communists are merely a "nonconformity minority," and (2) that this country has a distressingly small number of "tolerant" people who are willing to let avowed Communists spread Red propaganda in their communities.

Is it any wonder that the fund appropriated $75,000 in prizes for television scripts that ridicule and dsparage the efforts of those who are attempting to oppose Communists?

Is it any wonder that the fund distributed a book by the dean of the Harvard Law School, who tells his readers they may not infer Communist leanings when a man refuses to answer questions about alleged Communist connections on the ground that a truthful answer might incriminate him?

Is it any wonder that the fund financed the distribution of Edward R. Murrow's television film on J. Robert Oppenhimer—which attempts to elevate to national martyrdom a man who admittedly gave money to the Communist Party right up until the time he was asked to serve in our top secret atomic-energy program, and after that was responsible for the disastrous postponement of our hydrogen-bomb program?

I am sure that you people in Tulsa have as much contempt for the work of the Fund for the Republic as I do. I am sure you are as outraged as I am that the United States Government—through its tax-exemption policies is, in effect, subsidizing a brazen campaign to belittle the Communist menace and undermine our security program. Don't you people in this audience agree that the least we can ask of the "Fund to Destroy the Republic" is that it pay its taxes like everybody else?

Even the Communist Party has to pay an income tax.

Unfortunately, however, the heaviest blows on the Communists' behalf are being struck in the Halls of the United States Congress. Last May, the Democrat-controlled Senate set up a committee, headed by Missouri's special contribution to the "leftwing bleeding hearts club," Senator HENNINGS, to investigate the alleged threat to civil liberties. The Communist Party had been calling for such an investigation for many months. Ever since then Senator HENNINGS has used all the power of a Senate committee in an attempt to wreck the Government security program.

Recently I issued a public statement, pointing out that HENNINGS was waging jungle warfare against the security system, and was making it easier for the Communists to infiltrate our Government. HENNINGS replied the next day and said, in effect, MCCARTHY doesn't understand what we are trying to do when we attack the security program: we are trying to "strengthen the security program."

For hypocrisy and doubletalk, I have seen few equals to that statement. Let's look at the record. A little over a month ago in St. Louis, Mo., HENNINGS demanded three changes in our security program. He said (1) we can no longer utilize the doctrine of "guilt by association." This is leftwing gobbledygook for saying that the fact a man has belonged to 5 or 15 or 30 Communist fronts, and regularly associates with espionage agents and members of the Communist Party, must not even be taken into account in deciding whether he should be given a sensitive Government job.

Then (2) HENNINGS insisted we must do away with a "system of secret informers." This is leftwing gobbledygook for saying that FBI undercover agents cannot disclose the treasonous activities of Government employees, unless they reveal their own identity—which would, of course, destroy our counter-espionage system overnight.

But HENNINGS was not satisfied with that. He also contended (3) that we should get rid of the "reasonable doubt" loyalty standard. This means—as HENNINGS well knows—that John Stewart Service, John Patton Davies, Esther Brunauer, and dozens of others suspected of Communist activities would be back behind their desks in the State Department. These proposals are not exactly what I would call "strengthening our security program."

Senator HENNINGS is no fool. He knows that if these recommendations were put into effect, the security program would be left in shambles. He is bright enough to realize that this would open the floodgates to wholesale Communist infiltration of our Government. HENNINGS, of course, is playing politics. He is trying to prove—although he knows better—that Republicans are unmindful of civil rights. But this kind of cheap politics cannot be tolerated when the life or death of this country is at stake.

Another aspect of the security program about which HENNINGS has raised a great hue and cry is what he and the leftwingers call "guilt-by-kinship." This issue has been so misrepresented and distorted by the leftwing press that the public has very little idea of how family relationships actually figure in a security determination. Actually, of course, a security decision does not involve the question of guilt at all—the question is whether a person is suitable for a sensitive job, whether he is a good security risk. So the term is, to begin with, a deceptive misnomer. But beyond that, it is not the policy of the Government—contrary to what the leftwingers allege—to make an adverse finding on the basis of family relationships alone; this is just one of the factors to be taken into account.

Now: Does it make sense, as HENNINGS says, to pay no attention whatever to the fact a man's relatives are Communists? Let's test HENNINGS' theory by an actual case, the facts of which have now been documented. Let's suppose that, several years ago, a man named Harold Ware applied for a job in the State Department. Assuming the State Department was operating as it should, it would have called for an investigation and the FBI would have reported as follows: This man Ware's mother was a member of the central committee of the Communist Party, was Communist candidate for Governor of Pennsylvania in 1938 and for Congress in 1940; his mother's first husband was the Communist candidate for Governor of North Dakota in 1932; his brother was a Communist organizer and was the Communist candidate for Governor of Minnesota in 1930; his first wife was a Communist pamphleteer; and his sister conducted a music studio at which Communist meetings were held.

Now, according to HENNINGS, the State Department should not have taken these factors into account because that would have been endorsing the doctrine of guilt by kinship. I suggest, however, that the Department would have been wise to look a little further into the case of Mr. Harold Ware. A further look might have been rewarding, for the Department might have found that this man with the highly suggestive family tree was, himself, the organizer of one of the Washington cells of the Communist Party later exposed by Whittaker Chambers.

Now, does the fact his relatives were Communists prove that Harold Ware was a Communist? Of course not. But it should raise a flag, a warning to security officers and be considered as part of the whole picture. HENNINGS would have us ignore this information altogether—indeed, it seems he would have us ignore every type of circumstantial evidence of treason.

The thing we must remember is that the Communist conspiracy is a covert operation, and that Communist agents are usually successful in covering up their tracks. Clues of disloyalty are few and hard to find. HENNINGS must know that we cannot rule out, one by one, every method of spotting Communists and still hope to catch them.

Yet this is exactly what he is attempting to do. Three weeks ago, the Hennings committee began attacking the Army for trying to correct lax security practices that had been exposed by the Senate Investigations Subcommittee under my chairmanship. You will recall that we discovered in the Peress and Belsky cases (incidentally, has anybody discovered who did promote Peress?) that the Army was giving honorable discharges to soldiers who took the fifth amendment when asked about their Communist connections. After the Peress case, the Army corrected that particular situation—corrected it, that is, until HENNINGS arrived on the scene. Last month the Hennings committee, day after day, hammered away at Army officials for refusing to grant honorable discharges to fifth-amendment Communists.

At one point in the barrage, HENNINGS berated the Army for merely including as one of the items to be taken into account in deciding a security case the fact that the man took the fifth amendment. HENNINGS' counsel said: "How can you justify that, either on the constitutional basis, or on just the basis of morals? If a man is entitled to rely upon his constitutional privilege, how can the Army hold that against him?" Now do you get this picture? The Army, as part of a routine security investigation, makes a list of all of the information about a man that might possibly be considered derogatory—that is before any decision is made about the man—and it includes in this list the fact that the soldier says "I refuse to tell whether I am a Communist on the grounds that the truth might tend to incriminate me." But the Hennings committee says, "No, you can't do that; that's immoral."

There is, however, a sequel to this story. Due to Hennings' daily browbeating of Army officials, the Army changed its regulations and they are now worse than they were before the Peress case. The other day, the Army issued an amazing new directive. In effect, the new directive says to Communists and Communist party-liners who are drafted into the Army: All you have to do is take the fifth amendment, and then you will be able to avoid military service altogether, and go back to civilian life with no disgrace or stigma attached to your name.

I simply cannot understand the topsy-turvy moral standard that prevails in some quarters. How can we, in good conscience, ask loyal American boys to give several years of their lives to their country's service, when we allow Communists and Communist party-liners—by pleading the fifth amendment—to go scot free, neither drafted nor disgraced?

After this directive was issued, Hennings said, "We are making progress. I look forward to further improvements in the regulations as the subcommittee prosecutes this inquiry."

If what Hennings is doing represents an improvement to our security system, then I suggest we need some improvement in the type of men who conduct congressional investigations, and we need it as fast as we can get it.

I have no desire to get into politics tonight but I feel we must talk some now about Hennings, the Democrat. There is no way in the world of divorcing responsibility for the activities of a Senate committee from the political party which has control of the Senate. Moreover, the activities of Hennings' committee are the responsibility of the national leaders of the Democrat Party—who, anytime they choose, can find ways to call off the dogs, to stop the efforts to destroy our security program.

Several days ago I addressed a letter to the three leading candidates for the Democrat presidential nomination—Adlai Stevenson, Estes Kefauver, and Averell Harriman—asking them to repudiate Senator HENNINGS and his committee. None of them has done so. As a matter of fact, I am unaware that a single Democrat leader has spoken up and condemned HENNINGS on the grounds that the proper concern of the United States Senate is with exposing Communists and not with protecting them.

Therefore, we must face facts and start talking about the qualifications of the two major political parties to lead our country. I would like to be able to tell the American people that the Democrat Party is alert to the dangers of the Communist menace—for I know that millions of rank and file Democrats throughout the country abhor communism. But I cannot and I will not overlook the demonstrable fact that the Roosevelt-Truman-Stevenson leadership of the Democrat Party has, for the past 23 years, made life easier for the Communist Party-liners.

Most of that record is well known. Let's look, however, at the most recent chapters. A year ago this month, Democrat Senators, en bloc, voted to censure me—and why? Was it because I had tried to cover-up a tax delinquency? That question was pretty well settled when the Government admitted it owed me $1,056.75 for overpayment of taxes. Was it because General Zwicker was mistreated? As of this moment, General Zwicker's case is being examined by the Criminal Division of the Justice Department, on the recommendation of the McClellan committee, for possible perjury prosecution. No, these things—as everybody knew—were window dressing. The real crime was McCarthyism—i. e., tough anticommunism.

But after that the Democrats were anxious to cover their tracks. So on January 10th of this year, after they had obtained control of the Senate, a resolution was introduced and passed which said: "it is the sense of the Senate that its appropriate committees should continue diligently and vigorously to investigate, expose, and combat * * * [the Communist] conspiracy and all subversive elements and persons connected therewith." Now, this resolution was manifestly an attempt to offset the impression that the Democrats' censure vote was a vote in favor of letting up on prosecution and exposure of Communists. Nonetheless, I thought we should give the Democrats a chance to make good on their promise. So I said at that time on the Senate floor that I would give the Democrats 1 year to prove they meant what they had said about exposing Communists.

That year is now almost up. What do the Democrats have to show for that year? What is the box score? During the course of this past year not a single Communist in Government has been exposed by the Democrat-controlled Congress—not a single one. But worse than that: instead of trying to expose Communists, Democrats have concentrated their efforts on trying to emasculate our security program.

First, there was the Johnston committee that spent its time parading discharged Communist suspects before the public to tell their tales of woe. Then came the Hennings committee with its stepped-up assault on efforts to rid the Government of Communist influence. Such is the record for the Democrat Congress. In the light of that record, it is to imperil the safety of this country to say that communism should not be a political issue in 1956.

After 20 years of being soft on communism, there are no signs that the Democrat leadership has improved—not the slightest hint of repentance or acknowledgement of past errors. Yet have the American people not a right to demand some evidence of repentance and improvement if communism is to be dropped as a political issue? Did Harry Truman repent when he lied about his actions protecting Harry Dexter White, and then tried to defend those actions? Has Adlai Stevenson ever indicated a change of heart after his wisecracks in the 1952 campaign about Communists in the Bureau of Wildlife and Fisheries? Do the activities of the Hennings committee suggest that Democrats are ready to stop following the party line on the subversion issue?

Political leaders must learn that they cannot dance to every tune the Communists play and then expect to be entrusted with the conduct of our national affairs. Until they do learn this—whether they be Democrats or Republicans—they must answer to the American people at the ballot box.

The Communists are gloating today. They are congratulating themselves on their smashing diplomatic victories, and on their remarkable success in getting non-Communist Americans to wage their propaganda war for them. Of course, they have good reason to rejoice.

At the same time, I am convinced the Communist victory celebration is a little premature. The Communists may have the majority of the Nation's press, and tax-exempt foundations, and Senate committees doing their leg work for them. But if they think this means that victory is theirs, they have not reckoned with the ordinary American when he gets aroused and decides to fight back.

We are still, thank God, a Republic. By the power of the vote, the American people can see to it that their own wholehearted, unconfused, militant opposition to communism becomes the policy of the United States Government. We have our work cut out for us in 1956. Let's do a job for America.

ADDRESS BY HON. JOE MCCARTHY, OF WISCONSIN, MANION FORUM OF OPINION, MUTUAL BROADCASTING SYSTEM, JANUARY 8, 1956

My fellow Americans, tonight I want to talk about the most serious problem confronting us: Our losing battle against international communism; and I want to discuss what I believe to be the basic cause of our continuing defeats, namely, that we have permitted the Communists to write our foreign policy, as well as their own.

Any man who is honest and who views the situation objectively will admit that, since the Communist-inspired Geneva summit meeting, America's world position has progressively deteriorated. In Western Europe, instead of honoring their commitments to NATO, our allies are decreasing their armed forces. The West Germans are losing faith in us and are in danger of being forced into a neutralization deal with the Communists. A Communist arsenal is being established in Egypt. The Near East is torn with anti-American riots. In North Africa, anti-Western feeling is at a fever pitch. Millions in India cheer the Communist leaders. Communist enslavement of Eastern Europe has, in effect, been ratified by the United Nations by its admission of Soviet puppets in the infamous package deal.

Our fighting allies in Asia have been abandoned and one of them, Free China, has been threatened with blackmail for taking a moral position on the package deal. Indeed, President Eisenhower personally sent three cables to Chiang Kai-shek, urging him not to veto the admission of Outer Mongolia to the U. N.

Now, what has happened since that proud day in 1952 when the American people endorsed a militant, realistic foreign policy, grounded firmly on moral principle; when we told the world that we would not only oppose further Communist advances, but would seek to roll back the Communist tide? On November 4, 1952, we elected a President whose party platform had said: "We shall again make liberty into a beacon light of hope that will penetrate the dark places. * * * (We will) end * * * the negative, futile, and immoral policy of containment which abandons countless human beings to a despotism and godless terrorism, which, in turn, enables the rulers to forge the captives into a weapon for our destruction."

That statement in the Republican platform of 1952, and its overwhelming endorsement by the American people, struck terror into Communist hearts; and that terror was redoubled in the first few months of the Eisenhower regime by deeds—when, for example, President Eisenhower wisely revoked Truman's orders to the Seventh Fleet to protect Communist China. The Communists feared that if this new policy continued, their plans for world conquest would be frustrated.

It was therefore essential for the Communists to persuade the Eisenhower administration to get back on the road of cringing appeasement that had been traveled for 20 years under Democrat rule. This was to be their supreme mission in the months ahead.

Let us see how the Communists went about their task. On August 8, 1953, the then dictator of the Soviet Union, Georgi Malenkov, made a major foreign policy speech which laid down the line for a dramatic switch in Communist international tactics. The world situation, according to Malenkov, required the easing of international tensions. (How many times, incidentally, have we heard that Communist phrase parroted by Western statesmen during the past year?) Malenkov then went on to explain that the easing of international tensions could be accomplished by great power negotiations. This, then, was the Kremlin's strategy.

The job of undermining America's new moral position was assigned to the international Communist apparatus. In the fall of 1953, the Communist Party of the United States called a secret national conference. Let me read from the main report delivered at that conference. These were Moscow's instructions to the American Communist Party in 1953: "Both the needs and the possibilities of the present moment call for the development of a veritable crusade for peaceful negotiations, for a top-level meeting of the big powers. * * * It is to this end that we must turn all our energies, our utmost skill, tenacity and resourcefulness * * * We must develop a full-throated demand for peaceful negotiations that will ring from one end of the country to the other."

We all know that this Communist propaganda drive, like so many others in the past, was completely successful. Last spring, a year and a half later, the administration reversed its policy and agreed to a meeting at the summit. A black headline in the Communist Daily Worker screamed: "Geneva: A peoples' victory." And well the Communists might have rejoiced, for when officials of the United States Government shook hands, smiled and drank vodka with the Kremlin despots, our moral position had been smashed beyond recognition. We had adopted a foreign policy that had been devised in Moscow. Thereafter, the spirit of Geneva became the keystone of American policy, and concrete Soviet political victories began to pile up, one after the other.

Today, many people are saying, "Yes, Geneva was a mistake, but we know this only through hindsight." But I say this knowledge does not come to us through hindsight. The tragic consequences of falling for the Communist coexistence line were, I believe, foreseen by the majority of the American people—as, indeed, they must have been by anyone who possessed the most rudimentary knowledge of Communist teachings.

On June 16 of last year, just a few days after the President first announced that he

was going to meet with the Kremlin leaders, I advised the Senate that the Soviet peace offensive was a fraud, and that we were falling for a Communist ruse. I reminded the Senators of a speech delivered by Dmitry Manuilsky in 1930 to the Lenin School of Political Warfare—which is just one example of traditional Communist teaching. Here is what Manuilsky said 26 years ago: "War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. The capitalist countries, stupid, and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we will smash them with our clenched fist."

I warned the Senate that by acceding to Communist demands for the summit meeting, we were helping to fulfill Manuilsky's prediction.

On June 20, when it was apparent that the administration was determined to go through with the conference, I urged the Senate to recommend that the subject of the Communist satellites be put on the Big Four agenda. It was, after all, ludicrous to attempt to ease world tensions without so much as discussing the real cause of those tensions—namely, the Communist slave empire. But the Senate refused to so advise the President because—the argument ran—that would be tying the President's hands.

Because the Senate was too timid to exercise its constitutional right to advise the President on matters of foreign policy, the Communist slave empire was never discussed by the Big Four; and, as a result, the hopes of the captive peoples for obtaining their freedom were dealt a death blow.

By thus abandoning our liberation policy and substituting for it the Communist inspired spirit of Geneva, we courted the disastrous events of recent months.

The overriding fact of the present situation is this. There is not a single square mile in the entire Communist empire that is threatened by, or under pressure from, the free world. Thanks to our policy of peaceful coexistence—which we dutifully observe and the Communists do not—the Communists have absolute freedom to maneuver in any direction they choose. They are therefore on the offensive everywhere in the world. The free world, on the other hand, has denied to itself the right to try to liberate Communist territory, and is thus completely on the defensive. The result is that we are frantically trying to plug the holes and build up the dikes in a hundred places on the globe. We spend millions of dollars in one area, only to find that the Communists have advanced in another area. We then discover, several months later, that the millions we spent produced only more anti-Americanism.

I am not one of those who believe that the world situation can be repaired by the American taxpayer handing out more money. This is the argument of the Democrat leaders and the administration, which now wants to double our foreign-aid bill from two and one-half to five billion dollars. Handouts are no substitute for a foreign policy. We received startling evidence of this fact when the most enthusiastic welcome in India for Khrushchev and Bulganin occurred in a town built with American money.

What is really needed today is a return to the principles of the Republican platform of 1952. We must give all the aid we can spare, not in bribes to the neutralists, but to our fighting allies, the Free Chinese, the South Koreans, the South Vietnamese. Above all: We must give hope to the enslaved peoples all over the world by refusing to recognize their Communist rulers and by encouraging them to throw off their chains.

Now, it goes without saying, I think, that we cannot restore a liberation policy by returning the Democrat Party to power in 1956. Under the Roosevelt-Truman leadership, the Democrats appeased the Communists for 20 years; and they took the lead last spring in insisting that we accept Communist demands for top-level negotiations. (In fact, it was WALTER GEORGE, Democrat, chairman of the Senate Committee on Foreign Relations, who first urged the President to agree to the meeting.) Moreover, the definitive answer as to how the Democrat Party feels about communism was provided a year ago when, without a dissenting vote, Senate Democrats fell into line and carried out Democrat Party orders to censure a man who had fought Communists too vigorously and too successfully. At the same time, a majority of Republicans voted against condemning hard anticommunism.

We will get the kind of foreign policy we need only by electing those Republicans who, over the years, have proved they understand that America will never defeat communism by appeasing communism.

We must all work for a rejuvenated foreign policy in the months ahead. I trust that you, my fellow Americans, will lend to this fight the time, energy, and devotion that are necessary to save our country.

Why Public Law 875 Should Be Amended

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. PATTERSON. Mr. Speaker, every Member of this distinguished body knows of the devastating flood disasters that occurred along the eastern seaboard last August and October when the boundless might of nature destroyed human lives and caused untold destruction to property.

It was my district, Mr. Speaker—the Naugatuck Valley of Connecticut—that suffered worst of all from those two successive floods; and during those tragic hours of the August flood, I was a constant observer of the illimitable courage and heroism of those whom I was born amid, grew from youth to manhood with, and for whom I established an everlasting admiration and love.

However, Mr. Speaker, during the aftermath of those horrible tragedies of August and October of last year, I also observed the execution of a law of the land that this great body had enacted—Public Law 875. But it soon became clear, Mr. Speaker, that despite the many good provisions of this law, it was still inadequate to meet the impact occasioned by such a natural disaster as that which struck the State of Connecticut and five other States and afford immediate relief to victims in such disaster areas, as the Congress had expressly intended this bill to do. It is for that reason, Mr. Speaker, that I am introducing amendments to Public Law 875, and also for the following reasons:

When sudden disasters strike homes, farms, and factories, the American people plead for greater opportunities to help those in need. They realize that earthquakes, fires, floods, tornadoes, and hurricanes sweep asunder the lives, possessions, hopes, and dreams of many persons. They know that even creeping disasters cut away coastlines, alter rivers' courses, cause droughts, and take their tolls regardless of a person's race or color, religion, amount or lack of money, political affiliation, or where he lives.

The people respond gladly to public subscriptions and other forms of relief, but these efforts are usually insufficient. Many people feel that their eagerness to help has been frustrated.

Rivers once flowed unhampered to the sea. But streams are being increasingly constricted by bridge piers, bridges, transportation, rights-of-way, pipelines, factories, and other obstructions. Consequently, the dangers and damages of floods grow.

Even the well-intentioned efforts of our Government officials are too slow, too meager, and too cumbersome, mainly because of inadequate Federal disaster laws.

PUBLIC LAW 875

The principal authority for Federal disaster relief is Public Law 875, approved on September 30, 1950. This act authorizes the President to coordinate the disaster assistance activities of the National Government and to direct Federal agencies to utilize their available personnel, equipment, supplies, facilities, and other resources. This act has been amended to permit greater Federal assistance, by Public Law 107, 82d Congress, approved August 3, 1951, which authorizes housing relief in major disasters; and Public Law 134, 83d Congress, approved July 17, 1953, which authorizes Federal surplus property use in major disasters.

Basic statutory authority of the United States Department of Agriculture was amended by Public Law 115, 83d Congress. This amendment assists particularly in relief of drought areas.

Authority to administer Public Law 875 is lodged in the Federal Civil Defense Administration. Before Federal disaster assistance can be given the governor of the affected State must formally certify the need for Federal help and assure the expenditure of a reasonable amount of funds for relief purposes by the State or local governments. Then the President has to determine that the catastrophe is serious enough to be classified as a major disaster. This has been done 51 times up to June 30, 1954.

THE NEED TO IMPROVE PUBLIC LAW 875

Public Law 875 needs to be improved so that help can be more direct and more financial assistance can easily be made available. At present the officials charged with administration of the law have virtually no guidance for how much the State and local governments must spend. This should be made more definite, and the act should recognize differences in fiscal capacity among the States. Recognition should also be given to the disaster's crippling effect upon an area's ability to pay.

The specification that $5 million be appropriated to the President for purposes of the act is much too small and

restrictive. It should be omitted and terms such as "whatever funds are necessary" should be substituted. It is difficult to specify an exact amount. Actual appropriations for Public Law 875 purposes through the fiscal year 1955 amounted to $59.3 million—$28 million of these funds were advanced to the USDA for drought relief and subsequently the USDA reimbursed Civil Defense from its appropriated funds. This is to be contrasted with property losses from major disasters during the same period of about $4 billion.

Apparently the total amount of public money spent to recover from disasters is small compared to the total damage. The Federal investment—$59.3 million—since its enactment has averaged only 14 percent of the total public funds spent for disaster relief. The local authorities have furnished about 73 percent of these payments and the States have paid about 13 percent. In other words, those areas hit by the floods, hurricanes, earthquakes, and other disasters were the very ones which were least able to pay but they furnished three-fourths of the money. These people realize that we spent over $21 billion for foreign aid in the last 4 years. They know that the money for foreign aid comes out of the pockets of all the taxpayers, including those in disaster areas—to help outsiders. Regardless of the merits of foreign aid it is shocking to note that during the last 5 years Congress appropriated only $59.3 million for natural disaster sufferers in our country.

Evidently private insurance did not and probably could not fill the gap between total public expenditures—somewhat over $400 million—and total disaster losses of about $4 billion in the last 5 years. For example, of the 1951 Kansas-Missouri $1 billion flood loss, only 5 percent was covered by insurance—United States Congress, Senate, Committee on Banking and Currency, Federal disaster insurance, staff study, 84th Congress, 1st session, committee print, November 30, 1955, Washington, Government Printing Office, 1955: 14. Floods, whether caused by hurricanes or other factors, do the most damage, are hardest to insure and are apparently the least covered by any type of insurance. Insurance is scarce also for tidal waves, certain water damage from hurricanes, and air pollution.

The authority of the President and the several agencies to act quickly should be more definite and less restrictive. For example, the disaster in New England in the fall of 1955 required a decision as to whether or not a special session of Congress was necessary. Fortunately, that was not demanded. The chairmen of the congressional Appropriations Committees approved the emergency expenditure of additional Federal funds. This was admirable action but for a while a condition of uncertainty existed and valuable time was taken to get a decision. In contrast, if the law permitted more automatic and direct authority by the President to pledge the credit of the United States to necessary amounts, then private funds would be more quickly available and many frustrations and uncertainties would be avoided. More direct authority for the President to pledge credit would put less of a burden on the Small Business Administration which is empowered to make disaster loans, but naturally many safeguards are applied and the approvals of loan applications take considerable time.

Public Law 875 does relatively nothing to stimulate pre-disaster planning or post-disaster permanent reconstruction. To cite another example, numerous factories located in or near streams are damaged or washed away by floods, but they relocate at or near their original, dangerous sites. The Office of Area Development, United States Department of Commerce, has some specialists who could help advise businessmen on new locations. However, this agency has only about 15 employees and its services to distressed areas are thus quite limited.

Public Law 875 generally confines Federal agencies' aid to temporary, emergency assistance, and authorizes permanent restoration work only for Federal structures. This is a great hardship in some cases. There should be some provisions to explain Federal assistance on certain types of permanent restoration work.

It is sometimes said that some people will save taxes on disaster losses, but those individual savings will not be as large as is generally supposed. Such losses have to be applied first to the year's pretax income. It is only if the loss exceeds income that the excess can be "carried back" against the income of the preceding 2 years, with a possible tax refund.

The following table shows estimated losses from major disasters in the United States during 1951–55. It should be noted that it is difficult, if not impossible, to segregate hurricane and flood losses:

Major disaster losses in the United States, 1951–54, 1955 preliminary

[Not counting droughts]

[Property damage in millions of dollars] [1]

	1951	1952	1953	1954	1955 [2]	1951–55
Property damages:						
Floods and hurricanes (tropical storms)	$1,031	$257	$128	$755	[3] $1,776	[3] $3,947
Tornadoes	30	35	224	28	31	348
Earthquakes	3	60	----------	1	----------	64
Total damages	1,064	352	352	784	[3] 1,807	[3] 4,359
Lives lost:						
Floods and hurricanes (tropical storms)	51	57	42	193	231	574
Tornadoes	34	230	516	35	123	938
Major earthquakes	----------	13	----------	----------	----------	13
Total	85	300	558	228	354	1,525

[1] Figures rounded.
[2] 1955 estimates are preliminary and partly estimated. Large flood damages occurred in December 1955.
[3] Hurricanes often cause floods. In attempting to avoid duplication, the costs of these 2 disasters were combined for 1951–53 when hurricane damages were reported as small and flood losses large. For 1954 and 1955 the reported damages from hurricanes which included large flood losses were used.

Source: U. S. Congress. Senate. Committee on Banking and Currency. Federal disaster insurance. Staff study, 84th Cong., 1st sess. Committee print. Nov. 30, 1955. Washington, D. C., GPO. 1955. pp. 5, 37, 124, 133, 149.

Disasters hurt more people than their direct victims. By causing losses in incomes they reduce taxes collectible and by destroying factories, homes, and lives they weaken the strength of the whole Nation. It is high time the Congress enacts legislation to provide broader, more direct, and more permanent relief from natural disasters.

Postal Policy

EXTENSION OF REMARKS

OF

HON. W. KERR SCOTT

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a speech on postal policy made during the recess by my distinguished colleague, the Senator from South Carolina [Mr. JOHNSTON]. I also ask unanimous consent to have printed also an editorial from this month's Progressive Farmer, Dr. Clarence Poe's great southern farm journal, complimenting the Senator on his forthright stand regarding the so-called postal deficit.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. OLIN D. JOHNSTON, OF SOUTH CAROLINA, DELIVERED AT THE ANNUAL MEETING OF ASSOCIATED THIRD CLASS MAIL USERS, THE MORRISON HOTEL, CHICAGO, ILL., SEPTEMBER 13, 1955

Ladies and gentlemen, your association was kind enough to invite me to be its speaker at Milwaukee in October 1952. I looked forward to that meeting, but unforeseen developments made it impossible for me to join you. I understand my very able colleague, Senator DENNIS CHAVEZ, of New Mexico, addressed you on that occasion.

When you met in Detroit in 1953, you were fortunate to have Senator FRANK CARLSON, of Kansas, as your speaker. I read the fine address he delivered on that occasion. Although Senator CARLSON and I belong to different political parties, we hold similar views regarding the need for an improved postal establishment. I can assure you that the members of our Senate Post Office and Civil Service Committee will continue their efforts to achieve a realistic, modern postal policy for the United States.

Your association's practice of inviting to its annual meetings speakers from the leg-

islative and executive branches of Government is a wise one. I know of no more complex or more misunderstood subjects than the creation of a modern postal establishment and the continuing request for higher postal rates. More often than not the prepondenance of pressure on these issues is exerted by appointees in the executive branch. Since all wisdom does not repose in these public servants, the Congress is extremely anxious to recruit the ideas, the thinking and the cooperation of persons and business firms whose own livelihood, plus that of their millions of employees, depends on what we legislators do in Washington.

The Congress has refused to be stampeded into hasty and ill-advised action. It has stood firm in the face of the severest pressures by the administration to have legislation enacted divesting Congress of the rate-making power and hiking mail rates to ruinous levels.

The Constitution clearly directs that the Congress shall have full responsibility for United States postal policy.

You have my personal assurance that I will fight to the limit of my endurance to protect that prerogative.

Both major political parties are anxious that post office operations be modernized, that improvements long overdue be inaugurated. Unless we agree in the beginning that there are broad areas where economies can be achieved through modern business practices, it will be impossible to tackle the problem intelligently. Certainly we cannot legislate on postal rate legislation wisely until a sound course has been set for the Department. If, as many qualified observers believe, $250 million can be saved by elimination of waste in the postal establishment, it is unfair to the taxpayer to do nothing about it and then require the users of the mails to pay for such waste through increased rates.

The keystone of the administration's present program is what they choose to call "temporary" rate increases. The enactment of this rate bill would only compound the ills which plague our postal service. There would be a declining volume of mail and, at the same time, a spiraling of postal costs. If Congress should relax its inquiry into postal problems, top officials would continue to ignore defects which are so costly and make for poor postal service.

A complete overhaul of the Department is in order. Like Barkis in David Copperfield, Congress is willing, yet all attempts to get under way have met with the firmest resistance by the present Postmaster General.

This is not simply political talk. It is not the natural aversion for one who foully characterizes my political party as "the party of treason." Testimony from all sides is available to show that Mr. Summerfield has played fast and loose with the facts to trick the public into believing that the postal establishment, under his guidance, has achieved almost revolutionary improvement.

There came a time a year or so ago when the Post Office Department was issuing press releases designed to convince the unwary that their management policies had produced savings of $1 million each working day. I took them to task on that one. I simply pointed out that they had conveniently neglected to show that $70 million of airmail subsidies had been transferred from Post Office accounts to the Civil Aeronautics Board, that $36 million of franked and penalty mail, in a bookkeeping transaction, had been moved elsewhere. He neglected further to state that postal rate increases totaling over $200 million ordered by the 82d Congress are also included in the million dollar a day savings.

In a speech at Buffalo on August 17, Mr. Summerfield stated: "You will recall that earlier I stated that the postal deficit was $727 million for the fiscal year 1952, the last full year before we assumed responsibility.

"In 1954, when the effects of new management policies were first reflected, the deficit was reduced to $399 million. This is a 45 percent reduction in 2 years."

He never seems to be bored with claiming that his policies have reduced the postal deficit.

Sometimes I feel like taking him at his own word. I am inclined to say, "Mr. Summerfield, you are an amazing administrator. In only 2 short years you have lopped $328 million off the postal deficit. Why, give you another 2 years to work your wonders and we will have this deficit licked."

In one of their first official appearances before a congressional committee, post-office spokesmen assured the House appropriations group they could achieve savings of $200 million within 2 years. They have a very neat formula for postal economies. They ask the Appropriations Committees of the House and Senate for a certain amount of money to operate the Department, based on a predicted volume of mail in the ensuing year. Invariably the estimates of the volume of mail have been too high. Since the Department gets more money than it needs, it always has funds to turn back to the Treasury—although never quite equal to the overestimate of volume.

The most ridiculous waste of postal funds is the way the Nation is presently being bombarded with press releases.

But publicity will not solve the postal troubles.

Let me tell you of some things we have done about the postal problems and what we propose to do in the months ahead.

You will recall that the last Congress approved Senate Resolution 49. That measure provided for an investigation of the postal establishment under the guidance of a Citizens Advisory Council. The Advisory Council came up with some startling findings. They urged many reforms. They set the groundwork for a realistic, modern, business-like, efficient postal service. That report was severely criticized by the Department. Many of the suggestions have been adopted. On the major issues, however, the Department has refused to act. I was shocked when the work of the very fine Advisory Council under Senate Resolution 49 met with such strong opposition from the Department. If the major recommendations had been adopted, we would now have a sound postal policy.

As I have said, this is not a partisan issue. There have been Democratic Postmasters General, too, who failed to inaugurate needed reforms.

That the issue is bipartisan is best evidenced by the unanimous approval given both House and Senate resolutions in the last session of Congress to further investigate the postal service. Our Senate Post Office and Civil Service Committee is operating under Senate Resolution 33. I can assure you that we are not taking our task lightly. As agents of the United States Senate, we are expected to do as complete a job as possible and to make recommendations for the permanent improvement of the postal service. The Congress is anxious to dispose of this issue once and for all.

Here are some of the questions we will try to answer:

One. Is the manpower of the Department—500,000 employees in all—being utilized efficiently?

We know that postal workers are hard working and loyal Federal employees. For too long a period they were denied a rightful increase in their salaries. In spite of two Presidential vetoes of pay bills, they finally had their salaries hiked. I am as sure of this as anything: If we give them the tools, better supervision, more modern working conditions, they will outproduce anybody. Their morale has necessarily been low. Their top boss has managed to convince a large segment of the public that the Post Office Department is the least important of Government agencies. The contrary, of course, is true.

That postal workers have continued working on so loyally in the face of the inability of Department officials to assess their true worth and the wonders performed by the postal establishment for the American economy is tribute to their tenacity.

Two. Is the postal service purely a business, or is it a service to all the people?

In this area, we have got to pin-point those services performed by the Department under legislative mandate at a calculated loss in the public welfare. We know, for instance, that only about 2,000 of the 40,000 offices take in sufficient revenue to meet their overhead.

We know that rural free delivery was established to serve millions of people remotely situated throughout America. The Congress knows that this service will never be able to show a profit. We should stop calling the cost of these needed services a deficit. Rural delivery is no different from the lighthouses operated by the Treasury Department. Shipowners do not pay a fee every time they pass one of them. They are operated at a calculated loss in the interest of better, safer shipping. The benefits of the postal service to the people are every bit as direct as is the lighthouse service to the ship owner and the sailor, and they do exist.

The Congress has established low rates on many categories of mail. In these instances the question of profit has been shoved aside. I refer, of course, to free mail for the blind, free-in-county newspapers, philanthropic, educational and religious mail.

Under our agreements with the Universal Postal Union, the United States knowingly takes a calculated loss.

There are many, many more such items. Added up, they cost many millions of dollars. They are worth-while services. They will be continued by the Congress. I enjoyed reading in one of your trade magazines, the Reporter, a short list of nonpostal services performed by the Post Office Department. Permit me to read from the article:

"The Armed Forces ask that relatives of deceased men be located.

"The Housing Administration asks that former tenants be found.

"The Treasury pressures the sale of savings stamps and documentary stamps.

"The Department of the Interior depends upon the post offices to sell bird-hunting stamps.

"The Veterans Administration asks that we deliver flags for veterans' funerals.

"The Civil Service requests that we supply blanks and information on every vocation from lens grinders to linguists.

"Charitable organizations ask that money be received and transmitted for Heart, Polio, and Cancer.

"We count doves for the Agricultural Department.

"We answer inquiries from Selective Service.

"We give applicants blanks for alien registrations and their changes of address for the State Department.

"Even the Federal Bureau of Investigation enlists our aid and the 1040's we give away for Uncle Sam.

"What would happen to the revenues, if every post office didn't have income-tax blanks available on January 1 to April 15?

"Widows and children are certified in January and July for continued pension benefits.

"The Post Office Department operates the biggest savings bank in the world. Money orders are sold and cashed in the most remote places. The big mail-order houses look impressive, and they are, but the little people in the little places, using the money-order and parcel-post services, make them possible and big.

"The Post Office Department is the Government agency which deals most closely with every American citizen."

The only difficulty is that when the Post Office Department incurs these expenses on behalf of the people, the term "deficit" is used. With respect to expenditures for all other Government agencies, the nicer word "appropriation" is employed.

Post Office Department officials have made a bogeyman of the postal deficit. If they would only announce—as they should—that their Department creates more in wealth, taxes, and employment than any other Federal agency, people would realize that for millions spent, billions are earned.

3. In the dull realm of accounting, statistics, regional management, classification, etc., our committee expects to uncover many glaring deficiencies.

4. The controversy over parcel post is another of the many questions our committee will examine.

The Hoover Commission hints that parcel post should be discontinued. The Railway Express people contend that parcel post competes with private enterprise. The Postmaster General, in effect, recommends repeal of Public Law 199.

Representatives and Senators, snowed under by the pros and cons of the fourth-class issue, are looking to our committee for some sound recommendations.

Our committee will be calling on many of you for help and guidance. We feel confident you will give us all-out cooperation.

These are just a few of the matters our committee and the House committee will look into. We fully expect that any recommendations we make to the Senate and House will be favorably received.

I suppose your own industry is the best evidence of how much good can be created by Government acting wisely in the people's interest.

Direct mail has been the subject of attack in the press and, sometimes, in the Halls of Congress. For the most part, these attacks have been unfair. Your very success has probably stimulated many of them.

I should like to outline some of the facts regarding third-class mail, not necessarily for your own edification but rather for those outside the industry who at some future time may read these remarks.

Many people have been led to believe that you are taking a free ride. They assume that it costs as much to handle a third-class letter as it does a first-class mailing. They fail to realize that the factors which prompted the creation of this category of mail warrant charging a lower rate of postage for it.

Back in the depression-ridden thirties someone figured out that there wasn't a sufficient volume of mail to keep each postal employee fully occupied for an 8-hour period. It was recognized that first-class mail doesn't flow in evenly all day. At certain peak periods it floods in. This first-class mail properly receives preferred treatment. During peak periods, every clerk was needed to speed first-class mail on its way. The job was usually completed in several hours. How to keep these clerks profitably occupied during slack periods?—whoever answered that question would raise revenues for the Department not otherwise obtainable. Lower rates during the evening hours paid off for the telephone and telegraph companies. Why not for the Post Office Department? The charge for a 50-word telegram at straight rates from Washington to San Francisco is $3.45. The same 50 words at night rates, which received deferred service, cost only $1.30. Why the lower rate? Overhead remains the same, and employees get higher rates of pay.

The answer was, of course, obvious. It was better to use these expensive facilities at a lower rate than not at all.

The same thing applies in other fields. You pay less to see a movie in the afternoon than at night. Natural gas companies often contract on the basis of lower rates during slack periods.

The reverse principle is sometimes applied. Barbers may charge more for children's haircuts on Saturdays. They figure the youngsters can come in after school any day when other customers are scarce.

It was this economic principle which prompted Congress to lower the minimum piece rate on bulk third-class mail to 1 cent. In order to qualify for the special rate, the mailer had to sort the mail into State and city bundles, face the letters on either side of the bundle, tie the bundles, use printed indicia or precanceled stamps (this eliminated the canceling indicia expense), place the bundles in mail sacks, and deliver them to the post office. All that was left to be done was to put the sacks on an outgoing train. In other words, the mailer himself had to do 7 of 11 expensive handling operations. These rules still apply to third-class mail. In addition, third-class mail is not handled until all other mail is out of the way. This category of mail is sort of a byproduct of the postal service, a fill-in operation, if you please, to keep valuable clerks busy in periods when they might otherwise be idle.

The results of this congressional action have been fantastic. The volume of third-class mail has increased from 4½ billion pieces in 1944 to 13 billion pieces in 1954. Direct mail today is the second largest advertising medium, surpassed only by newspapers.

This phenomenal growth of direct mail undoubtedly stems largely from the fact that countless small-business men have been able to use it profitably.

Large corporations have advertising budgets which permit nationwide television, radio, and magazine coverage. Direct mail permits the smallest company to market its goods in any or every part of the Nation on a small budget.

In this era of big-business mergers, it is essential that small-business men be encouraged and protected. A Democrat-controlled Congress will, as it has in the past, be always on the alert against efforts to destroy our Nation's greatest asset, its small-business men.

Only in the aggregate may it be said that you are big business. The vast outpouring of direct mail by the 250,000 bulk permit holders means millions of jobs for those creating the advertising and those Americans who produce the goods and services sold.

In 1944 the Post Office received $62 million in revenue from third-class mailers. By fiscal 1955 the figure had reached $250 million.

If we were to further raise the rate for third-class mail, we might very well set off a disastrous chain of events which would cause a reduced volume of such mail, unemployment, and lower taxpayments. As recently as July 1952, we raised the rate on third-class mail by 50 percent. I tried in that particular Congress to hold the increase to 25 percent, but without success. I am certainly opposed to increasing it the full 100 percent over the original 1-cent rate, as the Postmaster General wants to do.

It is highly doubtful that the overhead of the Department would be reduced to any extent if third-class mail were legislated out of the service entirely. The only sure result would be the loss of one-quarter billion dollars in revenue to the Department, aside from the economic hardships you businessmen would endure. Postal rates should not be changed until a sound postal policy has been established by Congress.

It has been a pleasure being here today. I only wish other Members of Congress had an opportunity to meet with you in person, to learn of your business operations. Since all of you cannot get to Washington, you are well advised to continue your trade association there. When the Advisory Council was functioning during the last Congress, your director, Mr. Jack Tillotson, was a source of unending information. He worked as hard as anyone on the Advisory Council. He deserves a vote of thanks from all.

Your executive manager, Harry Maginnis, has cooperated fully with the House and Senate Post Office Committees. His testimony before the House group in July 1953 was a gem of logic presented in your behalf.

Senators and Representatives are busy considering many problems. It is particularly important, therefore, that associations such as yours continue to exist. We are constantly bombarded with propaganda from the executive branch of Government, and it is essential that we hear from you.

If ever the time comes when we hear only one side of the postal picture, I am afraid it will be a sad day for small-business men like yourselves.

I wish you a successful meeting. Keep the mail rolling. We will do all we can in Washington to keep you in business.

Post Office Department: Service or Business?

The Post Office Department costs the Federal Government several hundred million dollars a year more than it receives from those who use the mails. The postal deficit has led to a demand for increased postal rates on the first-class mail, such as letters; on second-class material, such as magazines; and on circular letters and other third-class mail. You have also heard it claimed that present rates give a huge subsidy to those magazine publishers that deliver their publications to subscribers through the mail. Farm organizations have taken certain publishers to task for opposing subsidies to farmers, claiming publishers themselves are the recipients of millions of dollars in postal rate subsidies.

All this leads to some very pertinent questions that should be earnestly considered by all users of the mails, including Progressive Farmer subscribers.

Is the postal service purely a business, or is it a service to all the people?

If it is purely a business, then the logical thing to do is to insist that the Post Office Department put into effect every possible economy consistent with good service. Then charge the users of the mail what it costs to deliver it. But before you decide that the postal service is purely a business, let's see what services it gives, to whom they are rendered, and why they cost so much.

First off, Progressive Farmer readers should know that there are 40,000 post offices in the United States. And only about 2,000 of them take in enough revenue to meet their overhead costs. Perhaps your own post office is one that does not pay its way. Why then is it kept open? Certainly, not as a service to magazines, such as the Progressive Farmer. Monthly magazines can be delivered from 20,000 post offices just about as effectively as from 40,000. If you have a post office that costs the Government money, it is not as a favor to magazines. It is because the people in your community want it. It renders services they would not willingly give up.

The rural free delivery was established to serve millions of people living a good way out from town. Congress knows that it would be out of the question to raise rates enough for this service to show a profit. Yet, if the postal service is purely a business, shouldn't rural free delivery show a profit?

As Senator Olin D. Johnston, of South Carolina, chairman of the Senate Post Office and Civil Service Committee, so aptly illus-

trates, "We should stop calling the cost of these needed services deficit. Rural delivery is no different from the lighthouses operated by the Treasury Department. Ship owners do not pay a fee every time they pass one of them. They are operated as a calculated loss in interest of better, safer shipping. The benefits of postal service to the people are every bit as direct."

There are a number of categories of mail that are either carried free of charge or at very low rates. An enormous volume of official Government mail—correspondence and publications of Congress and all Government agencies, and organizations—is carried free. Other such mail carried free of charge or at low rates includes free-mail-for-the-blind, free-in-county newspapers, charity, educational, and religious mail. And there are many other nonpostal services performed by the Post Office Department from which it receives no revenue. Here are just a few of them; as listed by Senator JOHNSTON:

1. Relatives of deceased men in Armed Forces are located.

2. Former tenants are located for the Housing Authority.

3. Doves are counted for the USDA.

4. Post offices receive and transmit money for heart, polio, and cancer organizations.

All these services cost money. If they were rendered by any other department of the Government, their cost would be taken care of by congressional appropriations. But when the Post Office Department incurs them, they become deficits. And those who use the mails are held responsible.

There is nothing wrong in the Federal Government spending money for these good services. And it is entirely proper for the Government to have 38,000 money-losing post offices, if they are a service to poeple and the people want them and are willing to pay for them. But it is decidedly unfair to say that the cost of these services to all the people should be charged largely against the comparatively few concerns that must use the mails to conduct their business.

Is the postal service purely a business, or is it a service to all the people? Until this question is answered by Congress, there can be no sound basis on which to establish postal rates. If the Post Office Department is a service to all the people, it does not follow that publications such as the Progressive Farmer should be carried free of charge. But it should mean rates somewhat lower than are necessary for the Post Office Department to show a profit. And it would also be recognized that the deficits of the Department are not a subsidy to publishers, but rather a service to the people that creates more in wealth, taxes, and employment than any other Federal agency.

Insofar as the Progressive Farmer is concerned in postal rates, we can say this: If we have been subsidized by low postal rates, it has not gone into the pockets of Progressive Farmer owners. If we have received a subsidy, then that subsidy has been passed on to our subscribers in low subscription rates. We give 60 big issues of from 100 to 200 pages an issue for the low cost of $2. That's 3½ cents an issue. To send a 176-page issue to a subscriber costs the Progressive Farmer 20 cents.

Three increases of 10 percent each were made in second-class postage rates in 1952, 1953, and 1954. The Progressive Farmer does not oppose further increases, if they are found necessary after Congress has established a sound fiscal and postal policy for the Post Office Department. But we do object to the continual agitation of the rate question by the Postmaster General and his attempt to make it appear that publishers are the recipients of huge Government subsidies.

Grand Island, Nebr., the All-America City

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. MILLER of Nebraska. Mr. Speaker, I should like to make the following remarks about one of America's all-America cities, and to extend the same in the CONGRESSIONAL RECORD.

GRAND ISLAND, NEBR., THE ALL-AMERICA CITY

Last Thursday, January 5, 1956, the largest city in my congressional district celebrated a well-deserved honor. The occasion, high-lighted by national celebrities who are proud to claim Nebraska's third city as their home town, marked Grand Island's recognition as a Look magazine all-America city for 1955.

The idea that Grand Island might compete for this honor was suggested by the city manager. The chamber of commerce gave it impetus. An all-out community effort sold it.

The comprehensiveness of the community improvement program was remarkable, but most significant were these projects developed or realized in 1955: A $4 million school bond issues; a Community Lutheran Hospital fund drive that brought in contributions exceeding $400,000; a vigorous and expended youth recreation program, emphasizing little league baseball, a concerted drive to increase religious and church activity; and a new home for the Hall County Fair, pari-mutual horse racing, 4–H shows, and farm youth activities.

These accomplishments were the backbone of the case presented on May 5, 1955, to the National Municipal League in New York City by Walter P. Lauritsen, chamber of commerce president, and Chamber Secretary William E. Dauer.

Grand Island can be justifiably proud to receive the coveted Look magazine award, to be recognized as one of the 10 outstanding cities in the United States in 1955. More deeply, however, they can be proud of the people and the forward-looking community of individuals who made this recognition possible.

The mark of a good home town is its emphasis on the church, the school, and the home. Grand Island is a city of 25,000 people. There are 36 churches providing places of worship for their congregations. In the past 10 years, these churches have spent nearly $2 million on new buildings, additions, and schools, and their membership has increased by nearly 10,000.

Grand Island, no different in this respect from many other cities and towns in America, was faced with a serious classroom shortage. The citizens rescued themselves. First, a campaign was conducted that led to a special building fund in 1947. Out of this fund came the wherewithal for urgent and immediate building. The long-range program was then agreed upon by a citizens' planning committee, their campaign was started and, with the untiring effort of an organized community, a $4 million school-bond issue was approved by a near-record number of Grand Island voters. The $2.7 million spent to date from this fund has gone a long way toward solving the third city's classroom problems, but these forward-looking people say "it has not completed the job," and pledge fulfillment.

New and beautiful homes have sprouted on practically every one of the hundreds of vacant lots that existed before World War II. In 1953 alone more than $5 million was spent on new home and dwelling construction, and in the 10 years following World War II, nearly 2,000 homes have come into being at a cost of more than $20 million. This home-growth record undeniably influenced the selection of Grand Island as an all-America city.

Many other community projects deserve praise: Beautiful new Fonner Park, internal improvements to streets, water and sewer systems, outstanding hospitals, commercial air service, and many others. It was this atmosphere of progress and achievement that induced at least six large industries to take notice of the prospecting in 1955 campaign of the chamber of commerce, and locate plants in Grand Island. This, and the inherent assurance that in Nebraska there is a labor supply of men and women who will do a day's work for a day's pay.

Grand Island's beauty is not confined to its homes, churches, or schools, or even the community spirit that evolves from a united and common campaign. The ethereal qualities of two daughters of Mr. and Mrs. Forrest Ritchie, of that city, last year received national recognition. Sharon Kay Ritchie is Miss America for 1956; her sister, Mrs. Donna Jo Strever, was a finalist in last year's Miss Universe contest.

No wonder its splendid citizens say "It's grand to live in Grand Island."

Consumer Gas Bills

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. VANIK. Mr. Speaker, in yesterday's newspapers I was dismayed to learn of the introduction of legislation by Senators MONRONEY, FULBRIGHT, ANDERSON, and DANIEL which would require the Washington Gas Light Co. to print on its monthly consumer bills a breakdown statement to show how much of the bill goes to the distributing company, the pipeline and the producer. This legislation is propounded in part to point up the smaller portion of the bill representing production.

The obvious purpose of this legislation is more sinister than sincere and purports to take punitive action against this

company for joining the Council of Local Gas Companies in a legitimate protest against the Harris-Fulbright gas steal bill.

The technique is completely in keeping with the resolution to investigate the distributors of natural gas because of their opposition to the Harris bill in the House last summer.

The Congress of the United States is no place for vindication and recriminations—it is a place for sober and conscientious deliberation.

I am proud of the forthright courage of the gas distribution industries to resist the efforts of the oil and gas industry to run roughshod over the interests of the gas-consuming public.

The records and cost figures of the distribution of natural gas in the Washington area as well as the other gas consuming areas are public records—open for public scrutiny. The gas-consuming public in any given area has the right to inquire, investigate and dispute a gas rate before its utility commission and in the courts. It is that very right which the Harris-Fulbright bill seeks to take away from the public with respect to gas production. The measure is no give-away—it is the "takeaway" of 1956.

It is my earnest hope that the Senate will exercise more wisdom than the House on this measure and defeat it for all time.

Address Delivered by Hon. Barry Goldwater, of Arizona, Before the National Association for the Advancement of Colored People

EXTENSION OF REMARKS
OF
HON. BARRY M. GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an address I delivered before the National Association for the Advancement of Colored People at Tucson, Ariz., on October 12, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Three years ago, I met with this organization in Tucson, I answered specific questions as to my position in regards to governmental policies that effected the Negroes of America, and my answers to these questions indicated to you, I believe, that I was wholeheartedly in sympathy with the program outlined, at that time, by our candidate for President, Mr. Eisenhower.

I believed then, and I believe now, in the equal dignities of all our people, whatever their racial origin or background may be. I believe in their equal right to freedom and opportunity and benefits of our common citizenship.

I am happy to be able to stand here tonight and report to you the accomplishments of this administration, in the field of what we might call civil rights. Actually though, it is a report on what has been accomplished for all Americans, because I don't think we should continue to look on Americans as a nation of minorities and majorities, but rather as a nation dedicated to the proposition that all men are created equal and that they are endowed by their Creator with certain inalienable rights, and that among these, are life, liberty, and pursuit of freedom. I believe that we should recognize in these words of Jefferson, the source of our freedom and the fact that freedom given by God is given to all people whether they be white or black, or Catholic, Protestant, or Jew.

These accomplishments have been American accomplishments and I am proud to have participated in bringing them about. In these accomplishments we find the fulfillment of promises made to all American people in 1952 and I would like to indulge you for a few moments in a recitation of these accomplishments.

1. A Republican administration will win an honorable and just peace.

The Korean war ended shortly after President Eisenhower was inaugurated. Servicemen who had been prisoners of war for as much as 3 years were brought home to their families. Not since that time has it been necessary for mothers and wives to send their sons or husbands to war.

2. A Republican administration will end segregation in the Nation's Capital.

By agreement with the administration, racial restrictions were lifted in theaters, hotels, and all other public places during Inauguration Week, beginning January 19, 1953. Most places of business cooperated. It was understood that while it would not be advertised (even after the inauguration), if Negroes presented themselves they would be accepted. With few exceptions, this plan of action was carried out. In August 1953 racial bars were dropped officially. Negroes now attend theaters, restaurants, and other public places, as well as public schools, in the District of Columbia. There has not been one reported incident as a result of the general integration. The Bell Telephone Co., Capital Transit, and other private industries are hiring colored employees on all levels. This is the result of the work of the President's Committee on Government Contracts, which has worked quietly but diligently to eliminate the evils of segregation and discrimination in hiring.

All recreational facilities are now operated on a nonsegregated basis.

Segregation among District of Columbia employees has been eliminated, even to the controversial Fire Department, which was an issue for so many years.

The District of Columbia public housing (National Capital Housing Authority) program is now operating on an integrated basis.

Civilian as well as uniform personnel are included in the integration program on all bases and in all departments of the District of Columbia government.

3. A Republican administration will stop bias and Jim Crow in Federal departments and bureaus, which the Democrats have not done.

On January 18, 1955, the President created, by Executive order, the President's Committee on Employment Policy, which automatically abolished the old Fair Employment Board. This Committee has increased in stature and reports directly to the President. Its purpose is to look into and straighten out problems on racial discrimination in the various executive departments.

When this administration took office there were many areas in which Negroes were not employed above a messenger; in some few there were none whatsoever. These inequities have been practically eliminated—opening up unlimited opportunities to youth—men and women all over America. No longer can it be said that our great sacrifices for education and preparation for participation in the American way of life are futile.

When President Eisenhower took office nearly half of the Negro units were still intact in the Army. Today, there are none. Over three-fourths of the Negroes in the Navy were in mess halls as servants when President Eisenhower took office. This system has been eliminated, and they are now serving in all branches of the Navy on an integrated basis.

All segregated schools at Army, Navy, and Air Force installations had been eliminated by the administration long before the Supreme Court handed down its decision against segregated schools.

There is no segregation in naval installations in the South; cafeterias, restrooms, and drinking fountains were all separate when the Republicans took over our Government in 1953.

Racial segregation has been eliminated from all the veterans' hospitals in the South, a feat said to have been impossible whenever this subject was discussed.

4. A Republican administration will make Negro Federal appointments of real importance, commensurate with the demonstrated ability of Negroes, as it did when in power before.

This is one of the brightest spots of this entire administration. Negroes are serving in administrative positions in practically every department of Government—many on a policymaking level, such as:

J. Ernest Wilkins, Assistant Secretary of Labor, the first Negro subcabinet officer. Wilkins was first appointed Vice Chairman of the President's Committee on Government Contracts, and as a result of his outstanding ability was chosen by Secretary of Labor Mitchell to be one of his assistants;

Scovel Richardson, Chairman of the Federal Parole Board—the first and only Negro ever to be appointed to the Board;

E. Frederic Morrow, Administrative Officer for the Special Projects Group in the Executive Office of President Eisenhower, promoted from Adviser on Business Affairs in the Department of Commerce;

Hon. Charles H. Mahoney, lawyer and insurance executive, first full delegate to the United Nations;

Marron W. Fort, Light Chemical Engineer in Israel under the Foreign Operations Administration (International Cooperation Administration) program, first to have ever served in such capacity;

Archie Alexander, Governor of the Virgin Islands;

Richard L. Jones, Ambassador to Liberia, who was first appointed Chief of Mission for Foreign Operations Administration (ICA);

Joseph H. Douglass, Special Representative of the Secretary of Health, Education, and Welfare;

John W. Roxborough II, Consultant to the Secretary of State;

Dr. Frank Snowden, Cultural Attaché, United States Embassy, Rome, Italy;

Samuel Pearce, Assistant to the Under Secretary of Labor;

Joseph Clark, Special Assistant to the Assistant Postmaster General;

Vernon Greene, Assistant General Counsel, Post Office Department;

Joseph Birch, member of the legal staff in the Fraud Division, Post Office Department;

Hon. Archibald J. Carey, Alternate Delegate to United Nations—and now Vice Chairman of the President's Committee on Employment Policy.

Attorney Julia Cooper, member of the legal staff of the Justice Department—was transferred and promoted from the legal staff of the General Services Administration. She was the first Negro to serve in the Legal Division of the General Services Administration, and is the first woman to serve in the Criminal Division of the Justice Department;

Brig. Gen. B. O. Davis, Jr., United States Air Force, is the first colored brigadier general in the Air Force;

Alexander Laneuville, Special Assistant in the Office of Veterans' Administrator

stationed in New Orleans—the first Negro to serve in such a capacity in the South;

Dr. Francis Hammond, Information Specialist, United States Information Agency;

Frank Walker, Administrative Aid in Postal Transportation in New Orleans—the first to serve in such a capacity in the South;

Attorney George E. C. Hayes, Chairman of Public Utilities Commission for the District of Columbia, is the first Negro to receive a Presidential appointment on any commission in the District of Columbia;

Joseph Ray, Racial Relations Adviser to the Administrator of Housing and Home Finance Agency;

Philip Sadler, Racial Relations Adviser, Public Housing Administration;

Joseph Rainey, information specialist, Housing and Home Finance Agency—this is a first;

Carmel Carrington Marr, area advisor on the staff of Ambassador Henry Cabot Lodge, Jr., the first and only Negro ever to serve in such a capacity;

L. B. Toomer, Register of the Treasury, the first to be so appointed since the administration of President William Howard Taft, also a Republican.

5. A Republican administration will appoint a Negro to an administrative office in the White House.

With the appointment of E. Frederic Morrow to the White House staff the 14-point program of campaign promises to minorities has been fulfilled. With still a year and a half to go in his first term, President Eisenhower will move on from here to attain greater rights and freedoms for all of us. A continuing program for the good of our great country and all its citizens can be expected as long as President Dwight D. Eisenhower, with his high religious and democratic concepts of the dignity of man, remains in the White House.

6. A Republican administration will make it possible for Negroes—not just one Negro, as now—to be placed in policymaking jobs in governmental agencies.

Of the more than 250 appointments by the Republican administration, such men and women as J. Ernest Wilkins, E. Frederic Morrow, Joseph Ray, Scovel Richardson, Joseph Douglass, Samuel Pierce, Richard L. Jones, George Maceo Jones, Charles Mahoney, Archibald J. Carey, Jr., Roberta Church, Carmel Carrington Marr, and others are on a policymaking level. This is a positive unmistakable demonstration by President Eisenhower and the Republican Party that the qualifications and ability of men and women of all races is the yardstick by which appointments are made. The color of the skin no longer is a barrier.

7. A Republican administration will strengthen the civil-rights section of the Justice Department.

In this particular field the administration has been outstanding. The Justice Department has been relentless in its attacks on the offenders of the civil rights of others; for example:

(a) In 1954 prosecution of the Ku Klux Klan in Florida and the Carolinas resulted in the conviction of nine North Carolina klansmen under the Lindbergh kidnap law. This brought a total of 40 convictions for floggings of citizens by lawless Kluxers who were taking many of their victims across State lines.

(b) In Alabama, Fred and Oscar Dial were convicted of peonage and sentenced to 18 months in prison. They would buy prisoners out of jail, then hold and work them for nothing on their plantation. One victim died after a beating inflicted upon him by one of the brothers.

(c) The courts upheld the Justice Deparment's contention that flogging is a crime under the Federal civil-rights laws in all State institutions. Thus there can be no more flogging of prisoners.

(d) The courts upheld the Justice Department's contention that civil-rights statutes pertain to Federal officers as well as those of States and municipalities. This resulted in the first conviction of a Federal employee for brutal treatment of a member of a minority race.

One of the most effective measures on the civil-rights front instituted by the Justice Department has been the inauguration of a program of indoctrination and preliminary training of all United States attorneys appointed by President Eisenhower. This was followed up by close liaison and direct supervision in civil-rights cases.

The new procedures have been very valuable in eliminating many of the misunderstandings and problems which existed in the civil-rights field in the past.

8. A Republican administration will not be tied down by a southern anti-Negro bloc in control of Congress and committees.

The 83d Congress was headed by Republican leaders. The committees were chaired by northern and western Republicans. We saw no such disgraceful performance as in the present Democratic Congress, when the chairman of a District of Columbia Subcommittee, Representative JAMES C. DAVIS, of Georgia, conducted hearings for the sole purpose of ending the integration program in the Fire Department, which had been placed in operation by the Eisenhower administration; nor the disgraceful spectacle of one Democratic Congressman, ADAM CLAYTON POWELL, being attacked physically by a southern Democrat, Congressman CLEVELAND M. BAILEY, of West Virginia, in a committee meeting just because he insisted that the constitutional rights of Negroes be protected in the school-building program.

9. A Republican administration will be able to better enforce the antibias laws already on the books, but seldom invoked by prejudiced white officers.

All instances of encroachment on constitutional rights of Negro citizens anywhere in the United States have been investigated by the Justice Department and action taken to correct these abuses; for example, the quick action and fervor with which the FBI is investigating the murder of Rev. George Lee in Belzoni, Miss., has seldom been equaled in its history.

10. A Republican administration will really enforce the nondiscriminatory clauses of the Taft-Hartley Act which will break the grip of negrophobic labor unions.

A magnificent job has been done in this field; slowly but surely Negroes are being employed in all occupations. This has been done through the President's Committee on Government Contracts. The Capital Transit, the Chesapeake & Potomac Telephone Co., and many others are now hiring Negroes. The Armour Meat Packing Co. is now hiring colored white-collar workers. Many labor unions that formerly barred Negroes now include them as members.

11. A Republican administration will reduce taxes.

Taxes were reduced by the Republican Congress nearly $7½ billion. This is the largest tax cut ever given. This is the first substantial cut made by our Federal Government since 1948 when the 80th Congress, also Republican led, cut taxes $5 billion.

12. A Republican administration will protect the basic freedom of all people and stop the trend toward all powerful and costly centralized government.

This administration has reversed the 20-year trend toward centralization of power in Washington. Free enterprise is again operating full steam ahead, and we now have the greatest prosperity in the history of our country. More people are working than ever before, over 64 million workers are averaging over $70 per week take home pay. Thus more people benefit from this great prosperity than in any other period of history.

13. A Republican administration will not arouse false hopes of Negroes by promising what it never intends to deliver.

Candidate Eisenhower made no wild promises on civil rights. His approach has been one of action, not words. Every move has been directed toward the complete elimination of every vestige of segregation and discrimination in American life with first-class citizenship for all as a goal.

It would be an easy matter for me to stand here tonight and give the Republican Party full credit for these achievements, but in effect the people of America deserve an equal share in this instance. Inherently, an American has a sense of fair play and they realize that all of us are bound in a common destiny, namely, our spiritual faith in the dignity of all men under God. The achievement of this dignity rests with the individual and not with a bureaucratic Federal Government. Given the opportunity, all Americans who possess initiative and courage and a faith in our fundamental strength can achieve and maintain the dignity of material success, but more importantly he can retain that dignity granted him as a free child of God if he but does unto others as he would have them do unto himself.

Too Poor For Defense?

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. PRICE. Mr. Speaker, we have been warned by the President of the United States that Soviet Russia and Red China continue to pose a serious threat to the free world. The threat is heightened by Soviet achievements in nuclear research, in technology, and in aircraft production. The air-atomic balance between the United States and the Soviet Union is tilting precariously, for us, in the direction of the Communist bloc in Europe and Asia. Marshal Bulganin has himself boasted that the Soviet armed forces would soon have an intercontinental ballistic missile. By now we should have learned that Soviet boasts usually precede by a narrow margin our own discovery, through intelligence channels, of Soviet accomplishments.

It was only a few years ago that Secretary of Defense Wilson pooh-poohed research as something that discovered why potatoes turn brown when they are cooked. Fortunately, Mr. Wilson was persuaded not to cancel all research being conducted by our Armed Forces, and after considerable unnecessary delay, we are now really getting somewhere in guided missile research and development.

Whether we are keeping up the production of manned aircraft and conventional weapons at a rate sufficient to insure our defense until we have better guided missiles, is another question. The answer is not reassuring. Soviet output is now far ahead of American output in 3 of the 4 major categories of combat aircraft, day fighters, night fighters, and long-range jet bombers. In fact, the only category in which they are not

ahead of us is medium range jet bombers. We got a head start with our B–47, and still maintain a lead in the production of this type of plane, which is the backbone of our Strategic Air Command's striking force.

These facts have caused hardly a ripple in the American attitude toward defense, because of public ignorance and the failure of responsible officials to correct it. Fortunately, if no truthful announcements come from the Pentagon, they still leak to Congress and the public. The periodic reporting of Mr. Joseph Alsop and his brother, Mr. Stewart Alsop, help to correct the situation in respect to vital information, though admittedly no individual outside the Government can command the attention—with the authority—of an administration spokesman.

We have now had a report on the state of the Union. We await with eagerness the President's budget message. But we wait with foreboding. The Alsops tell us that "one of the great secret dramas of the struggle over this year's budget was caused by General LeMay's bold demand for an urgent program to produce no less than 1,900 B–52's" to replace the B–47 and to bring us up to Soviet production of their comparable Bison, which they are producing at the rate of 13 per month.

If the commanding general of the Strategic Air Command lost out in geting this recommendation into the budget, it need not follow that his recommendation be ignored in the appropriations bill for 1957 which it is the responsibility of this Congress to prepare. And an appropriation for these heavy bombers of true intercontinental range need not be omitted—unless the richest country in the world is still too poor to pay for its own defense.

Mr. Speaker, I call my colleagues attention to two articles—the first of a series—by Joseph and Stewart Alsop, reporting current changes in the balance of strength between the U. S. S. R. and the United States of America. These articles appeared in the New York Herald Tribune of January 2 and 4, 1956, and have been inserted in the CONGRESSIONAL RECORD by the distinguished Senator from Missouri, the Honorable STUART SYMINGTON. They appear in the RECORD of January 9 on page 238. Every Member of Congress should read these articles.

Iowa Businessmen Demand Economic Justice for Farmers

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. GROSS. Mr. Speaker, more and more businessmen in Iowa cities and towns are feeling the affects of the serious and unwarranted economic punishment that has been visited upon Iowa farmers. The merchant on Main Street realizes that the success or failure of his business depends to an important degree on the financial well-being of agriculture.

Mr. Speaker, there is a job to be done, and immediately. The time is long overdue for emergency, remedial action to assist the farmers of this Nation. Early last fall I urged the Secretary of Agriculture to use his authority to put an emergency floor under livestock prices. His only response has been a too-little and too-late pork buying scheme which has been a dismal failure. To that, thousands of hard-pressed Iowa farmers can attest.

If the Secretary of Agriculture persists in his steadfast refusal to take effective action on his own, this Congress must act. Without regard to politics, immediate passage of legislation may be necessary to put an emergency floor of $18 under top hogs and $25 under choice cattle at Chicago. We simply cannot permit another crop of hogs to go to market this spring at the bankrupt prices paid in the fall.

This must be followed with long range legislation to provide the farmer cost of production prices for his products in the market place. In this regard, I have introduced a cost of production farm bill (H. R. 8128) which I commend to the attention of all Members interested in the economic welfare of agriculture and our Nation as a whole.

Mr. Speaker, as part of my remarks, I want to include an excellent resolution approved by the board of directors of the Clear Lake (Iowa) Chamber of Commerce. Clear Lake is a progressive community in the heart of an important agricultural section of my district. The resolution, which clearly recognizes the seriousness of the present situation on Iowa farms, is as follows:

Whereas the board of directors of the Clear Lake Chamber of Commerce fully realizes the great importance of the farmers in the Clear Lake trade area to Clear Lake merchants, and

Whereas the directors note with concern the continued downward trend of farm prices which is taking place while the prices of the articles the farmer has to purchase is rising; and

Whereas recent predictions by some leading economists indicate a further drop in farm income in 1956, but a continuing increase in other business; and

Whereas no evidence is noted that anything concrete has been done in Washington to alleviate and correct the above discrepancies; be it therefore

Resolved, That we, the said board of directors of the Clear Lake Chamber of Commerce, in meeting assembled in Clear Lake this third day of January 1956, do hereby urge the administration and Congress to immediately put into effect such temporary measures as may be necessary to assure farmers of fair hog and cattle prices during the present emergency; and be it further

Resolved, That we urge the administration and Congress to prepare, pass, and put into effect with as much celerity as circumstances will permit, legislation that will assure farmers of equitable prices for their products in times of maladjustment without instituting any permanent controls that would limit their freedom of operations and opportunity; and be it further

Resolved, That copies of this resolution be forwarded to President Eisenhower, Secretary of Agriculture Benson, Senators Hickenlooper and Martin, to Congressman Gross, to Governor Leo Hoegh, to Cerro Gordo County Farm Bureau officials and to Clear Lake and Mason City newspapers.

In witness whereof, the following officers of the said organization hereto attach their signatures.

S. T. THOMPSON,
President.
G. W. WILCOX,
Vice President.
JAMES R. SMITH,
Managing Secretary.

In addition, Mr. Speaker, I want to include as part of my remarks an explanation of the cost of production farm bill which I have introduced:

PROVISIONS OF COST OF PRODUCTION FARM BILL INTRODUCED IN HOUSE OF REPRESENTATIVES ON JANUARY 5, 1956, BY CONGRESSMAN H. R. GROSS

1. Cost of production plus a reasonable profit to farmers on that portion of crops consumed domestically. Cost of production prices, to be established for each farm product by the Secretary of Agriculture following public hearings by farm organizations and other interested parties, will account for all production expenses, including hired and family labor, interest, taxes, depreciation, soil depletion, 4 percent on investments, and compensation to average farm operator equivalent to average weekly earnings of the industrial worker as found and determined by Secretary of Labor.

2. Cost of production prices to be paid at and by the market place, not by the Federal Government.

3. No acreage allotments. Each farmer shall determine his own acreage and what he wants to plant, and shall have a chance to sell his surplus, if any, on world market at world price, but cost of production prices to farmers will be high enough to insure a good income without having to produce back-breaking surpluses.

4. Cost of production prices and amounts of each crop needed for total domestic consumption, a reasonable reserve, and export, to be announced by the Secretary of Agriculture once a year in advance of planting season, and will apply farm-by-farm. For example, if the Secretary announced that five-sixths of the Nation's corn crop will be needed for domestic consumption, each farmer will be allowed the cost of production price for five-sixths of his corn crop.

5. Competing foreign farm products can be imported into the United States only if importer pays 5 percent above prevailing United States cost of production prices. (Department of Agriculture figures show that for the first nine months of 1955 only, foreigners shipped into this country 90,700,000 pounds of beef and 124,148,000 pounds of pork products or a total of 214,848,000 pounds of meat. To this must be added 240,135 head of live cattle, mostly from Mexico. A substantial share of foreign canned ham came from Communist Poland. Aside from the live animals, every pound of these imported meat products displaced a market for United States feed grains. This is a fantastic situation and must be stopped).

6. Commercial buyers of farm products to be licensed and must pay, under penalty of law, cost of production prices on products needed for domestic consumption.

7. This bill covers any and all kinds of poultry, livestock, and any product of the soil, and any product or byproduct thereof, produced in the United States, in an unmanufactured or unprocessed state, which have a farm value in excess of $30 million during the preceding marketing year.

It is difficult to believe that farmers, assured cost of production for the major portion of their crops, would wear out machin-

ery, themselves and their families to produce unmanageable surpluses which they would be compelled to market at world prices. It is the conviction of many that this cost of production bill, translated into income to the farmer, would go far toward stabilizing the economy of the Nation because it would assure farmers buying power for products of industry, creating more income for industry and more jobs for those who in turn could buy more of the products of agriculture. A dollar of farm income generates approximately $7 in national income. Agriculture is the Nation's basic economy. Every depression or period of prosperity has begun on the farm.

The cost of production bill I have introduced (H. R. 8128), is a long-range program. It in no way obviates the absolute necessity for immediate emergency action on the part of President Eisenhower and Secretary Benson, who have always had administrative authority and ample money available to stabilize livestock prices at levels which would have prevented a farm depression pending the establishment of machinery that would provide economic justice to agriculture.

Results of McGregor Poll on National Issues

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. McGREGOR. Mr. Speaker, under permission to extend my remarks, I would like to place in the RECORD the results of a questionnaire I sent to the citizens in the 17th Ohio District of whom it is my proud honor to represent in the Congress of the United States. The questions were concerned with pertinent national and international problems facing Congress today.

I regret I could not send a questionnaire to each of my constituents in the district but it is my belief that the replies received represent the opinions of a cross section of those I represent. In the questionnaire I ask them to list their occupation or profession. This gives me the opportunity to tabulate them as separate groups, which in turn, helps me obtain a more complete analysis of their thinking. Especially gratifying to me is the large percentage of the completed forms which contain comments on the questions and proves to me that the average constituent of my district is interested in the important issues now before this legislative body and is anxious to express his views on them.

The population of my district is composed of about half rural and half urban with nearly all of the labor and farm organizations represented as well as large and small business. Included also are 2 colleges and 2 universities. Through the medium of this questionnaire I feel that I have gained the majority opinion of those I represent.

The questionnaire and the results are as follows:

A QUESTIONNAIRE

In an endeavor to learn the views of the "folks back home" relative to several subjects of national importance that will be before the next session of the Congress, may we have your considered opinion?

THE FARM PROGRAM

Which plan do you favor?

(a) 100 percent price support with acreage control. Yes, 0.7 percent; no, 99.3 percent.

(b) Flexible price support with acreage control. Yes, 37 percent; no, 63 percent.

(c) Elimination of all price supports and acreage controls. Yes, 54 percent; no, 46 percent.

THE TAX REDUCTION PLAN

Which plan do you favor?

(a) A uniform (percentage) tax reduction for all. Yes, 50 percent; no, 50 percent.

(b) An increase in the amount allowed for each dependent. Yes, 47 percent; no, 53 percent.

TARIFF ON IMPORTS

Do you favor?

(a) Tariff rates be increased on manufactured items brought into this country. Yes, 48 percent; no, 52 percent.

(b) Tariff rates be increased on agricultural products brought into this country. Yes, 60 percent; no, 40 percent.

Percentage distribution of replies to questionnaire—Continued

THE TAX REDUCTION PLAN: WHICH PLAN DO YOU FAVOR?

	Yes	No
(a) A uniform (percentage) tax reduction for all: Total replies	50	50
Attorneys	56	44
Business, industry, and salesmen	55	45
Farmers	60	40
Housewives	48	52
Labor	60	40
Ministers	52	48
Occupation not given and organizations	75	25
Professionals	66	34
Public officeholders and Federal employees	33	67
Retired	58	42
Teachers	34	66
Students	72	28
(b) An increase in the amount allowed for each dependent: Total replies	47	53
Attorneys	46	54
Business, industry, and salesmen	52	48
Farmers	51	49
Housewives	43	57
Labor	52	48
Ministers	34	66
Occupation not given and organizations	18	82
Professional	37	63
Public officeholders and Federal employees	66	34
Retired	41	59
Teachers	64	36
Students	48	52

TARIFF ON IMPORTS: DO YOU FAVOR?

(a) Tariff rates be increased on manufactured items brought into this country. Total replies	48	52
Attorneys	30	70
Business, industry, and salesmen	45	55
Farmers	50	50
Housewives	43	57
Labor	80	20
Ministers	36	64
Occupation not given and organizations	40	60
Professional	46	54
Public officeholders and Federal employees	50	50
Retired	46	54
Teachers	33	67
Students	76	24
(b) Tariff rates be increased on agricultural products brought into this country. Total replies	60	40
Attorneys	50	50
Business, industry, and salesmen	60	40
Farmers	63	37
Housewives	63	37
Labor	69	31

The Communist Conspiracy

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. McCARTHY. Mr. President, I ask to have printed in the CONGRESSIONAL RECORD the following letters and press releases regarding the Communist conspiracy:

Letter from me to the President of the United States dated August 24, 1955.

Letter from me to the President dated September 21, 1955.

Letter from me to the senior Senator from Arkansas [Mr. McCELLAN] dated November 2, 1955.

Press release from my office dated November 9, 1955.

Another release dated November 13, 1955.

Another release dated November 25, 1955.

Letter from me to the senior Senator from Missouri [Mr. HENNINGS] dated November 29, 1955.

Letter from me to the Senator from Tennessee [Mr. KEFAUVER] dated December 2, 1955, copies of which were sent to Governor Averell Harriman of New York and Hon. Adlai Stevenson.

Letter from me to the Attorney General dated December 16, 1955.

Letter from me to the senior Senator from Arkansas [Mr. McCLELLAN] dated December 16, 1955.

There being no objection, the letters and releases were ordered to be printed in the RECORD, as follows:

AUGUST 24, 1955.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: Your administration claims to have brought prosperity to the country. I think there is an important sense in which this is untrue.

Some areas of the economy are, thanks to huge Government expenditures on our defense and foreign-aid programs, quite prosperous. But the prosperous times being enjoyed by industry and labor are not being shared by the farm community. A boom in industry exists side by side with a depression in agriculture.

In such circumstances it is difficult for the farmer to take your administration's prosperity claims seriously; before long the falacy will be brought home to the whole country. For prosperity in America is indivisible: we cannot have an unhealthy farm community without the disease soon spreading to the rest of the economy. As you know, the great depression of 1929–39 was preceded by a depression on the farms, and was caused in large measure by depressed farm prices with consequent loss in farmers' purchasing power.

The current farm depression is not only being tolerated by your administration; it is a direct and predictable result of your administration's farm program, which I can only describe as one of persecution of the farmer. Although I cannot imagine why this should be the case, it seems to me that your administration is engaged in open war against the farm community.

My feelings might be considerably different if your administration's farm program reflected a general economic policy, consistently applied to all segments of our economy. I would, that is to say, understand—and to a large extent sympathize with—a determination by your administration to reestablish throughout the economy the free-enterprise system, and to restore, gradually, to all aspects of our economic life the sovereignty of the free market place.

But your administration has shown no such inclination, except with respect to the farmers. As you well know, the Federal Government continues to give subsidies, directly or indirectly to industry and labor—so that there is probably not a major industry existing today that would not suffer serious dislocation if the Government were to single it out and force it to compete in an otherwise subsidized economy. The various subsidies to the nonagricultural elements of the economy have resulted in incomes to these elements, that have, in nearly every case, kept pace with national income trends. But under the Benson farm program of lower commodity loans and Government selling at depressed price levels, the farmer is experiencing economic hardships that have not been visited upon any other segment of the economy. The farmer is asked to compete for economic survival where his costs and taxes are as high as those of other elements of the economy but where his wages—i. e., farm prices—are deliberately being forced downward.

The parity concept suggests nothing more nor less than that farm prices should advance or retreat in unison with prices received for nonagricultural goods. When farm prices are at 100 percent of parity, the farmer is getting his fair share of the national income. But the farmer can never get prices at 100 percent of parity when the Government is in a position to establish the market price, and then goes on to buy and sell farm products at less than parity prices.

I simply cannot understand why your administration should want to work an injustice on the farmer. The Wisconsin dairy farmer—for an example—whose prices are now supported at 75 percent of parity—is asked to receive less for his labor than heretofore, while he continues to face the same taxes and the same costs of production.

The farmer is constantly assured by Mr. Benson and his lieutenants that he is better off than ever before. The farmer knows this to be untrue, and he can cite no less an authority than your own Department of Agriculture. Let me remind you of the statistics recently issued by the Department of Agriculture comparing the farmer's income of the past 4 years with that of the rest of the economy.

Date	Gross farm income	National income	Percentage
	Billion	*Billion*	
1951	$36.4	$277.0	13.1
1952	36.9	291.0	12.6
1953	35.5	305.0	11.6
1954	33.9	300.0	11.3
Average, 1946–50	32.2	211.0	15.2

In the light of these figures—which show not only that farm income itself is dropping, but that the farm community's relative share of the national income is steadily dropping—it is hard to deny that the farmer is getting a raw deal. I can assure you that your administration's claim of bringing prosperity to the country is a huge and tragic joke to the Wisconsin dairy farmer—and, of course, to other members of the farm community.

If your administration is willing to put the country back on a free-enterprise footing, with no subsidies to anybody, that would create an entirely different situation. But a policy of favoritism in subsidies will never wash with the American people's sense of justice.

At one point in your political career, Mr. President, you apparently appreciated the farmer's claim to justice. On Ocober 4, 1952, at Brookings, S. Dak., you told the American farmers:

"The Republican Party is pledged to the sustaining of the 90 percent parity price support and it is pledged even more than that to helping the farmer obtain his full parity, 100 percent parity, with the guaranty in the price supports of 90."

You may have forgotten that solemn pledge, Mr. President, but I assure you that the farmer has not. I earnestly urge you to reexamine the position you took then, and see if it was not based on principles of justice and fair play.

A year ago, about this time, I asked you to honor your campaign pledge by urging Congress to enact such a farm program, and by instructing your subordinates to administer it in such a fashion, as would result in 100 percent of parity in prices at the market place. I predicted that if you administration failed in this, our party would lose the 1954 congressional elections. The experts seem to agree that the Republican Party's defeat in 1954 was caused primarily by the vote of an alienated, betrayed, and disillusioned farm community. There is every reason to suppose that the farmers will return precisely the same verdict in 1956 if your administration continues to press its war against agriculture throughout the next year.

I hope the Republican Party can honestly campaign under the "prosperity" banner in 1956. But we cannot do so unless your administration adopts a farm program that gives justice to the farmer and real prosperity to the country. May I suggest, Mr. President, that the problem is urgent, and deserves your earliest consideration.

Sincerely yours,

JOE MCCARTHY.

SEPTEMBER 21, 1955.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: I am deeply concerned, as I am sure you are, over the mounting assault on the administration's security program. Left-wing Democrats, in alliance with liberal-front organizations, have launched a full-scale attempt to discredit the Government security system. The current attack is, in part, politically inspired by men who desperately seek an "issue" for 1956; but it is also the fruit of an unrelenting Communist and left-wing propaganda campaign that for many years has sought to undermine public confidence in security measures—and, ultimately, to bring about the dismantling of the security system itself. The attackers are scoring new successes every day, and I predict they will continue to do so until the administration stands up on its hind legs and fights back.

Those who would keep Communists and security risks in Government have become so drunk with their successful attack on the security program, that in the case of the Communist Party of the United States versus the Security Control Board, even a United States Senator joined with the Communist Party in their demand that our security laws be declared unconstitutional.

The left-wing Democrats and the "civil liberties" cultists have hit upon a remarkably effective formula for discrediting the security program; thanks to the executive secrecy policy inaugurated by President Truman—which prevents the Government from telling its side of the story—the left-wingers have only to publicize the alleged grievances of discharged Government workers in order to make their point that we are back in the days of the star chamber.

With the deck thus safely stacked against the administration, Democrat-led committees parade before the public one ex-employee after the other to recount his "ordeal." The Democrat committee members and counsel express profound shock at what, in the absence of evidence in support of the Government's case, appears to be a terrible injustice to the employee. The Liberal press then gleefully retells the employee's story as though it were the whole story, and the public is led to believe that the administration of the security program is arbitrary, brutal, and unintelligent.

The Ford Foundation's Fund for the Republic, of which your personal friend and adviser, Mr. Paul Hoffman, is chairman of the board, has followed a similar approach. The fund's method of "evaluating the security program" is to compile alleged employee grievances, supplied by defense counsel of discharged security risks, and on

the basis of such data, to publicize selected "cases" that seem to prove the Communist and liberal contention that the security program is a guise for a political witch-hunt.

So far, the left-wing Democrats and the liberal fronts have had a free hand. So far, responsible administration officials have been unwilling, or unable, to stand up against the attacks and effectively defend the program. As a result, the vicious anti-security propaganda campaign—originally inspired by the Communists—is making headway and we are in serious danger of losing any semblance of the sort of security program that is needed to protect the Government against Communist subversion.

The dilemma of the administration is, of course, very real: as long as security officers are forbidden to discuss security cases, they are hard put to defend their actions before congressional committees. But in the interests of the Nation's security, a way must be found, and soon, to combat the new left-wing offensive.

In my judgment, the best way to protect the security program is to revoke Executive secrecy orders, insofar as they prevent security information from being divulged to United States Senators and Congressmen. I have, of course, always been opposed to the "blackout," and continue to regard it as a violation of legislative prerogatives. The Executive branch defies both the Constitution and principles of sound government when it denies to Congress information it needs to discharge its responsibilities. And now the evil has returned to plague its creators.

During the Truman regime, the blackout order was issued for the purpose of keeping from Congress data that would have exposed criminal negligence in the administration of the security program. But now by keeping the Truman order in force, the executive branch has been hoisted by its own petard. The secrecy order prevents the administration from showing that the program has improved, and from defending itself against the charge of overtoughness.

Congressional investigating committees should be given access to security files so that they may properly evaluate criticism of the program—whether the charge be that the program is too tough, or that it is not tough enough. Should you decide to divulge to committees the information to which they are entitled, I shall, for my part, urge the Congress to provide that no member of a committee or its staff be permitted to examine the files until he has received top security clearance, and that no specific information be divulged to the public that would, in the judgment of the Executive, endanger national security. Security would thus be protected, and congressional committees would be in a position to present to the American people a balanced, informed report on the administration's program.

Another possible consequence of the secrecy order should be noted—namely, that those responsible for the administration of the program may become demoralized by the sort of attack the left-wing is now waging. On several occasions, security officers have been hauled before Democrat-led committees, and asked to justify discharges or suspensions that appeared to be unwarranted on the basis of employees' complaints. The security officers were not, of course, at liberty to explain their actions. But knowledge of this fact did not prevent the committee or its staff from berating and ridiculing men who had been denied the means of defending themselves. In one case, Mr. Derrell Peterson, a Veterans' Administration security officer, was severely browbeaten by interrogators who showed little sympathy for his claim that silence had been imposed on him by Presidential directive. It is easy to see that such incidents can hamper sound administration of the program, for a security officer is certainly less likely, in a close case, to apply strict standards when he may be required to justify his decision publicly without being permitted to give his reasons.

If, however, you are unwilling to revoke the secrecy order, I suggest that you take the next best step—namely, commence a vigorous educational campaign to inform the public about the security program. If the executive secrecy order is to remain in force, administration spokesmen should make it absolutely clear to the American people that, for security reasons, they are getting, and can get, only one side of the story.

The public must be told that the "letter of charges" made public by the employee is at times incomplete and that the Government's evidence in support of the charges is either withheld entirely or disclosed in miniscule fragments.

In addition, the administration can, without violating the secrecy order, explain certain security practices that are now under attack.

Take, for example, the "suspension" issue: the left-wingers falsely claim that the fact a suspended employee is subsequently cleared proves he was dealt with unjustly in the first instance. The public should be informed that a case of reinstatement after suspension does not demonstrate a miscarriage of justice. Security officers are required to suspend an employee when derogatory information appears in his file, pending more extensive evaluation of the information and further investigation. The fact an employee is later cleared means only that he was able to explain the derogatory information to the satisfaction of the security board or of his department head; it most definitely does not mean the employee should not have been suspended, pending such explanation or the development of additional evidence. I believe, as I am sure you do, that mandatory suspension on the receipt of derogatory information is absolutely essential if our country is to be given adequate protection against the Communist conspiracy.

Or take the charge that too many jobs are considered "sensitive": the liberals contend for a security system that would recognize the sensitivity of a few select (but always unidentified) positions, and their argument is invariably made at the level of Adlai Stevenson's crack about spies in the Bureau of Wildlife and Fisheries. Administration spokesmen should make it clear that the great majority of Government jobs are sensitive in varying degrees—and should explain, with some examples, why this is so, and let them make the further point that while there may be some positions that would be utterly useless to the Communists, it is practically impossible to draw a hard and fast line that will separate sensitive from nonsensitive jobs.

Even more important is the need for the public to appreciate the wide differences between the demonstrable Communist and the "security risk," that is, between the traitor and the potential traitor—and to understand that neither type can be entrusted with a Government job. The public should understand that a security officer is not required to make out a case of treason that would stand up in a court of law—is not even required to show that the employee is, more likely than not, a Communist. If the department head or his representative entertains a reasonable doubt about the man's allegiance, he must order that man to leave the Government service. Those who quarrel with this strict standard entirely miss the point about the covert nature of the Communist conspiracy and the difficulties of obtaining legal evidence of treason.

Unfortunately, the security net will inevitably catch some persons who are not Communists. This is one of the prices of national safety. But the public must realize that the personal injustice allegedly involved in such cases is much less than the disgruntled employee or his lawyer may claim. Every Government employee is aware that working for the Government is a privilege, and is on notice that the Government may at any moment—and at its discretion—revoke that privilege. The employee is thus forewarned that associations, past or present—or, indeed, the associations and circumstances of relatives who are susceptible to Communist pressures—may cost him his job. If a man believes that the well-advertised risks of placing his economic bets on a Government job are too great, he is free to seek employment elsewhere.

These and other aspects of the security program should be emphasized vigorously and often. The leftwing attack is proceeding with increasing viciousness and irresponsibility. We must fight back. And I believe that you, Mr. President, should assume personal leadership of the defense. May I suggest that you devote a major speech to this subject in the very near future. Republican leaders throughout the country should then be urged to take their positions in the line. We should also attempt to enlist conservative Democrats in the fight, for our national security is surely an issue that transcends party lines.

We should not claim that the security program is beyond reproach. It has improved, but it is far from perfect. For example, recent investigations have disclosed delays in the handling of security cases that appear unreasonable. That situation ought to be remedied. Much more important: an impartial investigation would reveal that certain Government departments are still too lax in the application of security standards, and that potential traitors are still in Government.

We can undertake to remedy these defects and, at the same time, restore and maintain public confidence in the basic ideas of the program. We will have taken a firm step in the right direction, should you see fit to repeat your excellent speech on the Communist menace made at Milwaukee, Wis., on October 3, 1952, in the course of which you said that:

"To work for the United States Government is a privilege, not a right. And it is the prerogative of the Government to set the strictest tasks upon the loyalty and the patriotism of those entrusted with our Nation's safety."

The leftwingers are having a field day at the expense of the Nation's safety. It is our imperative duty to the American people to resist their unprincipled campaign—a campaign that, if successful, will open the door once again to large-scale Communist infiltration of our Government.

Sincerely yours,

JOE MCCARTHY.

NOVEMBER 2, 1955.

Hon. JOHN MCCLELLAN,
United States Senator, Chairman, Senate Permanent Investigations Subcommittee, United States Senate, Washington, D. C.

DEAR SENATOR MCCLELLAN: After an intensive investigation which dates back to nearly a year ago, I have succeeded in uncovering facts which, if true, establish the existence of a currently functioning Communist cell in one of the Federal agencies.

Since I am no longer chairman of the investigations subcommittee, and do not have the power of subpena, the job of tracking down and verifying the leads that have been given to me over this period has been extremely difficult. Nevertheless, sufficient information has now accumulated to convince me of the existence of a grave and present threat to the security of this country.

My information indicates that the National Labor Relations Board is literally

honeycombed with individuals identified either as members of the Communist Party, or as having had years of constant and close association with know and/or suspected Communists and Soviet agents. Moreover, it appears that this shocking situation has been condoned by the responsible NLRB authorities for many years.

I am now prepared to turn over to you, as chairman of the Senate Permanent Investigations Subcommittee, the results of my investigation so that the Committee's staff of investigators with its power of subpena may prepare the individual cases for public hearings. I should therefore like to urge that you immediately call an executive session of the Committee so that I may furnish you and the other members with the information I have gathered.

May I emphasize that my information incriminates a large number of individuals who at this very moment hold top-level jobs in this Government agency. I understand that another congressional group is in possession of information concerning past subversive activity in the NLRB. While it is of great importance that such evidence of past subversion be brought to light, the present situation appears to be so critical that, in my opinion, the investigations subcommittee must immediately undertake an inquiry of the facts I am prepared to present.

With a limited staff and no public funds, it has been impossible for me to follow up every lead and double-check every datum that has been brought to my attention. I can, however, assure you that all of my information has been furnished by informants of high reliability and with indisputable access to the pertinent facts. I am sure that, after you have heard the evidence, you will agree that it constitutes a cogent and alarming prima facie case against the adequacy of security enforcement in this Government agency.

Undoubtedly, powerful and bi-partisan pressures will be exerted upon you and the committee to prevent an investigation. For the evidence reflects not only upon the past Democrat administration of Mr. Roosevelt and Mr. Truman but also upon the present administration of Mr. Eisenhower.

The Nation is well aware that the Communists successfully infiltrated the Government during the 20 years of Democrat rule. Many Americans, however, have been led to believe that since January 1953 the Republican administration has dislodged most, if not all, subversives. I was among those in 1952 who were sure that this would be done if the Republican ticket were elected, and I campaigned for the Republican candidate on the basis of the pledge that Communists and security risks would be eliminated from the Government. Consequently, no one can be more distressed than I by the realization that the well-meaning efforts of the present administration in that direction have at least partially failed.

Both parties stand to be embarrassed by an exposé of the NLRB situation; yet I am confident you will frustrate any politically inspired attempts to prevent the Committee from performing its clear duty. I know you agree that partisan considerations must pale in the face of a common threat to us all.

As you know, no Federal agency during the last 20 years has had more influence upon the economic and social structure of the Nation than the National Labor Relations Board. The subversion of the Board is consequently a prime goal for those whose mission is to destroy our way of life.

With its network of branch offices—in New York, Philadelphia, Baltimore, Atlanta, Boston, Chicago, Buffalo, Cleveland, Cincinnati, Detroit, Los Angeles, Minneapolis, Pittsburgh, St. Louis, San Francisco, and other large cities—and in the light of its tremendous daily impact on labor-management relations, the NLRB, from its inception in 1935, presented an ideal target for Communist infiltration. The record is replete with evidence that the Communists were very successful in placing their agents in top-level jobs. In 1940, when the nature of the Communist conspiracy was only vaguely understood in Congress, a House committee headed by Representative SMITH of Virginia reported that the NLRB was heavily infiltrated. My information is that the conspirators still wield a powerful influence in the Board's operations.

To give you an idea of the situation now existing in the NLRB, I am herewith setting forth some of the data in eight of the cases, as an indication of the nature of the evidence gathered in my investigation. You will note that one of the cases, No. 8, is a Truman presidential appointee, a member of the five-man National Labor Relations Board. I shall, of course, mention no names here since these individuals are entitled to testify under oath at executive committee sessions and furnish whatever explanations are available. However, I shall be glad to give the committee full details on the names, dates and circumstances surrounding these and the other cases.

Case No. 1: This National Labor Relations Board official enjoys high connections both on Capitol Hill and in the Washington office of the Board. He was fired from the Labor Board in 1954 after a hearing during which he admitted under oath that he had been a Communist Party member. He admitted that he had made false statements in denying this fact when he applied for employment, attempting to justify this position by asserting that he had never been an American Communist—only a British Communist.

Despite his denying having been a member of the Communist Party of the United States, the evidence is that this man taught in a Communist Workers school in this country. He also supported the campaign of a western Congressman who has since invoked the fifth amendment when questioned about his Communist connections.

This man was properly dismissed on grounds of questionable loyalty. The almost incredible fact is that he was rehired a short time later, reportedly on the intervention of a member of the NLRB itself, by the NLRB, which had discharged him as a potential traitor. He is presently employed by the NLRB.

Case No. 2: This woman was a secretary to the Regional Director of the National Labor Relations Board. She was fired in 1954 after a loyalty hearing on the basis of past and present association with known Communists and subversives. She was rehired a few weeks later and given back pay upon the reported intercession of the same Board official. She is an employee today.

Case No. 3: This individual was fired in 1953 after a Loyalty-Security Board had unanimously recommended his separation upon hearing the record of his Communist activities. He was rehired 8 months later, in 1954, again upon the reported intercession of the same high official.

Case No. 4: This individual, an ex-convict, was a reported close associate of a foreign atomic scientist who fled behind the Iron Curtain. He was identified as a member of the Communist Party in a western State. He was given a clearance, despite these facts. Even though he remains employed in the office of the Chairman of the NLRB in Washington, D. C., his case has been referred to the Department of Justice for possible perjury prosecution.

Case No. 5: This employee was identified as a member of the Communist Party. At a loyalty board hearing in 1949, he at first denied, then admitted that he may have been a Communist. He was given a second loyalty hearing in 1955 and cleared because the confidential informants of the FBI could not be produced. A recommendation for perjury action against him has been sent to the Justice Department. Nevertheless, he remains presently employed by the NLRB.

Case No. 6: This young woman admitted in applying for employment that she had been a member of the Young Communist League. She was nevertheless hired. Investigative reports show that she has continued extensive Communist Party activities, and that her husband was also a member of the Young Communist League. Recommended loyalty board hearings on this person have not been held. She is presently employed as a field examiner with access to classified defense installations.

Case No. 7: This man is currently a regional director of the National Labor Relations Board. He was appointed to that position by Nathan Witt. This regional director was a lecturer at the Philadelphia School of Social Sciences and Art which was cited by the Attorney General as "an adjunct of the Communist Party." Recommended loyalty board hearings on this man have not been held.

Case No. 8: This individual is a prominent member of the National Labor Relations Board. The evidence relative to this case is sufficiently alarming to justify an immediate investigation. The derogatory information on him was so extensive and his position so important that his case was submitted to the White House. His complete file is reported to have been taken to Independence, Mo., by President Truman when he retired from office. Yet he remains in his high office with the National Labor Relations Board.

The American people have been told that communism in the United States is an exaggerated menace. As you know, this is a myth propagated by the Red leaders and the left-wingers. Communism is still an ugly, evil, and powerful threat to our Government and to our liberties. The American people have a right to know that men devoted to a godless ideology have been installed in high office in our Government, have successfully run the gauntlet of the loyalty security system, and remain in positions where they are able to influence policy and shape the destiny of our Nation. This fact will be brought home to the public if this investigation is pressed with vigor and determination. I am confident you and the committee will do just that.

Sincerely yours,

JOE MCCARTHY.

PRESS RELEASE, NOVEMBER 9, 1955

Mr. Molotov's vigorous restatement yesterday of the Soviet Union's intention to communize Germany leaves Secretary Dulles with no alternative but to break off the Geneva negotiations. To continue the conference in the teeth of this reaffirmation of Soviet imperialistic designs would serve no useful purpose, and would create still further dangers to the western position.

On August 1, I told the Senate that, despite all the smiles and handshakes, the Geneva summit meeting produced not the slightest change in the traditional Soviet position on German unification and European security, and that it was thus inviting disaster for us to play the Communists' friendship game. Some of my colleagues advised postponing judgment until the October Foreign Ministers' meeting. That meeting has been held, and with it has disappeared even the most visionary basis for hoping for a Soviet change of heart.

Obviously, there is nothing more to be said at Geneva, by either the Communists or ourselves, on the questions of Germany and European security. This means the conference will dribble off on the subjects of East-West trade and cultural contacts. It approaches insanity, in the light of Molotov's reaffirmations of Communist objectives, for our diplomats to try to work out agreements that will strengthen the Russian economy, and that will further facilitate the sending of Com-

munist cultural delegations to the United States and other western countries.

The deceptive and farcical spirit of Geneva was at the outset, and remains, the chief propaganda tool of our admittedly implacable enemy. Any attempt to keep it alive is fraught with perils for the free world.

Mr. Dulles deserves credit for standing firm at Geneva for the American policy of a free and unified Germany. It is his duty now to return to the United States, to advise the American people that the recent Communist peace offensive has been root-and-center fraudulent, and to set about restoring our Soviet policy to a realistic basis.

PRESS RRLEASE, NOVEMBER 13, 1955

There is a pressing need for the administration to correct an absurd situation that deprived the country of the invaluable services of one of its greatest sons. Ever since 1951 when President Truman, for partisan reasons, relieved him of his far eastern commands, Gen. Douglas MacArthur has been compelled to sit on the sidelines of the free-world's struggle against communism. This has been an extraordinary exile inasmuch as General MacArthur is a world statesman of unchallenged stature, and unquestionably one of our foremost experts on the Far East—the area where the fight against communism will probably be won or lost.

But today there is an additional reason for summoning General MacArthur's services. Due to his unfortunate illness, President Eisenhower is not now able to carry, personally, the full burdens of his office. In view of the continuing crisis in the Far East, the President's task would be immensely facilitated if he and his advisers had the benefit of the daily counsel of this wise man and seasoned area expert.

I therefore urge that General MacArthur be asked to serve as special Presidential adviser on far east affairs. The appointment would considerably lighten the President's workload and worries, and would assure the American people that their affairs are in capable hands.

PRESS RELEASE

The leadership of the Democrat Party should immediately call a halt to the disgraceful and dangerous activities of the Democrat-controlled committee under the chairmanship of Senator HENNINGS, of Missouri. Under HENNINGS all the power of a Senate committee is being used to wage jungle warfare against the Government security system on the argument that it is too tough on Communist suspects. The Hennings committee is being used as a "front" for leftwing organizations such as the Fund for the Republic and the ADA, whose principle objective is to torpedo any effective security program.

The Hennings committee activities are not only a disgrace to the Senate and to the Democrat Party, they pose a grave threat to the security of the United States. I note that not one Democrat leader has come forward to condemn the Hennings spectacle—which indicates that the national Democrat leadership is as soft as ever on the Communist issue.

The Communists-in-government question should not be an issue between America's two political parties. They should be united in efforts to fight Communist infiltration. However, unless the Democrat leadership does something to curb the activities of the Hennings committee, Communist subversion will be a major issue in the 1956 campaign. If the Democrat leadership does not remedy the situation then the millions of Democrats throughout the country, who abhor communism, will have no alternative but to put Republicans in control of the congressional committees.

When I was chairman of a committee that was attempting to expose Communists in government and in defense plants, there was a great hue and cry by the Democrat leaders and the leftwing press against one-man committee hearings. I note that now—when HENNINGS is conducting one-man hearings to "protect the rights" of Communist Party-liners in government—not a single objection is to be heard from the Democrat leaders or from the leftwing press.

NOVEMBER 29, 1955.

Hon. THOMAS C. HENNINGS, Jr.,
United States Senate,
Washington, D. C.

DEAR SENATOR HENNINGS: Last Friday I commented on the activities of your one-man committee, pointing out that you were making it easier for Communists to infiltrate our Government. Your reply to that statement has been brought to my attention, and let me say that the Sir Galahad pose you attempted to strike did not quite come off. The only people who can reasonably call you their hero are the Communist Party liners whose antisecurity propaganda campaign your one-man committee is so energetically promoting.

You stated that you are attempting to strengthen our security program. This claim was double-talk and hypocrisy at its worst: One November 3d at St. Louis, you demanded three changes in security procedures which, if adopted, would leave the security program in shambles. You urged, in effect, that we get rid of the reasonable doubt standard under which the benefit of the doubt in loyalty cases is given to the Government. You contended that the facts that a man's associates are Communists and that he has joined Communist organizations should not even be taken into account in determining his security status. Finally, you insisted that the Government be forbidden to make use of derogatory information gathered by undercover FBI agents. Far from strengthening the security program, these changes would open the floodgates to wholesale Communist infiltration of our Government.

Most recently, you brought the Army under attack for trying to correct lax security practices that were exposed by the Senate committee under my chairmanship in the Peress and Belsky cases. Day after day, your committee hammered away at the Army for refusing to grant honorable discharges to soldiers who take the fifth amendment when asked about their Communist connections. During one of the sessions (vol. 7, pp. 1049–1065), your chief counsel, supported by you, berated the Army for merely including as one of the charges against a soldier the fact he had taken the fifth amendment when asked about Communist activities. Mr. Hocker said: "How can you justify that, on either a constitutional basis, or on just the basis of morals? If a man is entitled to rely upon his constitutional privilege, how can the Army hold that against him?"

The result of this daily browbeating of Army officials was the promulgation of an amazing Defense Department directive. In effect, the new directive says to Communists and Communist Party liners who are drafted into the Army: "All you have to do is take the fifth amendment, and you will be able to avoid military service and go back to civilian life with no disgrace or stigma attached to your name." In other words, loyal American youths must give several years of their lives to their country's service, but Communists and Communist Party liners go scot-free—neither drafted nor disgraced.

After that directive was issued, you commented: "We are making progress. I look forward to further improvements in the regulations as the subcommittee prosecutes this inquiry." Progress for whom, improvement in whose behalf, Senator?

The frightening thing about your efforts to wreck the security program is that they apparently have the support of national Democrat leaders—none of whom have yet repudiated you or your committee. It is a sad commentary on Democrat leadership that the only Senate Committee now holding hearings on the Communist issue is waging jungle warfare against our security system instead of attempting to expose and get rid of Communists and Communist Party liners. For this choice of objectives the Democrat Party bears full responsibility. I do not want Communist subversion to be an issue in the next campaign, but I assure you it will be an issue, unless your committee desists from activities that give aid and comfort to this country's enemies.

I am sure that the millions of Democrats throughout the Nation who abhor communism join me in this protest against your committee's activities.

Sincerely yours,

JOE MCCARTHY.

LETTER WRITTEN TO SENATOR ESTES KEFAUVER, GOV. AVERELL HARRIMAN, HON. ADLAI STEVENSON

DECEMBER 2, 1955.

DEAR SIR: It is evident that you are being seriously considered for the Democrat presidential nomination in 1956. Therefore, I think it proper that at this time you take a stand on one of the major issues that will confront the American people in the coming election, namely, how to deal with the never-ceasing Communist attempts to infiltrate our Government. I think it is important that the public, and especially the delegates who select the Democrat nominee, know your views on this vital question.

On January 10, 1955, after the McCarthy censure, and after the Democrat Party had obtained control of the Senate, a resolution was introduced and unanimously passed which said, in part:

"It is the sense of the Senate that its appropriate committees shall continue diligently and vigorously to investigate, expose and combat * * * (the Communist) conspiracy, and all subversive elements and persons connected therewith."

That resolution was admittedly designed to counter the impression that the unanimous vote of the Democrat Party on the censure issue meant that "the Senate would terminate or soften its investigation of communism and subversion."

Although I voted for the resolution, I commented at the time that the resolution amounted to a declaration against sin, and that the Democrat Party would have to prove by deeds that it had ceased to be soft on the Communist issue. I added that I would give the Democrats 1 year to demonstrate that they had meant what they said.

That year is now nearly up. So far, under Democrat leadership, congressional investigating committees have not exposed a single Communist in Government. But this is not the most serious indictment of the Democrat Party. Instead of exposing Communists, the Democrat leadership has seen fit to join in the Communist-inspired campaign to discredit existing measures for combating subversion. While I did not expect any progress to be made in exposing Communists, I could hardly anticipate this development: That the Democrat Party would flagrantly and unabashedly expose its softness toward communism by attempting to destroy the security measures now in force.

First, the Johnston committee attempted to whip up hysteria against the security program by parading before the public a long line of discharged Communist suspects and inviting them to relate how badly they had been treated. No attempt was made to evaluate the complaints or to present the Government's side of the cases.

But the most serious threat to the safety of this country is the activities of the Democrat-controlled subcommittee under the

chairmanship of Senator HENNINGS. The manifest objective of the Hennings subcommittee is nothing less than the total emasculation of the security system.

Under the guise of protecting constitutional rights, HENNINGS has brought under attack practically every security procedure that is useful in detecting Communists and getting rid of them. If HENNINGS has his way the only person who would be caught in the security net is the man who announces "I am a present member of the Communist Party, and here is my party card to prove it." The procedure changes urged by the Hennings subcommittee would open the floodgates to wholesale Communist infiltration of our Government.

Inasmuch as the Democrat Party now controls the Senate, the activities of the Hennings subcommittee are the direct responsibility of the Democrat Party. The Democrat Party therefore has been put on record as being more concerned with protecting Communists than with exposing them. As things stand now, this is the record upon which the Democrat Party will have to campaign in 1956.

I have often said that it is not my wish for Communist subversion to be an issue between our two political parties. But the American people will make this an issue, unless the Democrat national leadership repudiates activities that give aid and comfort to our country's enemies. The public is fast losing patience with politicians who dance to every tune the Communists play and then ask to be entrusted with the conduct of the Nation's affairs.

I therefore call upon you to repudiate the antisecurity vendetta being conducted by Senator HENNINGS and to condemn all other attempts to weaken our national security. If you fail to take this action then you have no right to ask the American people, either in the primaries or in the national election, to endorse your candidacy.

Sincerely yours,

JOE MCCARTHY.

DECEMBER 16, 1955.

Hon. HERBERT BROWNELL, Jr.,
Attorney General, Department of Justice, Washington, D. C.

DEAR MR. BROWNELL: I make reference to a letter addressed to you on November 14, 1955, by Hon. JOHN L. MCCLELLAN, chairman of the Senate Permanent Subcommittee on Investigations, which reads:

"Reference is made to my letter of April 12, 1955, wherein I referred to you various material concerning Brig. Gen. Ralph W. Zwicker. At that time, I requested that your office advise whether there appeared to be a violation of the perjury statute and what action your Department intended to pursue.

"It would be appreciated if you would advise me as to the status of the case."

I am informed that your office has replied to this letter to the effect that the Zwicker case has been referred to the Criminal Division, but that no action has, as yet, been taken.

As the ranking Republican member of this subcommittee, I feel obliged to remind you that continued delays in the disposition of this case may reflect adversely on the present administration. The case was originally referred to your Department 8 months ago, because this subcommittee was of the opinion that General Zwicker's testimony might constitute the basis of a perjury prosecution. I submit that any further delay will arouse suspicions that the Department is permitting political considerations to interfere with the administration of justice.

May I be advised at the earliest possible moment of what action is to be taken.

Sincerely yours,

JOE MCCARTHY.

DECEMBER 16, 1955.

The Honorable JOHN L. MCCLELLAN,
Chairman, Permanent Investigations Subcommittee, United States Senate, Washington, D. C.

DEAR SENATOR MCCLELLAN: I am deeply concerned over the attacks by the Johnston and Hennings committees on the Government security program. In my opinion, these committees have consciously sought to discredit anti-Communist security measures by means of ridicule, unfair emphases and downright misrepresentation. The committees are deliberately portraying the security program as a ruthless, bungling Gestapo-like operation and this distorted picture is being passed on to the public with great gusto by the left-wing press. The result is that the Communist Party is winning a stupendous propaganda victory and may soon achieve its objective of destroying the security system altogether.

I enclose for your careful reading a photostat of an article published in the Washington Star of December 11, 1955—one of literally hundreds of the same tendency—which shows the kind of games the left-wingers are playing with the security issue. This article deals with the Hennings committee's so-called investigation of the Army's policy of assigning to "controlled duties," and refusing to grant honorable discharges to, inductees who take the fifth amendment when questioned about their loyalty to the United States.

I have read in their entirety the relevant transcripts of the Hennings committee hearings, and let me say that this story faithfully records the distorted version of security procedures developed by that committee. This team of clever publicists so twists the facts as to make the Army's position look ridiculous. The article, for example, "proves" that the Army compels an inductee to exercise his constitutional privilege, then punishes him for doing so.

When considered step by step by anyone who is acquainted with the security problem, and who takes a realistic view of the measures that are necessary to protect our country, the Army procedures that are under fire are utterly reasonable. To begin with the Army asks the inductee, in effect, whether he is loyal to the United States. (Do Hennings and left-wingers want the Army to induct persons without obtaining this information?) It then tells the inductee that if he chooses not to disclose whether he is loyal to the United States, the way to avoid such disclosure is to invoke his constitutional privilege. (Do left-wingers have in mind some other way in which an inductee can justify refusing to assert his loyalty?) The Army then must determine what bearing the invocation of the fifth amendment has on the inductee's security status; it usually decides against giving him full security clearance and an honorable discharge. (Are the left-wingers saying that the Army should completely ignore the implications of an inductee saying, "I cannot tell the truth about Communist connections because the truth might tend to incriminate me?")

Of course, the left-wingers never commit themselves on just what step in the process is wrong. Their purpose is to whip up public sentiment against a caricature of the whole—and thus to pressure the Army into emasculating its program or dismantling it altogether.

Daily browbeating of security officers by the Hennings committee has forced the Army to revise its procedures for dealing with fifth-amendment cases, and the new regulation creates a situation more absurd and more dangerous than existed when our committee went into the Peress case. The new regulations call for a loyalty investigation prior to induction. The result is that a Communist or Communist Party liner—or, for that matter, anyone who wants to dodge the draft—can, by merely invoking the fifth amendment, avoid the draft and return to civilian life with no mark or stigma attached to his name.

I am informed that ridicule and intimidation by Senate committees and the press has caused a general relaxation of efforts by the executive departments to expose and get rid of Communist suspects. My purpose in writing you is to suggest that our committee, which is charged with overseeing the operations of the executive branch of the Government, has a clear duty to attempt to repair the damage done by the Hennings and Johnston committees. First, we should give the Defense Department and the other Government agencies an opportunity to explain the operation of the security program in an atmosphere other than that of a "kangaroo court." We should make it clear to the executive officials that our interest is in strengthening the security program, not in weakening it.

Second, our committee should resume efforts to expose the Communists who are still in our Government. It is truly a sad commentary on the political leadership of the Senate that the only committees dealing with the Communists-in-Government issue are directing their fire at those who are attempting to prevent Communist infiltration, instead of at those who are doing the infiltrating.

This gets me over to a subject to which I hope you will give the most careful consideration. Unless Senate committees—all of which are Democrat-controlled—start fighting Communists instead of helping them, there is no way on earth to prevent the Communists-in-Government problem from becoming a political issue in 1956. The two parties should be united in their determination to fight Communist subversion, but on the basis of the Democrat Party's Senate performance to date, they are not united; and unless this situation changes, it will be the duty of Republican candidates to point out the differences to the electorate.

On January 10 of this year, the Democrat-controlled Senate passed a resolution that provided, in part:

"It is the sense of the Senate that its appropriate committees shall continue diligently and vigorously to investigate, expose and combat . . . [the Communist] conspiracy, and all subversive elements and persons connected therewith."

I voted for that resolution, though I felt that its real purpose was to offset a widespread impression that the unanimous Democrat vote on the censure issue foreshadowed a letup in efforts to expose and get rid of Communists in Government. I stated at that time that I would give the Democrat leadership 1 year to prove that it had meant what it said.

That year is now nearly up and so far, not a single Communist in Government has been exposed by a Senate committee. Moreover, so far as I have been able to discover, no attempts to uncover subversives in Government are being made by a Senate committee. Instead, Democrat-controlled committees have concentrated on discrediting the security program. The responsibility for this strange choice of objectives must be laid directly to the Senate Democrat leadership and to Democrat committee chairmen.

I believe that you personally, along with many other Senate Democrats, are anxious to expose Communists; but I also believe you have been hamstrung by the left-wing leadership of the Democrat Party. The interests of the country require that good Democrats emancipate themselves from left-wing domination. Unless this is done, unless the Senate starts providing some opposition to the Communist-inspired anti-

security campaign, instead of abetting it. Republicans in 1956 will have no choice but to cite the Communist issue as reason for restoring to them the chairmanships of Senate committees.

Sincerely yours,

JOE MCCARTHY.

Unless Nonessential Spending Is Trimmed and Budget Is Balanced, Congress May Fritter Away Chance To Give People Some Honest Tax Relief

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. FISHER. Mr. Speaker, if this Congress wants to do it, the American people can be given some badly needed tax relief this year. And it can now be done on a sound basis. Indeed it is possible, if we set our minds to it, to have moderate tax reduction and also pay a billion or so dollars on the mounting public debt.

But we all know that we cannot have honest tax reduction that really means something unless at the same time the budget is balanced. Otherwise the Congress would find itself in a position of borrowing money, adding it to the public debt, and of in effect paying that borrowed money to ourselves as taxpayers.

In other words, if the Federal Government spends more than it takes in it engages in deficit financing to that extent. That deficit is made up by the Government borrowing that amount and adding it to the public debt. We now pay nearly $7 billion annually in interest on that debt.

It is an unsound business practice, under present conditions, to borrow money for tax-relief purposes. That is not really tax relief—it is tax postponement. In a way it is a fraud because it unloads that much more on future generations to pay, while leading the people to think we have really down something for them.

Let us hope, Mr. Speaker, that as we approach this subject of tax reduction this year we keep these basic considerations in mind.

TAX REDUCTION IS CONDITIONED ON REDUCED SPENDING

If we do that, if we really want to take advantage of this opportunity to give some tax relief on a sound basis, we will start looking right now for ways to cut down on nonessential spending. That is the only approach to honest—not phony—tax reduction.

Now, how can we reduce spending? There are many ways. We can, for example, take the fat out of foreign aid and limit it in the main to necessary military assistance, with economic aid going only to those countries that are on the side of the Free World, that are strategic and cooperative, and which without our help are in danger of falling into Communist hands—thereby further endangering our own security and world peace.

END OF PUBLIC HOUSING WOULD HELP TAXPAYERS

Another obvious saving would be to discontinue the expensive public housing which each year is becoming increasingly burdensome to American taxpayers. It will be recalled that this House last summer reversed an earlier position and at the end of the session voted to continue public housing—a billion dollars worth of it having been committed at that time. Those who support that sort of reckless spending should be the last to talk about tax reduction unless and until the budget is balanced.

Indeed, the Congress should begin steps now to liquidate socialized housing and get out of this business that private enterprise can handle so much better. About $10 billion is involved in outstanding commitments, loss of revenue to local communities in foregoing local taxes on such housing projects, and other factors. Let us get the Government out of that kind of business and give the taxpayers a break.

TO HAVE TAX AND DEBT REDUCTION WE MUST FOLLOW CONSISTENT POLICIES FROM YEAR TO YEAR

Mr. Speaker, it should be evident to everyone that our approach to these problems should be consistent from year to year; planning for a sound fiscal policy should be projected into the future and not be haphazard. Such policies should be the same—the objectives should be the same—on nonelection years as they are on election years. The same basic principles of economy should be practiced every year—not just occasionally.

It happens that I have been one of those who in the past has tried to follow that rule of consistency. I have consistently opposed nonessential spending and phony tax cut proposals. I was constrained to vote against the big package foreign aid bills the past 3 years because they contained, in my judgment, too much fat, too much waste, along with the desirable features. We are told, for example, that Denmark was given $100 million last year to be used in helping balance its budget. And it was reported that $200 million was handed as a gift to Great Britain shortly before their last general election.

We simply cannot go on with irresponsible spending if we are to have responsible tax reduction and debt retirement. It is just that simple.

MORE PEOPLE NOW REALIZING THAT TAX CUT IS MEANINGLESS UNLESS BUDGET IS BALANCED

As I said at the beginning, we now have a chance to give the people some honest tax relief because we are within sight of a balanced budget. But that possibility can be frittered away by excessive spending.

There is another encouraging sign: many who last year and the year before insisted upon additional tax cuts despite the unbalanced condition of the budget are now, according to press reports, realizing the fallacy of that position and are calling for caution in applying similar tax cuts at this time unless the budget is brought into balance. That change in attitude is commendable.

Let us hope, Mr. Speaker, that those who now admit that honest tax relief can be had only with a balanced budget, will join with those of us who make annual fights for reduction in nonessential spending. Let us bear in mind that 10 percent of all taxes now collected is used just to pay annual interest on the public debt. Even if we paid a billion dollars a year on that debt it would require 280 years to retire it. The use of commonsense economy is the key to prospects for tax relief this year—and for a sound fiscal policy throughout the foreseeable future.

Federal Regulation of Independent Natural Gas Producers Is Essential

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an article which I wrote for the October issue of the Public Utilities Fortnightly. The article is entitled "Federal Regulation of Independent Natural Gas Producers Is Essential," and contains my general views on this question.

I wish to point out, however, that because of its length, I was not able to include all the supporting data which I shall later present to the Senate when the gas bill is debated. In addition, we now have figures for 1954 and, in some cases, for 1955, which have been provided to me by the Federal Power Commission since the article was published. In every case the new figures strengthen the position against exempting from Federal regulation the sales for resale of natural gas in interstate commerce. In fact, new figures for the price of gas, the domination of supplies by a few, and the ultimate costs to consumers involved if the bill is passed, all fortify the case against exemption.

The Public Utilities Fortnightly deserves credit for making available to its readers various views on the natural gas bill, and I wish to commend them for the fairness with which they have presented divergent views to their readers and the public.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL REGULATION OF INDEPENDENT NATURAL GAS PRODUCERS IS ESSENTIAL

(By the Honorable PAUL H. DOUGLAS, United States Senator from Illinois)

The United States Senate will have before it in January the Fulbright bill to exempt sales of natural gas for resale in interstate commerce by the so-called independent nontransporting producers from regulation by the Federal Power Commission. The bill would also provide large windfall profits to interstate pipeline companies owning natural gas reserves. I have opposed similar

legislation in the past. And I am opposed to this bill and its counterpart, the Harris bill, which passed the House of Representatives by a very narrow margin at the end of the 1st session of the 84th Congress.

I

Historically, the legislative efforts to win exemption for these producers' sales and to provide bonanzas for pipeline companies began with the Moore-Rizley bill in 1947–48. This bill was too extreme even for the Republican 80th Congress. It was shelved. An exemption measure (the Kerr bill) was unfortunately passed in 1950, but President Truman courageously vetoed it.

A majority of the Federal Power Commission in 1951 held in the Phillips Petroleum Co. case that the Commission did not possess jurisdiction over sales of natural gas in interstate commerce which were related to the activities of production and gathering.

The Supreme Court in 1954 reversed this self-denial of jurisdiction. The Court held that the Natural Gas Act gave the Commission power to regulate the interstate sales of producers and indicated that it should get on with the job of protecting the consuming public against exploitation at the hands of natural gas companies. Now the oil and gas producers are back again seeking clarification of the Natural Gas Act or—more precisely—exemption therefrom.

At the present time, then, the Federal Power Commission has the legal power to regulate the rates charged for natural gas sold in interstate commerce for resale at all points in its interstate journey, commencing at the wellhead. The various State regulatory commissions have the authority to regulate the sales to ultimate consumers. The regulatory scheme is complete, and no regulatory gap exists.

The effect of the Fulbright bill would be to reopen the gap and permit producers to charge all that the traffic will bear for this much-sought-after-fuel. Whatever is charged would be passed along by the pipeline companies and the distributing utilities, and included as a legitimate cost in determining the final price to consumers.

I oppose this legislation because it would exempt from Federal regulation a vital segment of an industry engaged in interstate commerce which is affected with a public interest just as much as electricity, water, public transportation, or the telephone industry. This fact was established legally by Congress in 1938. The decisions of the Supreme Court have confirmed it.

Basically, however, it was neither Congress nor the Supreme Court which made the industry one affected with a public interest and therefore subject to reasonable regulation. This is due instead to the fundamental nature of the industry itself. An examination of the industry structure and its business methods and operations led me, and many of my colleagues, to the view that continued regulation by the Federal Power Commission of the type of sales covered by the Phillips decision is clearly in the public interest.

Natural gas is a necessity in the daily lives of millions of Americans just the same as electricity, telephones, and water. These services are furnished by utilities. If a householder needs such services, there is only one place where they may be obtained on a practical or economical basis, and that is from the local utilities. In the economic sense, these householders are captive customers of the utilities.

It is true that there are alternatives. Candles and oil lamps may be used for light in place of electricity. Water may be bought in bottles, or one can dig one's own private well. However, the investment made by the American consumer in appliances negatives the opportunity afforded by such alternatives. Once the consumer has purchased a gas furnace, gas range, gas water heater, gas refrigerator, or gas clothes dryer, or other gas-burning appliance, he has no real alternative to gas as fuel.

Americans have now invested upwards of $10 billion in gas furnaces and appliances which cannot be economically or physically converted to electricity, coal, oil, or wood. Even if the conversion were practical, few consumers would shift because gas is cleaner, more convenient, and its utilization requires little physical labor. But the conversion is impractical: The costs would be prohibitive for the consumer to junk his existing gas-burning equipment and replace it by electric appliances or by coal- or oil-burning furnaces.

The argument that the residential consumer has an effective alternative to the continued use of natural gas and can switch to another fuel if he objects to high gas rates is pure sophistry.

II

A phenomenal increase in the prices of natural gas in the producing fields has taken place since the close of World War II, and, more particularly, in the last 2 or 3 years. This rising cost of gas in the field has had a pronounced effect upon the rates of the interstate pipeline companies and has likewise been reflected in the natural gas retail rates in many sections of the country. These increases have been so drastic that many distributing utilities actively participated in the hearings on the Fulbright bill in the Senate and the Harris bill in the House, strongly opposing this giveaway legislation. Likewise, State regulatory commissions and State and municipal officials joined in opposition to these measures.

The magnitude of the increases in the field cost of gas is demonstrated by the experience of 17 major pipeline companies, which in 1953 acquired 96 percent of the total volume of gas purchased from independent producers by companies reporting to the Federal Power Commission. In 1946 the weighted average price paid by these companies was 4.4 cents per thousand cubic feet. In 1953 the average cost had risen to 8.857 cents per thousand cubic feet. Based on filings for rate increases in the year 1954, the weighted average price had reached 9.723 cents per thousand cubic feet, an increase of 120 percent above the 1946 level. Almost two-thirds of this increase has occurred since 1951. The increased cost of natural gas in the field to the 17 major pipeline companies when placed upon an annual basis amounts to $196 million. This is no small sum, even in our billion-dollar economy.

In turn, these increases in the field cost of gas have meant higher resale rates. Between July 1, 1949, and March 1, 1955, natural gas pipeline companies filed 163 requests with the Federal Power Commission for increases in their resale rates aggregating more than $505 million on an annual basis. Of this amount, $157 million was disallowed or withdrawn; $199 million was placed in effect; and $149 million was pending as of March 1, 1955.

Natural gas distributing utilities have been forced to pass on the higher cost of gas purchased from the pipeline companies to their customers. This fact is reflected clearly in the statistics published by the American Gas Association. On a nationwide basis the average unit cost of natural gas to residential consumers increased during the period 1945–54 from 6.32 cents to 8.06 cents per therm; for commercial customers the increase was from 4.16 cents to 6.19 cents per therm; and for industrial users from 1.65 cents to 2.37 cents per therm. In some States the increases are even more striking.

At the same time that the cost of natural gas has been going up, the unit cost of electricity to the residential consumers has been declining. In fact, between 1945 and 1954 the residential unit cost of electricity dropped from 3.47 cents to 2.79 cents per kilowatt-hour, a decrease of 24.3 percent. The residential cost of natural gas, however, increased 27.5 percent.

Convincing evidence was presented by representatives of distributing utilities before the congressional committees to the effect that the increased cost of natural gas was seriously hampering their efforts to expand natural gas sales, that in some areas they were being priced out of the market, and that if the upward trend in field prices continued, they would meet with financial disaster. The difficulties faced by the distributing utilities are evidenced not only by the statements made before the congressional committees, but are to be found in testimony in rate proceedings before the State utility commissions and before the Federal Power Commission and in articles in trade magazines.

The problem of distributing utilities in coping with the rising cost of gas is not confined to those companies in the consuming States of the North. The problem is being faced by distributors in the producing States as well. Illustrative is the following statement made by Arkansas Louisiana Gas Co. in its annual report to stockholders for the year 1954:

> The serious problem of increasing costs of purchased gas discussed in the annual report of 1953, became even more severe in 1954. These increased prices, together with increasing volumes required from purchased sources, have been a major factor in the decrease of the company's earnings. The system-wide average price paid by the company for purchased gas has increased from 4 cents per thousand cubic feet in 1949 to 9 cents per thousand cubic feet in 1953, and in 1954 increased to 10 cents per thousand cubic feet. The cause of this upward spiral is the tremendous competition for new gas reserves by the many long-line transmission companies serving other sections of the country, compounded by the fact that the development of gas reserves has not kept pace proportionately with the increased demand for natural gas throughout the United States. Competing companies are presently paying more for large gas reserves in the field under new long-term contracts than our company is receiving as a retail price from large industrial customers. This is a dramatic illustration of the company's inability to maintain adequate reserves with its present rate structure.

Now the big oil and gas producers are making an allout effort to explain away these increases in the retail prices of natural gas and to shift the blame for such increases from their own shoulders. The producers' representatives, in their congressional appearances and through the so-called educational campaign which they have conducted in the press and by other means, have sought to show that the drastic increases in the field price of gas have had only a small percentage effect on the bills of the ultimate consumers and further that the field cost of gas itself is a small percentage of the total bill. It was implied that consumers were being gouged by the local gas utilities with the acquiescence of the State regulatory commissions.

These sorry diversions were part of a none-too-subtle scheme to turn public opinion into channels favorable for the exemption legislation being demanded of Congress. It was repeated over and over again that since these increases in retail gas rates were authorized by regulatory agencies, further increases in natural gas rates would surely be forthcoming if the producers were placed under regulation. In other words, rate increases according to them were the natural product of regulation.

Industry spokesmen cast the Federal Power Commission (which I, too, have had some occasion to criticize), the State regulatory commissions, and the distributing utilities in the role of the principal villains who were responsible for the increasing cost of gas to the ultimate consumer. Regulation of producer rates was described on the other hand as confiscatory and therefore destructive of our free-enterprise system, socialistic, and very close to communism.

Efforts were even made to cause a congressional investigation to be made of the transmission and distribution segments of the industry. It was charged by proponents of the legislation that interlocking relationships and combinations in these segments of the industry were responsible for the increases in gas rates, and not the producers.

They have cast aspersions on the cost of operations and profits of the regulated pipeline and distributing companies, which are a matter of public record. But no producers have come forward to reveal their own profits from gas-producing operations or furnish any comparison with pipeline and distributing profits which would clearly reveal the responsibility for rising retail gas costs.

Whether these unfair and diversionary tactics will pay off, of course, remains to be seen. I doubt, however, if the producing segment of the industry won any friends among the marketeers of their product or shed any real light on the picture by such machinations.

III

Spokesmen for the producers pitch their plea for exemption from regulation upon the proposition that the producing segment of the industry is intensely competitive and thus regulation is not necessary to maintain reasonable prices for natural gas.

If the industry really were as competitive as claimed, and if one could depend upon the natural processes of supply and demand to keep prices to the consumer at reasonable levels, neither I nor my colleagues could reasonably oppose the exemption. That is why the industry has worked so hard in its efforts to argue the slogan of "free enterprise" while ignoring the facts about the concentration of power within the industry. But competition of the nature claimed is not present, and an examination of the facts concerning the so-called independent producers and the conduct of their business of producing and selling gas will show that competition cannot be depended upon to protect the consumer against exploitation.

The latest available figures compiled by the Federal Power Commission show that in 1953 a total of 4,365 nontransporting producers sold natural gas to interstate pipeline companies reporting to the Federal Power Commission. These producers sold 4.249 trillion cubic feet to the pipeline companies. Abundant evidence of concentration in the production phase of the industry is found in the fact that of the 4,365 producers, 85.59 percent of the number, or 3,736, sold only 2.1 percent of the total gas purchased by the pipeline companies. Thus, only 629 producers, accounting for 14.41 percent of the total volume purchased.

Broken down even further, 90.7 percent of the sales were made by 174 producers. Twenty-nine producers—whose sales exceeded 35 million thousand-cubic-feet in 1953—produced almost two-thirds of the natural gas sold to interstate pipeline companies. The 29 largest producers who sell two-thirds of the natural gas are not a poor or impecunious group. Over half of them are on the most recent list of America's 100 largest industrial corporations. The argument used by industry spokesmen, that intense competition exists in the producing fields between many thousands of producers and that reasonable prices of natural gas are thus assured, is not borne out by the facts.

The producing segment of the natural-gas industry, although not necessarily monopolistic in the legal sense, is certainly monopolistic in the economic sense. Natural-gas transmission lines are expensive. Their cost is estimated at from $40,000 to $100,000 per mile. They are not easily moved. Once they have been laid the interstate pipeline company is practically at the mercy of the producers. For these lines cannot be picked up and relaid to other fields to escape an increase in the price of gas or to secure gas at a lesser cost. Thus, the pipeline company buyer is a captive customer of the relatively few nontransporting independent producers who provide the overwhelming share of natural gas for the utility market.

There are other reasons why competition among the so-called independent producers is ineffective and furnishes no protection to consumers against unreasonable prices. The first is that there now appears to be a diminishing supply of natural gas and an expanding market. With demand exceeding supply, the result is a seller's market.

As evidenced by the testimony before the congressional committees and in the certificate and rate proceedings before the Federal Power Commission, the competition for natural gas is between buyers seeking a supply rather than between sellers seeking a market for their product. We have then a natural resource which is diminishing in relation to annual use and which is a necessity to most users, and, on the other hand, a demand which is increasing. Fair and reasonable regulation in such circumstances is necessary to protect the consumer against skyrocketing prices. Competition among producers cannot be depended upon to do so.

Second, because the large blocks of reserves which must be secured in order to make feasible any major expansion of transmisson line capacity are held by the major oil companies who control most of the gas reserves in the Southwest, it is necessary for the pipeline companies to deal with these relatively few large producers. This also limits competition. Thus, if a pipeline company desires a large block of reserves it has no practical alternative but to go to the major producers and accept the prices which they dictate. The many thousands of small producers have been and will continue to be an ineffective source of competition in such circumstances. Moreover, while the southwest region supplies more than 95 percent of the gas supply of the interstate pipeline companies, more than 60 percent of the 4,365 producers are located in the Appalachian area which produces only 3.4 percent of the total gas supply.

The competitive situation in the gas fields in nowise resembles the normal competition involved in the buying and selling of commodities on the open market. If producers of coal or fuel oil raise their prices, buyers can use several transportation media to obtain supplies from other sources. Because of the high-cost fixed investment in gas transmission lines, the expense of tearing up a pipeline and laying a new one prevents the pipeline company from shopping around for lower prices. Thus, the type of competition which is present today in the gas fields does not and cannot operate to maintain reasonable prices of natural gas.

The almost universal inclusion of escalation clauses of one or more types in gas purchase contracts entered into in the last few years is conclusive demonstration of the lack of bargaining power on the part of pipeline companies. These clauses, which provide for future increases in the price of gas, many of them by reason of actions over which the buyer has no control, place burdens upon pipeline buyers which anyone having a free choice of suppliers would refuse to accept. The evidence is clear that the pipeline companies had no choice. If they wanted natural gas they were compelled to accede to the demands of producers that such clauses be inserted in the gas purchase contracts.

The existence of such clauses in gas purchase contracts belies assertions by producer representatives that there is free and open competition in the purchase and sale of natural gas in the producing fields of the Southwest.

IV

It has been asserted time and time again by proponents of this legislation that the regulation of independent producers is not feasible, that the cost of regulation will be staggering and the benefits, negative. I do not believe there is any merit to these assertions. Regulation of natural-gas companies—pipeline companies—who are engaged in exploration, development, and production of natural gas in most of the fields in which the nontransporting producers conduct their operations has been conducted by the Federal Power Commission since 1938. As a matter of fact, approximately 50 percent of the total number of gas wells in the United States are owned by pipeline companies reporting to the Federal Power Commission. Thus, the Commission has had considerable experience in dealing with a major producing segment of the industry and has successfully regulated that segment.

Since the Phillips decision by the Supreme Court, the Commission has been going forward with the regulation of the so-called independent producers. It has adopted rules and regulations. It has required the compliance filing of rate schedules and of applications for certificates. According to a press release of the Commission issued on March 10 of this year, 10,000 rate schedules of producers had been processed, and the situation was current.

While the certificate applications had not been processed quite so rapidly since each application requires a mandatory hearing, remarkable progress is being made in clearing up the backlog. Thus, there is no substance to the charge that regulation of producers is an impossible task which will bog down the Commission.

Some of us are quite willing, however, to reduce the regulatory burden very substantially by exempting the interstate sales of all those producers who sell for resale less than 2 billion cubic feet of gas a year. The 174 producers whose sales would be thus kept subject to Federal regulation sell more than 90 percent of the gas purchased for interstate commerce by the pipelines. I am confident that adequate protection can be afforded the consumers and distributing companies if regulation is concentrated on this major segment of the nontransporting producers.

No one expects the Commission to handle this regulatory task without some turmoil and strife. With less than a year of actual experience in processing rate and certificate applications filed by nontransporting producers, it would be too much to expect that all of the regulatory bugs have been eliminated and the problems solved. But these problems do not appear to be any more insurmountable than the problems and legal attacks which the Commission experienced after the Natural Gas Act became law in 1938. The road ahead may not be smooth, but at least the Commission has started on a task which, if it is permitted to complete the job, would be of immeasurable value to the people of the United States.

V

The sponsors and proponents of the Fulbright bill and the Harris bill point to certain provisions of these bills as furnishing all the protection necessary to save natural

gas consumers from unreasonable rates. I have examined these alleged protections. My analysis shows they are ineffective, futile, and of doubtful legality, and will not work to protect the natural gas consumers. They were not designed to do so and are mere sugar-coating which has been applied to give the appearance of regulation without providing its substance.

One provision of the bill purports to give the Commission authority to disallow as an operating expense of the pipeline company that part of the price paid for natural gas in a new or renegotiated contract which is in excess of the reasonable market price. Aside from the doubtful legality of this provision (which would deny recovery through rates of payments made by a pipeline company in good faith under contracts entered into at arm's length), it is incomprehensible to me that the Federal Power Commission would require the regulated utility to suffer losses through the disallowance of payments in excess of the reasonable market price while the producers selling the gas were able to secure excessive profits under the contract arrangement. Such a proposal is illogical, unfair, and completely contrary to regulatory purposes. The results would be inevitable. Contract prices would be accepted as the reasonable market price. The proposed control is of no help whatsoever to the consumer.

Another section of the bill dealing with certain types of escalation clauses in existing contracts purports to relieve the pipeline company from paying producers any amount for gas which is in excess of the reasonable market price as determined by the Commission. This proposal flies directly in the face of section 1 of the Fulbright bill, which defines such sales as not being in interstate commerce. The validity of such proposal is very much in doubt, since it would appear impossible for the Federal Power Commission to regulate a sale by a producer to a pipeline company which Congress has declared not to be a sale in interstate commerce.

The reasonable-market-price standard, as it is defined in the bills and in the reports of the Interstate and Foreign Commerce Committees of the Senate and House, is of no practical benefit in providing reasonable natural-gas prices. This is so because as the standard is defined it can mean only the contract price which has been agreed upon by the buyer and seller. The reasonable-market-price standard is contrary to utility regulatory principles. Its adoption would result in no effective control being imposed on field prices of natural gas.

Moreover, these alleged consumer protections apply only where the pipeline company is seeking a rate increase from the Federal Power Commission. They do not apply to the pending rate increases or to the excessive contract prices which have already become effective. In my opinion, it would be far better to repeal the Natural Gas Act in its entirety than to give the natural-gas consumer the illusion that he would be protected by Federal regulation of the character proposed in the bills.

VI

The provision in the Fulbright bill requiring the Federal Power Commission to allow natural-gas pipeline companies owning gas reserves to include in operating expenses the reasonable market price of the gas produced from their own leases is nothing less than an invitation to the pipeline companies to pay higher and higher prices to the independent producers for the gas which they purchase, since such higher prices can be passed on to the consumer and at the same time act as a basis for increases in their profits from their own produced gas.

What possible justification can there be for this windfall to the pipeline companies? As the pipeline companies and producing affiliates own more than 28 trillion cubic feet of natural gas, they stand to gain huge profits over and above a fair return under this section of the Fulbright bill. The values of their reserves will increase as the prices rise. An indication of the bonanza which will come their way is to be found in the 1954 annual report of Panhandle Eastern Pipe Line Co. to its stockholders. The report states that the company's owned reserves are carried at a book cost aggregating less than $3 million, which the company estimates is approximately 1 percent of their replacement cost under present conditions.

In other words, natural gas reserves which cost $3 million and the costs of exploration, acquisition, and development, of which the customers of the company paid through rates, would under the Fulbright bill be sold to their customers for 100 times that cost or $300 million. Under these circumstances, how is it that the pipeline companies can be counted upon as guardians of the consumer interest in the purchase of natural gas from producers as some propaganda argues?

As a matter of fact, 7 of the major pipeline companies already have pending or have received rate increases from the Federal Power Commission based in part on the substitution of the commodity value or average field price of gas in the field, for their cost of production plus a fair return on producing properties devoted to the public interest. These requested or allowed increases cost consumers approximately $40 million annually. The Fulbright bill would make this method of regulation mandatory. Thus the reasonable gas rates which consumers have secured over the years through regulation under the Natural Gas Act would be obliterated.

VII

What will be the effect on natural gas consumers if the oil and gas industry is successful in its campaign against fair and reasonable regulation? To answer this question we need only to look at the trend of gas prices in recent times and to statements by industry spokesmen that higher gas prices are anticipated.

We have seen that the average cost of natural gas at the wellhead in the Southwest has increased from about 5 cents to 10 cents per thousand cubic feet between 1947 and 1953. Prices in new contracts range from 15 cents to 24 cents per thousand cubic feet. These increases in the field cost of natural gas occurred in the absence of effective Federal regulation because of the Commission's self-denial of jurisdiction. In 1954 utilities sold approximately 5.8 trillion cubic feet of natural gas to ultimate consumers, an increase of approximately one-half trillion cubic feet over the volume sold in 1953. However, using a volume of 5 trillion cubic feet, a modest 5 cents per thousand cubic feet increase in the average cost of natural gas at the wellhead—a rise from 10 cents to 15 cents—would cost consumers an additional $200 million a year. If the average cost of gas rises to 25 cents per thousand cubic feet, and this price has been indicated by industry spokesmen to be in range of what may be expected in the future, the consumer would be hit for $600 million a year above present gas costs. This is the kind of bonanza which motivates the $1,500,000 war chest which the industry has gathered to finance its campaign.

The attempt to minimize the impact of higher prices on gas consumers by saying "it will cost each family only a few pennies a day" is a shocking argument. Pennies extracted from the many will mean millions for the few. The whole purpose of rate regulation is to save modest sums for the users of utility services by restricting profits to a reasonable level.

Much of the industry propoganda also argues that with no regulation there will be more exploration and more gas for consumers, the implication being that reasonable regulation will stifle discovery of natural-gas reserves. No reasonable person can believe, however, that the mammoth oil industry, whose discovery and marketing of gas is incidental to its exploration and development of oil, will ever stop or slow down or speed up its primary oil exploration work because the sideline, natural gas, is subjected to fair regulation. The exploration for oil and gas will not subside in any case.

This argument then gets down to an implied threat by the oil industry that it will waste or flare the gas rather than let it come to the consumers outside of the producing States under fair regulation. I just do not believe that the industry would be guilty of such a holdup, and I do not feel that Congress should fix national policy on the basis of such implied intimidation.

One final point should be noted: If the industry succeeds in gaining exemption from Federal regulation and the average prices at the wellhead increase from the present 10 cents to 15 cents or 20 cents or 25 cents, the industry stands to gain enormous windfalls from the increased value of the natural-gas reserves which they own. At the present time such reserves amount to about 210 trillion cubic feet of gas. An increase of only 5 cents per thousand cubic feet would result in an increase in the value of the gas reserves of over $10 billion. If the prices go to 20 cents or 25 cents this windfall would be doubled or tripled. These are the vast sums which the industry stands to gain from exemption, and no one should be fooled by claims made in the name of free enterprise, freeing the small producer from Federal red tape, States' rights, or the sanctity of contracts.

Free enterprise is an essential part of our national welfare. It should by all means be preserved. But freedom of private enterprise and of contract cannot be allowed, nor has it ever been allowed, to supersede the public interest and justify exploitation of captive consumers by a noncompetitive supply system of a basic necessity. Wherever there is a conflict, it has been our traditional national policy to establish reasonable regulation to protect the public interest. That policy with respect to interstate sales of natural gas was established in 1938, and it should be preserved.

VIII

In summary, competition cannot be relied on to protect the consumer against exorbitant prices for natural gas. The industry is not really competitive at the production, transmission, or distribution levels. Once the pipelines and the gas mains are laid and the consumers have invested in appliances, a natural monopoly with captive customers is created. The natural gas industry is an industry affected with the public interest, and regulation has been and should continue to be applied. The industry has grown to the sixth largest in the Nation and has become extremely profitable. It will gain billions of dollars in windfall profits if it is exempted from regulation. It is an industry which already receives special tax treatment through the 27½ percent depletion allowance.

The industry seeks protection against loss by way of tax policy, escalation clauses, minimum wellhead prices, and conservation agreements, and at the same time complete freedom to charge what the traffic will bear to captive customers. It is my considered judgment that legislation should not be passed by this Congress, the effect of which will be complete nullification of the Natural Gas Act as an effective regulatory instrument.

We Are Awake, Mr. Dulles

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. DAVIDSON. Mr. Speaker, in this morning's New York Times, I saw the headlines "Dulles Spurs United States in Economic War with Soviet Union." Our Secretary of State is quoted to the effect that in the cold war, he saw new emphasis on economic and social problems as the major turning point in the struggle between communism and freedom. He has asked the country to wake up to this very important new aspect of the foreign-aid program which he said our citizens had not yet sufficiently appreciated.

In a statement issued by the Secretary, he pointed out that the way to counter Soviet's efforts is "not by outbidding communism in sheer amounts of economic aid" but by making the newly independent nations of Asia feel that their needs can best be satisfied if they become and remain part of the free world. The importance of Mr. Dulles' observation is indicated by the statement "defeat in this contest would be as disastrous as a defeat in an armaments race." He characterized certain aspects of the Geneva talks as disappointing. He says, "We could lose this economic contest unless the country as a whole wakes up to all its implications."

Wake up indeed. I am glad that the Secretary has at last awakened to this shift of tactics by the Communists which I warned about in a speech in Congress exactly 6 months ago today. It was on July 12, 1955, that I tried to call attention to the new phase of the cold war, namely, the economic phase which Mr. Dulles now for the first time seems to be concerned with. Fortunately, it is not too late. But Mr. Dulles should know that some segments of our people have been awake for a long time. I take the liberty of inserting at this point in the RECORD my speech of July 12, 1955:

THE BIG FOUR CONFERENCE—NEW SOVIET PRESSURE

(Speech of Hon. IRWIN D. DAVIDSON, of New York, in the House of Representatives, Tuesday, July 12, 1955)

Mr. DAVIDSON. Mr. Speaker, I join with my distinguished colleagues in praying that the imminent conference at the summit which will be participated in by the Big Four may serve to encourage the recent seeming trend toward a reduction in the cold-war tensions. Our goal is peace. To achieve it, we shall and we must strive with all the strength and energy which, in the past, we have used to build America and to make it great.

The historic worldwide disregard for the Biblical commandment, "Thou shalt not kill," has brought us now to the point where if once again we take up the arms of war, we shall surely kill ourselves. And yet our President must go to Geneva fortified and backed by strength. There can be no relaxation of our preparedness. It has undoubtedly been our relentless struggle to maintain a sound military posture which has finally brought this first glimmer of hope in the cold war. To relent now would be to make those years of sacrifice count for naught. Make no mistake, the cold war has been costly, and we have sacrificed much in the waging of it. Our schools and children have suffered as a result. Economic and technical assistance here at home and abroad have taken second place to military preparedness.

The proof of this is the new Soviet approach. They have failed to frighten us by bluster and calculated military gambits. They were stopped in Korea because President Truman had the courage and foresight to see that failure to respond to the invasion of South Korea would mean the eventual fall of one friendly nation after another into the Soviet orbit. He saw also that it would spell the end of the United Nations. We won a round on points, but the struggle is far from over. This is one of those old-time, no-holds-barred affairs and we are now entering another round.

Among the mail which I received yesterday were appeals from natives of 2 captive countries now dominated by Russia. The Committee for Hungarian Liberation wrote calling attention to a provision of the Hungarian Treaty of Paris which provides for the withdrawal of the Russians from Hungary within 90 days after the evacuation of Soviet troops from Austria. Here it would seem exists a sterling opportunity for Russia to give evidence of its sincerity at the Geneva Conference in the light of the recent Austrian Treaty. I also received a copy of the plea for Polish freedom which was sent to the President.

The liberation of enslaved peoples must continue to be a basic objective of American policy.

In yesterday's mail, we received the next to last report to Congress of the operations under the Mutual Defense Assistance Control Act of 1951. This report emphasized the new sphere of attention in the cold war and reverts to the course which was staked out by General Marshall and President Truman. In this report, we read of the recent developments in Soviet-bloc foreign economic activities, especially in underdeveloped countries. The report graphically describes the Soviet attempts at economic penetration so we see that where the way to military expansion is barred, Communist Russia switches to conquests through economics. The goal is the same. The targets are the same, conquest and enslavement of the world, starting with the most susceptible areas.

The Marshall and Truman plans outlined our defense in this field. We have recently approved a new foreign-aid program. As I said when the bill was before us, its primary emphasis was on defense support, and I felt that the development assistance and economic and technical aid portions were not large enough. These should be increased and our efforts directed toward the new arena in which the world struggle is now patently being waged. Please do not misunderstand. I do not mean that we can in any way reduce our military preparedness. The Russians will maneuver to strike in whichever field they think there is the most chance of success. They are shifting to the economic field now and we must move with them. In fact, I urge that we move ahead of them and beat them at their own game.

The underdeveloped areas of the world are ripe for subversion and subtle economic pressure. Japan needs markets for her goods. Britain, France, and Germany likewise. As do Israel and Egypt. The Arab States, Asian countries, and the South American Republics need to import and export many goods. The smaller countries need aid in building up their lands. They need technical advisers on modern methods of farming and construction. They need schools, books, and most of the commodities which we have come to regard as necessities. To them these commodities are luxuries, enjoyed only by the very rich. Unless we help them to help themselves, we will lose this next round, and if we do, the loss is just as efficacious as if an army of Soviet troops had marched into these underdeveloped areas of the world.

We may view this in a sense of enlightened self-interest for if these depressed and possibly envious countries cannot support an adequate standard of living, they will be unable to buy the goods we produce and which we must sell for our own well-being. This country is not self-sufficient. We must import many essential supplies. We must export much to sustain our industry and continue a high level of employment. In short, we need friendly free nations throughout the world with which we can trade. If we fail to help these countries now, the Russians will see to it that they drop into the Communist field of influence and become lost to us as friends and economic partners forever.

At Geneva we must be prepared to deal with the Soviets in language they understand. We must be strong militarily and we must be strong economically. We can expect a concerted effort by the Communists to expand their program of conquest by economic subversion. I believe that that will be the base strategy of their participation in the conference at the summit.

We can win this phase of the cold war in a walk if we try. We are world champions in the economic field. We have the know-how, the ability, and the wherewithal, which the Russians cannot acquire in a hundred years regardless of what the Pravda propaganda machine might say. The important thing is that we must understand what the Russians are trying to do. We must at all times keep our attention fixed upon their motivation notwithstanding sweet talk, lessening of tension, or even a few good deeds. We must be willing to be fair, but not fooled. We must be kindly, but not kidded. We are justified in having faith in ourselves, albeit our trust must repose with the Almighty.

We are awake, Mr. Dulles; who do you really believe has been asleep at the switch?

Highway Legislation

EXTENSION OF REMARKS
OF
HON. BRADY GENTRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. GENTRY. Mr. Speaker, under leave to extend my remarks, I include the following address made by me to the annual convention of the American Automobile Association in the city of Washington on September 21, 1955:

President Sordoni, members of the American Automobile Association, ladies and gentlemen, it is unfortunate that the highways needed by today's traffic will cost so much money. It can hardly be denied that most of our main highways are grossly inadequate and are causing our motorists great losses in time, deaths, injuries, and destruction to property. While we are told by eminent authorities that it will cost motorists more in actual dollars and cents to continue using our present roads than to pay the taxes necessary to modernize and then enjoy good thoroughfares, recent happenings in the Congress are proof that modern highways are no early certainty.

Several points of difference on this problem seem to divide us. A few say that our 40,000 miles of most important highways comprising the interstate system do not need the major treatment outlined in the Highway Advisory Committee plan. Others contend that the interstate system deserves no better treatment than the remaining 700,000 miles of the Federal-aid system. While these groups helped defeat highway legislation, they constituted a minority of the opposition.

There is little question that the problem of financing caused the major opposition to this legislation or served as an excuse for such opposition. Since that problem must be resolved if we are to secure favorable results, let us proceed to its discussion.

The President, speaking through Vice President NIXON at a Governors' Conference in July 1954, called public notice to the need of a modernized system of highways. Subsequently the President appointed an advisory committee and named General Clay as chairman.

The advisory committee forthwith appointed a staff, comprised of highway and financial experts. Characteristic of the committee approach to this problem was the instruction to the staff that it evolve a plan that would spend $25 billion on highways without increasing taxes or debt.

Just think for a moment! Spend $25 billion without increasing taxes or debt! Your reaction must be that that simply could not be done. It would seem to be an utter impossibility. That a solution was even claimed is a credit to man's ingenuity.

Generally, what would the advisory plan, as formulated by the staff and committee, and recommended by the President, have done? It established a Federal Highway Corporation with a board of 5 members, 2 of whom were the Secretaries of Commerce and Treasury, or their representatives, the other 3 being public members. In the event of dispute this board, instead of the Bureau of Public Roads, would have final authority in road location, kind of roads, etc.

The board would issue $20½ billion in bonds, with interest of $11½ billion or 55 percent of the principal. Each bond would disclaim Government responsibility for its payment. The bonds finally would be retired in 1987 from a 32-year dedication and so-called capitalization of the Federal gas, diesel and lubricating oil taxes, taxes now levied as general revenue.

No revenues from these taxes would be available for construction between 1965 and 1987, all revenues in that lengthy period being pledged for payment of the $20½ billion in bonds and their $11½ billion interest.

The money derived from these bonds, plus $4½ billion, would pay the Federal Government's $25 billion share of construction in 1955 to 1965 of the interstate system.

In addition, regular Federal aid, now $700 million, would be set at $600 million and frozen at that yearly figure for the next 32 years.

Up to the present, every dollar expended by the Government on roads has been subject to authorizing legislation by Congress, full budgetary control, complete appropriation procedure, has been paid out of general revenue, and accounted for within the statutory debt limit. Such is the pattern of present Federal financing.

The advisory plan would discard each and every one of these safeguards of responsible financing. It would effectuate a complete and revolutionary departure from fiscal fundamentals and long recognized principles in Government practices.

If we dedicate to highway purposes taxes heretofore levied as general revenue, it could be adopted for a host of other purposes and finally result in the complete destruction of congressional authority over the appropriation of public funds. Actually the revenues from these particular taxes, in effect, have already been capitalized. They were capitalized, along with all other revenues from present Federal taxes, by the issuance of $280 billion in obligations by the Government with such tax revenues as security. What is being attempted here could result in stripping these $280 billion in obligations held by our people of every bit of security by reason of which they purchased them.

This Highway Advisory Committee or Clay plan would create a dummy corporation—one without assets but with authority to issue $20½ billion in bonds. And, although an entirely Government-owned corporation, it would recite in each bond that it was not a Government debt. Regardless of the facts, including contrary language in the bill incorporating the plan, it was claimed that this recital in the bonds eliminated their having to be shown as a part of the public debt, necessitating debt increase legislation by Congress. Yet, Government witnesses appearing before our committee, while disclaiming the bonds as Government debts, immediately hastened to add that the Government would have to pay them. But why, since we must pay them, should we say in the bonds that they are not debts of the Government when it causes our taxpayers to have to pay hundreds of millions of dollars in needless interest? Mr. Humphrey testified that this recital alone would increase their interest from one-eighth to one-half percent, or by $475 million to $1,900,000,000.

Just what does the legislation incorporating the advisory plan provide regarding the debt character of the bonds? It first stated that each bond must contain a recitation that it was not guaranteed by the United States and that it was not a debt or obligation of the United States. This recital of itself would restrict the bondholders to the revenues dedicated to bond payment.

In the very next section of the bill, however, it recited that the corporation could call on the Treasury for $5 billion when tax revenues were insufficient for debt service. That positively and irrevocably guaranteed $5 billion of the bonds and made them a debt of our taxpayers, regardless of the prior provision. But that is not all.

In the following section, it made the entire bond issue a lawful investment for fiduciary trust and public funds of any officer of the United States, including the Secretary of the Treasury. That meant that any Government funds, including social security and unemployment insurance funds, could buy these bonds. There was no restriction as to when they could buy them. Seemingly, it could be when offered by the Highway Corporation or when offered by some bond house originally purchasing them.

Even though it is contradictory, if not questionable, for bonds reciting that they are not Government obligations to be made eligible for investment in all Government funds, was this not an assurance to bond buyers that these bonds were recognized as Government obligations and would be paid by the Government? Was not this meaning made clear by Mr. Humphrey's public assurance that the Government would pay them if the tax revenues were insufficient? Under this provision, the Treasury's purchase of these bonds would, in effect, constitute a payment of them by the Government.

What was the testimony of Government witnesses concerning this? In effect, here is what they said:

"These bonds are not debts or obligations of the Government, but they are moral obligations, and the Government will, of course, have to pay them. It will have to do that to protect its credit."

Doesn't it seem unusual that anyone would question classifying as debt something which they say the Government must pay?

Just why would the Government have to pay them to protect its credit? Both because they are issued by a solely Government-owned corporation and because it obligated itself not only in the $5 billion provision of the bill but in the succeeding provision making them eligible for investment in all Government funds.

What was the result of all this mumbo-jumbo of the committee plan? Everybody got what they wanted. The Treasury could rely on the recital in the bonds that they were not Government debts and thus say that neither the debt nor debt limit would be increased. The bond buyers, regardless of the bond recital, could rely not only on the further provisions of the legislation which did obligate the Government but also on the assurances of the Secretary of the Treasury that the Government would pay them. Who was losing by all this financial word-juggling? You taxpayers were losing and so was responsible fiscal policy.

If the Government is to do further major deficit spending, there should be no question of its true character and it should mean the same thing to all people. Mr. Humphrey, as Secretary of the Treasury, can issue these bonds in the same number, of the same denomination, of the same maturities, at the same time, just as he can as the guiding member of the Highway Corporation Board. He can pay each bond of the same number, same denomination, same maturity, with the same funds from the same bank, and on the same date, just as he can as a Board member. Whether done by him as Corporation Board Member or as Secretary of the Treasury, it is deficit financing, pure and simple.

The great difference would be that our taxpayers would pay a penalty up to $1,900,000,000 in additional interest if it is done through the Highway Corporation. But the greatest loss would not be this large sum in unnecessary interest, great as it is, but the deadly precedent it sets in fiscal policy. In passing, it seems worth noting that before announcement to the public was made of the advisory plan, a convocation of investment bankers from New York and Chicago was held in Washington to consider the unusual language of its bond provisions.

The idea of the Federal Highway Corporation is represented as the easy way. It is the painless solution. It would have us believe we are getting something for nothing—billions in highways, without debt and without taxes. What could be more vicious in its evil potentiality for a Government's fiscal soundness? It could be the beginning of a chain of Federal corporations, each nibbling away a portion of the Government's general revenues which, even during the boom time of the last few years, still have been insufficient for us to live within our income. The danger is illustrated by the fact that a newspaper of the integrity of the Christian Science Monitor suggested in a front-page article a few days after the advisory financing plan was publicized that the billions needed to correct the schoolroom shortage might also be solved through the organization of a Federal School Corporation and assigning to it part of the present general revenue of the Treasury for dedication and capitalization. No specific taxes were suggested to be taken from the Treasury for this purpose. It could be the cigarette tax, or 5 percent of the income tax, or 10 percent of the corporation tax, or all or part of any tax now levied for general-revenue purposes. Just what will happen to the present manifold obligations of the Government if a great portion of its revenues are assigned to newly organized Federal corporations in order to secure new or greatly enlarged services? If this precedent is established, there is no earthly reason to doubt that other Congresses might utilize it to effect possible demoralization in Government financing.

Has the Congress ever passed legislation disclaiming the obligations of its corporations, while Government officials insisted the Government would pay them? In a recent release Senator BYRD, Senate Finance Committee chairman and long experienced in Government finance, said:

"I have searched the records and never before has such a proposal as this been seriously considered by the Congress."

The Senator aptly characterized the advisory plan when he said:

"We must remember that we cannot avoid financial responsibility by legerdemain nor can we evade debt by definition."

Comptroller General Campbell was appointed by President Eisenhower only last year. It is a duty of the Comptroller to prevent irregular action by Congress and the executive department. Testifying before the Senate committee considering highway legislation, Comptroller Campbell, with understandable restraint, said:

"We feel that the proposed method of financing is objectionable because the result would be that the borrowings would not be included in the public debt obligations of the United States.

"The total amount of borrowings by the corporation would amount to the very substantial sum of $20½ billion and, in our opinion, would be borrowings of the United States Government, irrespective of the terminology applied.

"It is our opinion that the Government should not enter into financing arrangements which have the effect of obscuring the financial facts of the Government's debt position."

The President appointed a Commission on Intergovermental Relations in 1953. Composed of many of America's ablest minds, it was directly to examine the role of the National Government in relation to the States. Making its report last June, after long and careful study of the advisory committee plan, it said:

"The Commission recommends that the expanded highway program be financed substantially on a pay-as-you-go basis and that Congress provide additional revenues for this purpose, primarily from increased motor-fuel taxes.

"The effect of our recommendation on highway aids will be to increase Federal expenditures. An increase in taxes is preferable to deficit financing as a means of supporting major highway outlays by the National Government. The latter method would result in high interest charges and would shift the burden to citizens of future generations, who will have continuing highway and other governmental responsibilities of their own to finance."

You are told to accept the advisory plan, pay as you use, and your days of worry are over. It is presented as solving the problems of the interstate system and regular Federal aid, with no additional taxes and no additional debt.

I should now like to try to show you that in addition to all its dangers to sound fiscal policy, it is fatally defective for a second reason, the basic one that it does not solve the problems of the interstate system and Federal aid for 32 years but actually will involve us in an even more difficult position than we are in today.

Regular Federal aid for the current year is $700 million. Considering the great traffic problem and the Government's responsibility as prescribed by our Constitution, I doubt if this sum is reasonably sufficient for the Government's contribution to the 700,000 miles of the regular Federal-aid system. But, granting that it is reasonable today, what would be reasonable Federal aid in 1987, one-third of a century hence, a year in which the advisory committee tells us that traffic on the highways will be more than twice as great as that today. Based on these figures, would not $1,500,000,000 be modest Federal aid in that faraway year. Starting with $700 million in 1955 and increasing Federal aid $25 million yearly would attain the figure of $1,500,000,000 in 1987, which was a provision of the Fallon bill.

What does the advisory plan do on regular Federal aid? It sets Federal aid at $600 million for 1955 and freezes it at that figure through 1987, decades after it would be a mere pittance. Why does it do that? It had to because its plan for capitalization of the gas, diesel, and lubricating taxes would not permit more after meeting bond and almost $12 billion interest payments. How much deficiency, then, is created in construction on the regular Federal-aid system by reason of insufficient aid from 1955 to 1987 under the facts here outlined? The answer is $16,700,000,000.

Now, let's revert to the interstate system, also supposedly solved for 32 years. Not one cent would be available from the capitalized revenues with which to do additional construction on the interstate system during the period 1965 to 1987, almost a quarter of a century. Remember that some of these roads would be constructed in 1955, 32 years before, and that all of them would be constructed by 1965.

On the interstate system 7,000 of the 40,000 miles will be constructed as two-lane roads because four lanes are not now required. What does the advisory plan do for that portion of these 7,000 miles on which the impact of more than doubled traffic will necessitate four-lane highways before 1987? Much of these 7,000 miles will need to be four-laned before that time.

What about the four-lane roads on which mounting traffic before 1987 necessitates six-lane highways? Thousands of miles will fall into this category.

What about those interstate routes where tremendous traffic increases necessitate additional parallel highways before 1987? There will be many of these. The advisory plan would leave traffic in a complete state of strangulation on four-lane highways falling in this category.

What would the advisory plan provide for interstate roads constructed between 1955 and 1965 which will have to be newly constructed long before 1987? Actually, how many miles of interstate highways constructed in the year 1955 would have to be reconstructed before 1987? Certainly many of them. What about those that would be constructed in 1956? In 1957? In 1958? The advisory plan does not meet this serious problem. If not met by the Congress, much of the traffic on the interstate system in 1987 will be traveling on jagged, broken concrete.

Do I exaggerate the insufficiency of the advisory plan as to the interstate system? I have here House Document 120 entitled "Needs of the Highway Systems, 1965–84," a report from the Bureau of Public Roads.

On page 14 it shows that if the interstate system is constructed between 1955 and 1965, additional construction, not maintenance, will be needed thereon between 1965 and 1984—not 1987—of $9,700,000,000. The advisory plan makes no provision whatever for that. Its revenues in that period are paying bonds and interest.

Let's estimate that construction deficits on the interstate system up to 1987 are $11 billion, probably an underestimate. The two deficiencies, therefore, that on the interstate of $11 billion and that of $16,700,000,000 on the Federal-aid system, total $27,700,000,000. But that is what it would have cost had it been done as the need materialized. Based on experience, what would it cost in 1987 to then build the roads which could and should have been constructed for almost $28 billion during the previous 32 years? It would be quite a sum, probably not less than $35 billion.

But, that is not all. What about the losses suffered by motorists in time, deaths, injuries, and property destruction solely because $28 billion in needed highway construction is left undone over a 32-year period? That would be many, many additional billions.

So, how do we stand in 1987 under the advisory plan? Will we not have woefully failed to meet the problem that was so obvious back in 1955?

What do these facts mean? They mean that we have never had enough available tax revenue to build the highways we needed; that we don't have enough available tax revenue today; and, that we delude ourselves if we think we will solve this problem by deficit spending through bond issues. If we do this, we simply compound our problem by using a part of insufficient and greatly needed revenue in paying interest.

In seeking an answer to our problem, let's consider recent statements by two men distinguished in the automotive field.

James J. Nance, president, Automobile Manufacturer's Association, appeared before the House Public Works Committee. He showed that the losses of motorists occasioned by inadequate roads amount to $5,300,000,000 yearly; $2,600,000,000 of this loss is on the interstate system. The Fallon bill, the last highway measure to be voted on recently, would have imposed taxes of three-quarters of $1 billion annually, only one-quarter of the yearly loss being suffered on the system which it would have modernized, a modernization that would have eliminated all labor, gas, brake, and tire losses due to inadequacies, and a major portion of the thousands of deaths and hundreds of thousands of injuries occurring each year on that system.

In a New York City address last February 14 before the Switzerland Road Commission, Karl M. Richards, head of the motor truck division of the Automobile Manufacturer's Association and secretary of its highway policy committee, said that the commercial trucking industry would save $1,450,000,000 yearly in labor, gasoline, tire and brake economy by the construction of the interstate system. This yearly saving would have been twice the amount of yearly taxes imposed in the Fallon bill, not on just the commercial trucking industry but on the entire 60 million automobile, small truck, and commercial truck owners. The Fallon bill not only would have modernized the interstate system in less than 16 years, it would also have provided reasonable Federal aid for the regular Federal aid system.

It seems material in this connection not only that Mr. Richards and Mr. Nance both stated that motor transport income is now over $50 billion annually, but that the commercial trucking industry can pass on increased tax charges, a privilege not available to a majority of other motorists.

If we do not build these roads, our motorists must continue suffering losses each year of several times what it would cost to construct, within a relatively short time, a modern interstate system that would, if reconstruction and expansion is provided for, eliminate further inadequacy losses forever.

Nothing would seem more unjust to the automobile and small truck owner than to have road construction financed almost solely by a gas tax, now that the Government for the first time contemplates major highway expenditures. The fact that a heavy vehicle derives more than four times as many ton-miles from a gallon of gas than does an automobile makes a gas tax a very highly inadequate measure of road use for the former. This disparity is further emphasized by the fact that the heavy truck carries an axle load of approximately 10 times that of the automobile and its weight is 18 times as great. This disparity is multiplied many times in related damage to highways.

Would it not, therefore, seem that the course which we should follow was charted in the Fallon bill which was rejected? Surely we will not at this late date take the easy road

by yielding to fear and political expediency. That will never get us the highways our motorists need and should have. Certainly we ought to do that which will neither involve us in deadly precedent nor lead us into fiscal irresponsibility. Neither should we accept a plan that is wholly insufficient and can only result in growing highway inadequacies and greater financial losses. We need legislation that is not only fiscally responsible, but also equitable as between various road-user groups. It should not be sufficient for a season only, but that which will give us the highway system required today and permit expansion as it is needed on tomorrow. Then and only then can we say that we are on the high road to solving our highway problem.

Excise Tax on Nonhighway Gasoline to Farmers Should Be Repealed

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. JENKINS. Mr. Speaker, a few days ago I introduced a bill which I think will be of great interest to the farmers of the country, and which I think will tend to relieve the complaints made by the farmers with reference to legislation heretofore passed that has been to their disadvantage. My bill, H. R. 8259, is a bill to amend the Internal Revenue Code of 1954 to relieve farmers from the payment of excise tax on gasoline and lubricating oils used exclusively in farm tractors or farm machinery or for other agricultural purposes. A copy of this bill is as follows:

Be it enacted, etc., That section 6416 (b) (2) of the Internal Revenue Code of 1954 (relating to special cases in which taxpayments are considered overpayments) is hereby amended by striking out the period at the end of subparagraph (H) and inserting in lieu thereof "; and", and by adding after subparagraph (H) the following new subparagraph:

"(I) in the case of gasoline and lubricating oils, used or resold for use exclusively in farm tractors or farm machinery or for other agricultural purposes."

SEC. 2. The amendments made by the first section of this act shall apply only with respect to gasoline and lubricating oils sold by the manufacturer, producer, or importer thereof on or after the first day of the first quarter which begins more than 10 days after the date of the enactment of this act.

Immediately following the introduction of this bill I made a public statement, which is as follows:

I have just introduced a bill to carry out the recommendation of President Eisenhower that the Nation's farmers be relieved of the payment of Federal excise taxes on purchases of gasoline and lubricating oils used exclusively for agricultural purposes. This recommendation was contained in the President's farm message delivered to the Congress.

Many States already exempt farmers from their own gasoline tax. I believe that the time has come for the Federal Government to grant a similar exemption. The present Federal taxes on gasoline and lubricating oils simply go to increase the farmer's cost of production. As a result, these taxes contribute to the price-cost squeeze from which our farmers are suffering today.

I shall press for prompt and favorable consideration of my bill.

This legislation which I have proposed has met with the approval of practically all of the farm organizations and farmers of the country who know about it.

The American Farm Bureau was anxious to have this information sent out to its members all over the country and to accomplish this their representative, Mr. John F. Lewis, arranged for radio time, and, as a result, I made a statement for the radio which I hope was heard by farmers all over the country, because they are very much interested in this matter:

This is what I said over the radio:

For some years the farmers of this Nation have had to pay Federal taxes on the gasoline used on their farms.

Since the inception of this levy, it has been pointed out that this is unfair taxation since the revenues derived are usually utilized to finance the construction of highways and in no sense provide any direct benefit to the man who is running a tractor or other farm equipment on his farm.

I have been impressed lately by the efforts of the membership of the Farm Bureau in my State of Ohio and other farm organizations across the Nation in having taxes on non-highway-used gasoline repealed.

It was heartening to me to hear the President endorse the repeal of these unfair taxes in his farm message to the Congress.

In connection with this I have introduced, and will push to enactment, a bill, H. R. 8259, to carry out this recommendation of President Eisenhower.

Farmers use an estimated three billion gallons of gasoline on their farms and ranches in the United States each year.

If my bill becomes law, it will save the farmers of this Nation some $60 million annually in relief from the present 2-cent Federal gas tax. If, under pending proposals for financing an expanded Federal highway building program, the tax is increased to 3 cents, my bill will save farmers $90 million a year.

I am happy to have sponsored this bill which embodies recommendations strongly advocated by the farmers in Farm Bureau and other farm organizations in the country. This is something in legislation that they have long sought, long deserved, and should have.

Mr. Speaker, I hope the Congress will give immediate consideration to this very appropriate and very necessary legislation.

Address by Hon. John W. McCormack, of Massachusetts, at Butler County Democratic Committee Annual Dinner, Butler, Pa.

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

Mr. Toastmaster, distinguished and invited guests, my fellow Americans, and fellow Democrats, I am highly honored in your invitation to be with you tonight, and to participate in and address this gathering of fine Americans and Democrats.

I am happy to be in the district represented so ably in the Congress by my friend and colleague, Congressman FRANK CLARK. The people of the 25th Pennsylvania Congressional District are justified in being proud of Congressman CLARK. His ability, sincerity, and devotion to duty have already made him an outstanding Member of the national House of Representatives. He enjoys the respect and confidence of his colleagues and of the Democratic leadership; Speaker RAYBURN and myself.

It is in the best interest of a district to keep a public official like Congressman CLARK in office, giving him seniority and prestige, and enabling him to broaden his service for district, State, and Nation.

I am pleased to be again in Pennsylvania where I campaigned in 1952 for Governor Leader, the State ticket, and congressional candidates. In Governor Leader Pennsylvania has a chief executive of whom you can be proud. His leadership is outstanding. He has already made a national name for himself, and it is growing rapidly. His ability, coupled with his humbleness and simplicity, is most noticeable.

I am so glad to see again and to pay proper tribute to one who, with her distinguished brother, has given a lifetime of service to the Democratic Party—your fighting national committeewoman, Mrs. Emma Guffey Miller. No tribute from anyone is too great for her.

All of us feel very sorry for the President and Mrs. Eisenhower in the President's illness, and we sincerely hope and pray for his rapid improvement and recovery to good health.

The President's illness is most unfortunate at this time in the world's history, because no one, under our constitutional setup, can decide and act as can the President. It is difficult to substitute anyone else, or a council, or a committee, or whatever a group might be termed, for the President. The battle for position—the conflict of interests—the ambition of individuals—human emotions—and efforts of groups within the administration and the Republican Party to gain control of the party machinery, and control the next convention, particularly if the President is not a candidate for reelection, comes into forceable operation with dividing results.

During the President's illness the Democratic Party will do everything possible to stabilize conditions, and particularly in the field of foreign affairs, to give strength to our policies and our position. We can and we will render, if consulted, outstanding service for our country, because particularly in the field of foreign affairs the Democratic Party is united, while the Republican Party, unfortunately, is sharply divided.

I look in the next several months for the GOP Old Guard and the Republican isolationists to come out of their political underground where they were driven by President Eisenhower.

The Democratic Party in Congress will continue its constructive attitude. However, the responsibility for policy and action will rest upon the Republican administration, which controls the machinery of our Government. While we will be a cooperative and stabilizing influence, that does not mean that we will not comment or constructively criticize the domestic and foreign policies of the present administration. Under our constitutional form of government it is our duty to do so, and we shall not fail in our duty to the people.

In 1952, the Republican candidates ran against the Democratic Party. They played upon every gripe and dissatisfaction possible, and some of their candidates for high office,

and I refer particularly to Vice President NIXON, resorted to statements that were not only undignified and unfair, but false. If some person stated that some of his charges were comtemptible, I would not challenge such an assertion.

In 1956, the situation will be different. The Republican candidate for President, and other Republican candidates, will not be able to run against the Democrats—they will have to run on the record of their own administration. They will not be on the delivering end in 1956.

And the Republican record is one of broken promises.

Let me refresh your memory on some of their broken promises.

1. A balanced budget. They are now frantically, for campaign purposes, after 3 years, trying to balance the budget in this fiscal year, and it can only be done at the expense of our national defense and our national security.

2. To reduce the national debt. Instead, it has been increased.

3. To be fair to labor. We find instead the stacking of the National Labor Relations Board, a majority of which members have administratively made decisions adverse to labor. What about the promise made to labor to amend and remove the harsh provisions of the Taft-Hartley Act? The promise was made—amendments were drafted which labor would not oppose, and before the President sent his message to Congress, someone "leaked," and big interests immediately opposed. The message was never sent to Congress. You will remember that former Secretary of Labor, Martin Durkin, a great man, and the only Democrat in the Cabinet, resigned over this broken promise.

4. The promise to the farmers of our country. Everyone knows what has happened to our farming communities under the present Republican administration. It will be remembered that the Republicans promised to reduce farm surpluses and also to reduce losses to the farmer. Instead, under the Republicans, there is reduced farm income, and in the last fiscal year—the largest loss in the history of the farm program, in the sum of $799 million. And after nearly 3 years of Republican control, the only excuse they can offer is to still blame the Democrats.

5. The promise to give fair and equitable treatment to small and independent businesses. Instead, we find Government contracts sharply reduced; bankruptcy among this group sharply increasing; mergers; and the frantic desire for "bigness" running rampant, resulting in a "squeeze play" upon this important segment of our society. When the Republicans terminated the Reconstruction Finance Corporation, which was very helpful to this type of business, they established the Small Business Administration; but, by law, curtailed its ability to act effectively. I can say with pride that in the last session, the Democratic Congress, despite Republican opposition, extended this law, and in a manner where this important segment of American business can receive fair and effective consideration. One illustration is that we increased the maximum loan capacity from $150,000, under the Republican law, to $250,000, under the Democratic measure. We also struck out other restrictive provisions of the Republican law.

6. The promise made to help, through contracts, labor-distressed areas. Under the Democrats we allowed a certain differential in bid price to firms located in such areas; as well as to small and independent businesses. Under the Republicans, this was wiped away.

7. The new military look. Our Army and Navy and Marine Corps have been sharply reduced, particularly our Army. And the Communist leaders in the Kremlin smile and slap some of our officials on their backs and boast openly that they are still intent on world revolution and world domination—with the determination and hope of taking over by internal subversion nation after nation in an effort to try and have America alone in the world.

8. Massive retaliation. Do you remember that promise? There has been a constant retreat from that to "peaceful co-existence"; then, "peace through trade," later, "cooperative peace"; and now, we have reached the policy of "no force"—whatever that means. To other free countries that is construed as weakness, uncertainty, and even appeasement.

9. To unleash Chiang Kai-shek. Do you also remember that promise? Everyone was led to believe that this meant that forces of Nationalist China would invade Red China in an effort to defeat the Red Chinese and regain continental China. The present administration has retreated from that dynamic policy, widely proclaimed, and widely acclaimed. And now Chiang and his forces are tied to Formosa and the Pescadore Islands, and in fear of further restrictions.

I could talk of other policies such as agonizing reappraisal directed at the time it was uttered toward France. And as we view the evidence since the meeting at the summit, it is apparent that we should undergo an agonizing reappraisal of our present situation.

While the Democratic Party has shown great statesmanship in its bipartisan cooperation, it is the right and the duty of the Democrats—in fact, members of both parties—to speak out and to alert and warn the people.

It was only the other day that Admiral Radford, Chairman of the Joint Chiefs of Staff, called for the maintenance of great "military and moral strength" and that "for the time being"—and that may be for a very long time—"our job is to stay strong and help our allies to stay strong." And Admiral Radford said further, "Never has the need for unity among nations been so great. Now is not the time to relax our vigilance."

Both President Eisenhower and Secretary Dulles have repeatedly said that the intent of the Communists for world revolution and world domination has not changed.

Only a few days ago, Senator KNOWLAND, Republican leader in the United States Senate, in lashing out against the Soviet Union, said, "There is no reason to believe there is any change in the basic premise of the Kremlin. There has been no demonstration of a change by deeds. They lie, cheat, and violate agreements and other things."

And what better evidence can we get than from what recently came from the lips of Khruschev, the present No. 1 Communist leader in the Soviet Union, while speaking on September 17, 1955, only a few days ago, to the East German delegates to Moscow, in observing that since the Geneva Conference people in the West have talked about how the Soviet leaders now smile, said, "That smile is genuine, it is not artificial. We wish to live in peace, tranquilly." Then he warned, "If anyone believes that our smiles involve abandonment of the teachings of Marx, Engels, and Lenin, he deceives himself poorly. Those who wait for that must wait until the shrimp learns to whistle."

And yet, in the light of this fact, there are some persons in America who believe that the Communist leaders in the Kremlin are sincere in their desire for peace.

Yes, the Communist peace of submission to communism, of enslavement, persecution, imprisonment, and death—but that is not our peace, the peace of men and women who desire and are determined to be free under God and under law.

We read of the spirit of Geneva. What should concern us is not words, but deeds and results that flow from Geneva. And if we are frank with ourselves we can only view the results to date with great concern. We should be greatly concerned about what is self-evident to anyone who is honest with himself:

1. The free world is being lulled into blissfulness, which is what the Communists want, and

2. The Communist leaders in the Kremlin are showing and convincing captive peoples—and even Russians who oppose communism—that they are forgotten by their Western friends, and that they had better accept as final their fate under communism.

The policy of peace through strength, which the Democratic Party stands for, with a consistent policy of military strength and power, and firm diplomatic policies, is the best course for America and the free world—not frequent changes and shifts, or signs of weakness, such as "massive retaliation" of about 3 years ago, to "no force" of today.

The Democratic Party stands for constant vigilance—recognizing that the price we pay for military strength and power that will create fear through respect, and deter aggressive action or a sneak attack by Communist Russia, is the premium we pay for liberty and preservation.

The fact is the only thing the Communists respect is what they fear, and that is military strength and power greater than they possess—and that is just as true today as it was before "the summit" conference. And we should not forget that the effective instruments by and through which our national objectives are attained in the field of foreign affairs is our military strength and power. We must be realistic. There is too much involved if we are not.

It is all right to negotiate, but not to compromise ideals and principle and truth which we believe in. And successful negotiations with Communist Russia, as long as the Communist leaders adhere to the Lenin-Stalin intent of world revolution and domination, can only be on the basis of strength.

The Democratic Party has oposed the military cuts that have been made.

Under Roosevelt and Truman we stood for peace through strength. We kept our allies united with us through friendship.

We view with concern the weakening of NATO, the spread of neutralism, the situation at Cyprus, the sale of Communist arms to Egypt, the suspicions growing against us in South Korea and in Formosa—all of which have taken place since "the summit" conference, as well as the situation in South Vietnam and Southeast Asia.

It seems to me that immediate consideration should be given by the administration to get back to the foreign policies of Roosevelt and Truman, which the present administration followed until the summit meeting—the sound policy of peace through strength.

This gathering is representative of the political life and history of America. How fortunate we are to be citizens of our beloved country in which free and untrammeled elections are held, the voters with complete freedom to exercise their judgment and conscience, and to vote for such candidates or party as they desire. It is our duty and obligation to preserve our institutions of government for ourselves and for future generations.

We are fortunate in having the two-party political system—bringing political stability and enabling responsibility to be placed on the party in power. We want this effective party system to continue, rather than a multiple party system of other democratic countries, which usually results in instability. Neither do we want the one party controlled system of dictatorial or totalitarian regimes.

While we oppose and criticize the political mistakes of our political opponents, we respect them. For over and above all, we are Americans, and our country comes "first, last, and always."

While we respect our political opponents, we feel that the Democratic Party in control of our Government is for the best interests of our people. Our policies and leadership have so impressed our people that, today, the Democratic Party is the stronger of our two great political organizations. During the past 25 years, in particular, our party has gained rapidly in strength throughout the Nation. And despite the temporary setback of 1952, the Democratic Party is steadily increasing in strength.

For the backbone of America—the workers, the farmers, the housewives, the small independent businessmen, the average American, are realizing more and more that the Democratic Party is their true friend, that the policies and leadership of our party are dedicated to the service and the best interests of all the people, and not of a select few. They realize that the Democratic Party is not dominated by a combination of certain big-finance and big-business interests, who are nonelected, and who meet in secrecy, and in the main, determine the policies of the Republican Party.

For there is one thought that is rapidly growing in the minds of average Americans, and that is that certain big-finance and big-business interests are in control of the present Republican administration and the evidence of the past 3 years justifies that thought.

The giveaways of the Republican 83d Congress, with the Dixon-Yates contract of ill repute, tax benefits for the few, the attempt to permit big business to exploit the great natural resources of our public domain, which, fortunately, the Democrats in Congress stopped; permitting the wave of mergers, many of them in violation of our antitrust laws, and designed to eliminate competition and increase prices; the disregard of small and independent businesses; the tremendous influence exercised by representatives of the financial and business barons of our country as advisers on policy of this administration, and occupying positions of conflict, for no man can serve two masters; the bypassing of Congress through the stretched interpretation of some provisions of law, so that they will not have to go to Congress for necessary authorization, which would mean penetrating inquiry and public information; the Republican policy of private utility exploitation of our great natural resources, as evidenced by Hells Canyon and other administrative acts; the breaking of their promises to the workers and the farmers, and to the Government employees, are some illustrations of the extent to which big-business thinking dominates and controls our Government.

But, fortunately, as a result of the election of a Democratic Congress in 1954, the Republicans cannot put through any more giveaways in the Congress. The big interests now look to administrative action by the executive branch, controlled by the Republicans, to accomplish their purposes.

As the 80th Republican Congress is remembered as the do-nothing Congress, so is the 83d Republican Congress remembered as the giveaway Congress.

It is due to the courageous fight made by the Democrats in Congress that some of the proposed giveaways of the Republican 83d Congress were defeated. One thing is certain, in the present 84th Democratic-controlled Congress giveaways by legislative action have been stopped.

The Democratic Party as the minority party in the 83d Congress, and as the majority party in the present 84th Congress, has been a constructive influence. Instead of being a party of "blind opposition," which the Republican Party was during the administrations of the late beloved Franklin D. Roosevelt and the fighting Harry S. Truman, our party has supported good measures, and, when in disagreement with the President, we constructively criticized, constructively opposed, and constructively proposed. As an example, let me refer to the road bill. The plan of the administration would have meant an abdication on the part of Congress of its constitutional powers for a period of from 10 to 30 years. The road plan of the present administration in a period of 30 years would have cost the taxpayers $11,500,000,000 more than the Democratic plan. This bill was well termed "The Banker's Dream."

Our party has lived up to the highest ideals of a political party. There is every reason for every Democrat, or any person who voted Democratic, to be proud of the action of the Democratic Party. There is every reason for progressive-minded Republicans and Independents to vote for Democratic candidates in the future.

The $1 minimum wage bill is a great Democratic victory for the workers. You will remember that President Eisenhower recommended an increase only from 75 cents to 90 cents per hour. It was over the opposition of the great majority of the Republicans, who voted for a lesser amount—in the Committee of the Whole—that we put this meritorious bill through.

The passage by the House, which the Senate will pass next year, of the expanded social security bill is further evidence of the constructive leadership of the Democratic Party.

The Democratic Party has always been dedicated to the passage of legislation that will preserve and strengthen the family life of America. For the family life of a nation is the very basis of its strength or weakness. A strong family life means a strong America; a weak family life means a weak America. And the modern history of the Democratic Party under the immortal Franklin D. Roosevelt, and courageous Harry S. Truman, has been one of fighting for legislation that will preserve and strengthen the family life of our country. And what more noble motive and purpose can any political party have than this?

There are so many bills to which I could refer in support of this statement—among which would be included unemployment compensation, earned annuities, old-age assistance, aid to the sick and the blind, appropriations for medical research, minimum-wage legislation, developing the great natural resources of our country for the benefit of our people, the right of labor to organize and bargain collectively, proper consideration for the farmers, just consideration for small and independent businessmen, protection of bank deposits, housing legislation, proper consideration of our Federal employees, and many other progressive measures, most of which were enacted into law over the bitter opposition of the great majority of Republican Members.

The Democratic Party of today is living up to the traditions and noble ideals of Jefferson, Jackson, Cleveland, Wilson, Roosevelt, and Truman. And I might also say that the few progressive measures recommended by President Eisenhower which have become law were passed only because of Democratic support.

During the past 3 years we have repeatedly read statements by economists and Republican leaders that we will never have another depression, due to "the cushions that exist in the law." Yes; but who put those cushions into the law? It was under the leadership of Franklin D. Roosevelt and Harry S. Truman that the Democratic Party, usually over the bitter opposition of the Republicans, put those cushions into the law.

Whether as a majority or a minority party in Congress—whether under a Democratic President or a Republican President—the Democratic Party in Congress has acted affirmatively and constructively.

So, with the record of broken promises of the present Republican administration, of its domination by certain big business interests, and with the other issues that we have, we can look forward to the 1956 elections with confidence of victory for the Democratic candidate for President, and an increased Democratic House and Senate in Congress, and of further Democratic gains on the State and local level.

SENATE

MONDAY, JANUARY 16, 1956

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

Eternal God, who hast been the hope and strength of many generations and who, in all ages, hast given men the power to seek Thee and, in seeking Thee, to find Thee: To these servants dedicated to the public welfare grant, we beseech Thee, a clearer vision of Thy strength, a greater reliance on Thy unlimited resources, and a more confident assurance of the final victory of Thy kingdom of love. Forbid that facing problems so vast in their ramifications, claiming for their solution our highest powers, any one of us should stain the brightness of the morning or darken the noontide with any shameful deed, mocking our possible best.

In a tangled day, fraught with destiny for the whole world, curb wild tongues that have not Thee in awe. And here, with all mankind looking and listening, let all bitterness and wrath and clamor and evil speaking be put away with all malice; and may we be kind to one another, tenderhearted, forgiving even as God for Christ's sake hath forgiven us. In His name we ask it. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Thursday, January 12, 1956, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its clerks, announced that the House had passed a bill (H. R. 7930) authorizing the completion of the initial stage of development for flood control and other purposes in the Russian River Basin, Calif., in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H. R. 7930) authorizing the completion of the initial stage of devel-

opment for flood control and other purposes in the Russian River Basin, Calif., was read twice by its title and referred to the Committee on Public Works.

COMMITTEE MEETING DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Committee on Finance was authorized to meet during the session of the Senate today.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business for action on the nominations on the executive calendar.

The motion was agreed to; and the Senate proceeded to consider executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting several nominations, and withdrawing the nomination of Robert R. Bowie, of Maryland, to be an Assistant Secretary of State, which nominating messages were referred to the Committee on Foreign Relations.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE REPORTS OF COMMITTEES

Mr. JOHNSON of Texas. Mr. President, I wish to report favorably two nominations to be placed on the calendar.

The PRESIDENT pro tempore. The nominations will be received and placed on the calendar.

Mr. LANGER. Mr. President, will the Senator from Texas yield for a question?

Mr. JOHNSON of Texas. I yield.

Mr. LANGER. May I ask the Senator from Texas to state what the nominations are?

Mr. JOHNSON of Texas. The nominations are from the Committee on Finance and concern two customs collectors.

The nominations are as follows:

James Weldon Jones, of Texas, to be a member of the United States Tariff Commission; and

Charles J. Walker, Sr., of Texas, to be collector of customs for customs collection district No. 22, with headquarters at Galveston, Tex.

The PRESIDENT pro tempore. If there be no further reports of committees, the clerk will state the nominations on the executive calendar.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

The Chief Clerk read the nomination of Lowell Thelwell Coggshall, of Illinois, to be Special Assistant on Health and Medical Affairs to the Secretary of Health, Education, and Welfare.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

UNITED STATES TARIFF COMMISSION—NOMINATION PASSED OVER

The Chief Clerk read the nomination of William E. Dowling, of Michigan, to be a member of the United States Tariff Commission.

Mr. JOHNSON of Texas. Mr. President, I have had a request that the nomination go over, and I ask that it go over.

Mr. POTTER. Mr. President, will the Senator from Texas yield?

Mr. JOHNSON of Texas. I yield.

Mr. POTTER. Is the Senator from Texas asking that the nomination go over?

Mr. JOHNSON of Texas. Yes.

Mr. POTTER. Will the nomination be taken up at the next call of the Executive Calendar?

Mr. JOHNSON of Texas. I would not say that it will be taken up at the next call. I do not know when it will be taken up, but at the present time it is going over, because a Senator asked that it be done. That is the course usually followed.

The PRESIDENT pro tempore. The nomination will be passed over.

COMMISSIONER OF INTERNAL REVENUE

The Chief Clerk read the nomination of Russell C. Harrington, of Rhode Island, to be Commissioner of Internal Revenue.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

COAST AND GEODETIC SURVEY

The Chief Clerk proceeded to read sundry nominations in the Coast and Geodetic Survey.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the nominations in the Coast and Geodetic Survey be confirmed en bloc.

The PRESIDENT pro tempore. Without objection, the nominations are confirmed en bloc.

Mr. JOHNSON of Texas. Mr. President, I ask that the President be notified forthwith of the nominations today confirmed.

The PRESIDENT pro tempore. Without objection, the President will be notified.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that statements made during the morning hour be limited to the usual 2 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT ON OVEROBLIGATION OF AN APPROPRIATION

A letter from the Chairman, United States Atomic Energy Commission, Washington, D. C., reporting, pursuant to law, on the overobligation of an appropriation in that Commission; to the Committee on Appropriations.

REPORT ON FLIGHT PAY FOR CERTAIN COAST GUARD OFFICERS

A letter from the Assistant Secretary of the Treasury, reporting, pursuant to law, on the flight pay of certain Coast Guard officers; to the Committee on Armed Services.

AMENDMENT OF REVISED STATUTES RELATING TO REQUIREMENT FOR CERTAIN REPORTS

A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation to amend the Revised Statutes, as amended, relating to reports required to be made by national banking associations (with accompanying papers); to the Committee on Banking and Currency.

AUDIT REPORT ON EXPORT-IMPORT BANK OF WASHINGTON

A letter from the Comptroller General of the United States, transmitting, pursuant to law, an audit report on the Export-Import Bank of Washington, for the fiscal year ended June 30, 1955 (with an accompanying report); to the Committee on Government Operations.

PROPOSED CONCESSION PERMITS IN CERTAIN NATIONAL PARKS

Five letters from the Assistant Secretary of the Interior, transmitting, pursuant to law, copies of proposed concession permits in Everglades National Park, Fla., and Olympic National Park, Wash. (with accompanying papers); to the Committee on Interior and Insular Affairs.

REPORT ON SALINE WATER CONVERSION

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, his report on saline water conversion, for the year 1955 (with an accompanying report); to the Committee on Interior and Insular Affairs.

AMENDMENT OF CIVIL AERONAUTICS ACT RELATING TO IMPOSITION OF CIVIL PENALTIES

A letter from the Secretary of Commerce, transmitting a draft of proposed legislation to amend section 610 (a) of the Civil Aeronautics Act of 1938, as amended, to provide for the imposition of civil penalties in certain additional cases, and for other purposes (with an accompanying paper); to the Committee on Interstate and Foreign Commerce.

REPORT ON SETTLEMENT OF CLAIM OF THE SUIATTLE-SAUK TRIBE OF INDIANS v. THE UNITED STATES

A letter from the Chief Commissioner, Indian Claims Commission, Washington, D. C., transmitting, pursuant to law, a report on the settlement by that Commission of the claim of the Suiattle-Sauk Tribe of Indians on relation of George Enick, Chairman of the General Council, v. The United States of America (with accompanying papers); to the Committee on the Judiciary.

SCHOOL CONSTRUCTION

A letter from the Secretary, Department of Health, Education, and Welfare, transmitting a draft of proposed legislation to authorize a 5-year program of Federal assistance to States and communities to enable

them to increase public elementary and secondary school construction (with accompanying papers); to the Committee on Labor and Public Welfare.

INCREASED MAXIMUM AMOUNT FOR MAILING OR SHIPPING OF CERTAIN PERSONAL PROPERTY OF DECEASED VETERANS

A letter from the Administrator, Veterans' Administration, Washington, D. C., transmitting a draft of proposed legislation to increase the maximum amount payable by the Veterans' Administration for mailing or shipping charges of personal property left by any deceased veteran on Veterans' Administration property (with an accompanying paper); to the Committee on Labor and Public Welfare.

REPORT ON SALARY SCHEDULES AND PERSONNEL, POST OFFICE DEPARTMENT

A letter from the Postmaster General, transmitting, pursuant to law, a report on salary schedules and personnel in the Post Office Department (with accompanying papers); to the Committee on Post Office and Civil Service.

PROPOSED AUTHORIZATION FOR CERTAIN APPROPRIATIONS FOR ATOMIC ENERGY COMMISSION

A letter from the Chairman, Atomic Energy Commission, transmitting a draft of proposed legislation to authorize appropriations for the Atomic Energy Commission for acquisition or condemnation of real property or any facilities, or for plant or facility acquisition, construction, or expansion, and for other purposes (with an accompanying paper); to the Joint Committee on Atomic Energy.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A resolution adopted by the Philadelphia (Pa.) Associates of the Emergency Civil Liberties Committee, favoring the repeal of the Internal Securities Act, and so forth; to the Committee on the Judiciary.

A resolution adopted by the Council of the village of Mountain Lake, Minn., protesting against the enactment of Senate bill 1853, relating to the regulation of natural gas; ordered to lie on the table.

By Mr. JOHNSTON of South Carolina:

A concurrent resolution of the Legislature of the State of South Carolina; to the Committee on Agriculture and Forestry:

"Concurrent resolution memorializing Congress to enact such legislation as will prohibit the Federal Government from further reducing tobacco allotments

"Whereas tobacco has become the No. 1 cash crop of South Carolina, having detroned King Cotton; and

"Whereas in the production of tobacco the amount that may be planted is being allotted by the Federal Government on an acreage basis which at the outset was very small; and

"Whereas many small farmers in this State who earn their living on the farm have found it extremely difficult to earn a livelihood on the farm due to the stringent tobacco allotment program and because the cost of raising this crop has greatly increased it would work a hardship and be very detrimental to the small farmers of South Carolina for the tobacco allotment to be further reduced; and

"Whereas the use of tobacco products is no longer condemned generally but rather has become a favorite enjoyment of the public and is now highly used throughout the world: Now, therefore, be it

"Resolved by the senate (the house of representatives concurring), that the Congress of the United States be memoralized to enact without delay such legislation as will prohibit the Federal Government or any of its agencies from further reducing the tobacco allotment; be it further

"Resolved, That a copy of this resolution be forwarded to the Secretary of Agriculture, the two Members of the United States Senate from this State and to each Member of the House of Representatives of Congress from South Carolina."

A concurrent resolution of the Legislature of the State of South Carolina; to the Committee on Finance:

"Concurrent resolution memorializing the Congress of the United States to amend the social-security laws so as to enable persons under 65 years of age who become disabled to receive social-security benefits

"Whereas under the present social-security law benefits are not payable to persons under 65 years of age; and

"Whereas it is the opinion of the General Assembly of the State of South Carolina that persons under 65 years of age and covered by the social-security law who become disabled should be entitled to receive immediate benefits: Now, therefore, be it

"Resolved by the senate (the house of representatives concurring), That the Congress of the United States be memorialized to enact such legislation as may be necessary to enable persons under 65 years of age and covered by the social-security law who became disabled to receive immediate benefits by virtue of their coverage under the social security law; be it further

"Resolved That a copy of this resolution be sent to each Member of the Congress of the United States from South Carolina."

CONCURRENT RESOLUTIONS OF SOUTH CAROLINA LEGISLATURE

Mr. THURMOND. Mr. President, I present 2 concurrent resolutions adopted by the General Assembly of the State of South Carolina, 1 entitled "A concurrent resolution memorializing the Congress of the United States to amend the social-security law so as to enable persons under 65 years of age who become disabled to receive social-security benefits," and the other, "A concurrent resolution memorializing the Congress to enact such legislation as will prohibit the Federal Government from further reducing the tobacco allotments."

I ask unanimous consent that the resolutions be referred to the appropriate committee for consideration.

There being no objection, the concurrent resolutions were received and referred as follows:

To the Committee on Finance:

"A concurrent resolution of the Legislature of the State of South Carolina, relating to the amendment of the social-security laws so as to enable persons under 65 years of age who become disabled to receive social-security benefits."

(See text of concurrent resolution, identical with the foregoing, which was printed in full when presented by Mr. JOHNSTON of South Carolina today.)

To the Committee on Agriculture and Forestry:

"A concurrent resolution of the Legislature of the State of South Carolina, relating to the enactment of legislation to prohibit the Federal Government from further reducing tobacco allotments."

(See text of concurrent resolution, identical with the foregoing, which was printed in full when presented by Mr. JOHNSTON of South Carolina today.)

ESTABLISHMENT OF FOREST RESEARCH CENTER IN NORTH DAKOTA—RESOLUTION

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the State Farm Forestry Committee at Bismarck, N. Dak., relating to the establishment of a Forest research center in North Dakota.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Be it resolved, That—

1. Since the McSweeney-McNary law of 1928 authorized the establishment of forest experiment stations, one of which was to be in the Great Plains;

2. All of the authorized experiment stations, with the exception of the one for the Great Plains, were established and have contributed much to the progress of forestry in the areas where they are located; and

3. That none of the existing experiment stations conduct research pertaining specifically to problems encountered in the growing and utilizing of trees in the Great Plains.

The North Dakota State Farm Forestry Committee requests that a forest research center, under the supervision of the United States Forest Service, Bureau of Research, and financed by an appropriation to the United States Department of Agriculture, be established in the State of North Dakota.

STATE FARM FORESTRY COMMITTEE,
By JOHN M. MOLBERG,
Secretary-Treasurer.

Membership of Farm Forestry Committee: Representatives of North Dakota Extension Service, Great Plains Field Station, North Dakota State Forester, Association of American Nurserymen, North Dakota Game and Fish Department, United States Fish and Wildlife Service, North Dakota State Tree Nurseries, Soil Conservation District Tree Nurseries, North Dakota Farm Forester, Soil Conservation Service, Bureau of Reclamation, North Dakota Agriculture College Department of Horticulture.

RESOLUTIONS OF McKENZIE COUNTY (N. DAK.) FARMERS' UNION

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a series of 15 resolutions adopted by the accredited delegates of the McKenzie County Farmers' Union at Cartwright, N. Dak.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS PASSED BY THE ACCREDITED DELEGATES OF THE MCKENZIE COUNTY FARMERS UNION, REPRESENTING 989 PAID-UP MEMBERS, AT ITS FALL CONVENTION HELD AT CARTWRIGHT, N. DAK., OCTOBER 15, 1955

RESOLUTION 1

It has come to our attention that the administration in Washington, D. C., has discussed the possibilities of merging the FHA, the ASC, and Soil Conservation with the county agent's office. We feel that the county agent's office at the present time is performing its service well in a nonpolitical atmosphere and for the good of all concerned, it should be left alone.

We also feel that the services of these officers would be curtailed and restricted before being brought under this new head: Therefore be it

Resolved, That in order to keep the programs we gained from an administration friendly to farmers intact, and operation to

good interest of all farmers, we go on record as favoring this resolution.

RESOLUTION 2

Whereas Senator YOUNG has been seeking proposals for durum acreage; and

Whereas one of his suggested proposals has been to let farmers in this area plant up to 50 acres of durum in addition to their regular wheat-acreage allotment; and

Whereas this would be a boost for the family-type farmer: Now, therefore, be it

Resolved, That we wish to support this proposal, and urge our Senators and Representatives to try to secure such legislation.

RESOLUTION 3

Whereas the Hoover Commission has recommended the abolition of REA, and the establishment of a corporation which would be forced to increase interest rates, and slash services to members; and

Whereas the adoption of the Hoover recommendation or the passage of the McCarthy-Church bills would be utterly destructive of the rural electric and telephone programs: Now, therefore, be it

Resolved, That we are opposed to any of these proposals which would hurt our present REA and RTA programs, and urge our Senators and Representatives to take a vigorous stand against them.

RESOLUTION 4

We are vigorously opposed to the Poage bill or any other bill which deals with selling submarginal land owned by the United States in North Dakota. Some years ago the various counties acquired a good portion of this rough and hilly land by default in the payment of taxes by the original owners. They failed to make a living and pay taxes on this type of land because it was not productive and was unsuited for grain farming. During the thirties this same land was purchased by the United States Government for grazing purposes. Under a well-managed plan by the various grazing associations, together with Government regulations, practically all of this land has been seeded back to grass, which has been preserved by not overgrazing, and a much needed land-erosion problem has been solved.

Should this land ever go back into private hands much of it would be plowed up and placed back in direct competition with the grain farmer who is already overproducing wheat, and is being accused of saturating the country with surplus wheat. The same land-erosion problems would reoccur, such as we witnessed during the twenties and the thirties. We can ill afford to lose more top soil on any land. The large percentage of cattlemen are medium to small operators making only a decent living from their operation. We believe that under the present system of grass and soil-conservation methods that the title of this land should remain where it is, and we beg your fullest cooperation and ask that you support us in what we think is sound and logical reasoning. We further believe that a program of submarginal land is good for the people and the Nation under anybody's administration.

RESOLUTION 5

Whereas it is our opinion that the continued practice of overseeding the allotted wheat acreage per farm will destroy the intent of the program, and eventually the program itself. The wheat acreage allotment was set up to control the ever increasing surplus of wheat now held in stock by the Government. The overseeding loophole in the law directly defeats the acreage control clause and makes it possible for the noncooperator to realize a price for his grain almost equal to the loan value at the expense of those who stay within their limited acreage and keep the program alive or intact: Therefore be it

Resolved, That the overseeding loophole be stricken out and abolished and its practice be discontinued, and that the full impact of the penalty provision be applied and also eliminate the posting of bonds as a way of escaping the penalty for overseeding.

RESOLUTION 6

Whereas at the American National Cattlemen's meeting recently held at Williston, N. Dak., a resolution in support of Benson's sliding scale was passed, while at the same time the members recognizing the danger of a drop in the livestock market, decided to carry on an aggressive campaign to induce the public to eat more beef; and

Whereas this plan might increase the consumption of beef to some extent but would decrease the consumption of other meats, such as pork, mutton, and poultry, which have already dropped to a dangerously low point; and

Whereas it is an established fact that the only factor that decides the consumption of meat products, and also all the other branches of our economics is the purchasing power of the consumer: Now, therefore, be it

Resolved by this convention, That we declare that the only way the purchasing power of the people can be raised is by establishing a parity price of 100 percent for the family-type farmer, and full employment for labor at not less than $1 per hour; and be it further

Resolved, That we urge Congress to take immediate steps to put this plan into effect and thus avoid an economic depression while there yet is time.

RESOLUTION 7

Whereas it appears that Congress may pass a new farm plan, known as the two-price system; and

Whereas this system would guarantee the farmer 100 percent of parity on that portion of his crop that would be used for home consumption, and the balance would have to be sold on the world export market; and

Whereas this export market would be much below parity and would result in lowering the average price of wheat and other commodities to a price equal or lower than the sliding scale: Now, therefore, be it

Resolved, That we urge that if Congress should pass this two-price plan that the following provisions be included, as follows: "That the first $10,000 sale of farm products be granted a price equal to 100 percent of parity, the next $10,000 sale of farm products be guaranteed 90 percent of parity, and all over $20,000 be sold on the world market."

RESOLUTION 8

Whereas the reduction of the 90 percent base of parity to a flexible base as low as 82½ percent, and the drastic cut in acreage allotment will reduce the income of the family-type farmer to such an extent that they cannot possibly pay running expenses, and support the family on the farm: Now, therefore, be it

Resolved, That we urge Congress to take immediate action to fix a base of 100 acres of wheat to be exempt from any allotment—this to apply to all farmers; and be it further

Resolved, That allotment over the 100-acre base be on a graduate base cut, increasing as the total acreage increases.

RESOLUTION 9

Whereas there is a constant propaganda carried on by those who wish to exploit our national resources for private profits to create distrust in the ability of our Government to handle its business; and

Whereas their assumed fear of Government monopoly and creeping socialism is used only to divert the attention of the real danger—that of control of our Government by powerful corporations; and

Whereas in a democracy the people are the government, and we could certainly not very well enslave and expoit ourselves: Now, therefore, be it

Resolved, That we resent any such propaganda, as a democratic government is of the people, by the people, and for the people, whose duty it is to provide for the general welfare of its people; and be it further

Resolved, That we recognize that, "eternal vigilance is the price of liberty," and that we can only lose democracy in America if we fail to avail ourselves of our rights and duties by not keeping ourselves informed on State and national issues and by not going to the polls on election day, and casting an intelligent vote.

RESOLUTION 10

Whereas the continuous cold war raging in the world today can never bring world peace but only create more hatred between nations; and

Whereas unless some means can be found to end the cold war it will eventually result in a third world war; and

Whereas there can be no victory won in a shooting war and its devastation would in all probability destroy the human race: Now, therefore, be it

Resolved, That we urge our Government to take immediate steps, through diplomatic channels, to work out a plan for coexistence with nations whose ideologies and views differ from ours; be it further

Resolved, That no sacrifice is too great for any nation to make if thereby world peace can be established.

RESOLUTION 11

Whereas we in the Farmers Union recognize that organized labor has proved to be our friends and supporters; and

Whereas except by joining our forces can either of us hope to get just laws passed by Congress for our protection: Now, therefore, be it

Resolved, That we pledge our support to the American laborers in their struggle to maintain a wage scale sufficiently high to maintain a decent standard of living for themselves and their families.

RESOLUTION 12

Whereas the present administration is favoring private utilities in preference to federally owned and operated hydroelectric plants and transmission lines: Now, therefore, be it

Resolved, That we oppose this line of action because the REA co-ops must have a source of cheap power, and the preference clause must be continued in order for the REA co-ops to be able to operate and pay off their loan to the Federal Government.

RESOLUTION 13

Whereas Congress has seen fit to remove a definite base from many farm products and passed in its place a flexible scale of support, thereby establishing an uncertain market; and

Whereas this has caused the market on grain, livestock, and dairy products to drop far below parity; and

Whereas agriculture is, and always has been, in America the basic industry whereupon all prosperity depends: Now, therefore, be it

Resolved, That we urge Congress to repeal the sliding scale and reinstate the 90-percent of parity, and to constantly work for 100-percent of parity.

RESOLUTION 14

Whereas we view with serious concern the passage of the compulsory reserve bill, which in reality is just another name for universal military training; and

Whereas plans are already in the making to introduce amendments to the Reserve Law as it now is written, to give it the full effect of a compulsory military training; and

Whereas this would give the military control over every eligible male, continuously and unabetted for a period of years, which means nothing other than finding ourselves under the heel of totalitarian militarism: Now, therefore, be it

Resolved, That for the safety of our democratic form of government there should be

no amendment added to the Reserve Act that would strengthen it in any way; and be it further

Resolved, That we maintain that Congress should repeal the Compulsory Reserve Act, that was passed by the last session of Congress, as quickly as possible.

RESOLUTION 15

Whereas there is now before Congress bills to make constructive use of our surplus food and fiber, by making them available to hundreds of thousands of our people who suffer from lack of proper food, countless of which are actually starving: Now, therefore, be it

Resolved, That we most emphatically urge Congress to pass the food-stamp bill, and the International Food and Fiber Act.

RESOLUTIONS COMMITTEE,
ROY JOHNSON,
ERNEST SONDROL,
DON NOTEBOOM,
OLIVER ERICKSON,
Secretary, McKenzie County Farmers' Union.

LOW PRICES FOR AGRICULTURAL COMMODITIES—RESOLUTION

Mr. YOUNG. Mr. President, on behalf of myself and my colleague, the senior Senator from North Dakota [Mr. LANGER], I present, for appropriate reference, and ask unanimous consent to have printed in the RECORD, a very important resolution adopted by the recent North Dakota State Convention of County Commissioners. This resolution is signed by all the county commissioners of the State of North Dakota.

It is unusual in that respect.

It deals with one the most important problems facing our Nation today—that of the low price for agricultural commodities.

Mr. President, the very fact that all the county commissioners of one of our most important agricultural States would go on record requesting Congress to take immediate action to relieve the desperate agricultural situation is indication itself of the seriousness of the problem.

There being no objection, the resolution was received, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE COUNTY COMMISSIONERS' ASSOCIATION OF NORTH DAKOTA

Whereas agriculture is the foundation of our national wealth, it is the basic industry of the entire world, along with forestry and mining the first link in our economic chain; and

Whereas the economic structure of our township, county, State, and Federal Government is based on the existance and the purchasing power of the American farmer; and

Whereas the family-type farm and the continuing existence of the family-type farm is contingent upon the prices received for the products produced; and

Whereas the prices received for farm commodities have greatly reduced compared to prices received for other basic commodities thus imperiling the standard of living of the American farmer; and

Whereas, the standard of living established on the American farm must be maintained in order to preserve the very fundamentals of our American democracy; and

Whereas the average North Dakota farmer retained a net income of 49 cents from each cash dollar he received in 1950 compared to a net income of 27 cents per cash dollar received in 1954; and

Whereas from 1910 until 1949 farm income and national income rose and fell together, resulting in parity purchasing power for the American farmer; and

Whereas since 1949 the national income has risen steadily and the farm income has decreased steadily until it is a peril to economic stability for all segments of the economy in America: Be it

Resolved, That if the powers of our democracy can justifiably be used to stabilize the many major segments of our economy that those same powers be used to stabilize the most basic of all economic segments, the American agriculture; be it further

Resolved, That greater recognition be given the family-type farm, that the economy and standard of living be maintained on a level deserving of our democracy; be it finally

Resolved, That the County Commissioners Association of North Dakota ask and petition the President of the United States, Secretary of Agriculture Ezra Benson, and the Congress, that immediate recognition be given the problems of agriculture and a positive program be initiated.

Dated at Minot, N. Dak., this 10th day of January 1956.

JACOB SWENSON,
President.
FRANK J. WARMER,
Vice President.
GILMAN WASTVEDT,
Secretary.

MEMBERS OF THE COUNTY COMMISSIONERS ASSOCIATION PRESENT

Chas. L. Truax, Ward County; Mike Gerring, Morton County; Albert Budihl, Stutsman County; Aile Gehlliar, Stutsman County; Christ Rare, Stutsman County; O. H. Hunderson, Stutsman County; Albert Bauman, Mercer County; Edward Schuky, Mercer County; Natt Wezstein, Jr., Foster County; Zeller Schmid, Foster County; Elmer Dick, Ransom County; Fred F. Wolf, McIntosh County.

THE FOREIGN AID PROGRAM—TELEGRAM

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the RECORD a telegram I have received from the Honorable G. Mennen Williams, Governor of the State of Michigan, in which the Governor gives his views on the foreign-aid program.

In bringing this statement to the attention of Congress, I should like to say that I am in agreement with the opinions expressed by Governor Williams.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

LANSING, MICH., *January 13, 1956.*
Senator PAT MCNAMARA,
Senate Office Building,
Washington, D. C.:

Recently I read that several of our distinguished Democratic leaders in Congress have advocated either curtailment or ending of our program of economic assistance to our friends abroad. In order that such views are not interpreted as representative of the Democratic party throughout the Nation, I feel compelled to present my profound disagreement with such opinions. In doing so, however, let me emphasize my high regard

for the great service which these gentlemen and their colleagues have given the American people.

We now find ourselves in a state which has been described by both the administration and the Communists as one of "competitive coexistence." The Communists have made great inroads in underprivileged countries by indicating a concern, empty as it may be, for the problems of survival and development in such nations. No one can doubt that India does have an almost insuperable task to provide a standard of living for her people, which by American standards, would be classified as almost abject poverty. My visits to Turkey, Greece, and the Middle East have impressed upon me the fact that these nations have the same problems, in greater or lesser degree. I am sure that these problems exist in all but a few areas of the world. We cannot tolerate the creation of opinion in these friendly nations that we in America are indifferent to the welfare of other freedom-loving people. This is particularly true when the Soviet Union is ready to use whatever chicanery necessary to win, at the least, the trust of our friends, and at the most, actual working alliances with these nations.

It is my belief that the President's proposals for economic aid fall far short of realistic needs and certainly far short of what our traditional private enterprise philosophy of competition would demand. We may fervently hope that the Democratic Congress will take the lead and enact a responsible program of ecenomic aid, which must, of necessity, be considerably broader in scope and resources than that of the Eisenhower administration. We won the respect of the free world because of enlightened democratic leadership in the past. To squander such respect by ill-conceived economy could spell disaster in our efforts to insure a democratic world community.

G. MENNEN WILLIAMS,
Governor of Michigan.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. CHAVEZ, from the Committee on Public Works:

H. R. 7930. A bill authorizing the completion of the initial stage of development for flood control and other purposes in the Russian River Basin, Calif.; without amendment (Rept. No. 1394).

Mr. GREEN. Mr. President, from the Committee on Rules and Administration I desire to report certain resolutions, authorizing subcommittees of Senate committees to make investigations. I ask that all 13 resolutions be placed upon the calendar.

The PRESIDENT pro tempore. The reports will be received, and the resolutions will be placed upon the calendar.

The reports are as follows:

By Mr. GREEN, from the Committee on Rules and Administration, without amendment:

S. Res. 175. Resolution authorizing additional expenditures by the Select Committee on Small Business (Rept. No. 1381).

By Mr. GREEN, from the Committee on Rules and Administration, with an amendment:

S. Res. 155. Resolution authorizing the Committee on Banking and Currency to investigate certain matters and authorizing expenditures therefor (Rept. No. 1386);

S. Res. 166. Resolution to investigate matters pertaining to the improvement of the Federal Criminal Code (Rept. No. 1382);

S. Res. 169. Resolution to authorize an investigation of national penitentiaries (Rept. No. 1383);

S. Res. 172. Resolution to make a study of immigration and naturalization matters (Rept. No. 1384); and

S. Res. 174. Resolution to investigate the administration of the Internal Security Act of 1950 and other laws for protection of the internal security of the United States (Rept. No. 1385).

By Mr. GREEN, from the Committee on Rules and Administration, with amendments:

S. Res. 160. Resolution authorizing further expenditures and temporary employment of additional assistants by the Committee on Banking and Currency to study public and private housing (Rept. No. 1393);

S. Res. 165. Resolution to make a study of matters pertaining to constitutional rights (Rept. No. 1387);

S. Res. 167. Resolution to examine the administration of the Patent Office (Rept. No. 1388);

S. Res. 168. Resolution to investigate certain problems arising in connection with European refugees (Rept. No. 1389);

S. Res. 170. Resolution to make a study of the antitrust laws of the United States and their administration (Rept. No. 1390);

S. Res. 171. Resolution to examine the administration of the Trading With the Enemy Act (Rept. No. 1391); and

S. Res. 173. Resolution to conduct a study of juvenile delinquency in the United States (Rept. No. 1392).

ADDITIONAL FUNDS FOR COMMITTEE ON INTERIOR AND INSULAR AFFAIRS—REPORT OF A COMMITTEE

Mr. MURRAY, from the Committee on Interior and Insular Affairs, reported an original resolution (S. Res. 184), which was placed on the calendar, as follows:

Resolved, That the Committee on Interior and Insular Affairs is authorized to expend from the contingent fund of the Senate, during the 84th Congress, $10,000 in addition to the amount, and for the same purposes, specified in section 134 of the Legislative Reorganization Act of 1946.

REPORT ON TEXTILE PROCUREMENT IN THE MILITARY SERVICES (S. REPT. NO. 1380)

Mr. McCLELLAN. Mr. President, from the Committee on Government Operations, I submit a report entitled "Textile Procurement in the Military Services." The report was prepared by the Permanent Subcommittee on Investigations. I ask unanimous consent that the report may be printed.

The PRESIDENT pro tempore. The report will be received and printed, as requested by the Senator from Arkansas.

Mr. McCLELLAN. Mr. President, I wish to say that in the course of these hearings evidence presented before the subcommittee showed that unscrupulous contractors had obviously bribed both civilian and military personnel attached to the Armed Services Textile and Apparel Procurement Agency to obtain contractual favors and to pass defective material on inspection.

In the light of the evidence before the subcommittee, studies were made which showed that the contractors involved, including Harry Lev and his affiliate companies, owed the Government over a half million dollars because of deviations in the terms of the contracts and the delivery of defective material.

The subcommittee has recommended the prompt institution of criminal proceedings against those guilty of illegal activities and has also recommended that civil proceedings be expedited to effect collection of the large amount in claims due to the Government arising out of procurement contracts examined by the subcommittee.

The subcommittee intends to expand its investigation into procurement matters and to examine into other instances of waste, inefficiency, fraud and corruption. The work of the subcommittee in this field should serve notice to others guilty of similar infractions that these practices will not be tolerated.

I may say that in the instance to which I have just referred I think the work of the committee has saved the Federal Government enough to more than pay the expense of operating the subcommittee for the next 4 or 5 years.

INVESTIGATION OF INTERNAL SECURITY ACT OF 1950—REPORT OF A COMMITTEE (S. REPT NO. 1395)

Mr. EASTLAND. Mr. President, I ask unanimous consent to submit a report to accompany the resolution (S. Res. 174) to investigate the administration of the Internal Security Act of 1950 and other laws for protection of the internal security of the United States, which was reported from the Committee on the Judiciary by the Senator from West Virginia [Mr. KILGORE] on January 12, 1956, and I ask that it be printed.

The PRESIDENT pro tempore. Without objection, it is so ordered.

PRINTING OF ADDITIONAL COPIES OF REPORT OF SUBCOMMITTEE ON AUTOMOBILE MARKETING PRACTICES OF THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE—REPORT OF A COMMITTEE

Mr. GREEN. Mr. President, from the Committee on Rules and Administration, I report, with an amendment, Senate Resolution 181, authorizing the printing of additional copies of a committee reprint of the report of the Subcommittee on Automobile Marketing Practices of the Senate Committee on Interstate and Foreign Commerce, with recommendations. I ask unanimous consent for the present consideration of the resolution. The total cost of the additional copies will be $1,200.

The PRESIDENT pro tempore. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution, which had been reported from the Committee on Rules and Administration with an amendment in line 1, after the word "printed" to strike out "forty-five" and insert "thirty-six," so as to make the resolution read:

Resolved, That there be printed thirty-six thousand additional copies of a committee print of the report of the Subcommittee on Automobile Marketing Practices of the Senate Committee on Interstate and Foreign Commerce.

The amendment was agreed to.

The resolution, as amended, was agreed to.

REPORT OF JOINT COMMITTEE ON REDUCTION OF NONESSENTIAL FEDERAL EXPENDITURES—SUMMARY OF MONTHLY PERSONNEL REPORTS OF CIVILIAN EMPLOYMENT IN EXECUTIVE BRANCH

Mr. BYRD. Mr. President, as chairman of the Joint Committee on Reduction of Nonessential Federal Expenditures, I submit a summary of monthly personnel reports on civilian employment in the executive branch of the Federal Government issued during the recess of the Congress. These reports were concerned with employment and payrolls during the period June-November 1955, inclusive.

In accordance with the practice of several years' standing, I request that it be printed in the body of the RECORD as a part of my remarks, together with a statement by me.

There being no objection, the report and statement were ordered to be printed in the RECORD, as follows:

Personnel and pay summary, June through November 1955

Total and major categories	Civilian personnel in executive branch			Payroll (in thousands) in executive branch		
	In November numbered	In June numbered	Increase (+) or decrease (−)	In October was	In May was	Increase (+) or decrease (−)
Total [1]	2,362,142	2,384,288	−22,146	$836,979	$814,384	+$27,595
Agencies exclusive of Department of Defense	1,182,495	1,197,607	−15,112	424,001	404,628	+19,373
Department of Defense	1,179,647	1,186,681	−7,034	412,978	409,756	+3,222
Inside continental United States	2,154,836	2,170,128	−15,292			
Outside continental United States	207,306	214,160	−6,854			
Industrial employment	713,420	711,971	+1,449			
Foreign nationals	309,007	323,109	−14,102	27,914	28,390	−476

[1] Exclusive of foreign nationals shown in the last line of this summary.

TABLE I.—*Consolidated table of Federal personnel inside and outside continental United States employed by the executive agencies during November 1955, and comparison with June 1955, and pay for October 1955, and comparison with May 1955*

[1] Includes seamen on the rolls of the Maritime Administration and their pay.

[2] In accordance with Public Law 568, 83d Cong., 3,404 employees were transferred to the Public Health Service, Department of Health, Education, and Welfare in July from the Bureau of Indian Affairs, Department of the Interior.

[3] Executive Order 10610, dated May 9, 1955, abolished the Foreign Operations Administration and established the International Cooperation Administration in the Department of State, effective at the close of June 30, 1955. Figure for State Department for November includes 7,369 employees of the International Cooperation Administration.

[4] Exclusive of personnel and pay of the Central Intelligence Agency.

[5] Ceased to exist.

[6] The Defense Transport Administration was transferred to the Interstate Commerce Commission pursuant to DTA order No. 1, as amended June 27, 1955, title 32A, National Defense Appendix, ch. 8.

[7] Transferred from Housing and Home Finance Agency. In accordance with Public Law 345, 84th Cong., the Federal Home Loan Bank Board became an independent agency effective Aug. 11, 1955.

STATEMENT BY SENATOR BYRD

Civilian employment in the executive branch of the Federal Government decreased by 22,146 during the period June through November 1955. The total in June was 2,384,288. In November there were 2,362,142 civilian employees.

Employment by civilian agencies of the Government showed a net decrease of 15,112 during the period from June through November 1955, dropping from 1,197,607 in June to 1,182,495 in November. Civilians employed by the Department of Defense decreased 7,034 during the same period, dropping from 1,186,681 in June to 1,179,647 in November.

In the Department of Defense white-collar employment decreased 11,759 from 533,677 in June to 521,918 in November; and industrial employment increased 4,725 from 653,004 in June to 657,729 in November.

In May the Federal civilian payroll was running at an annual rate of $9,773,000,000,

and in October it was running at an annual rate of $10,044,000,000.

These figures summarize compilations of monthly personnel reports certified by executive branch agencies to the Joint Committee on Reduction of Nonessential Federal Expenditures.

In addition to this regularly reported employment, there were foreign nationals working under United States military agencies overseas, excluded from usual personnel reporting, whose services are provided by contractual agreement between the United States and foreign governments, or because of the nature of their work or the source of funds from which they are paid. These numbered 323,109 in June and 309,007 in November, a decrease of 14,102.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JOHNSTON of South Carolina:

S. 2928. A bill to establish longevity pay increases for Wage Board employees; to the Committee on Post Office and Civil Service.

(See the remarks of Mr. JOHNSTON of South Carolina when he introduced the above bill, which appear under a separate heading.)

By Mr. POTTER:

S. 2929. A bill to amend the Federal Trade Commission Act with respect to certain contracts, agreements, or franchises to enable manufacturers of automobiles and trucks and their franchise dealers to protect their good will in the business of manufacturing and distributing automobiles and trucks made or sold by them by restricting franchise dealers from reselling to certain unauthorized persons; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. POTTER when he introduced the above bill, which appear under a separate heading.)

By Mr. McNAMARA:

S. 2930. A bill for the relief of Eladio Ledesma-Gutierrez; to the Committee on the Judiciary.

By Mr. SALTONSTALL (by request):

S. 2931. A bill for the relief of Oksanna Oztemel; and

S. 2932. A bill for the relief of Carlo Favazza; to the Committee on the Judiciary.

By Mr. SALTONSTALL (for himself and Mr. KENNEDY):

S. 2933. A bill to amend section 8c (2) of the Agricultural Marketing Agreement Act of 1937, as amended; to the Committee on Agriculture and Forestry.

By Mr. YOUNG:

S. 2934. A bill to continue through December 31, 1960, the existing method of computing parity prices for basic agricultural commodities; to the Committee on Agriculture and Forestry.

By Mr. YOUNG (for himself and Mr. LANGER):

S. 2935. A bill authorizing the Secretary of the Interior to convey certain land to the State of North Dakota for the use and benefit of the North Dakota State School of Science; to the Committee on Interior and Insular Affairs.

By Mr. CARLSON:

S. 2936. A bill to provide for the issuance of a special postage stamp in honor of Dr. Samuel J. Crumbine who pioneered in the field of public health education; to the Committee on Post Office and Civil Service.

(See the remarks of Mr. CARLSON when he introduced the above bill, which appear under a separate heading.)

By Mr. PAYNE:

S. 2937. A bill to increase from $50 to $75 per month the amount of benefits payable to widows of certain former employees of the Lighthouse Service; to the Committee on Interstate and Foreign Commerce.

S. 2938. A bill to amend section 4 (a) of the Railroad Retirement Act of 1937, as amended to authorize the crediting thereunder of certain military service; to the Committee on Labor and Public Welfare.

By Mr. MUNDT:

S. 2939. A bill declaring September 17 a legal public holiday to be known as Constitution Day; to the Committee on the Judiciary.

(See the remarks of Mr. MUNDT when he introduced the above bill, which appears under a separate heading.)

By Mr. CURTIS (for himself, Mr. HRUSKA, Mr. AIKEN, Mr. MUNDT, Mr. CASE of South Dakota, Mr. BARRETT, Mr. ALLOTT, Mr. YOUNG, Mr. MARTIN of Iowa, Mr. HICKENLOOPER, Mr. BRICKER, Mr. BENDER, Mr. JENNER, Mr. McCARTHY, Mr. WATKINS, Mr. GOLDWATER, Mr. WELKER, and Mr. DIRKSEN):

S. 2940. A bill to establish a Commission to prepare legislation providing for increased industrial use of agricultural products; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. CURTIS when he introduced the above bill, which appear under a separate heading.)

By Mr. CASE of New Jersey:

S. 2941. A bill for the relief of Lotte Windschild; to the Committee on the Judiciary.

By Mr. DOUGLAS:

S. 2942. A bill for the relief of Panagiotis Patsoureas (also known as Peter J. Paterson); to the Committee on the Judiciary.

By Mr. HAYDEN:

S. 2943. A bill for the relief of Moses Rakocinski (Rakoczynski); to the Committee on the Judiciary.

By Mr. SMATHERS:

S. 2944. A bill for the relief of William Jeffrey Jonas; to the Committee on the Judiciary.

By Mr. THURMOND:

S. J. Res. 119. Joint resolution to establish a Commission on Problems of Agriculture; to the Committee on Agriculture and Forestry.

By Mr. FULBRIGHT:

S. J. Res. 120. Joint resolution to establish a joint congressional committee to be known as the Joint Committee on United States International Exchange of Persons Programs; to the Committee on Foreign Relations.

LONGEVITY PAY INCREASES TO WAGE BOARD EMPLOYEES

Mr. JOHNSTON of South Carolina. Mr. President, under both the Classification Act and the Postal Pay Act, employees who are at a "dead end" by virtue of having reached the top of their pay grades are given not to exceed three longevity increases at prescribed intervals as a reward for long and faithful service. These provisions apply to about 1½ million of the 2 million and over Federal employees.

It is of concern to me that one large group of our good and competent employees are not similarly treated. The group to whom I refer is comprised of wage board employees. There are in the neighborhood of 800,000 such employees. Between six and eight thousand of this group are employed in the Charleston, S. C., shipyards. On the basis of personal knowledge, I can assure the Senate that the Government has no finer, more loyal, competent, and hard-working group of career employees anywhere than these fine South Carolinians who toil day in and day out to maintain the effectiveness of our great Navy.

Mr. President, I introduce, for appropriate reference, a bill to provide longevity increases to wage board employees. Early and favorable action to this bill is warranted as a matter of equity.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 2928) to establish longevity pay increases for wage board employees, introduced by Mr. JOHNSTON of South Carolina, was received, read twice by its title, and referred to the Committee on Post Office and Civil Service.

AMENDMENT OF FEDERAL TRADE COMMISSION ACT, RELATING TO RESALE OF CERTAIN AUTOMOBILES AND TRUCKS

Mr. POTTER. Mr. President, during the past few months, information has been presented to my office which would indicate that the businesses of many, many automobile dealers have been unjustly jeopardized by loss of their territorial security.

It is my feeling that an appropriate subcommittee of the Committee on Interstate and Foreign Commerce should thoroughly investigate this phase of the automotive business, and certainly if it is found that inequities exist which can be corrected by proper legislation, the matter should be attended to at once. Therefore, I introduce, for appropriate reference, a bill to amend the Federal Trade Commission Act with respect to certain contracts, agreements, or franchises to enable manufacturers of automobiles and trucks and their franchise dealers to protect their good will in the business of manufacturing and distributing automobiles and trucks made or sold by them by restricting franchise dealers from reselling to certain unauthorized persons.

At this time I am concerned over the so-called bootlegging of new cars. The practice of selling new cars for resale is not only unfair to individual, reputable new-car dealers, but is a detriment to the industry as a whole. It is not right that an unauthorized dealer, perhaps operating out of a gas station—with little or no overhead, and with little responsibility to the buyer—should realize the profits from the sale of admittedly new cars. I ask that the bill be appropriately referred.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 2929) to amend the Federal Trade Commission Act with respect to certain contracts, agreements, or franchises to enable manufacturers of automobiles and trucks and their franchise dealers to protect their good will in the business of manufacturing and distributing automobiles and trucks made or sold by them by restricting franchise dealers from reselling to certain unauthorized persons, introduced by Mr. POTTER, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

ISSUANCE OF SPECIAL STAMP IN HONOR OF DR. SAMUEL J. CRUMBINE

Mr. CARLSON. Mr. President, I introduce, for appropriate reference, a bill to provide for the issuance of a special postage stamp in honor of Dr. Samuel J. Crumbine who pioneered in the field of public health education. I ask unanimous consent that I may speak on the bill in excess of the 2 minutes allowed under the order which has been entered.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the Senator from Kansas may proceed.

The bill (S. 2936) to provide for the issuance of a special postage stamp in honor of Dr. Samuel J. Crumbine who pioneered in the field of public-health education, introduced by Mr. CARLSON, was received, read twice by its title, and referred to the Committee on Post Office and Civil Service.

Mr. CARLSON. Mr. President, Dr. Crumbine was a Kansas citizen who made a most valuable contribution to public health, not only in our State, but in the Nation.

One of Dr. Crumbine's best known contributions was the elimination of the public drinking cup. His efforts made great progress in the elimination of the common roller towel, which was prevalent at that time. His slogan, "Bat the rat and swat the fly," is still in effective use.

Dr. Crumbine began his practice in Kansas as a country doctor in Dodge City, Kans., in 1885. During those early days his practice often took him by horse and buggy or on horseback to points as far as 50 miles across the prairies. Several times he was thrown from his mount and left stranded in remote places. Once he was lost for hours in a snowstorm. Once, too, he was forced at pistol point by a patient at an isolated ranch to stay there overnight to make sure that there would be no complications in the fractured leg the doctor had just set.

In 1900 Gov. W. T. Stanley appointed him to serve as a member of the Kansas State Board of Health. Two years later Dr. Crumbine was nominated as board secretary and executive officer of the Kansas State Board of Health.

When Dr. Crumbine took office the term "public health education" had not yet been formulated as the name for a specific activity, and there were few persons in public health work who made extensive use of education. However, Dr. Crumbine was an exception to the general rule, and from the outset devoted much of his attention to education of the public with regard to health matters.

One of his first decisions after assuming office was to issue the monthly Bulletin of the State Board of Health, which was sent to doctors, teachers, editors, legislators, manufacturers, and dealers in foods and drugs, and leaders of social and civic groups.

In the bulletin he gave health facts and attacked health superstitions. Through this and other means he was able in 1907 to secure passage by the legislature of the State's first food and drug act and its first water and sewerage law. These were among the first legislative measures in the country to give such powers of sanitary control to a State health department.

But his success in having legislation enacted to bring better health protection to the people of Kansas forced him to decide whether he would make a career of public health or private practice when the position of State health officer was made a full-time job. He later wrote that by then "public health work had become excitingly absorbing." So that same year, 1907, he became the State's first full-time health officer.

The investigations made under his direction into sewage disposal and water pollution blasted many long-held theories, and resulted in important contributions to knowledge of the control of stream pollution.

If his efforts to arrange for the joint sanitary control of the Missouri River by the States of Iowa, Nebraska, Missouri, and Kansas had been successful, this would have been the first time that any group of States had joined together in a program for the control of pollution of their waterways.

But Dr. Crumbine was more successful in securing the establishment of an agency to deal with another interstate health problem which he discovered. A study of the incidence of tuberculosis in southeastern Kansas revealed that the tuberculosis-producing conditions of that lead-, zinc-, and coal-mining area extended into portions of Missouri and Oklahoma also, and that miners living in any one of the States might work in either of the others.

Dr. Crumbine persuaded the health officers of Missouri and Oklahoma to join him in petitioning the United States Public Health Service to set up a tri-State sanitary district with full authority to act in all three States. This was done, and Dr. Thomas A. Parran, Jr., who later became Surgeon General of the Public Health Service, was named the first officer in charge of the district.

Long before the study in southeastern Kansas Dr. Crumbine had determined to wage a campaign against tuberculosis. He secured a State law requiring that physicians report all cases of tuberculosis, and was a prime mover in the organization of the Kansas Association for the Study and Prevention of Tuberculosis, whose activities were largely educational, although for a time it provided a nursing service.

His board of health also carried on a sustained educational program. One of his slogans, "Don't spit on the sidewalk," which he developed for this program so impressed a Topeka brickmaker that for years the bricks of many of the streets there were embossed with the slogan. And he prodded the legislature into providing the money for the State's first tuberculosis sanatorium.

It was as part of this campaign against tuberculosis that the State board of health employed its first public health nurse, although her title was visiting nurse.

The 1907 legislature had voted $1,000 to pay for a traveling tuberculosis exhibit at Dr. Crumbine's request. The assigned duty of the new visiting nurse was to travel with the exhibit and give information to the public about tuberculosis prevention.

By 1911, five graduate nurses and one practical nurse were employed in the State. Each was assigned to a district where she visited reported cases of tuberculosis and set up preventive measures in cooperation with the reporting physicians. Dr. Crumbine finally secured authority to create a separate Bureau of Public Health Nursing in 1919.

While making a train trip in July 1907, Dr. Crumbine became aware of the many obviously tuberculous passengers, probably on their way to the southeast, where they hoped to be cured. He was horrified to see that when these persons went to the water cooler for a drink they used a common cup provided there for all passengers to share. As soon as possible thereafter, Dr. Crumbine arranged for cultures to be made from swabbings taken from the common drinking cups and glasses of all trains entering Union Station at Kansas City, and also from the cups used in a suburban public school. These tests provided all the evidence Dr. Crumbine required to prove the potential danger of common cups as the transmitters of disease.

Armed with this proof, he was able to secure at the next meeting of the State board of health the first regulation adopted in any State outlawing the use of a common cup. Other States quickly followed suit, until now it is illegal to offer a common cup in any public place in the country. And before long Dr. Crumbine had the satisfaction of seeing that, due to his initial efforts in Kansas, individual paper cups were furnished for public use on all trains, not only within his own State of Kansas but no matter where else he might travel in the country.

A similar menace of common use also came to his attention during his investigation of a smallpox outbreak. He found that all persons involved had used a common towel in a hotel. Bacteriological analysis of common towels collected from a number of public places showed transmissible contamination on many.

In 1911, therefore, the State board of health issued an order forbidding common towels on railroad trains, in public schools, restaurants and hotels in the State of Kansas. This order, too, was the first of its kind ever officially adopted.

Dr. Crumbine had not been long in office before he became concerned about the infant mortality rate in his State. When he learned that a division of child hygiene had been set up in New York State, he appealed to the Kansas Legislature to authorize the establishment of a similar division. With the approval granted in 1915, Kansas become the second State in the country to have a separate division in its State health department devoted exclusively to child health and hygiene.

Concerned too, about the high rates of typhoid and typhus in his State, Dr. Crumbine determined to launch educational campaigns for the extermination of rats and flies, which he was convinced were the principal carriers of these diseases.

For his campaigns he coined the phrases "Bat the rat" and "Swat the fly," slogans which spread all over the country as other organizations joined the battle against these dangerous pests.

It was during his time, and not a little due to his educational efforts, that house screening and the fly swatter came to be regarded almost everywhere in the country as indispensable in every house.

From the outset of his appointment as executive officer of the State board of health, Dr. Crumbine had benefited by the cooperation and assistance of the various departments of the University of Kansas.

In 1911, he was named dean of its school of medicine, which gave him an even better opportunity to correlate the work of the board with the work of the university's divisions. He continued in this dual role until 1919.

In 1923, Herbert Hoover, then president of the American Child Health Association, called in Dr. Crumbine as medical consultant to the association. Two years later he became its general executive. In 1930, Mr. Hoover, as President of the United States, again called on Dr. Crumbine to make a 3-month survey of children's health conditions in Puerto Rico. As a result of his report, the President set up a 6-year plan for the rehabilitation and relief of children in Puerto Rico.

Dr. Crumbine gave up his post as general executive of the American Child Health Association in 1936. In 1938, he became executive vice chairman of the Save the Children Federation, which position he held until 1954, when he became honorary member of the board. Throughout the entire period he was medical consultant to the organization.

Indication of the esteem in which he was held nationally by public-health figures is to be found in the fact that he was a one-time president of both the Association of American Food, Dairy, and Drug Officials and the Conference of State and Provincial Boards of Health.

At the time of his death, in 1954, at the age of 91, he was still mentally alert and continuing to make his contribution to public health as a consultant to the public health committee of the Paper Cup and Container Institute.

DESIGNATION OF SEPTEMBER 17 AS A LEGAL HOLIDAY TO BE KNOWN AS CONSTITUTION DAY

Mr. MUNDT. Mr. President, I introduce, for appropriate reference, a bill declaring September 17 a legal public holiday to be known as Constitution Day.

The PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 2939) declaring September 17 a legal public holiday to be known as Constitution Day, introduced by Mr. MUNDT, was received read twice by its title, and referred to the Committee on the Judiciary.

Mr. MUNDT. Mr. President, I have just introduced a bill in the Senate which is drawn for the purposes of making Constitution Day, September 17, a legal holiday.

There has been widespread interest in such a move, and many patriotic organizations and patriotic citizens have urged some such move which will increase understanding of the Constitution and create greater reverence for it.

September 17, 1787, was perhaps the most significant day in American history. It was on this date, 169 years ago, that 39 delegates, assembled in Independence Hall in Philadelphia, affixed their signatures to the Constitution of the United States.

This is a day that we Americans ought to remember and to celebrate throughout our Nation as Constitution Day, a legal holiday.

The Constitution expresses the fundamental law of our land. It provides for the organization of our Government into three branches—the executive, the legislative, and the judicial. It describes the powers and limitations upon each of these branches, and it outlines the relationship between the Federal Government and the States. It leaves the ultimate authority in the hands of the people.

But the Constitution is far more than a statement of our basic law or an outline of the structure of our Government. It is one of the noblest and most durable testaments in all of history to man's love of free government. It is a continuing source of inspiration and hope, not only to those of us fortunate enough to live under it, but also to freedom-loving people throughout the world.

Yet, despite the immeasurable importance of our Constitution, no separate day is set aside by law for the nationwide observance of its signing. Surely this event, which so profoundly influenced American history, should be given official recognition.

By establishing Constitution Day on September 17 of each year as a legal holiday, the Congress would give to the American people the opportunity to rededicate themselves to the basic principles of free government for which our Constitution stands. The Congress owes this to the people of the United States.

I ask permission to insert in the RECORD at this point, an editorial from the Cotton Trade Journal of September 16, 1955, which was written by Seton Ross, entitled "Constitution Day." Mr. Ross has been one of the most active proponents of legislation of this type and has done much through his articles and editorials to inform Americans about the worthiness of such a holiday calling attention to the anniversary of the signing of the Constitution.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONSTITUTION DAY

September 17 is Constitution Day. Few of us will be fully aware of the vital significance of that date in the history of our country; some will note the date fleetingly; most Americans, unfortunately, will take no note of it at all. Yet, if the framing of our Constitution were accorded its true value, September 17 would be a national holiday at least equal in importance to Independence Day.

More than just another government was born on that eventful September 17, 1789, when 39 delegates, under the chairmanship of George Washington, signed the Constitution. It marked the longest step forward ever taken by man in the evolution of the science of human government. It blazed new trails of individual dignity, political liberty, and economic opportunity for the relatively small handful of Americans scattered mostly along the country's eastern seaboard—and for the hundreds of millions of Americans of future generations. It lit a torch that shone and still shines around the world as a beacon light of hope to oppressed and enslaved peoples.

Human ingenuity has failed to improve upon our constitutional principles. Other governments have been forced, by popular pressure, to give their people more and more political and legislative freedom—but of all government charters only the American Constitution is based on the fundamental premise that the individual is the master, not the servant, of the state.

Stated simply, American constitutional principles cannot be improved upon because they are founded on the brotherhood of man under the fatherhood of God.

The Constitution is a sacred trust conveyed to us by the Founding Fathers. It is ours to hold inviolate, to protect against attacks from within or without, whether by an alien tyranny or under the guise of domestic paternalism. Attacks against our Constitution openly revolutionary doctrines are readily discerned; countermeasures are obvious. The chief danger today lies in the lack of vigilance which has allowed an increasing centralization of government to the point where the people willingly surrender their birthright of freedom for a mess of illusory security.

Edmund Burke, the great conciliator who defended the American Colonies in the British Parliament, said, "The people never give up their liberties except under some delusion." Let us not be deluded by promises of greater material security to surrender the spiritual values upon which our Constitution rests.

Benjamin Franklin said, "They that give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety."

The living significance of the Constitution should be brought home to every American. We would like to see a bill introduced in the next session of the Congress to make Constitution Day a legal holiday throughout the country. We believe this would be more effective than the issuance of a Presidential proclamation. It should be an occasion not for merrymaking primarily, but for appropriate public observance, an occasion for our rededication to the defense of our constitutional rights and liberties.

INCREASED INDUSTRIAL USES OF SURPLUS AGRICULTURAL PRODUCTS

Mr. CURTIS. Mr. President, on behalf of myself, my colleague, the senior Senator from Nebraska [Mr. HRUSKA], the Senator from Vermont [Mr. AIKEN], the senior Senator from South Dakota [Mr. MUNDT], the junior Senator from South Dakota [Mr. CASE], the Senator from Wyoming [Mr. BARRETT], the Senator from Colorado [Mr. ALLOTT], the Senator from North Dakota [Mr. YOUNG], the junior Senator from Iowa [Mr. MARTIN], the senior Senator from Iowa [Mr. HICKENLOOPER], the senior Senator from Ohio [Mr. BRICKER], the junior Senator from Ohio [Mr. BENDER], the Senator from Indiana [Mr. JENNER], the Senator from Wisconsin [Mr. MCCARTHY], the Senator from Utah [Mr. WATKINS], the Senator from Arizona

[Mr. GOLDWATER], the Senator from Idaho [Mr. WELKER], and the Senator from Illinois [Mr. DIRKSEN], I introduce, for appropriate reference a bill to establish a commission to prepare legislation providing for increased industrial use of agricultural products.

The bill relates to our agricultural situation, and deals with the problem of farm surpluses. It is entitled "A bill to establish a commission to prepare legislation providing for increased industrial use of agricultural products."

There are many very capable persons throughout the country who believe the time is at hand to utilize the research which has already been made to the end that we may use our surplus farm crops for greater industrial purposes. The bill proposes that a commission be appointed to prepare such legislation. The gist of their duties is found in the following language:

It shall be the duty of the Commission to prepare and present to the Congress not later than January 15, 1957, the necessary draft, or drafts, of legislation which in its opinion will bring about the greatest practical use for industrial purposes of agricultural products not needed for human or animal consumption, including, but not limited to, use in the manufacture of rubber, industrial alcohol, motor fuels, plastics, and other products.

Mr. President, in dealing with the nationwide, costly problem of handling farm surpluses, we have long groped for an answer.

It is my opinion that the only greatly expanding market we have is in the United States. Foreign nations are producing more and more of their food. Many foreign nations are plagued with a surplus. There are very definite limits as to how much more, if any, of our agricultural products we can dispose of abroad.

The potential capacity of American agriculture is almost unlimited. The high costs of operating the farm are such that we cannot solve this problem merely by asking further and further reduction of acreage or bushels on the part of the farmers. This is particularly hard on the small- or family-size farm, which is already so restricted that its unit becomes a costly operation.

The logical place to find a worthwhile use for these crops not needed for human or animal consumption is for industrial uses, such as synthetic rubber, industrial alcohol, motor fuels, and the like.

Automobiles in the United States of America consume some 36 billion gallons of gasoline per year. If they were required to use only 5 percent of alcohol blended in gasoline, it would consume some 700 million bushels of grain yearly. Ten percent would consume some 1,400,000,000 bushels. That is far more than our burdensome yearly grain surplus.

The alcohol from 1 bushel of grain will produce about 6 pounds of butadiene, and this in turn will produce about 6 pounds of synthetic rubber. Should all the synthetic rubber used in America be made from grain alcohol, it would consume some 200 million bushels of grain yearly.

Our Government is presently buying large quantities of alcohol as fuel for jet planes, rockets, guided missiles, turbojets, and reciprocating engines. Most of this alcohol is now made from imported blackstrap molasses or from petroleum fractions. Government purchases are large.

Within the last few years, a high official in the Department of Agriculture has said, "The motor fuel use is the only known outlet that is large enough to absorb the quantities of grain that might be available."

The competitive producers of motor fuel should not become unduly alarmed over such a program. The number of cars and the amount of travel are increasing so rapidly that agriculture could well share a portion of this increased market without taking any existing market away from any other source in our country. It should also be borne in mind that all of our industries are taxpayers and that the matter of finding a solution to the farm problem is the whole Nation's problem.

It is my opinion that such a program can be set into operation within the framework of our private enterprise system. By the very nature of the situation relating to agricultural controls, agricultural supports, Government purchases and Government fixed standards for motor vehicle fuel, Federal legislation is necessary to set such a program in operation and to give the stability upon which farmers and businessmen can rely.

Such a program would be much less costly than our present methods of dealing with surpluses wherein we are spending a million dollars a day on storage alone. Other nations have used such a program with great success.

Mr. President, I ask unanimous consent that the text of the bill may be printed at this point in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the Record.

The bill (S. 2940) to establish a Commission to prepare legislation providing for increased industrial use of agricultural products, introduced by Mr. CURTIS (for himself and other Senators), was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc., That (a) there is hereby established a Commission on Increased Industrial Use of Agricultural Products (hereafter referred to as "the Commission." The Commission shall be composed of five members to be appointed by the Secretary of Agriculture. One of the members so appointed shall be designated as Chairman by the Secretary of Agriculture.

(b) Members of the Commission shall be paid compensation at the rate of $50 per day and shall be reimbursed for necessary traveling and other expenses incurred by them in the performance of their duties as members of the Commission.

(c) The Commission is authorized to appoint and fix the compensation, without regard to the civil-service laws and the Classification Act of 1949, as amended, of an executive director and such chemists, engineers, agriculturists, attorneys, legislative draftsmen, and other assistants as it may deem necessary. The Secretary of Agriculture is authorized to provide the Commission with necessary office space, and may detail, on a reimbursable basis, any personnel of the Department of Agriculture to assist the Commission in carrying out its work.

(d) Upon request of the Commission, any other department or agency of the Government having information or data needed by the Commission in carrying out its duties under this act, shall make such information or data available to the Commission for such purposes. The Commission shall take such steps as may be necessary to protect against unauthorized disclosure any such information or data which may be classified for security purposes.

(e) Service of an individual as a member of the Commission or employment of an individual by the Commission in a technical or professional field, on a part-time or full-time basis, shall not be considered as service or employment bringing such individual within the provisions of sections 281, 283, 284, 434, or 1914 of title 18 of the United States Code, or section 190 of the Revised Statutes (5 U. S. C. 99).

SEC. 2. It shall be the duty of the Commission to prepare and present to the Congress, not later than January 15, 1957, the necessary draft, or drafts, of legislation which in its opinion will bring about the greatest practical use for industrial purposes of agricultural products not needed for human or animal consumption, including, but not limited to, use in the manufacture of rubber, industrial alcohol, motor fuels, plastics, and other products.

SEC. 3. There are hereby authorized to be appropriated such sums as may be necessary to enable the Commission to carry out its functions.

SEC. 4. Upon submission of the draft or drafts referred to in section 2, the Commission shall cease to exist.

SEC. 5. (a) Any bill or joint resolution embodying a draft or drafts of proposed legislation presented to the Congress under section 2 of this act shall, upon introduction in the Senate or House of Representatives, be referred to the Committee on Agriculture and Forestry of the Senate or the Committee on Agriculture of the House of Representatives, as the case may be. Such committee shall proceed to consider such bill or joint resolution and shall report it to the Senate or House either with or without amendment and either with or without recommendation, within 60 calendar days following the date of its referral to such committee. In the event of the failure of such committee to report the bill or joint resolution within such time, the committee shall be considered to have been discharged from consideration thereof and such bill or joint resolution shall be placed on the appropriate calendar.

(b) This section is enacted by the Congress (1) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such shall be considered as part of the rules of each House, respectively, and (2) with full recognition of the constitutional right of either House to change such rules (so far as they relate to the procedure in such House) at any time, in the same manner and to the same extent as in the case of any other rule of such House.

REQUEST THAT THE SECRETARY OF THE INTERIOR REFRAIN FROM GRANTING CERTAIN PERMITS

Mr. MURRAY. Mr. President, I submit, for appropriate reference, a concurrent resolution requesting the Secretary of the Interior to refrain from granting further geological and geophysical prospecting permits. I ask unanimous consent that a letter relating to the concurrent resolution, addressed by me

to the Secretary of the Interior, be printed in the RECORD.

The PRESIDENT pro tempore. The concurrent resolution will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The concurrent resolution (S. Con. Res. 63) was referred to the Committee on Interior and Insular Affairs, as follows:

Resolved by the Senate (the House of Representatives concurring), That it is the sense of the Congress that, in the administration of the Mineral Leasing Act of 1920 (41 Stat. 437), the act of August 13, 1954 (68 Stat. 708), and all acts which are amendatory of or supplementary to the foregoing acts, the Secretary of the Interior should refrain from granting further geological and geophysical prospecting permits, and oil and gas leases on lands administered by the Fish and Wildlife Service as refuges for wildlife conservation until such time as the Committees on Interior and Insular Affairs of the House and Senate of the United States have had an adequate opportunity to explore fully whether or not the issuance of such permits and leases is consistent with the public interest.

The letter, presented by Mr. MURRAY, is as follows:

UNITED STATES SENATE,
COMMITTEE ON
INTERIOR AND INSULAR AFFAIRS,
January 13, 1956.

Hon. DOUGLAS MCKAY,
Secretary of the Interior,
Department of the Interior,
Washington, D. C.

DEAR MR. SECRETARY: Thank you for sending me a copy of the transcript of proceedings of the meeting on January 4, at which time representatives of your Department discussed with representatives of conservation groups the purposes and provisions of the new regulations governing oil and gas leasing on Federal wildlife refuges. The accompanying copies of the old and new regulations also will be of interest to the members of this committee.

As you know, there has been a great deal of concern expressed in the press and elsewhere over the impact of these new regulations on both Federal and State wildlife conservation policies and programs. As chairman of a Senate committee charged with the responsibility of acting on measures and legislation affecting oil and gas leasing on public lands, I consider it a duty to obtain all relevant facts pertaining to this problem or any other situation involving the way in which the intent of the Congress as expressed in the Mineral Leasing Act of 1920, as amended, is being interpreted and administered by the officials of the Department of the Interior.

More specifically, I have in mind the possibility that further amendatory legislation affecting oil and gas leasing on lands administered for national park, monument, and wildlife purposes may be introduced and referred to this committee during the present session. I am also considering the introduction of a resolution expressing the sense of the Congress that the Secretary of the Interior should refrain from granting further prospecting permits, and oil and gas leases on lands administered by the Fish and Wildlife Service as refuges for wildlife conservation until such time as the appropriate committees of Congress have had an opportunity to determine whether or not the issuance of such permits and leases is in the public interest.

Apparently the first lease issued under the new regulations has been the subject of the most vigorous public condemnation in both the press and in statements made by Members of Congress. As I understand it, this lease was issued on the day preceding the issuance of the new regulations and that it will permit oil and gas development on some 12,000 acres on the Lacassine National Wildlife Refuge in Louisiana. It is also my understanding that this was a noncompetitive lease and that as a consequence the fees charged the lessee are less than those that would obtain had the lease been issued on a competitive basis.

Unquestionably, this particular matter will be the subject of considerable discussion by members of this committee. I therefore feel it incumbent upon me to request you to furnish me with all information available in the files of the Department together with a copy of the lease, the operating plan, and all correspondence, records, and memoranda of communications that relate to this particular oil and gas lease. Any justification or facts that have not been revealed that would tend to clarify the alleged necessity for the issuance of this lease will of course be welcome.

It is hoped that the file can be assembled and transmitted to the committee by the end of next week so that members of the committee and the professional staff may have an opportunity to examine into the factual record in this case. Your cooperation will be appreciated.

Sincerely yours,
JAMES E. MURRAY, *Chairman.*

NEWSPAPER PUBLICATION OF TESTIMONY TAKEN IN EXECUTIVE SESSION BY THE FOREIGN RELATIONS COMMITTEE

Mr. LANGER. Mr. President, I submit a resolution, which I send to the desk for appropriate reference. I ask unanimous consent that the resolution and a statement in connection with it be read by the reading clerk. That will take only approximately 3 minutes.

The PRESIDENT pro tempore. The resolution will be received and appropriately referred; and, without objection, the resolution and statement will be read by the clerk.

The resolution (S. Res. 182) was received, referred to the Committee on Foreign Relations, and read, as follows:

Whereas testimony of the Secretary of State given in executive session of the Senate Committee on Foreign Relations has been reported to Drew Pearson, who published the same in this morning's edition of the Washington Post, quoting almost verbatim what actually transpired in the meeting: Therefore be it

Resolved, That the chairman of the Committee on Foreign Relations be directed not to have any testimony, the publishing of which might be injurious to the Armed Forces of this country or to the people as a whole, taken before the full committee but that he be directed to have such testimony taken only before himself, the ranking members of the majority and minority parties, Mr. GREEN and Mr. WILEY, and the leader of the minority party, Mr. KNOWLAND, until the further order of the Senate; and that at all other meetings of the Committee on Foreign Relations, newspapermen be publicly invited to attend.

The statement, presented by Mr. LANGER, was read as follows:

STATEMENT BY SENATOR LANGER

In this morning's Washington Post in Drew Pearson's column there appeared true statements that occurred at the executive meeting of the Foreign Relations Committee.

Inasmuch as this was an executive meeting, it must be apparent to anyone that a Senator spoke to Mr. Pearson or one of his representatives. I believe that Mr. Pearson has rendered a great service to this Senate, and to the people of the country by reporting the statements made to him or his representatives by this Senator.

The Senate Foreign Relations Committee is one of the most important committees dealing in the lives of the hundreds of thousands of our soldier boys stationed all over the world and certainly a Senator that states to a newspaper man what had been reported in the executive session to the Senate Committee on Foreign Relations is hardly worthy to be a United States Senator. He is a traitor, he is a spy and is as inimicable to the ways of this country as a vulturous enemy picking the bones of our American soldiers in the field of battle. In my opinion, hanging is too good for a Senator who would betray his colleagues, the soldier boys and the people of this country. Had I the power, I would tear out his tongue by the roots. This Senator, taking advantage of his position to which he has been entrusted by the people of his State, has not only disgraced himself but disgraced the Senate and is evidently going upon the assumption that the Senate is powerless to protect itself. When he thinks that, he fails to realize the ingenuity of other Senators.

With this in mind, I am introducing a resolution directing the Chairman of the Foreign Relations Committee of the Senate that the Secretary of State or any of his subordinates shall not testify hereafter in executive session before the Senate Foreign Relations Committee, except to a bipartisan board consisting of Chairman Senator GEORGE, ranking member THEODORE GREEN of Rhode Island, ranking member ALEXANDER WILEY of Wisconsin, and Senator WILLIAM KNOWLAND, leader of the minority who is a member of the committee, and that other hearings before the committee shall be open to all newspapermen including Mr. Pearson and to the public. It is a sad state of affairs when a situation arises where this sort of action is necessary but the passage of this resolution will show to this traitor of the Senate, traitor to his colleagues, traitor to the American people, that in this great democracy of ours the United States Senate is capable of dealing with traitors even though one appears within our own body. For the information of the Senate, I am attaching hereto the article of Mr. Pearson that appeared in the Washington Post this morning. (See Exhibit A.)

The above is self-explanatory and I want everyone in the Senate body to know that the Senior Senator from North Dakota would vote to expel from this body any Senator who would do such a disservice to this body and to the Secretary of State and to the Nation.

I hope I get this resolution passed so that the Secretary of State will not testify to the Foreign Relations Committee except as indicated above.

EXHIBIT A

SENATORS LISTEN TO DULLES' GLOOM

(By Drew Pearson)

Less than a week ago Ike's state of the Union message stressing the rosy foreign outlook Secretary of State Dulles gave a long, gloomy, country by country report to the Senate Foreign Relations Committee behind closed doors.

Dulles complained about Communist gains in the French General Assembly, the West German political realinement reducing Chancellor Adenauer's majority, and Prime Minister Eden's slipping prestige in England. He also confessed concern over the brewing trouble in the Middle East, North Africa, and the Far East.

Listening carefully, Minnesota's blunt-tongued Senator HUBERT HUMPHREY finally

blurted: "I am having a little difficulty, Mr. Secretary, squaring your account of these trouble spots with the President's state of the Union message."

Dulles stammered something about the "overall picture" being good, then Indiana's GOP Senator HOMER CAPEHART came to his rescue.

"Would you say, Mr. Secretary, that, taking the free world as a whole, conditions are much, much better than they were and people are much better off than they were?" he asked helpfully.

Hastily, Dulles agreed.

"You mean conditions in India are good?" demanded Senator BILL FULBRIGHT, Arkansas Democrat.

"Conditions in India are better," defended the Secretary.

"Since the subject of India has come up," broke in HUMPHREY again, "I would like to know why you made your Goa statement."

This diplomatic pronouncement, favoring Portuguese rule over the disputed Goa colony in India, caused outraged reaction throughout India.

Dulles admitted he was trying to please the Portuguese Foreign Minister, who was visiting this country at the time.

"I knew my statement would cause some concern in India," the Secretary said. "But failure to make a statement would have caused concern in Portugal. You can't please everyone. Sound diplomacy called for us to make the statement while the Portuguese Foreign Minister was in this country."

Both HUMPHREY and FULBRIGHT disputed whether this was sound diplomacy, and the closed-door meeting ended on a note of bipartisan strain.

STUDY OF MINERALS, MATERIALS, FUELS, AND CERTAIN OTHER MATTERS

Mr. MURRAY submitted the following resolution (S. Res. 183), which was referred to the Committee on Interior and Insular Affairs:

Resolved, That the Committee on Interior and Insular Affairs, or any duly authorized subcommittee thereof, is authorized under sections 134 (a) and 136 of the Legislative Reorganization Act of 1946, as amended, and in accordance with its jurisdictions specified by Rule XXV of the Standing Rules of the Senate, to examine, investigate, and make a complete study of any and all matters pertaining to—

(1) Minerals, materials, and fuels.

(2) Irrigation, reclamation, and power development.

(3) Public lands.

(4) Indians.

(5) Territories and insular affairs.

(6) National Parks.

(7) Resource management and development.

SEC. 2. For the purposes of this resolution the committee from February 1, 1956, to January 31, 1957, inclusive, is authorized to (1) make such expenditures as it deems advisable; (2) to employ upon a temporary basis, technical, clerical, and other assistants and consultants; and (3) with the consent of the heads of the departments or agencies concerned, and the Committee on Rules and Administration, to utilize the reimbursable services, information facilities, and personnel of any of the departments or agencies of the Government.

SEC. 3. Expenses of the committee, under this resolution, which shall not exceed $177,000 shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

CONTROL AND DISTRIBUTION OF WATER—AMENDMENTS

Mr. BARRETT submitted amendments, intended to be proposed by him, to the bill (S. 863) to govern the control, appropriation, use, and distribution of water, which were referred to the Committee on Interior and Insular Affairs, and ordered to be printed.

ADDITIONAL COSPONSORS OF BILLS

Mrs. SMITH of Maine. Mr. President, last Thursday I introduced on behalf of myself and 26 other Senators from both sides of the aisle, S. 2925, proposing a 5-year medical-research program.

Inadvertently, the senior Senator from Pennsylvania [Mr. MARTIN], the junior Senator from Minnesota [Mr. HUMPHREY], and the junior Senator from Rhode Island [Mr. PASTORE] were delayed in notifying me of their desire to be cosponsors of the bill.

I so ask unanimous consent that they be added as cosponsors of the bill.

The PRESIDENT pro tempore. Without objection, it is so ordered.

SCHOOL CONSTRUCTION

Pursuant to the order of the Senate of January 12, 1956, the names of the Senator from Minnesota [Mr. THYE] and the Senator from South Dakota [Mr. CASE] were added as additional cosponsors of the bill (S. 2905) to authorize a 5-year program of Federal assistance to States and communities to enable them to increase public elementary and secondary school construction, introduced on January 12, 1956, by Mr. SMITH of New Jersey (for himself and other Senators).

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. BYRD:

Address delivered by Senator MARTIN of Pennsylvania on September 22, 1955, at a convocation at the College of William and Mary on the occasion of the bicentennial of the birth of Chief Justice John Marshall.

By Mr. DOUGLAS:

Editorial and comments by him dealing with proposed legislation on natural gas.

By Mr. CARLSON:

Article on post-office operations, written by Postmaster General Summerfield, and published in Nation's Business for January 1956.

NOTICE OF HEARING ON NOMINATION OF DR. FREDERICK J. BRADY, OF MARYLAND, TO BE REPRESENTATIVE ON EXECUTIVE BOARD OF WORLD HEALTH ORGANIZATION

Mr. GEORGE. Mr. President, the Senate received today the nomination of Dr. Frederick J. Brady, of Maryland, to be the representative of the United States on the Executive Board of the World Health Organization. I wish to give notice that this nomination will be considered by the Committee on Foreign Relations at the expiration of 6 days.

NOTICE OF HEARINGS CONCERNING CERTAIN NOMINATIONS BEFORE COMMITTEE ON THE JUDICIARY

Mr. KILGORE. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Simon E. Sobeloff, of Maryland, to be United States circuit judge, fourth circuit, vice Morris A. Soper, retired.

Warren E. Burger, of Minnesota, to be United States circuit judge, District of Columbia circuit, vice Harold M. Stephens, deceased.

John M. Cashin, of New York, to be United States district judge for the southern district of New York.

William B. Herlands, of New York, to be United States district judge for the southern district of New York.

Frank M. Johnson, Jr., of Alabama, to be United States district judge for the middle district of Alabama.

Ewing T. Kerr, of Wyoming, to be United States district judge for the district of Wyoming.

C. William Kraft, Jr., of Pennsylvania, to be United States district judge for the eastern district of Pennsylvania.

Joseph P. Lieb, of Florida, to be United States district judge for the southern district of Florida.

R. Dorsey Watkins, of Maryland, to be United States district judge for the district of Maryland.

Henry J. Cook, of Kentucky, to be United States attorney for the eastern district of Kentucky for a term of 4 years, vice Edwin R. Denney, resigned.

Ruben Rodriguez-Antongiorgi, of Puerto Rico, to be United States attorney for the district of Puerto Rico, for a term of 4 years, vice Harley A. Miller, resigned.

John Wesley Thompson Falkner IV, of Mississippi, to be United States marshal for the northern district of Mississippi, for a term of 4 years.

Gerald Francis Bracken, of Maryland, to be United States marshal for the district of Maryland.

James F. Brophy, of Georgia, to be United States marshal for the southern district of Georgia.

Santos Buxo, Jr., of Puerto Rico, to be United States marshal for the district of Puerto Rico.

Albert Di Meolo, of Pennsylvania, to be United States marshal for the western district of Pennsylvania.

Oliver H. Metcalf, of Pennsylvania, to be United States marshal for the middle district of Pennsylvania.

Donald C. Moseley, of Louisiana, to be United States marshal for the western district of Louisiana.

James Warren McCarty, of Texas, to be United States marshal for the southern district of Texas, for a term of 4 years, vice Emmett Mitchell Smith, resigned.

R. Lockwood Jones, of Oklahoma, to be a member of the Subversive Activities

Control Board for the remainder of the term expiring August 9, 1960, vice David J. Coddaire, resigned.

Francis Adams Cherry, of Arkansas, to be a member of the Subversive Activities Control Board, for a term expiring March 4, 1960.

Charles K. Rice, of New Jersey, to be an Assistant Attorney General, vice H. Brian Holland, resigned.

Louis F. Kreek, of the District of Columbia, to be an Examiner in Chief in the Patent Office, Department of Commerce.

Notice is hereby given to all persons interested in these nominations to file with the committee on or before Monday, January 23, 1956, any representations or objections in writing they may wish to present concerning the above nominations, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

MESSAGE OF GOVERNOR TIMMERMAN OF SOUTH CAROLINA TO SOUTH CAROLINA GENERAL ASSEMBLY

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the RECORD the second annual message of Gov. George Bell Timmerman, Jr., of South Carolina, to the general assembly, on January 11, 1956.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

Mr. President, Mr. Speaker, members of the general assembly, 1955 has been a year of broad change. The basic problems confronting us have altered little, but contributing influences have undergone constant change.

Perhaps one of the most important basic factors that you must consider is the general economy.

When I spoke to you a year ago, our farmers had closed their books on one of our worst drought years. The effect on the general economy was plain.

While you were still in session, freezing temperatures, wind and hail struck the rich orchard areas, destroying our peach crop, an important contributor to the agricultural income.

In other phases of agriculture, we generally enjoyed a good year. Although the dollar value of agriculture in 1955 may have been slightly lower than recent averages, it was considerably higher than in 1954.

The biggest impact upon our economy is our industrial development. In recent years, industry has poured millions of dollars into our State for new plants, creating new jobs and new payrolls.

Since your last adjournment, figures have been compiled for the past 12 months. Compared to the preceding 12-month period, there were almost 3,000 more South Carolinians employed in manufacturing plants. Annual wages in manufacturing industries had leaped more than $20 million and are now in excess of $494 million. The yearly value of our manufacturing product was increased by more than $140 million, and is now almost $2½ billion.

By all standards, 1955 was the greatest year of our industrial development. Plans were announced for the building of 43 new plants and 72 major expansions. When completed, they will provide 12,000 additional jobs with new payrolls approximating $32 million annually. This expansion represents a capital investment of $225 million.

Our economic growth is reflected in the State's income.

General fund revenue for the first 6 months of the current fiscal year is approximately $7½ million above what it was for the same period last year. The rise in revenue includes a $3½ million increase in revenue from the retail sales tax; $500,000 increase in revenue from the beer and wine tax; a $700,000 increase in revenue from the income tax; and a $1½ million increase in revenue from the inheritance tax.

The increase in the revenue from the inheritance tax is due mostly to the size of one unusually large estate and does not reflect an economic change. Other increases involve both economic and tax changes.

We entered the current fiscal year with an operating deficit of $1.8 million, and no general fund reserve.

Total expenditures and reserves for the current fiscal year and the deficit from last year will exceed the estimated revenue for the current year, leaving an estimated deficit of approximately $650,000 at the end of the current fiscal year. It is in the light of this that appropriations must be made for the next year. Appropriation requests exceed the revenue estimate.

I seriously question the advisability of additional taxation.

During the past year, a number of legislative committees was created to study various fields. Perhaps no general assembly has been more active in the pursuit of information for the effective operation of our Government. It is hoped that out of these studies, much valuable material will be made readily available to each member of the general assembly. Time will not permit discussing each separately.

During the past year, the South Carolina Law Enforcement Division was reorganized and a training program inaugurated. A special unit was created to curb the illegal manufacture of whisky. During the 5 months of its operation, 613 stills were destroyed; 360,000 gallons of mash, and 5,000 gallons of whisky were seized and disposed of as required by law; 61 motor vehicles were confiscated and turned over to proper authorities; and 325 arrests were made. As a result, fines totaling more than $10,000 were paid, sentences totaling more than 13 years are being served, and 150 cases are pending for trial in State and Federal courts.

In addition, a unit to deal with the importation of illegal whisky was established under the control of the South Carolina Tax Commission. Tax officials have announced that their operation is successful.

Current statutes affecting liquor-law enforcement do not work to the advantage of police agencies, and in some instances handicap effective enforcement.

During the last session, I recommended that the liquor-law enforcement statutes be recodified and strengthened.

Such a bill was passed by the senate. It is now in the house judiciary committee for study.

I recommend its passage with such amendments as may be appropriate.

There are State positions for which the statutes do not provide a complete method for filling vacancies when caused by death or resignation. Since the law contemplates that no office remain vacant, I recommend that you provide some statutory procedure for filling such vacancies.

After World War II, the Southern States realized heavy demands for professional, technical, and graduate education.

To meet this acute need, 14 States entered into a compact in 1949 to provide voluntary pooling of higher educational facilities.

The compact set up the Southern Regional Education Board and South Carolina is a charter member.

In this connection, the general assembly will have before it two matters.

One is the approval of a joint resolution to admit the States of West Virginia and Delaware to the compact. I recommend that the resolution be adopted.

The second proposal is to add a legislator from each State to the governing board of the compact. I recommend enabling legislation for this purpose.

The alarming number of highway accidents and traffic deaths is a cirtical problem.

In 1950 and again in 1951, we had the second highest traffic death rate in the Nation. In 1952 we had the highest traffic death rate. In 1953 we had the second highest traffic death rate. In 1954 our State was recognized and honored for achieving the largest percentage decrease in traffic deaths, but we still had the sixth highest traffic death rate.

In 1955 traffic deaths soared. While final comparative figures for all the States are not available, we do know that 706 persons were killed upon our highways, a death rate 50 percent above the national average.

One essential for highway safety is a system of roads that meets the needs of traffic.

The State Highway Department, within the limits of its authority, has sought by exceptional maintenance to meet this need.

Engineers and officials in other parts of the country attest to the quality of our maintenance.

However, no amount of maintenance can erase the fact that our present highway system is outdated.

We will not make our highways safe until we build a system designed to meet our needs.

The State highway department has the engineering knowledge and the engineering personnel to construct such a system.

The department has sufficient funds to start immediately.

The only thing lacking is enabling legislation to provide control of access as needed. I recommend such legislation.

The demands upon water for agricultural, domestic, industrial, and municipal purposes continue. I hope that you will consider the establishment of a sound water-rights law and a sound water conservation program, but, as mentioned in my last annual message, care must be taken to avoid provisions that would hamper economic progress.

Forestry is our second largest industry.

Unfortunately our forests are vulnerable to fire. I recommend that you consider strengthening the laws to protect our forests.

Demands for forest seedlings exceed the capacity of our State tree nursery. The committee created to study the forest fire problem has recommended the establishment of a nursery in the Piedmont area. The forestry commission believes such a nursery would become self-sustaining and return to the State within 7 years the capital investment. This nursery would concentrate on species adaptable to the Piedmont.

I commend to your careful consideration the report of the committee established to investigate the insurance department. I hope that you will take such action as you deem advisable to improve and strengthen our insurance laws and our insurance department for the better protection of the public.

We must continue to insist that the Central Government protect our textile workers and our textile industry against cheap, foreign goods. The textile industry provides more jobs and payrolls for our people than any other industry.

At the recent southern governors' conference, I coauthored and cosponsored a resolution to protect our people against this threat. We must continue this effort.

In view of recent developments, I recommend that you consider strengthening the law governing our State parks.

A well-organized drive for Federal taxation has been launched to raise funds within the States to be spent in the public-school systems now operated and supported by the States.

The effect would be to shift the major responsibility for levying taxes for school purposes from the State legislature to the Central Government. Federal aid is sugar-coated Federal taxation.

It is a fanciful dream to think that the Federal Government could assume this tremendous expenditure without additional heavy taxation. It might rely on its method of deficit financing for a short time, but as the States become dependent upon the Central Government, additional heavy taxes upon the low-income groups become inevitable.

It is inconceivable that the Federal Government would cut vast expenditures for national defense, foreign aid, and public welfare assistance—and debt service which it cannot cut—in order to give money to South Carolina for school purposes.

The folly of Federal taxation for State services is demonstrated in the field of highway-user taxes—taxes levied in the name of better roads. In reality, much goes to support other Federal programs. That is the reason additional heavy Federal taxation has been proposed for the pending Federal highway-construction program.

Propaganda for so-called Federal aid to education ignores these factors.

It fosters upon us a big political hoax, the claim of an acute shortage of school buildings. The claim is simply untrue.

More school buildings have been constructed in America within the last decade than during any other comparable period. We have more schoolhouses and better schoolhouses than any country in the world.

The real need is to meet the normal increase in school enrollment, a need which can be met by the several States without resort to the Central Government.

In South Carolina, we are meeting our construction needs both at the public-school level and at the public-college level.

Under our school-equalization program, 389 schoolhouses have been constructed. Sixty-four percent are for Negro pupils. Within the last year $29¼ million was allocated for 1,300 new classrooms. Permanent improvements at our State colleges are being made at a multimillion-dollar pace. Last year funds for additional construction totaled almost $4 million.

As for me, if I must be taxed, I would rather be taxed sensibly by representatives of my own State than be taxed heavily by representatives from other States.

I again recommend that you consider providing scholarships for prospective teachers to encourage students to enter the teaching field.

Estimates are that there will be 11,000 more children in our public-school system next September. Based upon the number of children under school age, public-school enrollment in the next 3 years is expected to increase by 11,000 to 15,000 children annually.

Our State is providing a modern school transportation system. Forty-five percent of our buses are used by Negro children. We are operating an average of 4,000 school buses, which is almost 300 more than were in operation last year. According to estimates, we will need 175 more buses starting next September.

A major problem still before us is the preservation of public schools acceptable to the people of our State.

The problem is foremost in the minds of our people. I am confident it is foremost in the mind of each of you.

There have been many suggestions for preserving our separate but equal school facilities, including the doctrine of interposition.

Two principles distinguish our form of government and provide it with stability and greatness. Both are essential to protect our form of government. Both are essential to preserve the rights of the States and the people.

One is the historic balance between the authority delegated to the Federal Government and the power reserved to the States and the people. It is expressed in the tenth amendment to the Constitution in these words:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Nowhere does the Constitution delegate to the Central Government the power to control public schools.

The other principle is the process of amendment expressed in Article V of the Constitution which forbids any change in the basic law without the approval of the States.

The Supreme Court has flagrantly violated both of these principles.

It has undertaken to upset the balance between Federal authority and State sovereignty.

It has weakened the stability of the written Constitution.

If the opinion is accepted, it will have established a precedent for destroying the greatest system of government ever established.

In striking down the separate but equal doctrine, the Court has not only usurped the authority of Congress to propose changes in the fundamental law, but it has also usurped the sovereignty of the States to approve changes in the Constitution.

It is unlikely that all of the members of the Supreme Court could have been ignorant of what they were doing.

In their opinion, they confessed that they would not interpret the Constitution according to its meaning when it was adopted, or in the light of how it had been interpreted by the Court. In making this confession, they had this to say:

"We cannot turn the clock back to 1868 when the amendment was adopted, or even to 1896 when *Plessy* v. *Ferguson* was written."

No document can be interpreted truthfully except in the light of what it meant when it was written. For the purposes of judicial interpretation, consideration of previous Court decisions is also essential to a correct interpretation.

Rather than resting their opinion upon established law, the present members of the Supreme Court based their opinion upon writings on sociology and psychology.

It must be remembered that the Congress has the authority to curb the Court and restore constitutional government.

Among many things, the National Senate must exercise greater care in confirming appointments to our Federal courts. An active constitutional bloc could soon force any President to give more consideration to judicial qualifications and less consideration to politics. In this way a great service would be rendered our Nation.

Throughout this crisis we have pursued a policy of working within the framework of the law, resorting to lawful means to preserve an acceptable system of public schools.

Your attitude has been one of intelligent restraint and commendable action. It is in sharp contrast to the attitude of those who seek to destroy our schools.

Last year the sovereignty of our State was interposed between the Central Government and local trustees when you wrote into the law that no funds appropriated for school purposes shall be used for any school from which or to which any pupil may be assigned by the order of any court.

This year our schools are operating in peace and in conformity with the pattern of racial separation which was made for that peace.

Not one child has sought to gain admittance to a school for the children of the other race. Many Negro parents living in Washington and other cities to the north of us are leaving their children with relatives in our State so that their children can enjoy the benefit of a southern climate in segregated public schools.

Nevertheless no one can offer a magic solution to the threats that continue to face us.

It is imperative that we continue to consider with great care each move that we shall undertake.

I think it advisable that we give consideration to joining, if possible, our sister States at an appropriate time in a lawful and formal protest against the effort to destroy our form of government; but I would caution again against premature action.

I also recommend that we make an earnest effort to expedite the work of our State, looking toward an early adjournment. I believe it in the best interest of our State at this time.

There is growing evidence of an effort to not only disrupt our public schools but also to relegate to a second-class status religious faith and racial heritage.

In his state of the Union message the President of the United States lent the prestige of his office to the effort to pour all religious faith and all racial heritage into a melting pot of lost identity.

In announcing the determination of the administration to use Federal authority to promote integration he said:

"We must strive to have every person judged and measured by what he is rather than by his color, race, or religion."

Never before has a national administration proclaimed as unimportant a person's race and religion.

How better can a person be judged and measured as to what he is? A man's most priceless possession is his heritage. A man's most priceless achievement is his religious faith.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I have a brief announcement to make.

At the conclusion of the morning hour the leadership will suggest the absence of a quorum before the calendar is called; and at the conclusion of the call of the calendar, before the Senate resumes consideration of the unfinished business, namely, the gas bill, the leadership will make the point of no quorum again, so that Senators may be notified.

PORTLAND, OREG., SHOULD BE INCLUDED IN MONTHLY RETAIL TRADE REPORTS

Mr. NEUBERGER. Mr. President, I would like to state for the RECORD that I believe there is at present unwise and unfair exclusion of the Portland, Oreg., retail trading area statistics from the monthly Retail Trade Report of the Bureau of the Census. I rise briefly to protest this situation, which has existed for the past 20 years.

Let me show briefly why I think this exclusion is unfair, and why I feel that it is most imperative to include this marketing area in the sampling of retail trade throughout the United States.

The samples of retail trading reported monthly are a valuable service to marketers and advertisers all over the coun-

try. On page 12 of the recently printed 1955 report on economic statistics of the Joint Committee on the Economic Report, recommendation number 19 States:

> We recommend that the scope of the Census Bureau's monthly retail trade report, which now covers sales of all types of stores and inventories of chainstores, be expanded to provide inventory data for independent retail stores other than department stores.

I understand, however, Mr. President, that contrary to the sense of this recommendation, the Department of Commerce has decided that most of the figures presently given in the monthly retail sales reports on metropolitan areas are now to be discarded as byproducts of the national totals. The sampling of large stores throughout the country is to be cut by two-thirds. Here is another example of the adverse results of an economy drive and budget cut—a valuable service is about to be eliminated, a service which provides benefits to our business economy out of all proportion to the costs involved.

I urge a continuation of the monthly retail-trade statistics presently given for metropolitan areas in this country.

With the growing importance of Portland to the West and of the West to the Nation, I feel it is important to indicate that the picture as presently given must of necessity be somewhat less than balanced with the absence of separate figures for Portland.

Portland's metropolitan area, estimated today to have almost 800,000 in population, grew by more than 40 percent from 1940 to 1950. It is the 23d ranking city in population in our country. In retail trade, Portland ranked 19th in the country with sales amounting to $374,822,000 for the year 1948—$674,783,000 in 1954. Sales of Portland's largest department store compare in volume with those of any store on the entire west coast. Portland, at present not reported separately, has 5,308 individual retail stores. Meanwhile, Sacramento, Calif., with only 2,496 stores is reported, as is Rochester, N. Y., with 4,123 stores. Portland is in the most rapidly growing region of the Nation.

In a letter to me, Mr. Edward N. Weinbaum, the able manager of the Portland Retail Trade Bureau, has written:

> Why should the State of California have 4 cities reported, Washington State 1, and Oregon none?

The samples taken by the Bureau of the Census include for the west coast, the Los Angeles, Sacramento, and San Francisco-Oakland metropolitan areas, all in California, Seattle in Washington, and no city in Oregon. Portland tallies within its marketing area almost 2 million people. It seems manifest that the west coast picture must be lopsided under such conditions.

For these reasons, primarily, I would repeat, Mr. President, the Bureau of the Census engages in an ill-advised economy in eliminating the Monthly Retail Trade Statistics relating to metropolitan areas. It unfairly discriminates in its choice of sample areas for its monthly retail trade reports, and further seriously jeopardizes the value of its findings by the omission of the Portland standard metropolitan area from these surveys.

AMENDMENT OF NATURAL GAS ACT, AS AMENDED

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the body of the RECORD at this point a copy of the telegram I sent last week to the 35 leading natural-gas producers, asking for details on their costs and the profits, together with a statement which I have prepared, on the subject.

The purpose of the telegram is to obtain from the gas-producing industry the same type of information which my good friend, the Senator from Oklahoma [Mr. MONRONEY], is trying to obtain from the gas-distributing companies.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. I hope the distinguished senior Senator from Illinois will be more successful with his request of the gas producers than I have been with my request of the gas-distributing companies, which are public utilities and which have readily available the kind of information I requested.

Mr. DOUGLAS. The Senator from Illinois will use due diligence in trying to get the information from the producers. If and when he obtains it, he will share it with the Senate and with his good friend, the Senator from Oklahoma.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Illinois? The Chair hears none, and it is so ordered.

The text of Senator DOUGLAS' telegram to the big natural-gas producers is as follows:

"Spokesmen for gas producers submitted in hearings on Harris-Fulbright bill considerable material seeking to prove that consumers are being gouged by local gas utilities with implied acquiescence of State regulatory commissions. But such spokesmen did not present any basic information on economics of gas production. Our hearings record is therefore devoid of such essential data, and it is not otherwise publicly available. In order that full facts may be available for Senate consideration, it is requested that you furnish me with answers to the following questions at your earliest convenience, since the managers of the bill propose its immediate consideration. Please state as of the most recent available date and as of the end of each of your last 5 fiscal years, first, the volume of your gas reserves in producing gas lands; second, the volume of your gas reserves in nonproducing gas lands; third, your gross investment in gas leases and production facilities; fourth, your depreciation and depletion reserves; and, fifth, any unamortized exploration costs not included in your gross investment figure. Please state also for each of the years 1950 through 1954, for the most recent available 12-month period, and for the first full year in which you sold gas for interstate markets, the following figures with respect to your gas business: First, total volume of gas sales; second, total revenues; third, cost of production exclusive of taxes; fourth, Federal income taxes; fifth, other taxes; sixth, depreciation and depletion accounts; seventh, net income; and, eighth, the percentage which net income from sales of gas after taxes bears to total investment in gas-producing properties.

"PAUL H. DOUGLAS,
"United States Senate."

STATEMENT BY SENATOR DOUGLAS

In my request I pointed out that the gas producers' advocates have accused the distributing companies of gouging the consumers, but have not furnished economic data about their own operations. My message asked for full information on their investment, reserves, sales, costs, and profits for the past 5 years.

I have no objection to Senator MONRONEY's recent request for further information from the distributing companies. I said in a statement accompanying release of my message to the producers. But I want to get all the facts on the table, not just a part of them. Fair comparisons between the different segments of the industry can be made only if the gas producers' profit rates on their gas operations and other basic figures are made just as available to the Senate as the pipelines' and distributing companies' cost and profit data already are.

Although the big gas producers have withheld the economic information about themselves up to now, I hope they will respond promptly and fully to my request for this data. Surely they do not expect the Senate to pass on this measure which would undoubtedly greatly enrich them at the expense of 80 million users of gas without even furnishing the essential facts about themselves.

CRITICISM OF SECRETARY OF STATE DULLES

Mr. SMITH of New Jersey. Mr. President, I ask unanimous consent to speak for 6 minutes in connection with the recent criticism made of Secretary Dulles.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and the Senator from New Jersey may proceed.

Mr. SMITH of New Jersey. Mr. President, our distinguished Secretary of State, Mr. John Foster Dulles, has been under sharp criticism during the last few days from Democratic presidential candidates and from some Members of the House and Senate. In an election year this is, of course, understandable, but we should be on our guard lest misinterpretation of the Secretary's intent do harm to our international position.

The criticisms are mainly on two counts: First, the proposal for assurance of continuity in economic assistance for development projects in underdeveloped countries. This has been exaggerated into an alleged 10-year commitment. Second, the brink of war statement in the article in the most recent issue of Life magazine.

Let me outline briefly my understanding of both these matters. In doing so, I must emphasize that I am not speaking by authority of Mr. Dulles, or endeavoring to interpret his thinking, or the thinking of the President in his state of the Union message. I am taking these statements at their face value and what they mean to me as a member of the Foreign Relations Committee of the Senate.

I. THE ASSURANCE OF CONTINUITY IN ECONOMIC ASSISTANCE FOR DEVELOPMENT PROJECTS IN UNDERDEVELOPED COUNTRIES

The criticism on this count is undoubtedly based on the statement in the President's state of the Union message where he says:

> We must sustain and fortify our mutual security program. Because the conditions of poverty and unrest in less developed areas make their people a special target of international communism, there is a need to help them achieve the economic growth and stability necessary to preserve their independence against Communist threats and enticements.

I continue to quote from the President's state of the Union message. This is the important part of the quotation:

> In order that our friends may better achieve the greater strength that is our common goal, they need assurance of continuity in economic assistance for development projects and programs which we approve and which require a period of years for planning and completion. Accordingly, I ask Congress to grant limited authority to make longer term commitments for assistance to such projects to be fulfilled from appropriations to be made in future fiscal years.

As one who has traveled extensively in the Middle East and Far East and who has studied the immediate pressing problems of the underdeveloped countries I can say without hesitation that I am entirely in accord with this statement of policy by the President and the Secretary of State. In the great upheavals of today these overpopulated countries are seeking freedom, independence, and self-determination, and are opposing the imperialism and colonialism of the past. They have felt the breath of free fresh air. They have hoped and prayed that our America, built on the foundation of the sacredness of the individual human being and his freedom under God, might lend the helping hand to assist them in attaining that freedom. This does not mean handouts by us to buy friendships. It means a sympathetic partnership understanding of their eagerness for our know-how and our willingness to share that know-how with them. In order to make this philosophy work in our assistance programs it may be necessary to obtain greater assurance of continuity in some economic aid programs, especially in the underdeveloped countries. It may be that this kind of longer term commitment will be necessary to assist in village development programs in the overpopulated areas, in the important construction projects, such as the big Egypt dam, or the proposals for refugee resettlement in the Middle East, where the problem is so difficult because of the Arab-Israeli conflict.

The interests of the United States under this proposal would continue to be protected. Congress must act year by year. No Congress can irrevocably commit any succeeding Congress. Appropriations can only be made year by year. This constitutes an important check on the limited authority the President asks for.

I turn now to the second part upon which Mr. Dulles is being criticized.

II. THE BRINK OF WAR ARTICLE IN LIFE

My distinguished colleague and fellow member of the Foreign Relations Committee the Senator from Minnesota [Mr. HUMPHREY] has developed an astonishing fear complex and has practically demanded the repudiation by President Eisenhower of his Secretary of State.

But, of course, as I said before, this is an election year, and, as the late Senator Vandenberg used to say to me, "We who are in public life, sometimes do and say things in an election year which we hardly even recall in normal times." I believe that is the best explanation of the hysteria on this point.

What is the mortal sin with which Secretary Dulles is charged? He simply relied on historical facts. If the Kaiser of Germany in World War I had known that the United States was able and willing to help save the world, that war would never have been started. Had Hitler known of our ability and willingness to join the Allies in World War II, that war might well have been averted; had Russia and Red China not been misled into thinking that Korea was outside the defense perimeter of the United States, the Korean war probably never would have broken upon us.

Mr. Dulles, as I understand him, believes that our military preparedness and our solemn determination to face up to the threat of war, if it should come to that, has saved and will save us from world war III. Any other attitude would mean a craven retreat even from moral principles and an inexcusable betrayal of our friends and allies abroad.

If we review Yalta and Potsdam—and we do not need to place blame at this point to do so—we will see clearly that retreat, compromise, appeasement, and fear can lead to dangers as great as war itself.

Mr. President, for myself, I thank God today and every day for the vision and courageous leadership of our great President Eisenhower and his distinguished Secretary of State.

Mr. SALTONSTALL. Mr. President, will the Senator from New Jersey yield for one question?

Mr. SMITH of New Jersey. I am glad to yield.

Mr. SALTONSTALL. Is it not true that in the three instances which were mentioned in the Life magazine article, the steps which were taken had satisfactory results? In other words, the Korean war was stopped, and it has not started again; Formosa is still in friendly hands; at least half of Indochina is still in friendly hands. The results speak for themselves. Is that not correct?

Mr. SMITH of New Jersey. I thank the Senator. His statement is absolutely correct, and in line with the statement I have just made.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, its reading clerk, announced that the House had passed, without amendment, the following bills of the Senate:

S. 1166. An act to amend section 6 of the act of August 30, 1890, as amended, and section 2 of the act of February 2, 1903, as amended; and

S. 2170. An act to permit sale of Commodity Credit Corporation stocks of basic and storable nonbasic agricultural commodities without restriction where similar commodities are exported in raw or processed form.

The message also announced that the House had insisted upon its amendment to the bill (S. 1287) to make certain increases in the annuities of annuitants under the Foreign Service retirement and disability system, disagreed to by the Senate; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. RICHARDS, Mr. CHATHAM, Mr. SELDEN, Mr. VORYS, and Mr. BENTLEY were appointed managers on the part of the House at the conference.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H. R. 5614) to amend the Communications Act of 1934 in regard to protests of grants of instruments of authorization without hearing, and it was signed by the President pro tempore.

ARTICLE BY GEN. MATTHEW B. RIDGWAY PUBLISHED IN THE SATURDAY EVENING POST

Mr. SYMINGTON. Mr. President, I ask unanimous consent to speak for not more than 5 minutes with respect to a magazine article.

The PRESIDING OFFICER (Mr. NEUBERGER in the chair). Is there objection to the request of the Senator from Missouri? The Chair hears none; and the Senator from Missouri may proceed.

Mr. SYMINGTON. Mr. President, in tomorrow's Saturday Evening Post there will appear an article, now being circulated among various people, by a great soldier, Gen. Matthew B. Ridgway.

There have been those among the money-firsters, including prominent civilians who picked up the military art after a few weeks' effort, who criticized the military opinions of General Ridgway; and, as the article shows only too well, put incredible pressure on him. But there has never been anyone, anywhere, who ever criticized the integrity of this great officer.

Many times we have presented to the Senate the fact that the military security of the United States was now being sacrificed by those who believe figures come before forces; in other words, money before adequate national defense.

Many times, also I have said that undue persuasion was being used, yes, what might justly be called threats were being made, against our military leaders, to line them up prior to their testimony before Congress, behind a program with which they did not agree.

Many times some have cautioned that the American people would never argue against any program which had the approval of another former Army Chief of Staff, General Eisenhower.

Mr. President, I did not come to the Senate to present only those matters which might be considered popular.

If people agree with those of us who are against the sacrifice of security and principle—principle in the American tradition—they would be agreeing with men who had as much to do with winning the past war as anyone else—such great soldiers as General Bradley, General Spaatz, General Ridgway, and a great many others.

Now the whole factual story is out.

In effect, this article says that the security of the Nation is being thrown into the market place, to be traded for political advantage.

It will be interesting to see what the answer will be to this latest authoritative statement about the current policy of "figures before forces."

After reading General Ridgway's article, I do not see how anyone can honestly doubt his narration of facts as to how these military budgets are being made; and how the Members of this Congress are being deluded by misrepresentations now being employed to justify reductions in defense expenditures.

If there is a policy of putting a price tag on survival, let it be brought out into the open. The people have the right to know.

In an address delivered in Chicago last September 30, I asked:

> How many people realize that all the vaunted talk about reducing the cost of Government during this administration has been entirely at the expense of our national defense? Whereas during the fiscal years of 1954, 1955, and 1956 there have been cuts totaling almost $3 billion in defense expenditures, the record shows that the cost of conducting the other branches of the Federal Government has increased almost $4 billion.

I ask, further, How many people realize that, in the face of the unquestioned facts of the Soviet military buildup, for 3 years the people have been asked to spend a smaller percentage of their gross national product, each year, for national security?

Whatever the cost for defense against the Communist threat, the American people will gladly pay it. But they will not even get that chance, any more than the British people did before 1938, unless their Government gives them the truth.

I suggest that everyone read this article by General Ridgway—and then decide whether or not the people are being given the truth at this time.

Mr. SALTONSTALL. Mr. President, will the Senator from Missouri yield for a question?

Mr. SYMINGTON. I shall be glad to yield to the Senator from Massachusetts.

Mr. SALTONSTALL. I have on my desk the article to which the Senator from Missouri has referred. I do not mean to discuss the article with my colleague from Missouri. I heard him use the word "principle." I am not quite sure how he used it, but I am confident that he will agree with me that our present President will do what he believes to be right. My colleague may not agree that the security which is worked out is the best security. There can be a difference of opinion, but I hope there is no difference of opinion as to the fact that the present President of the United States is going to do what he believes to be right and that he is in that way living up to the principles to which he has always adhered.

Mr. SYMINGTON. I do not know who in this administration is responsible for urging various people in the Defense Establishment to testify before congressional committees to what they did not believe was in the interest of the security of the United States. But whoever is responsible for that incredible action should take the responsibility and accept the blame for it. I believe it to be against the principles for which our country stands. It is a fact, as a reading of the article will disclose, that General Ridgway states he was pressured "crudely" at times—because it was suggested to him that he not say what he believed. Mr. President, when a military man is placed in that position just prior to his appearance before a congressional committee, where in effect, he is under oath, it is against the American principle. Now this is not the first time such reprehensible action has occurred. It is not the first time people have said pressure was being brought in this fashion by members of this administration.

The late great General Vandenberg would confirm completely the position taken in this article by a former member of the Joint Chiefs of Staff.

Mr. SALTONSTALL. We can discuss the details of this matter later, but, knowing General Ridgway, I am confident that no man would try to pressure him into saying something he did not believe.

Mr. SYMINGTON. In the article he states that is exactly what was done. He said he had had many shocks in his life, including moments in battle, but none to exceed his shock and surprise when he read the President's annual message for 1954.

The PRESIDING OFFICER. The time of the Senator from Missouri has expired.

Mr. SYMINGTON. Mr. President, I ask unanimous consent to proceed for 2 more minutes.

The PRESIDING OFFICER. Without objection, the Senator from Missouri may proceed.

Mr. CHAVEZ. Mr. President, will the Senator from Missouri yield?

Mr. SYMINGTON. I yield.

Mr. CHAVEZ. Mr. President, I happen to be chairman of the subcommittee on appropriations for the Defense Department, and I can assure the Senator from Missouri that what he has stated about General Ridgway is correct. He was the only official from the Pentagon who stood fast in the effort to get appropriations to carry out the ideas which the Senator from Missouri has in mind.

Mr. SYMINGTON. I thank my distinguished colleague as he defends the good name of a great soldier.

Mr. CHAVEZ. I asked the General, point blank, "Do you mean this?"

He said, "I certainly do."

Mr. SYMINGTON. I thank the distinguished senior Senator from New Mexico.

Mr. MANSFIELD. Mr. President, will the Senator from Missouri yield?

Mr. SYMINGTON. I yield.

Mr. MANSFIELD. I am delighted that the Senator from Missouri has seen fit to make the speech he has just made on the floor of the Senate. I think it is a good antidote for some of the matters set forth in the state-of-the-Union message. I believe it is time the American people knew that the situation in which we find ourselves is perhaps the most gloomy since the end of the Second World War.

I am also delighted to know that the Defense Department is taking a new look at the New Look they gave the American people when this administration came into power in 1953, at which time they reduced the Army, the Air Force, the Navy, and the Marine Corps, none of which branches has been restored to the optimum position held at the time when the new administration came into power.

I hope all Senators will see to it that the American people are told the truth about the situation which exists in the world today.

Mr. SYMINGTON. I thank the distinguished Senator from Montana. What he says is true. These reductions in the face of growing Communist strength are bad enough. But what is worse is the accusation, now being made by a man who resigned under the fire created by his criticism, namely, that crude, unfair pressure was brought to bear on him; and that prior to his testifying before the committees of Congress, that body which under the Constitution appropriates the money to keep this country secure; pressure was exerted on

him to make him state as fact something he did not believe.

Mr. MANSFIELD. Mr. President, will the Senator yield for one more comment?

Mr. SYMINGTON. I yield.

Mr. MANSFIELD. I point out that no one can ever question the courage of General Ridgway. He is one soldier who would never bow to pressure.

Mr. SYMINGTON. I thank the Senator; and would, among others, add the names of Billy Mitchell and Hoyt Vandenberg.

Mr. MANSFIELD. Yes.

SEVENTY-THIRD ANNIVERSARY OF SIGNING OF THE CIVIL SERVICE ACT OF 1883

Mr. CARLSON. Mr. President, today marks the 73d anniversary of the signing of the Civil Service Act of 1883. The establishment of the merit system in the Federal Government which was made possible by this act becomes more significant each day because of the increasing complexity and importance of the activities carried on by the Federal Government.

The civil-service system in America was born of the martyrdom of a President. The assassination of James A. Garfield in 1881, by a disgruntled jobseeker, stirred the American people to act to end the spoils system, under which public jobs were awarded on the basis of politics rather than merit and fitness. On January 16, 1883, the present Civil Service Act—also known as the Pendleton Act—was signed into law by President Chester A. Arthur, laying the groundwork for a competitive civil service which today embraces a career work force of more than 2 million Federal employees.

At the beginning of our national history, merit and fitness for a job were the primary considerations of our first Presidents in making job appointments, but gradually these factors became subordinated to the question of party loyalty. By 1829, the full-scale spoils system had arrived, bringing to vogue the cry: "To the victor belong the spoils."

The signing of this act marked the beginning of a new era and sounded the death-knell for the spoils system. The years which followed have demonstrated how our Government can become more effective and more efficient under a civil-service system.

The Civil Service Act itself represents not only a landmark which gives inspiration to all men of vision, but also it is a bulwark against attacks by those who would seek to destroy the civil-service system.

The past few years have given real meaning to the intent and purpose of the Civil Service Act. The progress which has been made and the achievements which have been secured demonstrate that we are keeping faith with those statesmen whose dreams have come true.

In the future we will see an efficient worldwide civil-service system which will be forever strengthened by our determination to preserve, protect, and extend the benefits and privileges for all Federal employees.

Mr. President, I ask unanimous consent that a statement issued today by the Honorable Philip Young, Chairman of the Civil Service Commission, may be printed at this point in the RECORD as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY CHAIRMAN PHILIP YOUNG, UNITED STATES CIVIL SERVICE COMMISSION, ON THE 73D ANNIVERSARY OF THE SIGNING OF THE CIVIL SERVICE ACT, JANUARY 16, 1956

On January 16, 1956, the 73d anniversary of the signing of the Civil Service Act, the Federal merit system established by that act is stronger than it has been at any time in civil-service history.

The past year has brought far-reaching improvements in the administration of the merit system, the benefits of which will continue to be felt for years to come. Some of the most significant facts can be briefly stated.

A completely new appointment system for the competitive service has been established. Known as the career-conditional system, it has opened the way to full careers under the merit system for the first time in 5 years, and has reestablished the importance of competitive examinations. With the aid of a greatly accelerated examining program, over 600,000 employees who held indefinite appointments in the competitive service have met the competitive standards for career or career-conditional status. In the future, career-conditional appointments will be made only through competitive examinations; few if any indefinite appointments will be made; and the permanent career service will be relatively undisturbed by the fluctuations in the size of the Government work force that are inevitable in a changing world.

Having built the framework for a true career service in the Federal Government, the Civil Service Commission was able to give attention to the need for real career recruiting. In order to assure a regular intake of highly qualified young men and women with the capacity to grow with the service and become the career leaders of the future, the Commission developed and put into effect the Federal service entrance examination. The new examination replaces over 100 college-level entrance examinations, and provides in their place a single avenue of entrance into the Federal career service. Announced on October 18, 1955, after an intensive promotion campaign, the Federal service entrance examination attracted over 30,000 applications for the first written test—the largest filing for any Federal college-level examination in more than 10 years. The examination will remain open continuously; applications will be accepted at any time, and written tests will be given at convenient intervals throughout the year.

The new examination has broad appeal, offering opportunity to college graduates in all fields of study and also to people without college degrees who have qualifying experience. It will be used to fill not only a greater number, but a much wider variety of entrance-level positions, all of which can serve as a first step on the career ladder. The success of this program will insure for the Federal service the trained and experienced career executives and professional leaders we will need in order to meet the challenging problems of tomorrow.

The program will also contribute to another permanent improvement of striking proportions that took place during 1955, namely, the extension of the competitive service to a large block of overseas positions held by United States citizens. The positions were formerly excepted under schedule A of the civil-service rules, on the assumption that it was impracticable to hold competitive examinations for them. The practical obstacles having been overcome, we are now on the way toward building, for the first time, a worldwide career system under which employees may be reassigned freely to and from overseas positions while retaining their standing in the career service.

About 10,000 excepted positions in Alaska were brought into the competitive service in August, and plans have been completed for bringing in an additional 20,000 positions in foreign countries and United States island possessions on April 1, 1956. Present incumbents of these positions will be eligible for conversion to career or career-conditional status if they can meet competitive standards, and future appointments to the positions will be made through the regular competitive examining processes.

Another development of the past year that has even greater significance for the long-range future than for the immediate present is the implementation of the Federal employees incentive-awards program. From December 1954 to July 1955, employee participation in this program increased by 34 percent over the previous year. Federal employees submitted 138,000 suggestions for the improvement of Government operations; 35,000 suggestions were adopted; 3,850 superior performance awards were granted; cash awards to employees totaled $1,519,400; and the first-year benefits to the American taxpayers amounted to more than $40,700,000.

The possibilities of this program are almost unlimited. The Federal Government has never before had so effective a means of stimulating suggestions, ideas, inventions, and high levels of performance, and for giving suitable recognition and reward to outstanding employees. Even more impressive than the program's initial results are its implications for the future. Increasing participation will bring increased benefits as the program develops. And we have by no means felt the full impact of even those suggestions that have already been adopted, for many suggestions continue to yield benefits for many years.

An outstanding achievement of 1955 was the completion of one of the Civil Service Commission's major projects, of which the overseas personnel program is actually one facet. This project, which was undertaken in 1953, was the identification of the true career service by clarifying the relationship of the competitive and the excepted areas of Federal employment and establishing a clear line of demarkation between them. The first step in the over-all program was the establishment of schedule C and the inclusion therein of the positions (most of which had been excepted under schedule A) that should be excepted from competitive requirements because of their confidential or policy-determining nature. The final step, which was completed during 1955, was a reexamination of all positions remaining in schedules A and B, with a view to determining whether continued exception was warranted in all cases. As a result of this review, many of the positions have been discontinued, revised, or returned to the competitive service.

Total Federal employment is now about 2,375,000. Eighty-five percent of all Federal employees are in the competitive civil service. The remaining 15 percent breaks down as follows: 5 percent are in jobs excepted from the competitive service by statute; 1 percent is made up of the 30,000 American citizens in Alaska and overseas jobs who have been or will be brought into the competitive service; 5 percent consists of 107,000 foreign nationals in overseas jobs who are ineligible for competitive appointment; 1 percent is the total of 8,000 attorneys and 17,000 substitute rural

mail carriers; and the remaining 3 percent, outside of 1,100 employees in schedule C and about 8,000 in schedule B, is composed mainly of employees in temporary, intermittent, seasonal, part-time, and consultant jobs.

Thus it can be seen that virtually all Federal positions that can be brought into the competitive service by executive action have been, or are being, brought in. This fact, coupled with the many far-reaching improvements in merit-system administration that I have outlined, gives us good reason to regard 1955 as a most significant year in civil-service history.

I consider 1954 outstanding for civil-service legislation; 1955 has been outstanding for administrative achievement. The Fringe Benefits Act and other legislation of 1954 opened the way for tremendous improvements to be made in the merit system, and in 1955 we have constructed and set in motion the administrative machinery to put those and other improvements into effect. In fulfilling the promise of 1954, we have created new and positive promise for the future.

FRANK PELLEGRINI

Mr. MONRONEY. Mr. President, on Saturday last one of the fine, faithful, and efficient servants of the Senate died of a heart attack while playing golf at the Manor Country Club, which is located in nearby Maryland. I speak of Mr. Frank Pellegrini, who, for many years, had served most ably the Senate Committee on Interstate and Foreign Commerce. He came to us as counsel for the Subcommittee on the Merchant Marine, and was promoted by the Senator from Washington [Mr. MAGNUSON] to become general counsel for the Senate Committee on Interstate and Foreign Commerce.

During Mr. Pellegrini's service, both in the subcommittee and as counsel for the full committee, no member of our committee could have asked for a greater degree of loyalty, more efficient, performance, and more energy, than were always manifested by Mr. Pellegrini. The hours he had to work were never too long or the task too difficult to prevent Mr. Pellegrini's responding and giving the best of his energy to meet the needs of committee members when they asked for information or help in working on the complicated legislation with which our committee deals.

Mr. Pellegrini did not limit his service to one side of the committee, but he tried to, and did, serve both the majority and minority members of the committee. He did not specialize only for those members with whose side in a particular issue he might have agreed, but he was ready to help all of us, no matter how greatly our personal position on legislation might have differed from his or from that of the majority of the committee.

Mr. President, it is on that type of faithful public service on the part of persons who do much of the hard, difficult spade work, that there is framed the sound legislation which makes the Senate the great institution it is. We Senators receive much credit for the information, statistics, and logic we accumulate; but many, many hours go into the culling of data, and much research work is conducted by men whose activities and service, rendered without public credit or notices in the newspapers, or public acclaim, help the Senate arrive at the best possible decision, based on the facts, of the question presented.

Mr. President, I know I speak for every member of the Interstate and Foreign Commerce Committee when I express a deep sense of personal loss, as well as a feeling of public loss, in Mr. Pellegrini's untimely passing, and our heartfelt sympathy goes to the family of Mr. Pellegrini, his wife, his twin children, and others who survive him. The service which he rendered is measured by the long space of time and the contributions which he effectively made through the years to the work of the Interstate and Foreign Commerce Committee.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE CALENDAR

Mr. JOHNSON of Texas. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Texas will state it.

Mr. JOHNSON of Texas. Under the unanimous-consent agreement entered into at the last session of the Senate prior to today, it is now in order for the calendar to be called, is it not?

The PRESIDING OFFICER. That is correct.

Mr. JOHNSON of Texas. At the conclusion of the call of the calendar, the unfinished business will be considered.

Mr. President, I wish to announce that at the conclusion of the call of the calendar, I shall again suggest the absence of a quorum. But first we shall proceed with the call of the calendar, and then we shall proceed with the further consideration of Senate bill 1853, Calendar No. 1234, the bill to amend the Natural Gas Act, as amended.

The PRESIDING OFFICER. Under the order previously entered, the clerk will proceed to state the bills and other measures on the calendar.

RESOLUTION AND BILLS PASSED OVER

The resolution (S. Res. 17) to amend rule XXV of the Standing Rules of the Senate was announced as first in order.

Mr. ERVIN. Let the resolution go over.

The PRESIDING OFFICER. The resolution will be passed over.

The bill (S. 300) to authorize the construction, operation, and maintenance by the Secretary of the Interior of the Fryingpan-Arkansas project, Colorado, was announced as next in order.

Mr. ERWIN. Let the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

The joint resolution (S. J. Res. 31) proposing an amendment to the Constitution of the United States, providing for the election of President and Vice President, was announced as next in order.

Mr. BIBLE. Let the joint resolution go over.

The PRESIDING OFFICER. The joint resolution will be passed over.

The bill (S. 63) to provide for the appointment of the heads of regional and district offices of the Post Office Department by the President, by and with the advice and consent of the Senate, was announced as next in order.

Mr. ERVIN. Let the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 636) to revise the Federal election laws, to prevent corrupt practices in Federal elections, and for other purposes, was announced as next in order.

Mr. ERVIN. Let the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

The resolution (S. Res. 131), relating to the refusal of Harvey M. Matusow to answer questions before a Senate subcommittee was announced as next in order.

Mr. BIBLE. I ask that the resolution go over.

The PRESIDING OFFICER. The resolution will be passed over.

The bill (S. 2603) to authorize the providing of family housing for the Chairman of the Joint Chiefs of Staff was announced as next in order.

Mr. BIBLE. Let the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (H. R. 6043) to amend section 216 (b) of the Merchant Marine Act, 1936, as amended, to provide for the maintenance of the Merchant Marine Academy, was announced as next in order.

Mr. BIBLE. Let the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2577) to define bank holding companies, control their future expansion, and require divestment of their nonbanking interests, was announced as next in order.

Mr. ERVIN. I ask that the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

The joint resolution (S. J. Res. 97) to amend certain laws providing for membership and participation by the United States in the Food and Agriculture Organization and International Labor Organization and authorizing appropriations therefor, was announced as next in order.

Mr. BIBLE. Let the joint resolution go over.

The PRESIDING OFFICER. The joint resolution will be passed over.

The concurrent resolution (S. Con. Res. 36) requiring conference reports to be accompanied by statements signed by a majority of the managers of each House was announced as next in order.

Mr. ERVIN. Let the concurrent resolution go over.

The PRESIDING OFFICER. The concurrent resolution will be passed over.

The bill (H. R. 2889) to provide for the conveyance of certain land in Nedecah, Wis., to the village of Nedecah, was announced as next in order.

Mr. BIBLE. I ask that the bill be passed over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1853) to amend the Natural Gas Act, as amended, was announced as next in order.

Mr. BIBLE. Since Senate bill 1853 is the unfinished business, I ask that it be passed over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (H. R. 6645) to amend the Natural Gas Act, as amended, was announced as next in order.

Mr. BIBLE. I ask that the bill be passed over; it is a companion bill to the unfinished business.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2523) to amend section 212 of the Merchant Marine Act, 1936, to authorize the construction of a nuclear-power prototype merchant ship for operation in foreign commerce of the United States, to authorize research and experimental work with vessels, port facilities, planning, and operating and cargo handling on ships and at ports, and for other purposes, was announced as next in order.

Mr. ERVIN. I ask that the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 898) to amend the Interstate Commerce Act, with respect to the authority of the Interstate Commerce Commission to regulate the use by motor carriers (under leases, contracts, or other arrangements) of motor vehicles not owned by them, in the furnishing of transportation of property, was announced as next in order.

Mr. ERVIN. Let the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (H. R. 6857) to authorize the Administrator of the General Services Administration to convey certain land to the city of Milwaukee, Wis., was announced as next in order.

Mr. BIBLE. I ask that the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

SHIH MING WANG

The bill (S. 31) for the relief of Shih Ming Wang was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Shih Ming Wang shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

OTTILIE HITZLBERGER LACHELT

The bill (S. 83) for the relief of Ottilie Hitzlberger Lachelt was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, notwithstanding the provisions of section 212 (a) (9) of the Immigration and Nationality Act, Ottilie Hitzlberger Lachelt may be admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of such act: *Provided*, That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice has knowledge prior to the enactment of this act.

MRS. MARIA MICHELA FEDERICO

The bill (S. 133) for the relief of Mrs. Maria Michela Federico was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, notwithstanding the provisions of section 212 (a) (9) of the Immigration and Nationality Act, Mrs. Maria Michela Federico may be admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of such act: *Provided*, That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice has knowledge prior to the enactment of this act.

ELLEN KJOSNES AND UNNI KJOSNES

The bill (S. 267) for the relief of Ellen Kjosnes and Unni Kjosnes was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Ellen Kjosnes and Unni Kjosnes shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct the required numbers from the appropriate quota or quotas for the first year that such quota or quotas are available.

JEAN PFEIFER

The bill (S. 277) for the relief of Jean Pfeifer was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, in the administration of the Social Security Act, as amended, any application which may be filed under section 202 (i) of such act by Jean Pfeifer within 6 months after the date of enactment of this act for payment of a lump-sum death payment with respect to the death of her son, John S. Inches (501–05–7167), who died on August 7, 1951, shall be acted upon as if such application had been filed, and any expenses incurred by the said Jean Pfeifer for the burial of the said John S. Inches had been paid, within 2 years after the date of death of the said John S. Inches.

CHIH SHING HWA

The bill (S. 318) for the relief of Chih Shing Hwa was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Chih Shing Hwa shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

GIUSEPPE AIRO-FARULLA AND JOSEPH ANTOINE AIRO-FARULLA

The bill (S. 499) for the relief of Giuseppe Airo-Farulla and Joseph Antoine Airo-Farulla was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Giuseppe Airo-Farulla and Joseph Antoine Airo-Farulla shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct the required numbers from the appropriate quota or quotas for the first year that such quota or quotas are available.

VICTORIANA AREITIO BERINCUA

The bill (S. 508) for the relief of Victoriana Areitio Berincua was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Victoriana Areitio Berincua shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

ANTHONY AGUSTINO SCRIVANICH

The bill (S. 551) for the relief of Anthony Agustino Scrivanich was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Anthony Agustino Scrivanich shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

ERICH ANTON HELFERT

The bill (S. 897) for the relief of Erich Anton Helfert was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Erich Anton Helfert shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

EUGENE ALEXANDER FIGUEIREDO

The bill (S. 993) for the relief of Eugene Alexander Figueiredo was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted etc., That, for the purposes of the Immigration and Nationality Act, Eugene Alexander Figueiredo shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

KATHLEEN SCHRATER

The bill (S. 1009) for the relief of Kathleen Schrater was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Kathleen Schrater shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee.

CHUNG HERP YOUN

The Senate proceeded to consider the bill (S. 1037) for the relief of Chung Herp Youn, which had been reported from the Committee on the Judiciary, with an amendment, in line 7, after the word "fee", to strike out "Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available", so as to make the bill read:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Chung Herp Youn shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

DOMENICO LEONARDI AND HIS WIFE, CLARA CORRADI LEONARDI

The bill (S. 1055) for the relief of Domenico Leonardi and his wife, Clara Corradi Leonardi, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Domenico Leonardi and his wife, Clara Corradi Leonardi, shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct the required numbers from the appropriate quota or quotas for the first year that such quota or quotas are available.

MOOSA EBRAHIMIAN

The bill (S. 1193) for the relief of Moosa Ebrahimian was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Moosa Ebrahimian shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

PINGFONG NGO CHUNG AND PEARL WAH CHUNG

The bill (S. 1375) for the relief of Pingfong Ngo Chung and Pearl Wah Chung was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Pingfong Ngo Chung and Pearl Wah Chung shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct two numbers from the appropriate quota for the first year that such quota is available.

SUMIKO ARIUMI BILSON

The Senate proceeded to consider the bill (S. 1616) for the relief of Sumiko Ariumi Bilson, which had been reported from the Committee on the Judiciary, with an amendment, in line 6, after the word "natural-born", to insert "minor", so as to make the bill read:

Be it enacted, etc., That, for the purposes of sections 101 (a) (27) (A) and 205 of the Immigration and Nationality Act, the minor child, Sumiko Ariumi Bilson, shall be held and considered to be the natural-born minor alien child of Maj. John G. Bilson, a citizen of the United States.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

PETER B. VARDY AND HIS WIFE LILIAN M. VARDY

The bill (S. 1629) for the relief of Peter B. Vardy and his wife Lilian M. Vardy was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Peter B. Vardy and his wife, Lilian M. Vardy, shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct the required numbers from the appropriate quota or quotas for the first year that such quota or quotas are available.

FELISA HO (NEE CHANG-KUON)

The bill (S. 1651) for the relief of Felisa Ho (nee Chang-Kuon) was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Felisa Ho (nee Chang-Kuon) shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

BRUNO ROMEO

The bill (S. 1672) for the relief of Bruno Romeo was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That for the purposes of the Immigration and Nationality Act, Bruno Romeo shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

MOHAMMED AKBAR ASHRAF

The bill (S. 1686) for the relief of Mohammed Akbar Ashraf was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Mohammed Akbar Ashraf shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the

proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

BALBINO ACUSIN ARIASA

The bill (S. 1793) for the relief of Balbino Acusin Ariasa was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Balbino Acusin Ariasa shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

ADEL KAMAL

The bill (S. 1827) for the relief of Adel Kamal was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Imigration and Nationality Act, Adel Kamal shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

CARMEN AGUADO

The bill (S. 2020) for the relief of Carmen Aguado was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Carmen Aguado shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

MRS. ELENA APOSTOLESCU BUSTIUC

The bill (H. R. 938) for the relief of Mrs. Elena Apostolescu Bustiuc was considered, ordered to a third reading, read the third time, and passed.

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Mrs. Elena Apostolescu Bustiuc shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

Passed the House of Representatives July 5, 1955.

Attest:

RALPH R. ROBERTS, *Clerk.*

MR. AND MRS. DERFERY WILLIAM WRIGHT

The bill (H. R. 1015) for the relief of Mr. and Mrs. Derfery William Wright was announced as next in order.

Mr. PURTELL. Mr. President, reserving the right to object—although I shall not object—since the bill, if enacted, might be considered as setting a precedent, may we have an explanation of it?

Mr. EASTLAND. Mr. President, this bill would pay to the parents of a soldier first reported as missing in action, and later determined to have been killed in action on December 17, 1944, the amount which the Administrator of Veterans' Affairs certifies would have been payable to them as death compensation for the period from February 1948 to November 10, 1952, the date on which they began receiving such death compensation.

The Veterans' Administration states that a letter dated April 27, 1945, was addressed to the claimants at Amherst, Va., advising that under existing law, payment of death compensation to dependent parents of persons who die in service in line of duty is authorized, and further advising that if they so desired, they could file a claim on a form which they enclosed. No reply was received to that letter, and the parents maintain that they never received any such letter.

Under the law, an award of death compensation for dependency, if claimed within 1 year from the soldier's death, could be made retroactive, so that payments would begin from the date of death. If such claim is not made within 1 year, but is thereafter made, the payments begin only from the time of application therefor.

Late in 1947, the parents were notified that their son's body was being returned to the States; and they were sent certain papers to be filled out and signed. Needing assistance to fill out the papers, they contacted the director of the area office of the division of war veterans claims, an agency of the State of Virginia, who assisted them with the application, and inquired if they had filed an application for dependency pension on account of their son's death in action. The parents say that this was the first information they had that there was a possibility of receiving dependency compensation, as they thought their son's death stopped any dependency compensation they had been receiving during his lifetime. They thereupon filed for such compensation, but again with the State agency, and were later advised that they were not so entitled.

It was not until 1952, on the occasion of the death of a nephew in Korea, that they realized they had filed with the wrong agency. Since that time they have been receiving the benefits. The bill, as originally introduced, provided for payment for the period beginning December 17, 1944, the date of the death of their son, but was amended in the House so as to have the payment date from February 1948, when they first asserted this claim.

The committee has allowed attorney fees in this case on valid representations that the attorney has expended much time and effort before various agencies to secure the relief sought.

Mr. PURTELL. Mr. President, I wish to thank the distinguished Senator from Mississippi for his most satisfactory explanation.

I offer no objection at all to the bill.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill (H. R. 1015) was considered, ordered to a third reading, read the third time, and passed.

ANTONIO ANDREA CHITATO

The bill (H. R. 1022) for the relief of Antonio Andrea Chitato was considered, ordered to a third reading, read the third time, and passed.

ORA L. POWERS

The bill (H. R. 1145) for the relief of Ora L. Powers was considered, ordered to a third reading, read the third time, and passed.

BALDOMERO R. GARCIA AND OTHERS

The bill (H. R. 1183) for the relief of Baldomero R. Garcia, Teresa Garcia y Braganza, Francisco Garcia, Teresita Garcia, and Eduardo Garcia was considered, ordered to a third reading, read the third time, and passed.

ESTATE OF MRS. MARGARET A. SWIFT

The bill (H. R. 1219) for the relief of the estate of Mrs. Margaret A. Swift was considered, ordered to a third reading, read the third time, and passed.

BILL PASSED OVER

The bill (H. R. 1667) for the relief of Lieselotte Boehme was announced as next in order.

Mr. ERVIN. Mr. President, pursuant to a request made of me, I ask that House bill 1667, Calendar No. 1347, be passed over.

The PRESIDING OFFICER. The bill will be passed over.

JOHANNA JURESIC GRGURICH

The bill (H. R. 1752) for the relief of Johanna Juresic Grgurich was considered, ordered to a third reading, read the third time, and passed.

JEFFERSON AND PLAQUEMINES DRAINAGE DISTRICT

The bill (H. R. 1768) for the relief of the Jefferson and Plaquemines Drainage District and certain persons whose properties abut on the Federal Government's right-of-way for Harvey Canal in Louisiana was considered, ordered to a third reading, read the third time, and passed.

BLANKA GOLDSTEIN

The bill (H. R. 1910) for the relief of Blanka Goldstein was considered, ordered to a third reading, read the third time, and passed.

DER CHUCK YEE AND WU MEI ON

The bill (H. R. 2273) for the relief of Der Chuck Yee and Wu Mei On was considered, ordered to a third reading, read the third time, and passed.

CONSUELO CALDERON DE VILLARREAL

The bill (H. R. 2278) for the relief of Consuelo Calderon de Villarreal was considered, ordered to a third reading, read the third time, and passed.

SIMONE GILLILAND

The bill (H. R. 2296) for the relief of Simone Gilliland was considered, ordered to a third reading, read the third time, and passed.

MARINO AND GISELDA PRONI

The bill (H. R. 2466) for the relief of Marino and Giselda Proni was considered, ordered to a third reading, read the third time, and passed.

IVO AND ELIA MONARI

The bill (H. R. 2467) for the relief of Ivo and Elia Monari was considered, ordered to a third reading, read the third time, and passed.

BILL INDEFINITELY POSTPONED

The bill (S. 185) for the relief of Mrs. Agnes Thompson (nee Mannhardt) was announced as next in order.

Mr. EASTLAND. Mr. President, I ask that Senate bill 185, Calendar No. 1356, be indefinitely postponed, inasmuch as the beneficiary is at present a legal resident, and the bill is no longer necessary.

The PRESIDING OFFICER. Without objection, Senate bill 185 will be indefinitely postponed.

ELI E. HOOD

The Senate proceeded to consider the bill (S. 419) for the relief of Eli E. Hood, which had been reported from the Committee on the Judiciary, with an amendment, on page 2, line 8, after the word "sum," to insert a colon and "*Provided*, That no part of the amount appropriated in this act shall be paid, or delivered to, or received by, any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.", so as to make the bill read:

Be it enacted, etc., That (a Eli E. Hood, 5977927, chief boiler tender, United States Navy (retired), is hereby relieved of all liability to the United States for repayment of the whole or any part of the sum of $2,011.24 representing the overpayment of retired pay received by him during the period of June 1942 through June 1954, such payment resulting from the erroneous crediting, through no fault of his own, of service as an enlisted member of the United States Coast and Geodetic Survey, subsequently determined to have been unauthorized in the computation of his retired pay.

(b) The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the said Eli E. Hood an amount equal to such sums as may have been paid by him or deducted from his retired pay, in repayment of such erroneously paid sum: *Provided*, That no part of the amount appropriated in this act shall be paid, or delivered to, or received by, any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

TIBOR HORVATH

The Senate proceeded to consider the bill (S. 1067) for the relief of Tibor Horvath, which had been reported from the Committee on the Judiciary, with an amendment, on page 2, line 4, after the word "act", to strike out "in excess of 10 percent thereof", so as to make the bill read:

Be it enacted, etc., That the Secretary of the Treasury is authorized and directed to pay out of any money in the Treasury not otherwise appropriated, to Tibor Horvath, the sum of $1,000, in full satisfaction of his claim against the United States for refund of the amount of the bonds posted with the Immigration and Naturalization Service of the Department of Justice in the case of Tibor Horvath and his wife, Agnes B. Horvath, and declared breached by such Service when the said Tibor Horvath and Agnes B. Horvath failed to depart in accordance with the terms of such bonds although they were subsequently granted permanent residence in the United States: *Provided*, That no part of the amount appropriated in this act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

HAIM COHEN (HAIM BRAUN)

The Senate proceeded to consider the bill (S. 1182) for the relief of Haim Cohen (Haim Braun), which had been reported from the Committee on the Judiciary, with an amendment, after line 7, to strike out "Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.", so as to make the bill read:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Haim Cohen (Haim Braun) shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

BILL PASSED OVER

The bill (S. 1244) for the relief of Eva Gershbein Rubinstein was announced as next in order.

Mr. BIBLE. I ask that the bill be passed over.

The PRESIDING OFFICER. The bill will be passed over.

PACIFIC MUSIC SUPPLY CO.

The Senate proceeded to consider the bill (H. R. 1146) for the relief of the Pacific Music Supply Co., which had been reported from the Committee on the Judiciary, with an amendment, on page 2, line 3, after the word "act", to strike out "in excess of 10 percent thereof."

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

ALEKSANDRA BORKOWSKI

The Senate proceeded to consider the bill (H. R. 1447) for the relief of Aleksandra Borkowski, which had been reported from the Committee on the Judiciary, with an amendment, on page 2, line 7, after the word "act", to strike out "in excess of 10 percent thereof."

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

SAM H. RAY

The Senate proceeded to consider the bill (H. R. 1637) for the relief of Sam H. Ray, which had been reported from the Committee on the Judiciary, with an amendment, to strike out all after the enacting clause and insert:

That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $5,000 to Sam H. Ray, of Washington, D. C., in full satisfaction of his claim against the United States for injuries he received resulting in the amputation of his right arm following an accident which occurred when he was 8 years of age, while he was working in the laundry at Ute Mountain Indian School at Towaoc, Colo.: *Provided*, That no part of the amount appropriated in this act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

MR. AND MRS. DONALD D. PARRISH

The Senate proceeded to consider the bill (S. 1034) conferring jurisdiction upon the United States District Court for the Eastern District of Michigan to hear, determine, and render judgment upon certain claims of Mr. and Mrs. Donald D. Parrish, which had been reported from the Committee on the Judiciary, with an amendment, to strike out all after the enacting clause and insert:

That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Mr. and Mrs. Donald D. Parrish, of Lansing, Mich., the sum of $5,000, in full settlement of all their claims against the United States arising out of injuries sustained by Mrs. Donald D. Parrish on April 1, 1952, when she was a passenger in a United States Air Force staff car which was involved in an accident with a commercial bus near Florence, Italy: *Provided*, That no part of the amount appropriated in this act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Mr. and Mrs. Donald D. Parrish."

Mr. PURTELL. Mr. President, in connection with Calendar No. 1364, Senate bill 1034, I should like to have the RECORD show that an inquiry was made as to whether or not Mr. or Mrs. Donald Parrish had received any compensation whatever from the people involved in the accident in Italy. I should like to have the RECORD show that the following telegram has been received in the office of the Senator from Michigan [Mr. POTTER]:

Please be advised that Mr. or Mrs. Donald Parrish have never received any money from any source relative to accident in Italy.

ALLISON K. THOMAS.

DETROIT, MICH.

The PRESIDING OFFICER. The clerk will state the next order of business on the calendar.

RENATO NOE AND ANGELA NOE

The Senate proceeded to consider the bill (S. 1062) for the relief of Renato Noe and Angela Noe, which had been reported from the Committee on the Judiciary with an amendment, on page 1, line 4, after the word "and", to strike out "Angela Noe" and insert "Angiola Maria Anna Noe", so as to make the bill read:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Renato Noe and Angiola Maria Anna Noe shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of enactment of this act, upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct the required numbers from the appropriate quota or quotas for the first year that such quota or quotas are available.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended, so as to read: "A bill for the relief of Renato Joe and Angiola Maria Anna Noe."

LIEN CHING CHEN AND DR. ROSE HU CHEN

The Senate proceeded to consider the bill (S. 1183) for the relief of Lien Ching Chen and Dr. Rose Hu Chen, which had been reported from the Committee on the Judiciary, with amendments, on page 1, line 4, after the word "act", to strike out "Lien Ching Chen and"; at the beginning of line 8, to strike out "fees" and insert "fee"; at the beginning of line 9, to strike out "aliens" and insert "alien"; in line 10, after the word "deduct", to strike out "the required numbers" and insert "one number"; in line 11, after the word "quota", to strike out "or quotas"; and on page 2, line 1, after the word "quota", to strike out "or quotas are" and insert "is"; so as to make the bill read:

Be it enacted, etc., That, for the purposes of the Immigration and Nationality Act, Dr. Rose Hu Chen shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended, so as to read: "A bill for the relief of Dr. Rose Hu Chen."

RESOLUTION REFERRED TO COMMITTEE ON RULES AND ADMINISTRATION

The resolution (S. Res. 161) authorizing the Committee on Foreign Relations to employ two temporary additional clerical assistants was announced as next in order.

Mr. ERVIN. Mr. President, I ask that Calendar No. 1371, Senate Resolution 161, be referred to the Committee on Rules and Administration.

The PRESIDING OFFICER. Without objection, it is so ordered.

INCREASE IN FEE FOR PASSPORT APPLICATION

The Senate proceeded to consider the bill (H. R. 5844) to increase the fee for executing an application for a passport from $1 to $3, which had been reported from the Committee on Foreign Relations, with an amendment, on page 1, line 7, after the word "out", to strike out "the fee of $1" and by inserting in lieu thereof "a fee of $3"., and insert in lieu thereof "the retention of" and "of the fee of $1." and by inserting after the word "officials" the following language: to collect and retain the sum of $2 as the fee.

Mr. BIBLE. Mr. President, I offer the amendment to the committee amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment offered by the Senator from Nevada will be stated.

The LEGISLATIVE CLERK. On page 1, line 8, it is proposed to strike out the works "the retention of" and insert the words "the retention by."

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

Mr. BIBLE. Mr. President, I offer an amendment to the title to strike out the words "from $1 to $3," so as to make the title read: "An act to increase the fee for executing an application for a passport."

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Nevada to the title of the bill.

The title was amended accordingly.

RESOLUTIONS REFERRED TO COMMITTEE ON RULES AND ADMINISTRATION

The resolution (S. Res. 162) to investigate matters pertaining to technical assistance and related programs was announced as next in order.

Mr. ERVIN. Mr. President, I ask that Senate Resolution 162 be referred to the Committee on Rules and Administration.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution (S. Res. 163) to investigate certain problems relating to interstate and foreign commerce was announced as next in order.

Mr. BIBLE. Mr. President, I ask that Senator Resolution 163 be referred to the Committee on Rules and Administration.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRINTING OF COPIES OF CERTAIN HEARINGS AND REPORTS OF THE INTERNAL SECURITY SUBCOMMITTEE—CONCURRENT RESOLUTION PASSED OVER

The concurrent resolution (S. Con. Res. 55) to print for the use of the Senate copies of certain hearings and reports of the Internal Security Subcommittee of the Judiciary Committee of the Senate was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

Mr. ELLENDER. Mr. President, I should like to ask a question. Are these copies in addition to the number of copies authorized by law and under the rules?

Mr. GREEN. Yes; they are additional copies. The concurrent resolution pro-

vides for printing additional copies of certain hearings and reports of the Internal Security Subcommittee. The total cost involved is $11,447.57.

Mr. ELLENDER. What period do the hearings cover? Were they hearings held during the previous session?

Mr. GREEN. They were hearings held during the last two Congresses, the 82d and the 83d.

Mr. ELLENDER. How many additional copies would be provided, and why are they necessary?

Mr. GREEN. I have a long detailed report as to just what is involved. There are 12 separate items. I shall be glad to submit the report to the Senator for his inspection.

Mr. ELLENDER. I am wondering why it is necessary to have printed so many additional copies of these hearings. Is there a great demand for them?

Mr. GREEN. Additional copies were needed simply because there was an increased demand, beyond expectations. That was the explanation which was made.

Mr. ELLENDER. Can the Senator tell us how many copies have already been printed of the hearings with respect to which he is now asking for additional copies?

Mr. GREEN. I have not that information.

Mr. ELLENDER. I should like to have it for the RECORD before the concurrent resolution is agreed to. I ask that it be passed over.

Mr. GREEN. I can go through the various items, but I do not have the total. The number of copies requested for the first item is 5,000, at an estimated printing cost of $1,746.01.

With respect to item No. 2, the number of copies requested is 5,000, and the estimated printing cost is $559.76, and so forth.

Mr. ELLENDER. Does what the Senator is now discussing relate to copies of hearings already printed, or additional copies?

Mr. GREEN. It refers to additional copies.

Mr. ELLENDER. The question I am asking is, How many copies of the hearings to which the Senator is now referring were printed previously?

Mr. GREEN. I do not know.

Mr. ELLENDER. I should like to have the RECORD show that information. I ask that the concurrent resolution be passed over.

The PRESIDING OFFICER. The concurrent resolution will be passed over.

WAIVER OF STATE RESIDENCE REQUIREMENTS IN CERTAIN ELECTIONS

The concurrent resolution (H. Con. Res. 94) favoring the waiver of State residence requirements in certain elections was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

Mr. ELLENDER. May we have an explanation of the resolution?

Mr. GREEN. The resolution was agreed to by the House on July 10, 1955. It merely recommends to the several States the consideration of appropriate legislation to enable persons to vote for President and for Vice President after they have moved from one State to another, but have not lived in the second State long enough to qualify under its residence laws for voting. If the States enacted the appropriate legislation, the vote would not be lost.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the concurrent resolution was considered and agreed to, as follows:

Resolved by the House of Representatives (the Senate concurring), That the Congress expresses itself as favoring, and recommends to the several States the consideration of appropriate legislation to enable a person to vote for President and Vice President when such person would be eligible to vote but for the fact that he had moved from one State to another and had not yet fulfilled the residence requiremnts of such State to which he had moved.

The preamble was agreed to.

EXTENSION OF TIME FOR CERTAIN EXPENDITURES BY COMMITTEE ON PUBLIC WORKS

The resolution (S. Res. 159) extending the time for certain expenditures by the Committee on Public Works was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

Mr. ELLENDER. May we have an explanation of it?

Mr. ERVIN. Mr. President, during the last session of Congress the Public Works Committee was authorized to spend $100,000 in connection with highway, river, harbor, power, and flood control project surveys. The committee did not spend the money. The resolution merely provides that the committee shall have the same amount of money for the same purpose during this year.

Mr. ELLENDER. As I remember, when the money was asked for, the statement was made that the request was an urgent one and that the money should be appropriated for the use of the committee. What is the reason for reappropriating the money?

Mr. ERVIN. I am afraid I cannot give the answer to that question, except to say that the committee did not spend the money.

Mr. ELLENDER. Mr. President, I ask that the resolution go over.

The PRESIDING OFFICER. The resolution will be passed over.

EMPLOYMENT OF TEMPORARY PERSONNEL BY THE COMMITTEE ON RULES AND ADMINISTRATION

The resolution (S. Res. 176) authorizing the Committee on Rules and Administration to make expenditures and employ temporary personnel was announced as next in order.

Mr. ELLENDER. Mr. President, I should like to have an explanation of the resolution.

Mr. GREEN. The resolution provides for the appropriation of $50,000 to the Subcommittee on Privileges and Elections for expenditure by that subcommittee between February 1, 1956, and January 31, 1957. It is a routine resolution, which provides money for the continuation of the subcommittee's work during 1956, an election year.

Page 2 of the accompanying report sets forth the proposed budget.

Mr. ELLENDER. How much money was spent during the last election year for the same purpose?

Mr. GREEN. During the last election year?

Mr. ELLENDER. Yes.

Mr. GREEN. Does the Senator mean 2 years ago?

Mr. ELLENDER. How much did the subcommittee spend last year? The subcommittee is a continuing subcommittee. Although last year was not an election year, I assume the subcommittee was in operation.

Mr. GREEN. That is correct. The subcommittee had $50,000, I believe.

Mr. ELLENDER. Can the Senator from Rhode Island tell us what the subcommittee has been doing to occupy itself to spend $50,000 during a year in which no election was held?

Mr. GREEN. The subcommittee did not spend the money. It was available, in case it was necessary to spend it.

Mr. ELLENDER. Does not the subcommittee investigate elections?

Mr. GREEN. It does.

Mr. ELLENDER. How is that subcommittee sustained? Where does it get its funds?

Mr. GREEN. It looks to appropriations like this being made by the Senate.

Mr. ELLENDER. The Senator from Rhode Island said the subcommittee obtained $50,000 last year.

Mr. GREEN. That was for the year 1954–55.

Mr. ELLENDER. Did the subcommittee spend that money?

Mr. GREEN. It did not.

Mr. ELLENDER. Mr. President, I ask that the resolution go over.

The PRESIDING OFFICER. The resolution will be passed over.

GRATUITY TO MYRTLE E. CARRICO

The resolution (S. Res. 177) to pay a gratuity to Myrtle E. Carrico was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Myrtle E. Carrico, widow of Everett C. Carrico, Sr., an employee at the time of his death, a sum equal to 1 year's compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

CHRISTINE HIMES AND GEORG B. TENNYSON

The resolution (S. Res. 178) to pay a gratuity to Christine Himes and Georg B. Tennyson was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate,

jointly to Christine Himes, daughter, and Georg B. Tennyson, son, of Emily I. Tennyson, an employee of the Senate at the time of her death, a sum equal to 11 months' compensation at the rate she was receiving by law at the time of her death, said sum to be considered inclusive of funeral expenses and all other allowances.

PRINTING OF ADDITIONAL COPIES OF HEARINGS FOR THE JOINT COMMITTEE ON THE ECONOMIC REPORT

The concurrent resolution (S. Con. Res. 60) authorizing the printing of additional copies of the hearings on automation and technological change for the use of the Committee on the Economic Report, was announced as next in order.

Mr. ELLENDER. Mr. President, may we have an explanation of the concurrent resolution? How many copies of the hearings had been previously printed?

Mr. GREEN. The resolution calls for the printing of a normal number of additional copies.

Mr. ELLENDER. How many were previously printed? Was only the normal number printed?

Mr. GREEN. Only the normal number was printed.

Mr. ELLENDER. The normal number of copies, as provided for under the rules? Is that correct?

Mr. GREEN. That is correct. The Senator from Illinois [Mr. DOUGLAS] perhaps can give more detailed information on this subject.

Mr. DOUGLAS. Originally, 1,580 copies were printed. Virtually all those copies have been disposed of. In addition, 1,000 copies have been sold. We have on hand applications for approximately 500 additional copies from libraries and scholars, who we believe are not financially able to purchase them.

Mr. ELLENDER. Are the additional copies asked for in the resolution to be sold?

Mr. DOUGLAS. No; they are for free distribution.

Mr. ELLENDER. For free distribution?

Mr. DOUGLAS. Yes.

Mr. ELLENDER. The entire 1,000 additional copies?

Mr. DOUGLAS. That is correct.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

There being no objection, the concurrent resolution was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That there be printed for the use of the Joint Committee on the Economic Report 1,000 additional copies of the hearings on automation and technological change, held before said joint committee during the 84th Congress, 1st session.

PRINTING OF ADDITIONAL COPIES OF A CERTAIN DOCUMENT FOR THE JOINT COMMITTEE ON THE ECONOMIC REPORT

The concurrent resolution (S. Con. Res. 61) authorizing the printing of additional copies of the joint committee print, entitled "Federal Tax Policy for Economic Growth and Stability" for use of the Joint Committee on the Economic Report, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

Mr. ELLENDER. Mr. President, may we have an explanation of the concurrent resolution?

Mr. GREEN. I can give the same answer to the Senator that I gave in the case of the previous resolution.

Mr. ELLENDER. The resolution provides for an additional thousand copies?

Mr. GREEN. That is correct.

Mr. ELLENDER. The only copies previously printed were those which were authorized under the rule?

Mr. GREEN. That is correct.

Mr. ELLENDER. One thousand five hundred copies were originally printed. Is that correct?

Mr. GREEN. That is correct. The estimated cost of the additional copies is $2,830.

Mr. ELLENDER. However, the number printed previously was the number authorized under the rules, namely, 1,500 copies?

Mr. GREEN. That is correct.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

There being no objection, the Senate proceeded to consider the concurrent resolution, which had been reported from the Committee on Rules and Administration with an amendment in line 3, after the word "the", to strike out "Eoconomic" and insert "Economic", so as to make the concurrent resolution read:

Resolved by the Senate (the House of Representatives concurring), That there be printed for the use of the Joint Committee on the Economic Report 1,000 additional copies of the joint committee print, entitled "Federal Tax Policy for Economic Growth and Stability."

The amendment was agreed to.

The concurrent resolution, as amended, was agreed to.

PRINTING AS A DOCUMENT OF PAMPHLET ENTITLED "A HANDBOOK FOR AMERICANS"

The concurrent resolution (S. Con. Res. 62) to print as a document a pamphlet entitled "A Handbook for Americans," was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

Mr. ELLENDER. Mr. President, I should like to inquire who prepared the document.

Mr. GREEN. The Subcommittee on Internal Security of the Committee on the Judiciary.

Mr. ELLENDER. Have any copies of the handbook been printed?

Mr. GREEN. Only the normal number of copies.

Mr. ELLENDER. How many copies would be printed under the resolution?

Mr. GREEN. Seventy-five thousand copies.

Mr. ELLENDER. At what cost?

Mr. GREEN. At a cost of $5,963.24.

Mr. ELLENDER. That is the cost for the entire number of copies requested?

Mr. GREEN. That is correct.

Mr. ELLENDER. Is there a very large demand for the handbook?

Mr. GREEN. Yes; there is a very large demand for it.

Mr. ELLENDER. How large a document is it? Does the Senator have a copy of it?

Mr. GREEN. I am told it consists of about 50 pages.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

There being no objection, the Senate proceeded to consider the concurrent resolution, which had been reported from the Committee on Rules and Administration with an amendment in line 6, after the word "printed", to strike out "fifty" and insert "seventy-five", so as to make the concurrent resolution read:

Resolved by the Senate (the House of Representatives concurring) That the pamphlet entitled "A Handbook for Americans," prepared for the use of the Subcommittee on Internal Security of the Senate Committee on the Judiciary, be printed as a Senate document.

SEC. 2. There shall be printed 75,000 additional copies of such Senate document for the use of the Subcommittee on Internal Security of the Senate Committee on the Judiciary.

The amendment was agreed to.

The concurrent resolution, as amended, was agreed to.

PRINTING OF A DOCUMENT ENTITLED "HOW TO OBTAIN BIRTH CERTIFICATES"

The resolution (S. Res. 144) to print as a Senate document a revised edition of a document entitled "How to Obtain Birth Certificates," was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

Mr. ELLENDER. May we have an explanation of the resolution? I should like to know who prepared the document.

Mr. GREEN. The Library of Congress prepared it. It contains information which is constantly being asked for. The request is to print a revised edition of the booklet, which explains how to obtain a birth certificate. In the interest of economy, I will say the Senator from Louisiana that the estimated cost is only $361.59.

Mr. ELLENDER. How many copies were previously printed, and how long ago was a previous printing of the document had?

Mr. GREEN. Previously it was printed as House Document No. 821, in the 77th Congress. The document was prepared by the American Law Division of the Legislative Reference Service of the Library of Congress. It is to be printed as a Senate document.

Mr. ELLENDER. Is it usual for the Library of Congress to make such requests of Congress?

Mr. GREEN. I understand it is.

Mr. ELLENDER. Can the Senator cite any other instances when documents of this nature were printed at the re-

quest of the Library of Congress or of any department of the Government?

Mr. GREEN. The information contained in the document is constantly requested, and is to the advantage of the various agencies of the Government, and it saves them a great deal of trouble to have the Library of Congress make such information available, so that it may be handed to persons who seek for that kind of information, instead of constantly referring such inquiries to other departments of the Government.

Mr. ELLENDER. Why does not the Library of Congress ask for an appropriation to cover the cost involved? Why should such a request come from the Committee on Rules and Administration?

Mr. GREEN. Our distinguished colleague, the Senator from Illinois [Mr. DIRKSEN] was particularly interested in this subject.

Mr. ELLENDER. Mr. President, I ask that the resolution go over.

The PRESIDING OFFICER. The concurrent resolution will be passed over.

DEDUCTIONS FROM GROSS INCOME OF CONTRIBUTIONS TO EMPLOYEE TRUSTS

The bill (H. R. 4582) to amend the Internal Revenue Code of 1954 with respect to deductions from gross income of amounts contributed to employee trusts was considered, ordered to a third reading, read the third time, and passed.

PERIOD OF LIMITATION IN CERTAIN CASES FOR FILING CLAIMS FOR CREDIT OR REFUND OF INCOME TAXES

The bill (H. R. 5428) to amend the Internal Revenue Code of 1939 with respect to the period of limitation for filing claims by certain transferees and fiduciaries for credit or refund of income taxes was considered, ordered to a third reading, read the third time, and passed.

EARNED INCOME LIMITATION ON RETIREMENT INCOME

The bill (H. R. 7036) to amend section 37 of the Internal Revenue Code of 1954 with respect to the earned income limitation on retirement income was announced as next in order.

Mr. ELLENDER. Mr. President, reserving the right to object—and I shall not object—I should like to address a question to my good friend, the Senator from Rhode Island [Mr. GREEN], the chairman of the Committee on Rules and Administration.

As the Senator knows, each year I have been making a feeble effort to try to ascertain how the money we appropriate for various special committees is spent by them. I have tried on 2 or 3 occasions to obtain detailed accounts of how the money is expended by some of the committees. Whenever I try to obtain such information from the Financial Clerk of the Senate, I am advised that the information cannot be given out. I wonder why that is. Can the Senator from Rhode Island give me an explanation of it?

I should like to have the chairman of the Committee on Rules and Administration spend a little time in looking into the manner in which funds appropriated for special committees are spent, for instance, with reference to travel expenses, who takes the trips, what is bought on such trips, and so forth. I have tried to obtain such information in the past, but have been unsuccessful. I am wondering if the committee itself will not go into the matter and obtain from whoever is in charge such information as may be helpful.

Mr. GREEN. In the first place, let me say that I think the Senator is unduly modest in describing his efforts as feeble. It seems to me that his efforts have been very vigorous.

Mr. ELLENDER. I thank the Senator. I meant that I have not been as successful as I should like to be.

Mr. GREEN. I do not know how we could furnish the information unless the Senator would submit some sort of a questionnaire applicable to all cases.

Mr. ELLENDER. I do not want to delay resolutions when they come before the Senate, but if I cannot get the necessary information with reference to them, they will certainly be delayed.

Mr. GREEN. I think the Senator is entitled to all the information he asks for, but no one can anticipate what the questions will be. If the Senator will let us have his questions when a resolution is submitted and referred to our committee, I am sure we shall make every effort to obtain the information.

Mr. ELLENDER. The Senate has had before it resolutions to continue many of the special committees. They have been busy for quite some time. I should like to have a detailed statement as to how the money was spent, how many persons were employed, how much they were paid, and, if they traveled, I should like to have a detailed statement of how the travel expenses were paid, and to whom, and who went on the trips. The Senate should be entitled to that information.

Mr. GREEN. I quite agree with the Senator.

Mr. ELLENDER. If the committee will adopt a resolution giving authority to obtain such information, I can assure the Senator that I shall not insist if the committee does not have the time to look into the matter.

Mr. GREEN. I think the Senator would be of great help to the committee if he would let us have a list of the questions which he thinks it would be desirable to have answered.

Mr. ELLENDER. I have stated the sum and substance of the information.

Mr. GREEN. I am very much afraid that if information is given simply with reference to those questions, other questions would be asked about what had been done by previous Congresses and how much would be asked by future Congresses——

Mr. ELLENDER. I am not going to inquire into previous Congresses. Let us know how the money we appropriated last year was spent. I think Senators are entitled to that information.

Mr. GREEN. They are.

Mr. ELLENDER. I am not going back to the 77th Congress. All I am asking is that the committee look into the matter before it makes its report.

Mr. GREEN. I shall be very glad to do so. As I said before, I think the Senator would be of great help to us if he would submit a questionnaire which would satisfy the situation.

Mr. ELLENDER. I hope that will be done before any of the resolutions now pending are reported to the Senate.

The PRESIDING OFFICER (Mr. KENNEDY in the chair). Is there objection to the present consideration of the bill?

There being no objection, the bill (H. R. 7036) to amend section 37 of the Internal Revenue Code of 1954 with respect to the earned income limitation on retirement income was considered, ordered to a third reading, read the third time, and passed.

ALLOWANCE OF CREDITS FOR DIVIDENDS RECEIVED AND FOR DIVIDENDS PAID

The bill (H. R. 7282) relating to the allowance of the credits for dividends received, for dividends paid, and for a Western Hemisphere trade corporation in computing the alternative tax of a corporation with respect to its capital gains was considered, ordered to a third reading, read the third time, and passed.

APPLICATION OF DOCUMENTARY STAMP TAX

The bill (H. R. 7364) relating to the application of the documentary stamp tax to transfers of certain obligations paid for in installments was considered, ordered to a third reading, read the third time, and passed.

The PRESIDING OFFICER. That concludes the call of the calendar.

ORDER FOR RECESS

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when the Senate concludes its business today, it take a recess until tomorrow at 12 o'clock noon.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Chair lays before the Senate the unfinished business.

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call may be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MONRONEY. Mr. President, I sincerely believe that this is one of the

most important bills to be considered by this Congress. It is important, not only for those who deal in gas, whether producer, transporter or distributor. It is important to the 25 million households who now depend on gas. It is important to the 9 million households who hope to get gas by 1958.

In considering this bill every Senator is concerned with two principal issues—

First. The effect of this legislation on increasing the supply of gas moving into interstate commerce to supply these 34 million present and prospective customers; and

Second. The effect upon the consumer's price.

After hearing all sides of this question, if we cannot prove beyond any reasonable doubt that this bill will protect not only the present, but future supplies of gas, and will at the same time through its regulatory provisions prevent unjustifiable increases in consumer price for their gas, then you should vote against the bill.

To begin with, this bill has suffered from a vast amount of misunderstanding. This is due principally to a very unfriendly press, which I sincerely feel has not bothered to get both sides of the story. It has been the victim of that old adage "give a dog a bad name."

An old managing editor of mine used to have a big sign in the city room which read: "Every story has two sides; unless you get both sides, it's only half a story."

For that reason, I will undertake, as best I can, backed by figures and statistics which have been checked and rechecked by my own staff and by myself, to show the reasons why this bill is here. I will show why I believe this bill must pass if the great convenience of natural gas as a household fuel is to be made available at reasonable rates to present and future millions who desire it.

There are some widely advertised and widely publicized misconceptions of this bill. The first great press error is that the Fulbright bill will free the producers of regulation. Every paper—almost every paper, that is—that I have read writes as though the gas industry grew up under utility regulation and that this bill will terminate what heretofore is presumed to be effective regulation.

As a matter of historical fact, since the first use of gas at Fredonia, N. Y., in 1824 when hollow logs carried natural gas from a nearby reservoir to an inn and public buildings, the production of natural gas has been under only the regulation of price set by supply and demand. It grew from this humble beginning to become the sixth largest industry in the United States, with the production of gas entirely under the system of free enterprise.

It was not until a divided opinion by the Supreme Court in July 1954 that production of natural gas was declared to be subject to price regulation as a utility at the point of sale to the interstate pipeline. This was by a 5-to-3 decision, with Justice Jackson not participating because of illness. Judging from his previous opinion, had he been able to be present the Court would have divided 5 to 4.

Had he been present, judging from his previous opinions, he would have joined Justices Douglas, Burton, and Clark in dissenting.

Consequently, the repeated effort in finest Madison Avenue style to state that this bill "will free" the gas producer from all regulation is not in line with the facts.

Neither is it in line with the facts to intentionally omit reference to any of the very effective regulatory provisions contained in the Fulbright bill to prevent unreasonable price increases. The greater part of the work on the bill by our committee and its corresponding committee of the House was to provide an effective and workable regulation against unreasonable price increases. We wanted to protect the consumer, but at the same time give him a workable, instead of a completely unworkable and chaotic system which the bare Supreme Court divided opinion would create.

As proof of the unworkability of the Supreme Court's legislative gambit, the Federal Power Commission is hopelessly bogged down in paperwork, and will be bogged down for years to come, without ever arriving at any workable formula by which they can carry out the Supreme Court's new law. The testimony by the FPC has been in favor of the system of regulation provided for in this bill, and against the chaotic utility regulation provided for by the Court.

Likewise the findings of the President's Intercabinet Committee on Energy Supplies and Resources Policy arrived at the same conclusion.

This bill, I say with all the sincere conviction a man can have, is the best system for preventing unreasonable price increases. It is fair and gives protection to both the producers and the consumers.

Another well publicized—and equally fallacious—claim is that this bill will cost the consumers $800 million a year. The implication — and the one intended—is that it will cost household consumers this much. According to the Bureau of Mines, the producers' total receipts from the sale of gas which went to household consumers—both interstate and intrastate—was $191 million. This ridiculous $800 million figure pulled out of thin air would thus represent a 400 percent increase in revenues to the producer—or a price of 40 cents at the well head. It is absurd.

Under historic free bargaining in the sale of natural gas by the producer to the pipeline, the price of gas of 9.5 cents per thousand cubic feet in 1926 fell to 4.5 cents per thousand cubic feet in 1940. This was due to increasing reserves which were discovered but for which no interstate market then existed. This supply was so great that a prodigal waste of this valuable natural resource occurred, as trillions of cubic feet of gas were blown into the air and only the natural gasoline was extracted from it. I have heard it estimated that enough gas has blown into the air, because no interstate pipeline was available to transport it, to have heated New York and Chicago for 10 entire years.

To stop such a prodigal waste, the States, through their regulatory bodies and through their conservation commissions, required, at considerable expense to the producers, that there be constructed systems of gathering lines and other equipment to make possible the reclamation of gas, rather than its being blown into the air, so that it could enter interstate commerce.

As interstate commerce lines were opened the price rose from the distress price of 4½ cents a thousand cubic feet in 1940 to 10 cents a thousand cubic feet by 1954.

Mr. President, bear in mind that 9½ cents in 1926 was a reasonable value for the gas, and only because there was no market, and there was no way to transport it in interstate commerce, did it fall to the 4½-cents price in 1940, which was the all-time low.

We talk about 30-cent wheat, and nickel cotton, and 5-cent hogs, and I most certainly believe that no one would want to take the farmers back to those days, in which there was widespread distress in this country. It was during those years that the price of gas reached 4½ cents a cubic foot, and that is the base point on which the distributors and others are trying to convict the gas producer of profiteering. This is the first time since 1926 that the price has exceeded the 9.5-cent price that existed in that year—and then the net increase was only one-half cent. All of these figures are from the Bureau of Mines.

Even without the effective regulation provided for in the pending bill, it is the wildest possible misrepresentation to conceive of the $800 million household increase so widely bandied about in the Nation's most respected press.

I think I can show, before I conclude my statement, that behind a respectable facade alleging strong consumer opposition to this bill in the interest of consumers there have been at work the best public relations men of Madison Avenue in a plan designed to shift the blame for high consumer rates on the back of the producer.

Is it not strange that for the many, many years that legislation of this type has been discussed, we find not one mention of the gas distributing utilities, or their part in the consumer rate structure? It is strange to me that such great newspapers as the Washington Post, the Evening Star, the New York Times, the St. Louis Post-Dispatch, and others have accepted this credo without investigating the position of the gas distributing utilities.

Would not my colleagues think that the sharp editorial writers who search for facts might have asked a question or two of these utilities? Had they looked up the consumers rates in their own cities and compared them with the producers price at the wellhead, they would have discovered the 10 to 1 spread for delivery from the field to the burner tip.

Had they compared the city delivery cost for their cities against other similar cities such as Denver, Kansas City, or Cincinnati, they would have begun to ask some questions.

Had they then checked in their morgue in Poor's and Moody's financial statistics, they would have readily observed the phenomenal increase in dividends since

natural gas was introduced into their systems.

Had they done these things, I sincerely believe the editorial positions of many great newspapers would have been different. The tragedy of their failure to inform themselves is that consumer groups and organizations that rely on them for basic information have been unintentionally misled.

Thus the well of public information—cut off from its source of facts—has been supplied by the stream of propaganda from Madison Avenue.

The consumers' gas bill, like ancient Gaul, is divided into three parts. One is the price the producer gets for his gas. The second is the transportation cost from the field across many States by the long interstate pipeline to the point of its sale at the city gate. This is the point where, for a fixed amount, the interstate pipeline turns it over to the gas utilities for city distribution.

The third part is the charge by the gas utility for delivery from the city gate to the consumer's burner tip—three clearly identifiable stages going to make up the ultimate charge for gas delivered to the consumer's burner tip, as that charge appears on the bill the consumer receives.

On one thing we can agree with the critics of the Fulbright bill; namely, that the producer's price is of great importance in the discussion of this case. We wish we could put it in neon lights atop the office buildings of the gas utility companies across the Nation.

In 1954, the average cost of natural gas to a residential user on a nationwide basis, as reported by the Bureau of Mines, was 89.3 cents per thousand cubic feet. Of this amount, the producer received 10.1 cents per thousand cubic feet. The cost of the raw gas thus represented only 11 cents out of every consumer's dollar paid for delivered gas.

But, Mr. President, this is the average. States such as Kansas, with an average consumer's rate of 50 cents; and Oklahoma, with a rate of 60 cents; and Georgia, with a rate of 73 cents; and Arkansas, with a rate of 55 cents, help bring down the greatly higher rates, such as that for Washington, D. C.-Maryland, $1.40; New York, $1.47; Virginia, $1.52; New Jersey, $2.02; Massachusetts, $2.31; and Connecticut, $2.53.

Generally, the protest against this bill has come, not from the States where good regulation and efficient companies have held down the city delivery costs, but largely and loudly from the cities with the greatest spread between the price at the city gate and the selling price to the consumer. Later in my speech I shall detail the high city-delivery cost. The city-delivery cost ranges from $1.05 in Richmond, Va.; $1.05 in New Haven, Conn.; and $1.42 in Newark, N. J.; to $2.07 in New York City. Those are the charges merely for city delivery, for delivery from the city gate to the consumer's burner tip.

The gas can be produced from 5,000 feet underground in west Texas, and can be transported by interstate pipeline all the way from the point of production in Texas to the gate of New York City, for a total charge of about 35 cents; but the charge for taking the natural gas from the city gate to the consumer's burner tip in New York City, is $2.07.

Mr. President, would you not suppose, with all the experts who are writing "Who Dunnit's," that someone—at least 1 or 2 of the "specialists" in fixing the blame for the alleged gas rate hold-up—would have checked the fingerprints on the hold-up gun; or, to refer to the charges made in the case of the delivery of natural gas—

> A dollar and a dime,
> A dollar and a dime,
> But only the producer
> Is convicted of crime.

Mr. PASTORE. Mr. President, will the Senator from Oklahoma yield?

The PRESIDING OFFICER (Mr. McNAMARA in the chair). Does the Senator from Oklahoma yield to the Senator from Rhode Island?

Mr. MONRONEY. I yield to my friend, the Senator from Rhode Island.

Mr. PASTORE. It is a fact that the distribution company is supervised by the local public utility commission, is it not.

Mr. MONRONEY. My distinguished friend from Rhode Island, who serves with me on the Committee on Interstate and Foreign Commerce, is correct.

Mr. PASTORE. If there has been any gouging on the part of a distribution company, is it because of a lack of supervision or because the law is not being enforced?

Mr. MONRONEY. I would say that perhaps it is due partly to a lack of understanding of the necessity for new regulatory procedures, as natural gas has replaced manufactured gas. I think the public utility commissions of the States that complain the loudest, and that have the highest gas rates, do not understand the magical transformation in the dividend rate, as related to the capacity of the physical equipment of the old artificial gas lines. I do not believe they understand the blessings the local gas companies have received from the use of natural gas. Later, I hope to show some charts which will indicate that, for instance, in New York City the Consolidated Edison Co. has saved more than half the cost of the raw gas it uses, but the consumer has received a rate reduction of only 3 or 4 cents per thousand cubic feet. I can produce charts showing that in Washington, D. C., the cost of raw gas has decreased by 5 cents a thousand cubic feet since the conversion to natural gas, but the charge to the consumer has risen by 12 cents a thousand cubic feet. I can show in firm figures that since 1950, the cost of the unregulated portion of Washington's gas supply has increased 1.7 cents; that the regulated transportation charge by the long line has increased 9 cents; and the rate for city delivery has increased 12 cents—the portion of the rate that is regulated by public utility commissions has increased more than has the portion regulated by free, open, and competitive buying and selling.

Mr. PASTORE. Mr. President, will the Senator from Oklahoma yield further to me?

Mr. MONRONEY. I am glad to yield.

Mr. PASTORE. I wish to say that for the protection of the consumer, I do not think Senators who are opposed to the so-called Harris-Fulbright bill have to become wedded either to the pipeline companies or to the distribution companies. Our position here is that we are solely, strictly, and exclusively concerned with the interests of the consumer.

Is not the fair test as to whether unreasonable profits are being made by the distribution companies, the rate of return on their investments, and not whether the charges made are higher than those made in other parts of the country, which may have been so before conversion to natural gas?

Mr. MONRONEY. I say to my friend, the Senator from Rhode Island, that the same plant that could distribute a given quantity of artificial gas, is able to distribute twice that quantity of natural gas; in other words, the capacity is doubled when natural gas is used. By means of the conversion to natural gas, the capacity of an existing line is doubled in terms of British thermal units delivered to the burner tip. Thus the companies which have converted to the use of natural gas have been able to enlarge their volume. That has been the result of conversion to the use of natural gas.

Although natural gas costs far less than artificial gas, the gas companies have not given the consumers any appreciable reduction in the rate charged. In New York City, where the cost of natural gas per B. t. u. is less than half the cost of manufactured gas, the consumer's rate difference is only 3 to 4 cents, in the case of gas used for cooking and heating, respectively. The gas company's saving of millions of dollars has resulted in not even one thin dime of saving passed on to the consumers.

On Long Island, N. Y., instead of passing on to the consumers what the gas company has saved by using natural gas, they have actually raised the rate. I cannot explain it. I think the public utility commissions of many of the States should be called to task, at least by the newspapers—which, after all, are the guardians of the public interest—and perhaps also by the State legislatures, to see what is wrong.

Why can Kansas City distribute gas for 30 cents, whereas the charge in Washington, D. C., is approximately $1, and the charge in New York City is approximately $2? I cannot understand it, because Washington, D. C., and New York have congested populations, whereas Kansas City has a widely diversified area in which people live in private homes. A gas main going down a street in Kansas City must have 100 laterals off the main, in order to reach 100 consumers. But in Washington, D. C., or New York City, 1 lateral off 1 main can serve 100 or 500 consumers, in the case of apartment houses; and the apartment-house builders have to build the rest of the system, which does not even belong to the Washington Gas Light Co. or the Consolidated Edison Co. So I should think there would be great economies in the case of congested populations living in apartment

houses, where one gas main can serve an entire apartment house. However, the rates charged are just the reverse of what one would think they should be. How the gas companies can explain that, I certainly do not know.

Mr. PASTORE. Mr. President, will the Senator from Oklahoma yield further to me?

Mr. MONRONEY. I am glad to yield to my distinguished friend.

Mr. PASTORE. Assuming that that constitutes an abuse—although for the purposes of the debate, I am not ready to admit that at the moment—what in the Fulbright bill will correct the abuse?

Mr. MONRONEY. Let me say that I hope one advantage of the debate on the Fulbright bill will be to enable the public to understand better the charges which are made.

Mr. PASTORE. If they get whacked twice rather than once, they will feel the pain more?

Mr. MONRONEY. I think they will be able to determine whether the rate of 12½ cents for their gas supply is as damaging to their pocketbook as the 98 cents for city delivery. I think they will be able to determine whether the wholesale cost of 35 cents at the city gate in New York City is as damaging to their pocketbook as the $2 city delivery cost is. I think after we get through, if the press will print the facts as to the tremendous spreads, we can get some action from sleepy or lazy public regulatory bodies. When that happens, it will be in the public interest.

Mr. PASTORE. The city from which I come has, I think, the highest rate in New England. I think the Senator is familiar with that fact.

Mr. MONRONEY. I am familiar with it. I have it in my book.

Mr. PASTORE. That is a fact which disturbs me very much; but I must say that the rate of return of the gas company in the city of Providence is only 4 percent. Would the Senator call that exorbitant?

Mr. MONRONEY. I suggest to my distinguished friend that the first job I had on a Scripps-Howard newspaper was to find out why Oklahoma City was paying 87 cents at the burner tip for gas which cost 5 cents in the Chickasha gas field, some 50 miles away. We lost the fight to lower that gate rate, but we kept on. We did not get a reduction, but we continued the fight, looking behind the elaborate marble facade of investments, depreciated values, and all that.

Finally, by printing the facts month after month, with respect to the return on the actual investment, we got results. We compared their assessed valuation for tax purposes with what they claimed for a rate base. There was quite a difference in the rate of return, depending upon which base was used, whether it was the taxable value based upon the figures submitted in the return for taxation, or upon the claimed rate base. Upon the basis of taxable value figures the company was earning about 33½ percent, but on the basis of the claimed rate base, the return was always around 5.5.

I am not familiar with the situation in the Senator's hometown, but I do know a little about the Washington system, and I wish to see a full-scale investigation with respect to the $4,700,000 write-down for obsolescence of manufactured gas plants, when I know that there has been a considerable accretion in value on the most valuable open property in all of Washington; namely, the hill on Virginia Avenue, overlooking the broad Potomac, from which the obsolete plant was removed. This property was sold last year. I want to know the reason for the high costs and expenses which are written up so blithely in the alleged rate base. I want to know whether we are paying, on the basis of a 1-, 2,- or 3-year writeoff, expenses which normally would be written off over a period of 20 years.

I think we need a careful analysis of these things. In my opinion the utility should provide some justification for the fact that its rates are so far out of line for city delivery, as compared with the rates in other places in the country.

Mr. PASTORE. I will disturb the distinguished Senator for one further question.

Mr. MONRONEY. I am glad to yield.

Mr. PASTORE. I think the Senator is arguing now that if we had better and more strict supervision by the local utility commissions over the distribution companies, many of the abuses which now exist would be cured.

Mr. MONRONEY. If we had an effective and workable regulatory operation, many of the abuses in connection with the wide spread in city delivery cost could be cured. However, the regulation would have to be effective.

Mr. PASTORE. Why does that same principle not apply to the producers, as well?

Mr. MONRONEY. That goes to the exact point about which I am trying to tell the Senate. We must discard the chaotic and unworkable utility rate-base system imposed by the Phillips decision in favor of the one recommended by the Federal Power Commission and by the President's Committee, as well as by everyone else with whom I have talked. It is practically the unanimous opinion of those with some familiarity with gas production that such a regulatory system would be twice as effective in protecting against unreasonable rate increases as would the utility-type formula, with which I shall deal at length later in my statement.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. I am delighted to yield to my dear colleague from Illinois.

Mr. DOUGLAS. Do I correctly understand my friend to say that we ought to make regulation of the producers even tighter than it now is?

Mr. MONRONEY. I believe that regulation of the producers will be tighter than is the case under the chaotic type of regulation now in existence.

Mr. DOUGLAS. I have never heard this reason advanced for the Harris-Fulbright bill before, namely, that it would provide tighter regulation. The argument has been that it would free the producer from regulation.

Mr. MONRONEY. It is the claim of the opponents that it would free the producer from regulation. The point I make is that we offer the most effective, practical, and workable regulation that can be devised; and if the Senator will hear me out, I believe I can prove that only in this way can we have effective regulation of an extractive, exploratory, highly hazardous industry such as the production of natural gas.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PASTORE. In other words, in order that we may join issue in this debate, the distinguished Senator from Oklahoma is taking the position that the producer should not be free from regulation.

Mr. MONRONEY. Oh, no.

Mr. PASTORE. But that he should be regulated only as the producers would like to be regulated.

Mr. MONRONEY. No. The Federal Power Commission has recommended a basis of regulation, and the President's Cabinet Committee has approved it. I do not think it would make any more sense to apply the utility type of regulation to the production of natural gas—that is, the same type of utility regulation that is applied to electric power—than it would to apply the same type of utility regulation to both electric power companies and railroads. There is regulation of both. But the type of regulation which we propose is more nearly similar to railroad regulation than it is to the simple utility type of regulation used in connection with gas or electric distributors and other utilities of that nature.

I think we are oversimplifying the problem when we say that we must apply this particular type of invested cost utility regulation when we do not use it in connection with many other regulated facilities.

Mr. PASTORE. Does the Senator wish to leave the impression that the "reasonable market price" spelled out in the bill was suggested by the Federal Power Commission?

Mr. MONRONEY. It was; and it was used by the Federal Power Commission.

Mr. PASTORE. Is it not a fact that the Federal Power Commission took the position that the price should be just and reasonable?

Mr. MONRONEY. The Federal Power Commission, in its last report to our committee, indicated that it stood for a reasonable market price. The testimony is thoroughly supported. I think mention was made of the phrase "fair and reasonable" in a statement earlier in the hearing. But in its prepared statement to us the Commission refers to "reasonable market price"; and it was the reasonable market price basis that it sought to substitute for the utility cost formula in the Panhandle Eastern Pipeline opinion.

Mr. PASTORE. Is it not a fact that when members of the Commission appeared before the committee they could not define what "reasonable market price" meant, as spelled out in this bill?

Mr. MONRONEY. No; it is not.

Mr. PASTORE. Is it not a fact that they testified that they would have been

better satisfied with the words "just and reasonable"?

Mr. MONRONEY. No; and I think the Senator is arguing about semantics. The reasonable market price is as easy to establish as the value of a piece of land taken by the Government from the Senator from Rhode Island for the purpose of building a post office. The Government condemns the property, the court establishes the reasonable market price, and the owner of the land is paid for it. If the fair market price can be established in connection with the seizure of private land, I think we have at least a method which would be workable in establishing the reasonable market price of gas in the field. The reasonable market price is established on the basis of a situation in which supply and demand are in balance, not a situation in which there is an extreme scarcity or where there is an extremely high demand, when the purchase of a small quantity might show a variance from the normal market rate.

Mr. PASTORE. I am looking at page 1174 of the printed hearings. I am reading from a statement submitted by Jerome K. Kuykendall, Chairman of the Federal Power Commission. This is one of the concluding sentences in his statement:

> This seems to be less definite than the phrase "just and reasonable," and the latter appears to be proper.

He is speaking about "reasonable market price."

Mr. MONRONEY. I did not recall that statement. I do know that throughout the hearings it was indicated that the method used by the Federal Power Commission on its own motion in the Panhandle case was the reasonable market price formula for which the Fulbright bill provides. In the opinion of many lawyers, the phrase "just and reasonable price" would mean a utility base, and a return thereon, or the same old original-cost-less-depreciation formula. No record exists of the Federal Power Commission ever accepting that formula. I believe the Commission was ordered to do so by the 5-to-3 decision of the Supreme Court.

Mr. PASTORE. Is the Senator from Oklahoma familiar with the recent decision of the circuit court of appeals in the Panhandle case?

Mr. MONRONEY. I am familiar with it.

Mr. PASTORE. Did not the court in its decision say there was no hard and fast rule with respect to a rate base; and did not the court further say that it is permissible, under certain circumstances, to go so far, sometimes, under the term "just and reasonable," as to establish the fair market price and the fair field price?

Mr. MONRONEY. The decision of the circuit court of appeals was a bit fuzzy, as was also the Supreme Court's decision.

Mr. PASTORE. That is the trouble, Mr. President. Every time a court decides against the producers, the decision becomes fuzzy.

Mr. MONRONEY. What I object to is the court writing its own Natural Gas Act, against the clear intent of Congress. In the Gas Act of 1938 Congress specifically exempted the production and gathering of natural gas.

However, the Supreme Court, in its 5-to-3 decision, said "Yes; but Congress, in exempting specifically the production and gathering of natural gas, did not mean the sale of natural gas." Mr. President, what purpose would anyone have who produced or gathered natural gas if it was not for the purpose of sale? It is not possible to eat the gas, or to drink it. It is produced for sale.

Mr. PASTORE. For sale in intrastate commerce is one thing. Production for sale in interstate commerce is an entirely different thing.

Mr. MONRONEY. The act dealt solely with interstate commerce, and in the act that fact was clearly spelled out. Then Justice Minton discovered that Congress had omitted the word "sale." Thereupon the Supreme Court rewrote the Natural Gas Act, which had stood for 16 years.

In rewriting the act it did not prescribe formula or suggest any road map which the Federal Power Commission could follow. Clearly, the decision of the Circuit Court of Appeals is fuzzy, because the Supreme Court did not fully understand the situation; but the Federal Power Commission understood it; yet it was reversed by the circuit court of appeals, which felt compelled to make its decision because of that of the Supreme Court.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. I am glad to yield to the Senator from Illinois.

Mr. DOUGLAS. Is it not true that the Natural Gas Act of 1938 gave to the Federal Power Commission jurisdiction over the sale in interstate commerce of natural gas for resale?

Mr. MONRONEY. Over the pipeline; certainly.

Mr. DOUGLAS. No; the act did not say pipeline. It said the sale of natural gas in interstate commerce for resale. Is it not also true that the Supreme Court in 1947, in the Interstate case, said that fact gave to the Commission the power to regulate the price of gas sold to pipelines by independent producers? The circuit court of appeals decision of 1942 had been to the same effect. There was another decision by the circuit court of appeals in 1953 in the Phillips case. Then there was the decision of the Supreme Court in 1954 of the Phillips case. Therefore, there have been at least 4, perhaps 5, decisions by the circuit court of appeals and by the Supreme Court to the effect that the sale by producers of natural gas in interstate commerce for resale came under the jurisdiction of the Federal Power Commission.

I do not like to see my good friend from Oklahoma, who is one of the finest men in the Senate, say that the decision of the Supreme Court in 1954 came as a surprise and amounted to a rewriting of the Natural Gas Act. It is just not true, and I am sure the Senator does not mean to leave a false impression.

Mr. MONRONEY. I may say to my distinguished friend from Illinois that I do not care how many justice of the peace courts or county courts or Federal district courts make decisions. It is not a binding decision on the Federal Power Commission or on the country until it is passed upon by the Supreme Court. In the Phillips case in 1954 the Supreme Court overthrew the law that had been in effect since 1824. It did so without having advantage of any hearings on the subject. That is an advantage which Congress had when it exempted the production and gathering of natural gas. Furthermore, the Supreme Court acted by a closely divided decision.

Mr. DOUGLAS. The Interstate case was decided by a unanimous decision of the Court, as I remember.

Mr. MONRONEY. I shall discuss the salient features later. To my recollection, it was only obiter dictum that was added, and did not refer at all to the issue in the case. In other words, it was comment by the Court, and it did not bear on the issue which was before the Court in the Interstate Pipeline case.

Mr. DANIEL. Mr. President, would the Senator from Oklahoma be willing to yield to me so that I may read what the then Chief Justice, Mr. Vinson, said in the Interstate case?

Mr. MONRONEY. I shall be happy to yield to the Senator for that purpose.

Mr. DANIEL. Mr. Justice Vinson said in the Interstate case:

> Clearly, among the powers thus reserved to the States is the power to regulate the physical production and gathering of natural gas in the interests of conservation or of any other consideration of legitimate local concern. It was the intention of Congress to give the States full freedom in these matters. Thus, where sales, though technically consummated in interstate commerce, are made during the course of production and gathering and are so closely connected with the local incidents of that process as to render rate regulation by the Federal Power Commission inconsistent or a substantial interference with the exercise by the State of its regulatory functions, the jurisdiction of the Federal Power Commission does not attach (331 U. S. at 690).

Mr. MONRONEY. I thank the distinguished Senator from Texas.

Mr. DOUGLAS. The Supreme Court in both opinions pointed out that production and gathering were physical processes, but that sale is an economic and legal transaction. It pointed out that the production and gathering of natural gas is still left in State hands, and that the States, through various agencies, have the power to regulate the total output. That was freely granted. These powers are now being exercised by the various States. But this did not give them nor was it ever intended to give them immunity from regulation on the price which the producers charged the pipelines for the natural gas which they sold for interstate commerce for resale.

When gas is sold and moved across State lines, the Supreme Court said the original act held that the Federal Power Commission had jurisdiction. It was on that point that the Supreme Court, in its unanimous opinion in 1947, in the Interstate case, and in the 1954 Phillips case, said that the Federal Power Commission had such jurisdiction.

Mr. MONRONEY. I thank my distinguished friend for his contribution, although I regretfully must disagree with him on the construction. I certainly do not believe that Congress would have written in any idle exemption of production and gathering without an intent. The purpose of production and gathering is sale. The sale which was referred to later was the sale by the Interstate pipelines.

Mr. DOUGLAS. I do not wish to interfere with the argument being made by my distinguished friend from Oklahoma, and I do not want him to think that I am badgering him.

Mr. MONRONEY. Of course not. The Senator and I have worked together on many issues.

Mr. DOUGLAS. Later in the debate I intend, by discussion on the floor of the Senate, to show that the purpose of the act was rather clearly stated by the then senior Senator from Montana, Senator Wheeler, who was in charge of the bill, when he replied to a question of the then Senator from Texas, Mr. Connally, when he said that the sale by producers to pipeline companies would be regulated by the act. The congressional debate indicates it. I would like furthermore to point out that Justice Minton, who wrote the opinion in the Phillips case, was a Member of the Senate at the time the subject was discussed. He was a member, I believe, of the Committee on Interstate and Foreign Commerce, and took part in the debate on the bill. He knew precisely what the intent of Congress was.

Mr. Justice Black was also a Member of the Senate until the summer of 1937, I believe, and he knew the purpose of the act in its early stages.

Therefore, two members of the Court who were former Members of the Senate had some knowledge of what the intent of Congress was. The congressional debate bears out the fact that it was the intent of Congress to give jurisdiction over these matters to the Federal Power Commission.

Mr. MONRONEY. I do not wish unduly to prolong the debate, nor do I desire to become facetious, but I should like to consider the case of Senator DOUGLAS versus Justice Douglas, and read the dissenting opinion at this point, because I think it is another example of a great mind, certainly not that of a reactionary and certainly not of a man who would favor discrimination against consumers. This is what Mr. Justice Douglas stated:

> The sale by this producer is a "sale in interstate commerce * * * for resale." It is also an integral part of "the production or gathering of natural gas" * * * for it is the end phase of the production and gathering process. * * *
>
> Congress was concerned with interstate pipelines, not with independent producers. * * * If one can judge by the reports of the Federal Trade Commission that preceded the act * * * and the hearings and debates in Congress on the bills that evolved into the act, little or no consideration was given to the need of regulating the sales by independent producers to the pipelines. The gap to be filled was that existing before the pipelines were brought under regulation—sales to distributors along the pipelines. * * *
>
> That was the view of the Commission in a decision that followed on the heels of the act. * * * That decision exempted from regulation an independent producer to whom Phillips is in all material respects comparable. It was a decision made by men intimately familiar with the background and history of the act * * * Leland Olds, Basil Manly, Claude L. Draper, and Clyde L. Seavey. One Commissioner, John W. Scott, dissented. That construction of the act by the Commission has persisted from that time * * * down to its decision in the present case.
>
> There are practical considerations which buttress that position and lead me to conclude that we should not reverse the Commission in the present case. If Phillips' sales can be regulated, then the Commission can set a rate base for Phillips. A rate base for Phillips must of necessity include all of Phillips' producing and gathering properties; and supervision over its producing and gathering expenses. * * * The fastening of rate regulation on this independent producer brings "the production or gathering of natural gas" under effective Federal control, in spite of the fact that Congress has made that phase of the natural gas business exempt from regulation. * * * That regulation largely nullifies the exemption granted by Congress.

That is Mr. Justice Douglas' language in his sound, wise, and adequate dissent which we have discussed somewhat fully. I intend to go into it again a little later. I shall again yield if my distinguished colleague wishes me to do so.

Mr. DOUGLAS. I do not wish to interfere with the argument of my good friend from Oklahoma. Was the decision which the Senator just read a majority opinion or a minority opinion?

Mr. MONRONEY. It was a 5-to-3 decision, with Mr. Justice Jackson not participating. I shall later read a related opinion by Mr. Justice Jackson. The decision of the Supreme Court has so vitally changed what the Congress has so definitely written that I think Congress must give the matter adequate consideration, and I am glad that we are giving it full consideration and debate.

Mr. DANIEL. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. DANIEL. Does the Senator consider it to be significant that only 2 years after the Natural Gas Act was passed, in 1938, in the first decision of the Commission on this point, 3 of the members who had been in office at the time the bill was passed, and 1 of whom had helped to draw the bill, held that the act did not apply to the sales of producers to interstate pipelines? Is not that significant?

Mr. MONRONEY. The Senator is certainly correct. All the members then sitting on the Federal Power Commission held to the view that we could not regulate companies on a utility cost basis; and the present Commission finally adopted the view which the Fulbright-Harris bill embraces. So I cannot see why the Congress cannot rely not only on 1 set of Commissioners, but on 4 or 5. We simply cannot effectively regulate the extraction of a mineral resource 5,000 feet underground by applying a public utility yardstick to it with reference to cost.

Mr. DANIEL. What would be the reason for Congress writing in the act the words "that it shall not apply to the production of natural gas" if Congress intended that it should apply? From what are we exempting the producer if we are not exempting him from the fixing of prices on his sales?

Mr. MONRONEY. I agree with my distinguished friend.

Mr. PASTORE. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. PASTORE. Regardless of what the Supreme Court said in the Phillips case, is it not now a fact that the proponents of the bill are taking the position that there must be some supervision or control?

Mr. MONRONEY. Indeed, yes. It is the same supervision or control that the Federal Power Commission is advocating. Let there be no misunderstanding. I think this is the best bill that has ever been introduced on this subject. I believe it clearly meets the need without crippling the business, and, furthermore, that it clearly protects the consumer against unreasonable increases. So I am happy to be associated with the authors of the bill in seeking its passage, because otherwise I think we would have a chaotic condition in our gas supply. When it becomes scarce no regulation in God's world will prevent the price from skyrocketing.

I am always happy to agree with my distinguished friend, and I always regret it when we do not agree. But we shall still be agreeing on many, many things during this session.

Mr. President, I hope the Senate will pass this bill. I sincerely feel it is in the interest of the consumer, both by increasing the supply of gas for present and waiting customers but also insuring him against unreasonable increases. But this bill should not be passed if it is not right to pass it. I would rather lose the bill than pass it without clearly justifying the need for this legislation.

We hope that during this discussion those who have closed their minds or have been satisfied with one-half of the story will open their minds and their columns to the facts on both sides.

I know my colleagues who oppose this bill, many of whom I have teamed up with in many legislative fights on this Senate floor, will forcefully present their side of this case. I intend to hear all that they have to say; and I trust they will listen to what we have to say. Above all, I hope the press will hear both of us out and print both sides of this case.

Mr. THYE. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. THYE. I recognize the fact that the State of Oklahoma produces a great quantity of natural gas——

Mr. MONRONEY. We have the best football team, but we are No. 3 in gas production.

Mr. THYE. This is a football, but it so happens that the Senator wants to keep it on his side of the line.

But the question I wish to ask is what percentage of the wells which have been drilled produce merely gas and no petroleum?

Mr. MONRONEY. Approximately two-thirds of the gas is produced from what we call dry gas wells. The other

third is from wells producing gas and oil in mixed quantities. I shall deal with that very important subject later.

Mr. THYE. Is that also true in other States where petroleum is produced? Is there approximately the same percentage of dry wells?

Mr. MONRONEY. I could not say exactly. It varies by fields. The largest dry gas field in the world is in the old dust bowl area which encompasses the northern part of the Texas Panhandle and the Oklahoma Panhandle and southwestern Kansas. It is the biggest known dry gas field in the world.

Mr. THYE. That was my understanding, and that is why I wanted to bring out the thought, because most wells, other than in that particular area, produce not only petroleum, but also gas, and the gas is of secondary importance in the development of the oil well. I think there will always be drilling for oil, even though there might be some slight regulation over the end product, gas.

Mr. MONRONEY. I shall be glad to develop that fully, if the Senator will hear me out.

Mr. THYE. I am listening to the Senator.

Mr. MONRONEY. I believe the Senator will find there are reasons for fearing that by going to a cost basis, such as the Supreme Court decision provides, any dry hole which is drilled will find its way into the cost basis in the determination of natural-gas rates. If the cost system shall be adopted, there will be no dry holes developed as a result of starting out to look for oil. They will all be started in a search for gas, if they are dry. If they are producers, they may be oil wells. But the public will pay for practically all the dry holes in the United States, because no one except the little gremlin which drives the bit into the sands will know whether it is going down for oil or for gas.

Mr. THYE. What percentage of the financing for the drilling of wells comes from the actual operator in the field of oil development, and what percentage comes from the speculator's investment in stocks and oil well development, which proves to be a nonprofitable venture?

Mr. MONRONEY. It is hard to break that down, because one cannot determine, when he begins to drill a hole in the ground 5,000 feet deep, whether he is drilling for gas or for oil. Of course, the driller would rather get oil, because it is worth about twice as much per B. t. u. as gas, and an oil well usually produces much longer. Certainly the oil well is not subject, at present, to Federal regulation.

Mr. THYE. There are those who are privileged to sell stock in oil well development ventures; and therefore the innocent investor oftentimes has financed the development of what becomes a nonprofitable venture.

Mr. MONRONEY. I may say to the Senator from Minnesota that I was born in Oklahoma. I have helped to finance many unprofitable ventures to this date, and no profitable ones. But I am in complete accord with the Senator's statement. I am not only a junior Senator in point of service, but also junior in point of successful oil well experience.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. FULBRIGHT I thought the question asked by the Senator from Minnesota was along the line of wildcatting. Nearly 8 out of 9 wells are usually unsuccessful.

Mr. MONRONEY. One cannot say whether an unsuccessful well was in search of gas or oil. But we will discover, if we set up a cost plus-reasonable-return basis, that all wells will have been in search of gas.

Mr. FULBRIGHT. The point I wanted to make was that if we adopted the cost-plus basis, which is recommended by the opponents of the bill, and which I think would have to follow the Supreme Court's decision, the burden would be piled upon one successful well owner in order to enable the operator to secure a 6 percent return.

Mr. MONRONEY. That is certainly correct. One might get 50 dry wells. Fifty dry wells times $200,000 would give a $10 million rate base, which it is proposed to pass on to the consumers on the basis of a 6-percent return. On this basis, there would probably be the highest price paid for dry wells ever known in the industry. The operators will not be content to drill such a well, but they will find a way to sell the dry holes. The operator can go down to 6,000 feet, perhaps, below which no gas or oil was ever found in the particular field, and still sell that hole to the productive gas or oil producer. So dry holes will have a new value, instead of merely being filled up as post holes.

Mr. PURTELL. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PURTELL. Would it not be true that if all the dry holes were charged to the cost of exploring for gas, and none were charged to seeking for oil, we would reasonably expect the price for oil to be reduced somewhat in the States that use large quantities of oil?

Mr. MONRONEY. No. My friend from Connecticut does not understand the clear writing of the cost-plus-reasonable-return basis, because no matter how the operations were written off in the tax return, the operators could still capitalize them for rate-making purposes. So we come up with the fact that under the Supreme Court decision the consumer of gas is going to have the privilege of paying for all of the fine dusters which are drilled throughout the United States.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. ANDERSON. I merely wish to ask my friend from Oklahoma to be careful about saying that no oil had been discovered below 8,000 feet.

Mr. MONRONEY. Oh, no; I was using that as an example. We could use the figure of 8,000 feet in an area where no oil had been discovered. Just before the driller got into granite (no oil has been discovered below the granite level), such a well could be sold for speculation to someone who might pay a few dollars, and he might be able to capitalize it in the rate structure.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. DOUGLAS. The Senator from Oklahoma has made the amazing argument that all the cost of unsuccessful dry wells will be charged to gas for regulation purposes. Does the Senator think for a moment that if the Federal Power Commission was alert to the public interest it would be so foolish or corrupt as to permit such a ruling to exist?

Mr. MONRONEY. When a well is drilled, can an entrepreneur, as a prospective producer, identify and certify to the Federal Power Commission, that he is drilling only for gas? He cannot identify in any way what will be discovered, because he does not know what is below the ground. After a wildcat well is brought in, the producer knows what he has found; but he cannot identify his well beforehand. There is no way, I may say—and I am not trying to be facetious—by which any man alive can tell what he is going after when he studs in a well.

Mr. DOUGLAS. Of course, General Thompson, railway commissioner of Texas, who is frequently quoted by the proponents of the bill, in his testimony before the committee of which the junior Senator from Oklahoma is a member, said that one never drills for gas; he drills for oil, and then sometimes finds gas—hearings, page 54.

I do not believe that allocating the costs of drilling, in the case of a wildcat driller, is very much different from the problem which arises in many other economic transactions which are subject to joint costs; and furthermore, the costs of developmental drilling, which is done to a greater extent, as I understand, than wildcat drilling, can easily be allocated.

Mr. MONRONEY. Oh, certainly; if the wells are never dry.

Mr. DOUGLAS. The relative costs of dry wells can be allocated.

Mr. MONRONEY. Oh, they might be, but they might be perimeter wells. They are certainly not interior wells. I am talking about dry wells, drilled in wildcatting, in strange, unproven territory. No one in the world knows what he will find there, if anything, when the well is in. He does not know what he is going after, whether it be oil or gas.

Mr. DOUGLAS. I do not believe that is any more difficult than the situation which a large packing company experiences in allocating total or joint costs to meat, on the one hand, and to other products such as hides on the other hand.

Mr. MONRONEY. The meat packer has the dead pig or the dead cow. He knows what he has. But the producer does not know what is 5,000 feet under the ground, and he will never know until he gets his drill down there and finds out.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. BUSH. Is it the Senator's contention that under the present situation

the Federal Power Commission would only take into account the cost factor, and would not take into account other factors, such as reserves?

Mr. MONRONEY. The reserves are worth absolutely nothing under the rate base formula. It would include, under the decisions, as a cost item property normally bought as wildcatting acreage for a dollar an acre. That is what the prospector would pay a farmer for leasing rights for an undeveloped acre. He pays a dollar a year as rental. If he found a gas well worth $5 million under that acreage, which perhaps would be 500 acres, it would be worth $500 on a cost basis, rather than as an investment, because that would be the original cost.

Mr. BUSH. Perhaps the Senator misunderstood my question. Is it the Senator's understanding and contention that under the present state of affairs the Federal Power Commission in setting the price or rate which may be charged for the gas, is justified in taking into account only one factor, namely, the cost factor?

Mr. MONRONEY. That is the only factor, because when market price factors were taken into consideration in the Panhandle case, the Circuit Court of Appeals reversed the Commission on the basis that it conflicted with the Phillips decision in 1954. One runs into the utility type regulation imposed by the courts as a result of the Phillips decision in 1954.

Mr. BUSH. Since the Phillips decision have there been any rates set by the Federal Power Commission which fixed the price at the pipeline gate?

Mr. MONRONEY. I beg the Senator's pardon.

Mr. BUSH. I shall repeat my question. Since the Phillips decision in the summer of 1954, has the Federal Power Commission set any rates that are effective at the pipeline gate?

Mr. MONRONEY. I shall answer that question in rather great detail later. We see the Commission engaged in a snowstorm of paper work. The Commission is some weeks behind even in opening its mail. It will be two or three years before it can actually start setting rates. The Commission is merely trying to get ready to set rates by getting applications for certificates of convenience and necessity from all the producers. After that point is reached the Commission must go into the contract aspects. From that point the Commission has to try to establish the rates. The Commission is in an endless maze of investigation. With respect to the problem of setting rates, the Federal Power Commission is going to be bogged down for from 10 to 25 years. Yet the gas producers are in constant jeopardy. The gas supply is disappearing because of the uncertainty. In the meantime millions of people are waiting for gas and cannot get it, because any prudent operator of gas production who does not have a long-time commitment is not going to wait that long, and will not permit his gas to go into interstate commerce, because of the uncertainty.

Mr. BUSH. The Senator still has not answered my question.

Mr. MONRONEY. I thought I had.

Mr. BUSH. I shall try to make my question very clear. I ask the Senator whether he knows that any rate determinations have been made by the Federal Power Commission since the Phillips decision.

Mr. MONRONEY. I am willing to read to the Senator from Connecticut the decision——

Mr. BUSH. I may say to the Senator from Oklahoma my question is not a frivolous one, but a very important one.

Mr. MONRONEY. My reading of the decision would take a few minutes, but I shall be glad to read the Federal Power Commission's way of evaluating the matter. If the Senator prefers, I shall be glad to show the decision to him. I would like to have the entire Senate hear it, but I am afraid we would lose some of our audience.

Mr. BUSH. I do not wish to interfere with the debate. All I am asking the Senator from Oklahoma is whether he knows if the Federal Power Commission has established any rates under the present situation since the Phillips decision.

Mr. MONRONEY. The Commission has been engaged in trying to establish rates.

Mr. BUSH. I know that, but I am asking the Senator whether any rates have been established.

Mr. MONRONEY. I do not believe they have.

Mr. FULBRIGHT. Mr. President, will the Senator from Oklahoma yield to me?

Mr. MONRONEY. I yield to the Senator from Arkansas.

Mr. FULBRIGHT. Some increases have been granted. It is impossible to tell upon what basis. It is purely by guess. The Commission itself has said it is unable to ascertain what the cost is. The Commission has granted some rates on a guess basis, because it felt the requests were so worthy that it could not resist.

Mr. BUSH. If that be the case, the Commission felt legally bound to follow the cost formula, did it not?

Mr. FULBRIGHT. I think it felt bound legally, but it was impossible to carry it out. There have been a number of increases.

Mr. BUSH. How did the Commission determine the increases?

Mr. MONRONEY. By guesswork.

Mr. BUSH. My reason for raising the point is that the Senator's argument is that the only basis on which the Federal Power Commission can fix a rate is on the basis of cost. If the Senator from Arkansas is correct, the Commission has granted rate increases, not based on that factor alone, but on other factors.

Mr. FULBRIGHT. The Senator from Oklahoma stated a moment ago the Commission had attempted to do that, and the case that got into court was held to be in violation of the Phillips decision. The point I make is that under the pressure of necessity, the Commission has granted increases before the Commission was able to ascertain the cost factor, as required by the Phillips decision.

Mr. MONRONEY. It will be 5 or 10 years before the Commission will be able to establish the rates, and some of the gas companies will go bankrupt before that time.

Mr. FULBRIGHT. The situation is ridiculous. The Commission is required to fix the rates on a cost basis. The Commission cannot do it; yet the demands are such that the Commission must do it.

Mr. BUSH. I appreciate the difficulties facing the Federal Power Commission. I have talked to personnel in the Commission about them, and I am very sympathetic. I think there is some way out of the situation.

Mr. MONRONEY. Senate bill 1853 is the ideal way out, because it brings into play what the Federal Power Commission, and others say provides the only workable method by which the consumer can be protected against unreasonable increases in the charges they must pay.

Mr. BUSH. All I wish to say at this point—I hope to say more later—is that it appears the Federal Power Commission has, under the existing situation, since the Phillips decision, granted some rate increases based on other determinations than merely cost.

Mr. MONRONEY. I may suggest that it was administering artificial respiration to keep the patient alive until the paper work could be finished.

Mr. FULBRIGHT. I think the Senator from Connecticut has put his finger exactly on the intolerable situation. Something must be done about it. One can make his choice. We can let the Commission continue to stumble about, or let Congress, which legally should act, express a policy as to how to approach the problem. The pending bill does direct the policy to be followed in setting rates, and that is all it does.

Mr. BUSH. If the Senator will permit me, I should like to observe that if the bill proposed to give the Federal Power Commission more than one basis on which to determine rate increases, it would be a better bill, and would be more acceptable in some parts of the country.

Mr. FULBRIGHT. Mr. President, will the Senator from Oklahoma yield further?

Mr. MONRONEY. I yield.

Mr. FULBRIGHT. The basis is the reasonable market price. It is the same traditional basis which has existed for centuries in the English-speaking world. It is the basis on which private property is paid for in condemnation proceedings. It is the same basis used by the Interstate Commerce Commission in establishing railroad rates and by the Civil Aeronautics Administration in setting airline rates. I do not know what better basis there is than the one which experience has proved to be the best.

Mr. BUSH. Later I shall suggest some factors which would greatly improve the bill and which would not arouse so much opposition to it.

Mr. MONRONEY. Perhaps some of the opposition has been aroused by failure of some of our great newspapers to present both sides of the questions, and by leaders of some organizations of labor and others who have objected to any reasonable suggestion, and who have given the dog a bad name. That is the reason why I appreciate the good attendance on the floor today and the good attendance

in the press gallery, because I know persons there will write about the question as they see it. We have had a hard time getting certain interests to hear both sides of the question.

Mr. MORSE and other Senators addressed the Chair.

Mr. MONRONEY. Mr. President, I should like to proceed for 5 or 10 minutes in an orderly development of my points. I believe the points could be made better if I proceeded with my prepared statement than by questions and answers at this point.

We hope that during this discussion, those who have closed their minds or have been satisfied with one-half of the story will open their minds and their columns to the facts on both sides.

I know my colleagues who oppose this bill, many of whom I have teamed up with in many legislative fights on the Senate floor, will forcefully present their side of this case. I intend to hear all that they have to say, and I trust they will listen to what we have to say. Above all, I hope the press will hear both of us, and will print both sides of the case.

In our democracy, the task of leadership places a great responsibility upon our newspapers. It requires an informed and enlightened editorial leadership, not blind adherence to a credo, which, once accepted, can never be modified. A true liberal wears no badge. Rather, he searches for all the facts, however obscure, before reaching his decision.

We cannot afford leadership which might imitate that of the French Revolution, when it was said: "The mob is in the street. I must join them. For I am their leader."

THE CASE FOR THE GAS BILL

From 1824, as I have detailed before, the production of natural gas had been in free enterprise. The seller with a supply of gas met with the buyer of a quantity of gas, and a contract ensued. Both parties, the seller and the buyer, under the law of supply and demand fixed the price for the gas at the wellhead. This had been true, and now is true, for every mineral product ever produced in the United States—that is, until the Phillips decision on June 7, 1954.

Under this historic bargaining of producer and consumer, the use of gas increased from the small amounts required for lighting the inn and the public buildings of Fredonia, N. Y., in 1824, to the time when the gas industry became the sixth largest in the Nation.

No question was ever raised regarding the regulation of the gas distribution systems, as public utilities. That came as a matter of course as other utilities were regulated.

It was essential that they be given a monopoly—a franchise for the particular area they served. Having been given such a monopoly and freedom from competition, regulation of their rates was necessary. They enjoy the right of eminent domain and a guaranteed return on their investment.

None of these essential attributes of a public utility does the gas producer have—not even under the decision of the Supreme Court declaring him a utility. He has no protection against competition. The opening of a huge, new gas field leaves him vulnerable to all the forces of competition. He has no right of eminent domain. He has no protected territory in which to operate. So he must do the best he can. No utility body can guarantee the gas producer an actual rate of return on the value of his property. Bear in mind, Mr. President, that I said "the value of his property"; and I did not refer to the cost. The kind of utility regulation we are discussing relates to cost; and who can say that when a man with a wildcat well discovers a valuable gas-producing property, it should be valued at $1 an acre—which is what the Supreme Court's decision would require on a cost basis.

But as the gas produced in Oklahoma, Texas, Arkansas, Kansas, Louisiana, Mississippi, and New Mexico began to move into the long lines then being built, regulation of such interstate lines became desirable. For that reason, the Congress in 1938 enacted the Natural Gas Act, which the Supreme Court rewrote in 1954, by a 5 to 3 decision.

The bill which Congress wrote properly recognized that no utility type of regulation could possibly apply to an extractive mineral industry. The language of the act of 1938 specifically states that the act "shall not apply to the production and gathering of natural gas."

All of the authors and the Members explaining the bill made it clear that the act dealt with the control, through utility regulation, of the long lines and the sale of gas for resale. The control of the production and gathering of gas was never questioned, for all familiar with the act knew and understood the impossibility of such inclusion of the hazardous exploration and production of the raw supply.

It was in 1954 that the Supreme Court attempted to rewrite what Congress had said. In effect, Justice Minton held that while the act did exempt production and gathering, it did not exempt sales of such production to the pipelines. For what purpose could a producer or gatherer produce gas, if it were not for sale? Blowing it in the air or flaring it was illegal under State conservation laws. They could not eat it. Obviously the decision, with the necessary prevailing votes, rewrote the clearly expressed intent of the Congress.

I think the decision of Mr. Justice Douglas—certainly not a dyed-in-the-wool reactionary, nor a minion of vested inerests—explains the case more fully than I can:

> The sale by this producer is a sale in interstate commerce for resale. It is also an integral part of the production or gathering of natural gas, for it is the end phase of the production and gathering process. * * *
>
> Congress was concerned with interstate pipelines, not with independent producers. If one can judge by the reports of the Federal Trade Commission that preceded the act, and the hearings and debates in Congress on the bills that evolved into the act, little or no consideration was given to the need of regulating the sales by independent producers to the pipelines. The gap to be filled was that existing before the pipelines were brought under regulation—sales to distributors along the pipelines. * * *
>
> That was the view of the Commission in a decision that followed on the heels of the act. * * * That decision exempted from regulation an independent producer to whom Phillips is in all material respects comparable. It was a decision made by men intimately familiar with the background and history of the act—Leland Olds, Basil Manly, Claude L. Draper, and Clyde L. Seavey. One Commissioner, John W. Scott, dissented. That construction of the act by the Commission has persisted from that time, down to its decision in the present case.
>
> There are practical considerations which buttress that position and lead me to conclude that we should not reverse the Commission in the present case. If Phillips' sales can be regulated, then the Commission can set a rate base for Phillips. A rate base for Phillips must of necessity include all of Phillips' producing and gathering properties; and supervision over its producing and gathering expenses * * * The fastening of rate regulation on this independent producer brings the production or gathering of natural gas under effective Federal control, in spite of the fact that Congress has made that phase of the natural gas business exempt from regulation. * * * That regulation largely nullifies the exemption granted by Congress.

Mr. BUSH. Mr. President, will the Senator from Oklahoma yield?

The PRESIDING OFFICER (Mr. ALLOTT in the chair). Does the Senator from Oklahoma yield to the Senator from Connecticut?

Mr. MONRONEY. I am glad to yield.

Mr. BUSH. If the intent of the 1938 act is so clear, why was it that in 1949, I believe, a bill along similar lines was introduced in both the House and the Senate, and was passed?

Mr. MONRONEY. I believe it was in 1950.

Mr. BUSH. I refer to what has commonly been known as the Kerr bill.

Mr. MONRONEY. Yes.

Mr. BUSH. Why was it then felt necessary to have such a bill introduced and passed, if it was perfectly clear that the Federal Power Commission was not to have any jurisdiction?

Mr. MONRONEY. There had been lower court decisions, as the distinguished senior Senator from Illinois [Mr. DOUGLAS] has stated. There was a Supreme Court decision, not involving this point, but in which the obiter dicta of the justice writing the opinion had raised this question. So Congress properly, I think—recognizing that the country's supplies of gas would disappear if there were any uncertainty which would cloud the clear intent of the act—passed those bills, for it was the job of Congress to act. That is why those bills were before Congress; and that is why there are now more completions of wells, instead of fewer, and more interstate pipelines, instead of fewer. That is why Congress felt compelled to get those bills passed even before the Phillips case decided the matter.

Mr. BUSH. Is it also true that at about that time the large interstate pipelines were being constructed and public attention was being attracted to the issue, and it was felt that there was a good deal of doubt as to whether the Federal Power Commission had jurisdiction; and the purpose of the bill was to kill the doubt?

Mr. MONRONEY. Most of the long lines were built immediately after the war—in 1946 and 1947. As rapidly as

steel became available, the lines were constructed. A major addition came with conversion of the Big Inch and the Little Inch lines. The uncertainty was delaying the supplying of natural gas, and I think the uncertainty also actually helped increase the field price. So I believe it was important to have the bill introduced and debated.

When I was a Member of the House of Representatives, I voted for the Rizley bill and the Kerr bill. Let me say that the bill now before the Senate is the best bill, offering the finest type of regulation and the most complete regulation of the price of natural gas, that has yet been before the Congress.

Mr. PASTORE. Mr. President, will the Senator from Oklahoma yield to me?

Mr. MONRONEY. I yield.

Mr. PASTORE. Speaking of the Kerr bill, is it not true that it left unaffected the pipeline company that was also a producer? Under the Kerr bill the pipeline company that was a producer would have remained under the exclusive control of the Federal Power Commission. But in this bill its authors have gone beyond that, and have taken care of the pipeline company that is a producer, because under the pending bill the pipeline company that is a producer can separate its cost midway; it can get one price at one end and a new price at the other end. As a matter of fact, under the pending bill there will be 2 methods and 2 formulas for calculating the price.

Mr. MONRONEY. Let me say to my distinguished friend, the Senator from Rhode Island, that if my memory serves me correctly, the reason why the Kerr bill did not deal with the pipe-line production of gas was that the formula then used by the Federal Power Commission, and used in the case of pipe-line gas until the recent circuit court decision, was that it should come into the line at the fair market price. I am told that that decision by the Federal Power Commission came afterward; but the Federal Power Commission did later adopt, of its own volition, the method of the fair field price as the cost of the gas which goes into the long pipeline.

Mr. PASTORE. That is the case which was in dispute. It was decided only on the 15th of December, 1955. The Kerr bill was introduced in 1950.

Mr. MONRONEY. What I am saying is that between the introduction of the Kerr bill and the Court decision to which my distinguished colleague refers, the policy of the Federal Power Commission had been to apply the same formula to the gas owned by the pipeline as is contained in this bill with respect to the independent gas producers. It was found to be the only way effectively to ascertain the cost of gas in interstate commerce. The Federal Power Commission recommended that method, but it was overturned by the circuit court, which had to give obeisance to the Supreme Court decision, a 5 to 3 decision, standing in its way.

Mr. PASTORE. I do not believe there is such a connection, but let me say to the Senator from Oklahoma that originally and traditionally, before a pipeline company could get a certificate of convenience and necessity it had to establish the fact that it already had reserves of gas. In other words, a pipeline company had to be a producer before it could get a license to operate.

Mr. MONRONEY. Was that true in connection with interstate pipelines?

Mr. PASTORE. In connection with interstate pipelines, originally.

Mr. MONRONEY. A pipeline company had to guarantee a supply; but today the biggest interstate pipelines have no gas whatsoever.

Mr. PASTORE. I know that that was the situation afterward. What I am saying is that in the beginning the only way a company could get a certificate of convenience and necessity was by establishing the fact that it already had dedicated reserves which it owned. In other words, before it could get into the business it had to be a public utility. Later we separated the producer from the pipeline company.

Mr. MONRONEY. The Senator is absolutely incorrect.

Mr. PASTORE. Will the Senator bear with me?

Mr. MONRONEY. Certainly.

Mr. PASTORE. From the beginning the pipeline company, which was a producer, understood that it was under the exclusive control of the Federal Power Commission. Under the terms of the pending bill it is proposed to say to the pipeline company, "With respect to the gas you produce, we will give you a reasonable market price. You can load that on, and then come forward and establish your cost before the Federal Power Commission, for selling at the gate." If the Senator contends that the pending bill is a better bill than the Kerr bill, I remind him that it is a more far-reaching bill than the Kerr bill in that respect.

Mr. MONRONEY. Let me say to my distinguished friend that he is completely unfamiliar, in this particular instance, with the supplies of natural gas owned by the pipeline companies. What he is talking about is the supplies of gas which were owned by pipeline companies prior to the act of 1938. Such gas, belonging to the pipeline companies, was first regulated on a cost basis, which was later abandoned by the Federal Power Commission, resulting in the Circuit Court of Appeals decision, with which the Senator is familiar.

So the gas business has been out of regulation, under regulation, out of regulation, and under regulation again. Where is the gas business winding up? Formerly it was the pride of the pipeline industry that it had some gas of its own. All the reserves which used to be owned by the pipeline companies are being liquidated. Pipelines are now disposing of the gas which they own. As the gas is produced, they buy no more. They develop no more. They sell their unexplored reserves. They are getting out of the production business. That proves my point that the cost-plus-fixed-return will drive anyone out of the production business, as it has driven the pipeline companies out of the production business. Today every one of them is liquidating its present reserves.

Mr. PASTORE. Is the Senator telling me that in the case of pipeline companies which were producers, they have been entitled to a fair field price for the gas?

Mr. MONRONEY. They were entitled to a fair field price until the passage of the act of 1938, and after the Panhandle opinion, about 1954, until it was reversed in late 1955 by the Circuit Court of Appeals. The situation in the gas industry has been a case of "off again, on again, gone again, Finnigan." That is the trouble with the gas industry under the Supreme Court decision in connection with the natural-gas act, under which it is sought to make gas producers operate.

Mr. PASTORE. I invite the Senator to do a little research——

Mr. MONRONEY. I will place in the RECORD the exact dates of the various types of regulation. I ask unanimous consent to have that information printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See Exhibit 1.)

Mr. MONRONEY. I shall show the point at which the pipelines were operating under the fair field price, or the free play of the law of supply and demand; the point at which they went on a cost-return basis; the point at which they left the cost-return basis for the fair field price; and the point at which they returned to it, presumably, after the circuit court of appeals decision only recently.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PASTORE. There has been decision after decision—and that is the reason why I think the Kerr bill did not touch the situation—to the effect that there was a distinction between the producer and the gatherer which was not a pipeline company. Pipeline companies which were producers have always been under the control of the Federal Power Commission. There can be no question about that.

Mr. MONRONEY. Since 1938.

Mr. PASTORE. Since 1938.

Mr. MONRONEY. That is correct. They were not under any regulation prior to that time.

Mr. PASTORE. The first time the Federal Power Commission changed the basis from a cost basis to a fair field price was in the case which was appealed by the city of Detroit. That was the Panhandle case, which was recently reversed.

Mr. MONRONEY. That is correct.

Mr. PASTORE. Therefore, the fair field price has never been the measure with respect to a pipeline company which is a producer.

Mr. MONRONEY. The Senator is ignoring the fact that from 1824 to 1938 there was no regulation of pipelines in interstate commerce. At the time of passage of the Natural Gas Act most of the pipelines produced the greater portion of the gas which they sold; but when they were under Federal regulation, they knew that they could not operate producing facilities under a cost-return system of regulation, so that part of the industry has been in process of liquidation

ever since. I shall be happy to supply, as a part of the appendix called for by the Senator, the dates of the various types of regulation and the diminution of the supply owned by pipeline companies in relation to the amounts which the pipeline companies now sell.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. FULBRIGHT. I think the Senator from Rhode Island [Mr. PASTORE] is in error in one very important part of his question, when he says that the Federal Power Commission required the pipeline to own any part of the reserves. The pipeline company was required to have a minimum dedicated to the particular line, but it did not have to own it. It had to have contracts for it. Ownership was not required.

The percentage of the gas dedicated to interstate commerce which belonged to the pipelines has declined from approximately 25 percent in 1940 to approximately 10 percent last year. Pipeline companies have disassociated themselves from ownership, because of the existence of the Natural Gas Act, which, of course, made the pipeline a utility. Whatever activity it was engaged in came within the cost formula. It is true that so long as the gas was actually owned by the pipeline companies, the cost formula applied.

That is the reason they are going out of the business of ownership. For that reason, if the pending bill is not passed, the gas flowing into the interstate system will decline.

Mr. MONRONEY. The reason given for the Federal Power Commission adopting a fair field price basis instead of a cost basis with respect to the gas owned by the pipelines, apart from disappearance of the pipeline-owned supply, was that, in the interest of an adequate supply and adequate bargaining position in dealing with independent producers, it was desirable to stimulate the entry into the business of pipelines. The Federal Power Commission recognized the danger of new pipelines stretching across the country without any supply of their own on which they could rely, to meet their commitment at the other end.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PASTORE. The Senator has misunderstood my point. The question has arisen in connection with the Kerr bill. What I am saying is that in 1950 the Kerr bill left undisturbed the pipeline company which was a producer. This bill goes beyond that point. This bill even frees from regulation the pipeline company which is a producer, so far as its activities are concerned with producing and gathering.

The only point I am making is that the pending bill goes further than the Kerr bill, which did not pass Congress.

Mr. MONRONEY. The Senator is incorrect in the basic part of his statement, that the bill frees the pipeline producer from regulation. It puts him under the same type of regulation, which is superior and more adequate and more workable than the cost formula he would have been faced with under the old type of regulation.

Therefore I beg to disagree with my distinguished friend when he says it frees the pipeline. It does not free the pipeline. That statement is as fallacious as the statement that it frees the independent producer. The latter statement has been circulated in every first-class newspaper in the country for the past year. Under this bill the pipeline producer would be under a better type and a more effective type and a more workable type of regulation than he would be under the cost formula. That fact I shall develop later in my remarks.

Mr. PASTORE. Mr. President, will the Senator yield further?

Mr. MONRONEY. I yield.

Mr. PASTORE. Therefore is it not a fact that if we now change the rule insofar as the pipeline producer is concerned, in giving him a reasonable market price at the place where the gas goes into interstate commerce beyond the gathering point, we fix a rule that will unquestionably and inevitably raise the price of gas?

Mr. MONRONEY. I doubt that it would raise the price of gas, although it may increase it a cent or a cent and a half.

Mr. PASTORE. It would raise it, whether it would raise it by 1 cent or by a tenth of 1 cent.

Mr. MONRONEY. A pipeline company which owned its own production, when it went under the act, was required to count into its amortization of the rate base the profits it had made during the period when it was under no regulation.

Therefore it suffered when the 1938 act went into effect. In many cases, particularly in old fields, under the cost method, which the Senator advocates, gas would move into the pipeline at half a cent a thousand cubic feet, because the situation during the unregulated period forced down the return after the act became effective. However, I make no case on that. It is relatively unimportant, because pipelines are going out of the producing business as soon as they liquidate their present reserves. They are not hunting for gas. They are not buying gas fields, as they used to do. They know they cannot operate under a utility return basis and stay in business. Therefore they choose to buy their gas from the independent gas producers. That is what is happening.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. DOUGLAS. I know the Senator from Oklahoma desires to keep the discussion on a factual basis.

Mr. MONRONEY. I certainly do.

Mr. DOUGLAS. Is it not true that in 1953 the pipelines produced 21½ percent of the gas which they transmitted across State lines?

Therefore it is not an insignificant proportion.

Mr. MONRONEY. I will put the figures in the RECORD. I believe they will show a strongly declining curve.

Mr. DOUGLAS. I am sure it is not to the degree that my distinguished friend from Arkansas said it was, from 25 percent to 10 percent, because the figures for 1953, which are figures for the last full year, show the percentage to be 21½. That is the amount produced by the pipelines and their affiliates. The record will further show that they have been drilling a larger number of additional wells. Therefore, the statement that it represents an insignificant proportion of the total gas production is not really a correct statement.

Mr. MONRONEY. I believe the figures will speak more eloquently than the junior Senator from Oklahoma can present them at this time. If there are no further questions, I should like to proceed with my statement as rapidly as I can.

Mr. FULBRIGHT. Mr. President, will the Senator yield on that point?

Mr. MONRONEY. I am glad to yield.

Mr. FULBRIGHT. The figures produced by the Bureau of Mines show that the ratio declined. I assume it refers to pipelines.

Mr. DOUGLAS. Not necessarily, because in some instances, particularly in the Southwest, as the Senator knows, direct shipments are made from the producer into the local marketing area.

Mr. FULBRIGHT. Yes; certainly. However, the ratio has declined from 24.8 percent in 1945 to 10.5 percent in 1953.

Mr. DOUGLAS. I should like to check those figures.

Mr. FULBRIGHT. These figures are contained in the report of the Bureau of Mines.

Mr. MONRONEY. I would like to return to the problem of the method of regulation. The initial paperwork of applying for certificates has slowed down and worked a severe hardship on many producers who must wait many months before the available gas from their leases can be committed to the pipelines seeking delivery. One producer can drain gas from beneath the leases of another while the new one waits in the long- and slow-moving line for his certificate.

What the answer will be when a cost formula is finally applied is anyone's guess. Probably they will not reach that during our lifetime, unless the Congress increases appropriations to the FPC by some 10 times its present amount. And even then the FPC's decisions on utility-types rates for gas at the wellhead face the likelihood of a long-delayed court test before they become final.

But even these time-consuming and costly delays on the simple cases do not indicate the complex and insoluble problems which the law, as rewritten by the Supreme Court, would entail. If the cost for one well, or one group of gas wells, can be established—with proper credit, of course, in the rate base for dry holes, unproven leases under contract, variable drilling costs, sales in the field, separators, and Christmas trees, and all the rest—what is to be done about the combination wells which produce gas along with oil?

I believe that is the question which was asked by the Senator from Minnesota [Mr. THYE].

Testimony before the committee was that one-third of the gas sold is produced

in conjunction with oil production. Thus making a utility of a gas well brings about new complications.

The producer started out in the hunt for oil or gas. He did not know what his drill bit would find 5,000 feet under ground. If he struck oil, he was in free enterprise, but if he struck gas, he became a public utility. If he found both oil and gas, he became half slave and half free.

I can well imagine a producer, as he goes down some 5,000 feet, striking oil at 1,000 feet. He says, "Oh, boy, I will be in free enterprise."

Then at 1,500 feet, another test is made, and it shows that he has hit a pocket of gas. He says, "Now I am a utility."

At 3,000 feet he may again be in free enterprise.

At that point he may well hope that he will hit a bourbon well, after all that nervous strain and all that damage to his nervous system.

One-third of the well was a public utility. Was it the top third or the bottom third of the well? Or do we slice it vertically and dedicate one-third of the 18-inch hole to utility regulation?

As ridiculous as this sounds, it will be the case. But worse than that, when we regulate under Government control over the production of oil as well, the FPC will allocate the costs—whenever they can, after many years, determine them—that are attributable to gas, but the free enterprise of oil must salute and obey as the other Siamese twin.

While the gas production of old contracts will be tied up in a supertraffic jam, the new production so necessary to meet the ever-increasing demands of new customers must wait at the end of the line before it can got into interstate commerce. The ready and waiting buyer cannot buy—the ready seller cannot sell—the Commission cannot act because there are thousands of waiting old contracts to be first cleared.

It is this Gordian knot tied by the split decision of the Supreme Court this bill seeks to cut. It seeks to turn the gas into the lines with a workable system of regulation of the market price, instead of the impossible utility type of regulation legislated by the Court.

Clear testimony before our committee showed that 50 percent of the gas produced remained in the State where produced under present conditions. It should be clear that if 50 percent remained within the State before the decision, the impossible regulatory situation faced by producers under the Court's bill would cause even a greater amount to be consumed in the State where produced.

Mr. DOUGLAS. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. DOUGLAS. When the Senator says that 50 percent of the amount produced remains within the State, he does not mean that 50 percent is productively consumed within the State or rather sold for a market price, does he?

Mr. MONRONEY. The testimony shows that 50 percent of marketed production moves into interstate commerce and that the other 50 percent remains in the State. A part of it moves into household use, a great deal into industrial use, and a great deal is used in the field in drilling other wells. There is not a great deal of gas flared any more.

Mr. DOUGLAS. Is it not a fact that approximately 9 percent of the production is waste, that approximately 14 percent is used in the field primarily by the gas and oil companies themselves, and that there are further wastages? The Senator is speaking of gas produced in the Southwest and transmitted to other sections of the country. Does the Senator have the figures, taking into account the wastage and the consumption in the field, which, together, amount to nearly 25 percent?

Mr. MONRONEY. The distinguished Senator would not say that consumption in the field by using gas under boilers to drill other wells is wastage. It would be sold if it were not right there belonging to the person who owned the gas. The Senator would not expect him to buy it from the Washington Gas Light Co, would he?

Mr. DOUGLAS. The gross production of natural gas in 1953 was 10.6 billion thousand cubic feet. There was 1.4 billion used for repressuring, and so forth, making a net production of 9.2 billion thousand cubic feet. Out of this there was a loss in the field of more than 800 million thousand cubic feet. There was field use of 1,470 million thousand cubic feet, losses in transmission of 240 million thousand cubic feet, compressor fuel 230 million thousand cubic feet, use in manufacture of mixed gas, 179 million thousand cubic feet. So that the remainder left for sale was approximately 6.2 billion thousand cubic feet.

I think that gives a better sense of proportion for the industry. I think the Senator will find that very large quantities are used for repressuring, and there are wastages in the field, losses in transmission, use of compressor fuel, and so forth.

Mr. MONRONEY. Only a half moves into interstate commerce. There will always be losses in transmission. That is an unavoidable loss. There will always be a demand for repressuring, because that is a means of adding to the natural resources. It is pumped into old oil wells so that the oil supply can be conserved. There is more of that going on all the time, which will further detract from the interstate supply. To get a greater supply is the problem. This bill will move in the direction of insuring a larger supply, while the Supreme Court moves in the direction of a smaller supply.

Mr. DOUGLAS. I did not wish the Senator to cause people to believe that there are enormous intrastate commercial uses outside of the gasfields.

Mr. MONRONEY. I did not mean to give that impression.

Mr. DOUGLAS. It is the interstate movement of gas which is the primary factor of commercial importance.

Mr. MONRONEY. Mr. President, I should like to refer to a table compiled from the reports of the Bureau of Mines relating to the distribution of natural gas in 1953. I will place it in the RECORD.

	Billion Mcf.
Gross production	10.6
Interstate movement and consumption	4.2
Intrastate consumption	4.2
Repressuring	1.4
Waste and losses	.8

Mr. DOUGLAS. The point is that the intrastate figure covers the field use and a lot of other nonsalable uses as well.

Mr. MONRONEY. It does not cover waste and losses. Perhaps the Senator has not seen this table.

Mr. DOUGLAS. It covers loss in transmission.

Mr. MONRONEY. Repressuring is carried as a separate figure. Waste and loss are carried as 0.8 billion M c. f. Interstate consumption is shown as 4.2 billion M c. f. Intrastate consumption is shown as 4.2 billion M c. f. I am sure that includes boiler fuel use and use in the oil fields. I think we are talking about the same thing.

Mr. DOUGLAS. I thought the Senator was speaking of commercial sales.

Mr. THYE. Mr. President, will the Senator from Oklahoma yield for a question?

Mr. MONRONEY. I yield.

Mr. THYE. I should like to ask the Senator a question with reference to competition in bringing gas into Minnesota. I am not speaking generally of the Midwest area. I refer only to the State of Minnesota. Is there as of today any opportunity of bringing gas into Minnesota other than by one specific pipeline?

Mr. MONRONEY. That would be up to the Federal Power Commission. They issue certificates of convenience and necessity where a pipeline company can show it has an additional gas supply. This bill has no reference whatever to that situation.

Mr. THYE. The only reason I asked the question was to ascertain whether the distinguished Senator could assure me of a gas supply for a consuming center such as the Twin Cities, which are dependent on one pipeline, the gas for which is concentrated, and into that pipeline. Until I know there is some certainty that the consumers, whether they be commercial, private, or utility consumers, will not be hamstrung by one pipeline through which all the gas must be fed, I cannot lay aside my responsibility to the housewife who may have spent her last dollar in converting from either coal or fuel oil to gas for her heating plant or her cooking unit. I have in mind, also, great industrial plants which have spent large sums of money converting to natural gas. That is the situation with which we are confronted in that northern region, and I have to be mindful of my responsibility to industries and individuals who are in the situation which I have described.

Mr. MONRONEY. I may say to my distinguished colleague from Minnesota that the Williston Basin, in which lie the great States of Minnesota, North Dakota, South Dakota, Wyoming, and Idaho, promises to be, on the basis of geological formation, the great new frontier of gas and oil.

Mr. THYE. That is correct.

Mr. MONRONEY. Wherever oil is found, there will be found some gas. If

under the processes of regulation the pricing of natural gas is fair, reasonable, sound, and workable, more people will drill in the effort to find and develop new gas wells and new oil fields.

The great thing about our American system is competition. When the magic bit strikes the magic fuel within the borders of the Senator's great State of Minnesota, or in areas nearby, he will find that the rates in his State, like those in Oklahoma, Arkansas, and other States, will quickly come down, because the people simply will not stand for the exorbitant rate which they are now being charged.

Mr. THYE. Mr. President, will the Senator further yield?

Mr. MONRONEY. I yield.

Mr. THYE. That will be true if the magic bit strikes the magic commodity about which we are talking, namely, gas. But in Minnesota the geologists have said that neither natural gas nor petroleum will be found. Therefore, since we can never expect to have those products, we must depend upon the sources in the Senator's State of Oklahoma which supply them. Then we shall be dependent upon the pipelines, which are the only means of conveying those products into our area. In the event there is no supervision over their transportation, we will have no knowledge as to whether the rates will go up once, twice, or five times in a given year. So far as we in that northern region are concerned, I believe the rate has gone up five times in the past 5 years. We do not know how many more times it will go up in the next year or 5 years.

Mr. MONRONEY. Does the Senator from Minnesota know whether the city of Minneapolis owns the gas distributing plant there? Is the Senator familiar with the operation of the Twin City delivery system?

Mr. THYE. Yes; I think I am familiar with it. It happens that the price of natural gas in the city is regulated; and in the particular instance referred to, of course, the regulatory body would determine what the utility might charge for it. But, again, the utility is solely dependent upon what the gas costs it as it comes from the pipeline. Therefore, the utility could not be governed by the city council of any city, because the city council would have to recognize the fact that the gas transmission line was charging so much; and, in turn, the gas transmission line would say that it had an increase imposed upon it at the wellhead, and so must pass it on to the distributing utility.

Mr. MONRONEY. I may say to my distinguished friend that, according to the figures I have for Minneapolis, the cost at the wellhead is 10.7 cents, which is about in accordance with the national average.

Mr. THYE. The Senator is correct.

Mr. MONRONEY. The cost at the city gate, including the producer's 10.7 cents, is 34.7 cents.

The cost of gas at the burner tip for household use is 75.3 cents. This gives a spread of about 40 cents per thousand cubic feet, which is about average on a nationwide basis.

I do not think any great economies will be made in trying to force down the 10.7-cent rate, because, as I showed, in 1926 the cost of gas was 9.5 cents. So the increase of 1.2 cents from the 1926 price has been very small.

Mr. THYE. If the Senator will further yield, I may say that it was not many years ago that the conversion from either coal or fuel oil to natural gas took place. It has only been within the past few years that the load buildup has come.

Once the load factor has been established, then the consumers might possibly be confronted with an entirely different situation if no regulation were imposed, because with the load factor having been established, the producer could charge whatever the traffic would bear. While the load factor was in process of being built up, and since the pipeline was laid only in recent years, there would have been no object in imposing the higher rate. But once the municipalities, colleges, industries, and residential users have their facilities converted to natural gas, the question is what the traffic will stand. That is the problem which confronts us.

I have confidence in the Federal Power Commission. I think they would be just and fair in the regulation they imposed. For that reason, I am bound by my responsibilities to the consumer, who is absolutely defenseless if an unreasonable charge is imposed, because his facilities have been installed, and his plants cannot use anything but natural gas.

Mr. MONRONEY. The Senator is talking about Federal Power Commission regulations. I have explained not once, but a dozen times, that the bill provides for the very type of practical, workable regulation which the Federal Power Commission had advocated. So, if the Senator has confidence in the Federal Power Commission, then he must have confidence in the bill, because the Commission is the agency which is familiar with the problem, not the Supreme Court, not Mr. Justice Minton. I do not think Mr. Justice Minton ever located a gas or oil well in his life. He is a great justice; but sometimes even great justices are wrong.

The Senator from Minnesota should support the bill if he has confidence in the Federal Power Commission; if he has confidence in the President's inter-Cabinet Committee on Fuel Resources, which has made a careful study of the problem; if he has confidence in the Members of the Senate from the gas-producing States, who have studied the problem; if he has confidence in any one who deals in gas, whether it be production or transmission. On the distribution side, we have a little static, but I may say that, almost to a man, those I have mentioned have approved the type of regulation proposed in this bill as being workable, as opposed to the type advocated by the Supreme Court, which is completely, hopelessly, and chaotically unworkable.

The Senator has his choice. Does he want to protect his people, or does he want to make a stump speech? He can hold the producer's price down, and then watch the rates go up and watch the supplies of gas disappear, because that will be inevitable.

Mr. THYE. I am not a rate expert, and I do not profess to be qualified to pass an opinion judicially on all legislative matters. But I may say to my distinguished friend from Oklahoma that there are some attorneys who disagree with the Senator's viewpoint with respect to what is sought to be embodied in the bill.

Mr. MONRONEY. I think the mayor of the Senator's fine city of Minneapolis appeared before the committee. We asked him what regulatory suggestions he had to make. If my memory serves me correctly, he was devoid of any suggestions, as were most of the other mayors. They had simply heard that the bill was a bad bill, and they merely came before the committee to say that it was a bad bill.

Mr. THYE. If the Senator will further yield, I may say that I am not now being influenced by the opinions of mayors. I am being influenced in my interpretation of the intent of the bill as a result of my study of the views of some very able and distinguished lawyers, who have made a complete study of the question. I say that those distinguished lawyers hold views which are at variance with the expressed intent of the bill, as it has been described by the Senator from Oklahoma, for whom personally I have the greatest respect and admiration, and in whom I have great confidence.

Mr. MONRONEY. I hold the same admiration for my distinguished friend from Minnesota.

Mr. THYE. The Senator's explanation of the bill, which he stated is a simple one, is somewhat in conflict with the opinions expressed by the experts, whose opinions I have read as to what the bill embodies.

Mr. MONRONEY. If all lawyers were in agreement on any bill which reached the Senate, we would have arrived at the millenium. We would never have difficulty in enacting laws, because there would be no difference of opinion. Certainly I do not expect during my lifetime, or in those of my grandchildren, to find a time when it will be possible to put 3 lawyers into a room and not find 1 of them dissenting.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. MONRONEY. I am trying to expedite the debate, to accommodate the time of other Members. But I will yield to the Senator from Arkansas.

Mr. FULBRIGHT. I think it might be of interest to the Senator from Minnesota to know that it so happens that the great Minneapolis Gas Co., with which I am certain he is familiar, has the highest earnings on its equity of any company whose earnings I have seen stated.

In 1954 the Minneapolis Gas Co. earned 16.3 percent on its equity capital. For the last 4 years that particular company has averaged the highest earnings on its equity among all the companies, I believe, which belong to the great Council of Utilities, which opposses the bill.

I am quite sure that company has taken the lead in opposition to the bill. I am trying to point out that the gas line which brings the gas to that area is a

monopoly, under the Gas Act. There is no question about that. But I may say there is plenty of competition among the producers of gas from whom the line buys the gas to take to Minneapolis, and which creates such a very favorable rate of return on the Minneapolis Gas Co. stock. That stock sells at the highest premium of any gas company stock in the United States.

VISIT TO SENATE BY THE HONORABLE MICHAEL MOOHAN, OF THE PARLIAMENT OF NEW ZEALAND

Mr. SMITH of New Jersey. Mr. President, will the Senator from Oklahoma yield to me?

Mr. MONRONEY. I yield to the Senator from New Jersey.

Mr. SMITH of New Jersey. I ask the Senator to yield to me on a question of personal privilege.

I hold in my hand a letter from our former colleague, Senator Hendrickson, who was formerly a Senator from my State. The letter introduces the Honorable Michael Moohan, a member of the House of Parliament of New Zealand, who is visiting with us today.

I am happy to introduce to my colleagues Mr. Moohan, who, as a fellow member of a parliament, is eligible to visit with us on the floor of the Senate. [Applause.]

I ask unanimous consent to have printed in the body of the RECORD, as a part of my remarks, the letter of introduction which former Senator Hendrickson sent to me.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN EMBASSY,
Wellington, New Zealand,
December 29, 1955.

The Honorable H. ALEXANDER SMITH,
United States Senate,
Washington, D. C.

MY DEAR ALEX: It is with the utmost pleasure that I forward to you by the bearer hereof this letter of introduction. As I tell you something of the talents and attainments of the Honorable Michael Moohan my only regret is that I cannot be personally present to participate in the interesting discussion which I know is ahead for you both.

At the outset you should know that Mr. Moohan is a distinguished member of the House of Parliament of this land of wonderful people. He is in our country primarily to learn more about our own Government and its operations and functions but he also wants to study the labor movement in the United States and to acquaint himself with its impacts upon our economy as well as upon the Government itself. Naturally as the president of the Labor Party in New Zealand he is extremely interested in all matters pertaining to trade unions the world over.

Now as to the man Michael Moohan: as his name implies he stems from good Irish ancestry; he is a family man, a fine citizen, and as you will soon observe is blessed with a personality which wins friends wherever he goes. He is a great asset to his country fundamentally because he is interested in the welfare of mankind.

With these few words in his favor I know that you will see to it that the distinguished member of the House from the Petone district has every facility placed at his disposal to the end that he may return to his own great country with even deeper convictions than those he already entertains concerning the need for an ever stronger alliance between New Zealand and the United States of America.

With warmest personal regards, I am,
Most sincerely,
ROBERT C. HENDRICKSON,
American Ambassador.

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

Mr. MONRONEY. Mr. President, I was saying that 50 percent of the gas now produced remains in the State. It remained there before the decision of the Supreme Court, and I believe the decision will cause an even greater amount to be committed to intrastate use.

Since June 7, 1954, when the effect of the Court decision has become apparent, we have seen this happen. More and more markets for State gas are being opened. Producers, to avoid the red-tape, confusion, and frustration of utility regulation, are committing their gas on long-term contracts within the State where it is produced.

They are not doing this to spite the interstate users. They know how they can operate, what they can charge, and the conditions of sale as long as it moves only in intrastate commerce.

I have many cases in my files showing clearly that producers have chosen intrastate markets even at a lower price because of the uncertainties of utility regulation on interstate sales.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. MONRONEY. I am happy to yield.

Mr. FULBRIGHT. I dislike to interrupt the Senator's statement.

Mr. MONRONEY. I am delighted to yield to the Senator who introduced the proposed legislation.

Mr. FULBRIGHT. It is interesting to note that the same Minneapolis Gas Co. spent $689,000 on advertising and sales promotion.

Mr. MONRONEY. Does the Senator mean that, as cold as it is in Minneapolis, the gas company advertised?

Mr. FULBRIGHT. The Senator can see how very efficient the company must be.

Mr. THYE. Mr. President, will the Senator from Oklahoma yield to me?

Mr. MONRONEY. I yield to the Senator from Minnesota.

Mr. THYE. We in Minnesota have some of the most able business people to be found anywhere in the United States. The Senator from Arkansas just called to the attention of the Presiding Officer and the Senate that the gas company in Minnesota is a very efficient one. I merely wish to say I have always been proud of our businessmen and their efficiency, not only in serving the interests of the consumer, but their efficiency in every other activity in which they engage.

Mr. MONRONEY. Mr. President, before we got off on the subject of Minneapolis, I was saying that much of the gas is now being developed for the intrastate market.

I hold in my hand a clipping from the Tulsa Tribune, which sets forth that the Trans-Ok pipelines, which runs from the same Chickasha gas fields, to which I was referring a moment ago, to Tulsa, transports gas for use as boiler fuel—for which it should not be used—in a 24-inch pipe. The Trans-Ok bought its supply from the Phillips Petroleum Co. and the Magnolia Petroleum Co. in the Chickasha and Lindsay fields. Over a 25-year period there will be a commitment for trillions of cubic feet of gas, which will be used as boiler fuel. At the time the deal finally was made to keep the gas in the State and have it used as boiler fuel to generate electricity—and I say this advisedly—a better offer for interstate sale was being considered. The company was not trying to spite anybody, but the Phillips Co. knew the dangers inherent in regulation on a cost basis and the futility of such regulation, and the frustration that would be occasioned thereby, so that gas which could have moved in interstate commerce for household use is now going to be kept in my own home State as boiler fuel.

I ask my colleagues to listen to this point, because it is important. The use of that gas results in the generation of electricity, and that electricity will be absolutely uncontrolled, even though the electricity moves in interstate commerce. So we find a big hole in utility regulations, in that as that fuel is converted into electricity within the State, the Federal Power Commission must pass on, as it does for increased coal costs, the increases in the cost of natural gas. It can flow into many States so long as the fuel is burned under boilers instead of put into pipelines.

I do not say this as scare talk, but many people are going to find that more and more electricity will be generated in steam plants in States producing natural gas, because a tremendous outlet is thereby available. The producers will not go to the cost, the danger, the trouble, the red tape, and the frustration of committing large supplies to interstate pipe lines. The supplies now available will be provided outside consumers, but as new supplies are obtained, those consumers will not receive them, because the gas will remain in the States where it is produced.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to the Senator from Rhode Island.

Mr. PASTORE. From an economical standpoint, is it not true that it is always going to be cheaper to use gas where it is found than to transport it 1,000 or 2,000 miles, regardless of what is done about the pending bill?

Mr. MONRONEY. No.

Mr. PASTORE. It is always going to be cheaper to use gas where it is found than to redistribute it over long distances.

Mr. MONRONEY. I am afraid that my friend, whom I respect very much, is overlooking the fact that this industry like ancient Gaul is divided into three parts—the producer, the transmitter to the city gates, and the city distributor. If there are no red tape, regulations, or threats of becoming a public utility, I

would not care, were I a producer, whether the gas were put in the funnel of a long pipe which goes to New York or Providence, or whether it were put in a line that goes to Tulsa. But I would not want to become a public utility and be required to hire lawyers at very high fees, in order to get certificates of convenience and necessity. There is no question about that. Washington lawyers charge pretty high fees, especially those who are trying to discourage favorable action on this bill.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. I am still trying to develop the point which my friend from Rhode Island raised. I should like to develop it, because I believe my colleagues should be concerned with the question, when there are millions of people waiting for gas. I think it is a practical, honest discussion, not of what is likely to happen, but what will happen.

Mr. PASTORE. I think the Senator has put his finger on a very important problem. I had been under the impression that the fear was on the part of the oil producers rather than the gas producers. I think the whole inspiration of the bill has been the fear that there is a chance that looking in on gas may result in looking in on oil, more than the fear of control of natural gas which has to be transported over hundreds and hundreds of miles.

Mr. MONRONEY. No one has been so brash as to propose control of the production of oil. We have great reserves as a result of the exercise of free enterprise, and I do not think anybody has suggested otherwise. But I do say it is getting a little close to the line to suggest that when gas represents a third and oil the other two-thirds of the production from a well Federal regulation should control the third represented by gas production. We say the red tape, the interminable delay, the uncertainty, the problem of gas production becoming a utility overnight is disadvantageous to the gas producer. It is contrary to his understanding of and knowhow in the business. Under those circumstances, when he has two markets, I leave it to the Senator as to which one he will choose.

Mr. PASTORE. The Senator has overlooked one question, and that is the fact that captive consumers are involved. Already before the Federal Power Commission there are a number of contracts in which the stipulated price is in excess of 20 cents a thousand cubic feet. If that 20-cent price should become the average market price, my colleague can see what would happen. It has been indicated that the price went from 4 cents to 10 cents. Ten cents is past history. The price in new contracts being negotiated today is at least 20 cents. That figure is a lever pointing to higher prices. There is no end, until we get to the point where it is not going to be economically feasible to give the consumer natural gas any cheaper than the consumer can be given fabricated gas.

Mr. MONRONEY. I will say to my distinguished friend that any 20-cent price has come about under regulation.

Mr. PASTORE. Oh, no; the cases are now pending.

Mr. MONRONEY. They are under regulation, and that is a part of the threat of this entire situation. A reasonable market price formula would not justify a 20-cent price, because the norm in the field is about 10 or 11 cents. If the distinguished Senator understands the fair market price, by which a reasonable quantity of gas in a free market meets a reasonable demand in the market, he will understand that the going rate will largely obtain. But if the utility-cost method is to be used—and I should like to discuss that as quickly as possible——

Mr. PASTORE. First, I believe we should complete this colloquy.

Mr. MONRONEY. Yes, I wish to do so; I am not trying to run away from it.

However, under the arrangement to which the Senator from Rhode Island has been referring, I believe I can clearly demonstrate that the utility formula will serve to increase the cost, whereas under the normal competition which historically has existed the rate is regulated or controlled by the supply and the demand—with the result that at the end of 1954, the field price was only one-half cent above the price in 1926. I believe that can be clearly shown.

Mr. PASTORE. But where there is a seller's market, how can there be a free market and how can there be a competitive market?

Mr. MONRONEY. That is why we have placed the spiral and the "most-favored-nation" escalator clauses under the supervision of the Federal Power Commission—not only in the case of the new contracts, but also in the case of the old ones, which are subject to the approval of, and review by, the Federal Power Commission. What could be clearer? Then the Commission can reduce any increase because of spiral and "most favored nation" escalators, which result in prices which are above the fair market price in the field.

Under the bill, the fixed periodic step-ups under existing contracts are exempt, whereas the rates under new contracts are subject to review by the Federal Power Commission, which can refuse to allow the pipeline any amount which is found to be in excess of the fair market price.

Mr. PASTORE. But in this case how can the fair market price be arrived at?

Mr. MONRONEY. By this method, and by ignoring any crazy, screwball offers which may be made in a certain gas field, for a small quantity of gas suddenly needed by a utility—as in cases similar to the one on which we had testimony, which was at Jamestown, N. Y., as I recall. The Senator from Rhode Island will remember that case. About 8 or 10 cents above the going field price was offered, as I remember. That was for only a small quantity of gas; and under any normal, fair market basis that price would not have been considered in determining the reasonable market price.

Mr. PASTORE. But this bill will not prevent that, because the Senator from Oklahoma has said that in the case of future contracts the pipeline company can pay any price it may desire to pay, but can charge against costs only the part which is within the reasonable market price. So actually these companies would be permitted to outbid one another, and then they would have to try to absorb the costs which they could not charge off; and in the event of their bankruptcy, as a result of such a situation, the poor housewife would not be able to obtain gas to use in her home.

Mr. MONRONEY. The Senator from Rhode Island would seem to imply that a pipeline company would intentionally bankrupt itself by paying more for gas than it could afford to pay.

Mr. PASTORE. But the Senator from Oklahoma is the one who called offers of that type "screwball."

Mr. MONRONEY. But at this time the companies can charge that off as an expense. On the other hand, under the bill the Commission can say, "No; you must absorb it."

Mr. PASTORE. But that cannot be done now; now they can obtain only what is just and reasonable.

Mr. MONRONEY. But I can show the Senator from Rhode Island that all the high-cost gas will move in interstate commerce, and the low-cost gas will remain within the State of production, as a nonutility production. So the gas will remain in the fields where it is produced.

Mr. DANIEL. Mr. President, will the Senator from Oklahoma yield to me?

Mr. MONRONEY. I yield.

Mr. DANIEL. Did not the committee hear from many witnesses who testified that if the bill is passed, the supply of natural gas available in interstate commerce will take care of exactly the situations mentioned by the Senator from Rhode Island?

Mr. MONRONEY. Yes. The uncertainty is what has caused the difficulty.

Mr. DANIEL. Did not the Federal Power Commission report to us that passage of the bill would bring so much greater a supply of natural gas into interstate commerce that it would take care of these situations, and that as a result the supply would be sufficient to prevent the rise in prices which has been cited by the Senator from Rhode Island?

Mr. MONRONEY. Certainly.

Mr. PASTORE. Does the Senator from Texas seek to leave the impression that the producer has been holding off, waiting for the bill to pass?

Mr. DANIEL. No, I did not say that.

Mr. MONRONEY. I think any producer will say that where there is such uncertainty, to connect today to a pipeline would perhaps make a producer a utility, whereas the Congress and our committee considered all along having Congress write its own law, instead of letting the Supreme Court write one. So it is only natural for the producer to decide that he will wait, to see what will happen. But once the producer hooks up to the long line, he is stuck for 20 years, inasmuch as that is the term of a gas contract.

Mr. DOUGLAS. Mr. President, will the Senator from Oklahoma yield on this point?

Mr. MONRONEY. I yield.

Mr. DOUGLAS. Is it not true that the overwhelming preponderance of contracts between independent producers and pipelines have in them what is termed the "most favored nation" clause, so that no matter what the original contracts may fix as the price, if the pipeline company, in order to get additional gas from another producer, agrees to pay a higher price than the base rate, that is automatically extended to all those who already have contracts? In many cases that is true not only of the higher offers made by a particular pipeline, but also of the offers made by other pipelines in the same area, so that when there are "most favored nation clauses" in the second or third degree in the contracts, as is true, then the last price becomes the prevailing and average price, and all the rates go up, and that price then becomes the reasonable market price.

Mr. MONRONEY. I beg to disagree with my distinguished friend and colleague.

The fair market price policy, is well established in law, in the case of the seizure of private property by Government condemnation. If a courthouse site is to be condemned, the fair market price is not determined by showing that 15 or 20 miles out of town, in the next county, a price of 20 percent more was paid. The price to be applied must reflect the fair market price in that city, which is what the Government has to pay in seizing the property. That is a well established line of law—and more firmly established than the Supreme Court's position regarding a reasonable rate of return in an extractive industry.

Mr. DOUGLAS. My good friend from Oklahoma is one of the most reasonable men in the Senate. Let us take this issue point by point.

Is it not true that the overwhelming portion of the current contracts includes what is known as the "most favored nation" clause?

Mr. MONRONEY. It is not true.

Mr. DOUGLAS. I will present evidence that it is.

Mr. MONRONEY. Perhaps in recent years it has been true that contracts contained some escalator clause. But up to that point, the supply was largely on the basis of 20-year contracts. Most of the contracts before 1953 were on that basis. Such a contract would not be modified by a 1953 contract, because a contract for 20 years is like a lease for 20 years. It cannot be rewritten at will. So the 20-year contract included fixed escalation at given stated intervals, and in definite amounts. Such old contracts are exempt from Federal Power Commission review. Later contracts, containing escalator clauses, "most favored nation" clauses, and spiral clauses are subject to the approval of the Federal Power Commission. When my distinguished and beloved friend from Rhode Island says that the prohibition against passing on any amount found to be in excess of the fair market price will not be a deterrent on the pipeline to prevent over-overbidding or paying more than a reasonable market price, he is not acquainting himself with the business reaction of a man who has sufficient business acumen to float a bond issue for some $50 million or $100 million worth of pipelines.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PASTORE. Then why is it that in this bill there is the "gimmick" that when an existing contract has an escalator clause, the pipeline company is not obligated to pay more than the reasonable market price, but that in connection with future contracts it can pay more but charge off less? Why is it not made obligatory that the pipeline company pay no more than the reasonable market price in connection with future contracts, if the proponents of the bill are not trying to build up the market price?

Mr. MONRONEY. We are not trying to use the bill to build up the market price. I think any reasonable man knows that a pipeline company will not pay more for gas than it can charge in its rate base. Those who operate pipeline companies are not from St. Elizabeths' Asylum. They are more like men from Wall Street. I have had enough experience watching what the Wall Street boys have done in the past few years to enable me to conclude that they can take care of themselves. They are not going to pay more for Oklahoma gas in the field than they can charge as an expense when they deliver it.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. DOUGLAS. The stocks of some of the producing companies which are selling gas to the pipelines seem to be selling extremely well on the market.

Mr. MONRONEY. Some Oklahoma companies have become so strong that their stocks are listed; and we are not ashamed of it.

Mr. DOUGLAS. I hope the Senator from Oklahoma will not dress up Standard Oil, Cities Service, Shell, Gulf, and so forth, in the oil-soaked overalls of the boys from Oklahoma, because they do not belong in the picture.

Mr. MONRONEY. We have some companies of pretty good size, of Oklahoma genesis. They still maintain their offices and headquarters in Oklahoma. They take our Oklahoma college boys into the petro-chemical industry, which has become a great, progressive instrument for building up not only the raw production of oil and gas, but also the production of associated chemicals and products that flow from them, such as artificial rubber and many other products.

Mr. DOUGLAS. My good friend from Oklahoma was trying to pin the Wall Street label on the transmission and pipelines, and not on the producing companies.

Mr. MONRONEY. Oh, no.

Mr. DOUGLAS. It will be found that the producing companies are just as characteristically Wall Street as are the transmission lines, and probably far more so than the distributing companies.

Mr. MONRONEY. I think neither our producers nor the transmission lines need to have their heads examined when it comes to the ability to pass on to the consumer an expense of that kind. They are not in business to give away anything. I believe that the fear expressed by the Senator from Rhode Island [Mr. PASTORE] is absurd, with all due respect to my very dear friend.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PASTORE. Of course, the Senator can make any characterization he likes; but the bill provides, with reference to existing contracts, that pipeline companies shall not be obliged to pay more than a reasonable price. Why does not the bill make the same provision with respect to future contracts?

Mr. DANIEL. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. DANIEL. I think the Senator from Rhode Island knows full well why that provision was written into the bill with respect to present contracts. It was in order that it might be clear that, even though the contracts provided to the contrary, Congress was preventing the carrying out of those contracts.

As to future contracts, if any transmission company wants to pay more than the market price which can be charged as expense, the excess cannot be passed on to the consumer.

Mr. MONRONEY. That is true.

Mr. DANIEL. Those who are concerned about the consumers need have no fears on that score. It will be the interstate pipeline which will have to absorb the difference.

My position is like that of the Senator from Oklahoma. I did not think it was necessary to place a prohibition in the bill to take care of the interstate pipeline. Those who operate such pipelines are good enough businessmen to refuse to pay a higher price than that which they have been allowed by the Federal Power Commission to charge as expense.

Mr. MONRONEY. Mr. President, unless there is some urgent question, I should like to relieve the Senate from the burden of having to listen to me at greater length than necessary. I have reached almost the halfway point, and would like to proceed.

At least 10 other cases are in my files showing sales at a lower rate in intrastate commerce to avoid becoming a utility. This preference to intrastate use will continue as long as the producers are faced with the uncertainties posed by the Supreme Court's new Natural Gas Act.

One type of gas, however, will be committed to the heavy demands of the interstate lines. That is the gas produced at a high cost. Such gas as is produced in the offshore area from wells costing $2 million each in the tidelands area will reach the long lines.

They have an extremely high cost of production. That is especially true with respect to the part still reserved by the Federal Government. The interstate lines will have to pay what the gas is worth. Consequently there will be high cost production from a vast new gas area which is coming in most rapidly.

Because of the chance the Court's decision gives them to earn a guaranteed return on production from expensive

wells and costly leases, this high-priced gas will become the principal source of new interstate supplies.

So will gas from other uneconomic fields where light production and high drilling costs make it advantageous to sell on a guaranteed return on a cost basis. The hard-luck producer who has many times as many dry holes in a year as producing wells also will be able to capitalize for high rate-making purposes all of his bad luck with "dusters."

Only the gremlins who guide the drill bits into oil or gas sands can tell whether the dry hole was drilled in the search for oil or for gas. No crystal ball of the FPC can determine it with any degree of certainty. But we can count on one thing for certain, and that is that the future supplies of interstate gas will be the "lemons" of the industry—while the low-cost gas will move unregulated into intrastate usage.

Is this all an idle fear? Am I seeing ghosts under the bed? Better look at the statistics to see what has happened in just 1 year of this uncertainty.

In 1955, the year just closed, the number of new oil wells completed showed an increase of 7 percent over 1954. The number of new gas wells showed a decrease of 9.7 percent.

Each year, during the period from 1945 through 1953, the unregulated gas producers have added new reserves averaging twice the current production of that year. But the new reserves added in 1954 barely exceeded current production—for the first time in recent history. What greater warning could the Congress have of the ultimate effect of the Phillips decision?

Of greater immediate concern, however, is the vast decline in the amount of new gas committed to the 11 major interstate pipelines under contract in 1953 and in 1954. I am speaking of actual gas commitments for interstate commerce. In 1953, before the Supreme Court's new law, these interstate pipelines were able to contract for 6.4 trillion cubic feet of new reserves. In 1954 only 2.3 trillion cubic feet—about one-third—was committed.

These decreases—in new reserves, in gas well completions, and in additional reserves committed to interstate commerce—should give pause to reckless action.

Mr. DOUGLAS. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. BIBLE in the chair). Does the Senator from Oklahoma yield to the Senator from Illinois?

Mr. MONRONEY. I yield.

Mr. DOUGLAS. The Senator has pointed to the fact that so far as the gas facts figures are concerned, the new reserves discovered in 1954 were just equal to the amount of gas used up, and implied that that was due to the decision of the Supreme Court in June of that year.

Mr. MONRONEY. No; I did not mean to imply it. I merely stated the fact.

Mr. DOUGLAS. I should say that such an inference could be drawn from the remarks of the Senator from Oklahoma.

Mr. MONRONEY. That may be.

Mr. DOUGLAS. Drillings for oil are planned a year in advance. Therefore the decision of the Supreme Court in June 1954 could not have had an effect on the number of drillings, as General Thompson testified before the Senate committee on page 54 of the hearings. If we go into the number of drillings, we find that the total number of drillings in 1955 was greater than in any other year. Wildcat drillings in 1955 amounted to approximately 12,350, as compared with 11,062 in 1953—see Oil and Gas Journal Weekly well completions.

Mr. MONRONEY. That is for both gas and oil.

Mr. DOUGLAS. Combined drillings.

Mr. MONRONEY. Except that in developmental drilling one knows what one is drilling for.

Mr. DOUGLAS. The number of developmental drillings was greater in 1955 than in any previous year. They amounted to approximately 45,000 as compared with 38,217 in 1953—same source. As a matter of fact, in 1955 there were a larger number of drillings, both wildcat and developmental, than in any previous year. There may be some question as to why the gas was not found in 1954, but that could not be charged to a failure to drill or to a discouragement of exploration. For 1954 drillings, though less than 1955, were 11,280 for wildcat wells and 42,650 for developmental wells.

Mr. MONRONEY. But I am certain the Senator from Illinois will agree it is rather significant that between those 2 years there was a reduction by two-thirds in the amount of gas committed to the interstate pipelines.

That is a figure we can get our teeth into. I do know that there are many reserves in which a discovery well has been drilled but as to which the developmental costs have not been spent, because of the uncertainty.

Mr. DOUGLAS. Inasmuch as the Senator has asked a question, I take it he would like my reply to it.

Mr. MONRONEY. I would.

Mr. DOUGLAS. Perhaps the reason why so many wells committed to interstate pipelines are owned by interstate pipelines—

Mr. MONRONEY. I am not talking about that. I am talking about the commitment of new reserves from independent producers.

Mr. DOUGLAS. I thought the Senator was talking about directly drilled wells. If drillings by affiliated pipelines has gone down it has been because people thought the new bill would be like the Kerr bill, and that the new bill would continue control over the pipelines and their affiliates, but would exempt the independent producers. Believing that the Kerr bill would be continued, the gas pipeline companies had a natural tendency to move out from under and let the so-called independents down. Messrs. HARRIS and FULBRIGHT crossed up these people, or perhaps gave them a bonus, by also virtually exempting the wells controlled by the pipelines.

Mr. MONRONEY. I may say that actually the failure to commit the gas to interstate commerce shows that the new producers do not wish to become public utilities. Perhaps the FPC felt that the price of a thousand cubic feet of gas produced in the same field should be a fair market price both for the man who has his pipeline and the man who is an independent producer. They would have found themselves in an untenable position to say that the fair-market price must be fair only to one group, and not also to another group.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. BUSH. Will the Senator advise us what the 1955 figures are which are comparable to those for 1954?

Mr. MONRONEY. It is too early to get those figures. We shall try to get them. The only dependable figures at the moment are the figures for 1954. However, I am certain there is a great deal of similarity in the figures. During the course of the discussion, if we can get those figures, they will be put in the RECORD.

Mr. BUSH. Do not the gas companies report on a monthly basis to the Petroleum Institute, or a similar organization?

Mr. MONRONEY. The commitments? I would doubt it.

Mr. BUSH. I would ask the Senator to get the 1955 figures.

Mr. MONRONEY. We will do the best we can to get those figures.

Mr. BUSH. They would be significant one way or another. I believe we ought to have them, inasmuch as we have the figures for 1953 and 1954.

Mr. MONRONEY. In 1954 we had a 32-year supply of natural gas in reserve. In 1954 we had only enough gas for 22 years, even at the present rate of consumption. If demand, which has increased from 1.3 trillion cubic feet in 1935 to 6.5 trillion cubic feet in 1954, continues to increase at the same rate, our reserves will be further reduced, barring new discoveries of ever-increasing quantities of gas.

This is not just scare talk by the proponents of this bill. Let us read what the Institute of Gas Technology—representing the gas distributors—reported to its members last month:

> Domestic production will not keep pace with demand, and—in the early 1960's the rate of natural-gas production will be inadequate. * * * The element of major importance to us in this anticipated shortage of gas in the middle 1960's—

I say that the pending bill will help to a marked degree to relieve the built-in shortage machinery of the Supreme Court's gas law.

It is utterly impossible for the Federal Power Commission to carry out the provisions of the Supreme Court's decision. Remember that this decision places the producer's price for gas, for the first time since 1824, on a public utility basis—that is, on the basis of cost of production plus a reasonable return on investment.

How do we determine the cost of production? No one, including the Federal Power Commission, the producers, the long interstate pipelines, the distributors, and other opponents of this bill, who testified before our committee, has the

answer. The FPC held weeks of hearings on the subject, only, finally to dismiss the proceedings without having found a solution.

Such an impossible standard of establishing the cost of gas from thousands of producing wells—each with different conditions—had already been explored by the FPC and found completely unworkable in practice and undesirable in effect in the Panhandle Eastern opinion. But notwithstanding the unworkable nature of the cost-plus-reasonable-return standard, the circuit court of appeals has now held that under the Phillips decision and the Natural Gas Act as it now stands, the FPC must use the rate-base formula.

In the year and a half since the Phillips decision a snowstorm of papers, most of which are yet unfiled, has occurred—while the traffic jam daily grows worse. At one point not long ago the Commission was 6 weeks behind just in opening the incoming mail. Certificates of convenience and necessity for 8,000 individual producers, sales contracts and rate schedules, permits to connect with gathering lines, permits to connect with long lines—the merry-go-round spins but goes nowhere.

What does the Commission to which the Supreme Court passed this Rube Goldberg machinery say about it? Listen to some of the testimony by its chairman before our committee.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. Does the Senator from Illinois wish me to read the testimony?

Mr. DOUGLAS. Yes. However, the Senator from Oklahoma is a very honorable man, and I know he would not give any incorrect figures. When he mentions 8,000 producers, I am sure he is using the testimony before the committee of Mr. Boatwright, of the Standard Oil Co.

Mr. MONRONEY. That testimony has been checked by our own staff. It is based on our findings in State regulatory bodies, not in the Federal Power Commission. Those findings indicate that the figure is approximately correct.

Mr. DOUGLAS. The figures which I get from the Federal Power Commission show a total of approximately 5,000, instead of 8,000.

Mr. MONRONEY. We have gone behind the Federal Power Commission, because many of the producers cannot afford to engage attorneys to request certificates of convenience and necessity. Some of them have so little gas to sell in interstate commerce, they will risk voiding the contracts.

Mr. DOUGLAS. It will be transmission companies which will make the filings. The figure I have indicates that the total number is about 5,000, of which 2,400 are in the very small Appalachian field. As a matter of fact, all but 200 of these companies sell less than 2 billion cubic feet of gas a year. One hundred and ninety-seven big producers sell 90 percent of the gas; all the others sell only 10 percent. That is the real issue.

Mr. MONRONEY. Is it 197?

Mr. DOUGLAS. That is correct.

Mr. MONRONEY. I am glad to have that figure, because it shows a big diffusion of ownership.

Mr. DOUGLAS. I shall present more figures later. Thirty-five of the big companies, which the Senator from Oklahoma would dress up in overalls, sell 70 percent of the gas which moves across State lines. Twenty-five companies sell about 50 percent of the gas. If we take each pipeline as a unit, we find that about four producers along most of pipelines will sell the majority of the gas. In the case of one pipeline, which serves Michigan and Wisconsin, one company, Phillips, sells 100 percent of the gas which the pipeline buys.

Mr. MONRONEY. One hundred percent to the distributing companies in a certain region?

Mr. DOUGLAS. Yes.

Mr. MONRONEY. That particular pipeline company did not want to deal with a lot of small producers; they wanted to have a single reliable source of supply.

Mr. DOUGLAS. There are a great many electric companies in the country. Would the Senator think there is competition in that field because of that fact, when the truth is that we have a series of local monopolies?

Mr. MONRONEY. I would say there is a modest amount of competition. I will give all the figures for the RECORD. So far as natural gas is concerned, there is a greater diffusion by far than in most of our large industries.

In copper, the first 4 companies have 80 percent of the market; the first 8 companies have 91 percent.

In iron ore, the first 4 companies have 62 percent of the market; the first 8 companies have 77 percent.

In lead, the first 4 companies have 56 percent of the market; the first 8 companies have 70 percent.

In zinc, the first 4 companies have 42 percent of the market; the first 8 companies have 60 percent.

In anthracite coal, the first 4 companies have 41 percent of the market; the first 8 companies have 60 percent.

In natural gas, the first 4 companies have 17 percent of the market; the first 8 companies have 28 percent.

In bituminous coal, the first 4 companies have 16 percent of the market; the first 8 companies have 24 percent.

In natural gas, the first 8 companies have 28 percent of the market, and the first 20 companies have 46 percent.

Mr. DOUGLAS. I think the figures the Senator has given are figures on total production of gas rather than the movement in interstate commerce. But is not this further difference a very vital one, namely, that if the price charged for coal by one mine is relatively high the consumer can go to another mine? And there are other methods of transportation in the case of coal, but in the case of gas there are the gathering lines, the transmission lines, and the distribution lines, and the consumer is tied to the local gas company, the local gas company is tied to the transmission line or pipeline, and the transmission line or pipeline is tied to the producer or to a very limited number of producers.

Mr. MONRONEY. I agree with my distinguished colleague that the consumer is tied to the supposedly regulated local gas distributing company, and that the distributing company is tied to the long line; but did the Senator ever look at those pipeline fingers that go out all over the country? If someone says, "I have a gas well," he is told, "Come in and we will do business with you." There is no monopoly. Long pipelines are going out all over the States to purchase gas. The utilities in the city of Chicago over which the Senator has fought many battles for the consumer——

Mr. DOUGLAS. For him or against him.

Mr. MONRONEY. For the consumer.

Mr. DOUGLAS. Against the gas companies?

Mr. MONRONEY. Against the gas companies. I say that in all sincerity.

Mr. DOUGLAS. I am glad the Senator understands where I have stood in Illinois on these issues.

Mr. MONRONEY. I understand the Senator's position.

The utility in Chicago is proposing to pay 20 cents a thousand at the border for gas coming down from Canada. They pay about 11 cents at the well for the gas produced in the United States and used in Chicago, but they are offering Canada 20 cents for the gas as it crosses the line.

They are going into Mexico and offering 16 or 17 cents for the production there.

Certainly, I feel that we want to prevent unreasonable increases, but I think we have got to have a workable bill that will not kill the patient when we are trying to cure him. But to say that a transmission line is tied to one set of gas producers is not in line with the facts, because they are roaming all over America to get more gas.

Mr. DOUGLAS. In the matter of the pipelines, there probably is some competition in the original evaluation of the lines, but the cost of the lines is very great, and with the contracts, having a "most favored nation" clause in them, it would mean that when they try to get additional gas they have to bid high in order to get it. The price has to be passed on to the distributing company which passes it on to the consumer. They cannot pick up their lines and go elsewhere.

Mr. MONRONEY. I cannot follow the Senator when he fails to see that the Fulbright-Harris bill would make it possible to avoid the situation to which he objects as the FPC would review the operation of such clauses. I know the distinguished Senator has studied the bill and knows that is the case under the provisions of the Fulbright-Harris bill.

Mr. DOUGLAS. The Senator's bill says "reasonable market price." But no one knows what it means. But I do not wish to delay the Senator.

Mr. MONRONEY. We cannot carry on a future spiral or a "most favored nation clause" in a contract and say it is going to raise the fair market price.

Mr. DOUGLAS. "The reasonable market price."

Mr. MONRONEY. I agree. I should have been a little more careful in my language, perhaps.

Mr. DOUGLAS. As the Senator from Rhode Island [Mr. PASTORE] has pointed out, this does not prevent the lines from paying more than a "reasonable price," but merely that they cannot pass it on, so it is so said. Furthermore, there is a great deal of question as to what the term "reasonable market price" means. It amounts to saying that whatever is the market price will be the reasonable market price.

Mr. MONRONEY. It probably goes back to the term "reasonable market price" which the Federal Government has been using for 160 years in condemnation proceedings for the taking of private property for public use.

Mr. DOUGLAS. Is that the standard for electricity and other utility rates?

Mr. MONRONEY. No. We cannot apply the standard for distributing utilities automatically to gas producers.

Mr. DOUGLAS. We are perfectly willing to have a higher rate of return granted to a gas producer than to producers of electricity. Any reasonable person would agree to that. But I do not think we have to turn to the market price as an explanation or justification of market price. As that is what we are supposed to determine and not indulge in legal mumbo-jumbo.

Mr. PURTELL. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. PURTELL. What would be an unreasonable market price?

Mr. MONRONEY. One of which the Federal Power Commission would not approve.

Mr. PURTELL. Then it would not be the market price.

Mr. MONRONEY. Of course not. If it were an unreasonable price, it would not be approved. I never heard anything so absurd——

Mr. PURTELL. If the Senator will pardon me, we are talking about market prices.

Mr. MONRONEY. We are talking about reasonable prices, and the Senator asked me if it would be an unreasonable market price.

Mr. PURTELL. I suggest to the Senator that I did not say that. I asked, What would be an unreasonable market price?

Mr. MONRONEY. An unreasonable market price would be one which, after an examination of all the factors in the particular field, would be found to be unreasonable by the Federal Power Commission, which is charged with the enforcement of the law. Let me read to the Senate what the Federal Power Commission said, because I think it is important in the consideration of the bill. I do not claim to be an authority, so I would like to quote a few authorities. This is what the Chairman of the Commission said as to their situation under the Phillips decision:

> What standard can we use, or does the law require us to use, in determining whether a producers' price is a fair price? That has puzzled us ever since the Supreme Court decided the Phillips case.
>
> Last year we asked for suggestions from everyone interested—pipeline companies, producers, distributing companies, and all interests—to give us written suggestions on what kind of a standard should be used. Then we held oral argument and gave those people an opportunity to explain to us how they thought we should approach the problem.

That is what we are trying to do, I think, with some degree of authority. I continue to read from the testimony of the Chairman of the Commission:

> I might say that out of all that, nothing developed which is clear, or to my mind, satisfactory. * * * I feel that the use of original cost would make us slaves to mathematical formulas which simply don't work in the producing industry.

That is in the testimony, and it is the testimony of the Chairman of the Federal Power Commission.

I continue to read:

> If we endeavor to regulate on an original cost basis * * * and even assuming we exempt the small producers * * * we are left I think 80 to 100 producers * * *
>
> At present we regulate about 120 pipeline companies, and some of those are rather small, and there are probably less than a hundred that really give us much work.
>
> Due to the newness of the problem, and the difference in the characteristics of the producers, and the fact that many of them do have oil business intermingled with their gas business, plus the further fact that they are scattered here and there, and are not in one place like a pipeline is, it would cost us several times as much to endeavor to regulate the producers as it does the pipeline companies. * * *
>
> I hope the Congress will see fit to relieve these producers from the necessity of getting certificates of public convenience and necessity. Those requirements are not, as I see it, applicable to producers as they are to utilities, pipeline companies which have certain fixed areas in which they operate, and so forth.
>
> The situation under the Fulbright bill * * * would be better for the Federal Power Commission, and better for the consuming public, and better for the pipelines, and all segments of the gas industry, including the producers, than the situation that now exists.

That is the testimony of the Chairman of the Federal Power Commission, the Commission which, over the years, has been forced to carry out whatever regulation there is.

Mr. PURTELL. The Senator from Oklahoma has been citing the testimony of the Federal Power Commission. Let me read to him a portion of a letter sent to the committee under date of March 30, 1955, which is referred to on page 1169. I will quote that portion of the letter which is the third from the last paragraph on page 1174.

This is a statement by the Chairman of the Commission:

> The phrase used in the bill for the Commission to consider in fixing the allowance of payments by interstate pipeline companies to producers is that the payments to producers shall not be in excess of the "market price" or the "reasonable market price." This seems to be less definite than the phrase "just and reasonable price," and the latter appears to be proper.

Is that not correct?

Mr. MONRONEY. There was some testimony to that effect, and the committee listened to it. There has been a lot of nit-picking as to what the difference was, but it sounds to me a lot like tweedle-dee and tweedle-dum.

Mr. PURTELL. If the Senator will permit me to say so, the Chairman of the Federal Power Commission was not contradicted.

Mr. MONRONEY. But at a later point in the hearings he did say:

> The situation under the Fulbright bill * * * would be better for the Federal Power Commission, and better for the consuming public, and better for the pipelines, and all segments of the gas industry, including the producers, than the situation that now exists.

He knew what was in the Fulbright bill. I think he had read it and knew what he was commenting about. This was later in the hearings, after he had taken considerable time to review what he had said earlier.

Mr. POTTER. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. POTTER. Is it not true that some States have a minimum price law?

Mr. MONRONEY. Some States had minimum price laws, but so far as natural gas was concerned, minimum price laws were found to be invalid because of the Natural Gas Act as interpreted by the Phillips decision.

I feel that since the bill continues effective regulation by the Federal Power Commission, State minimum price laws will still be found to be contrary to the Natural Gas Act of 1938.

Mr. POTTER. Is it the Senator's opinion that passage of the bill would not allow the States to establish minimum prices again?

Mr. MONRONEY. That is my opinion, but I am not a lawyer, and certainly I am not a constitutional authority on the interweaving. But I do not believe there is anything in the bill which would give legality or validity to minimum price laws which were invalidated under the Natural Gas Act of 1938.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PASTORE. Unless the Senator reiterates the fact that the Federal Power Commission will have jurisdiction over the producer, how will he escape that situation? He is saying here that the producer is not in interstate commerce until he gets to the terminal point or the gathering point.

Mr. MONRONEY. I would rather have a lawyer debate that particular subject—and there are many competent lawyers in the Senate, but they appear to be off the floor at present. My own horseback opinion, after a reading of the bill, and not getting into the fine legal technicalities, is that that is not the case. But I am certain that the Senator will discuss that with a more competent legal authority than I am.

This, as I have described before, is not the job of regulating under utility-type regulation the 8,000 gas producers. All of this confusion thus far is occasioned in reaching the point of embarkation. The worst is yet to come—the task of determining the individual elements of

cost for each well, the cost of operation, the value of the above-surface installations, the depreciation thereon, the loss due to escapage of gas, the damage to the farmer's crops during drilling, the damage to the farmer's crops due to cleaning-out operations, the cost of line right-of-way, the damage to the farmer's crops in laying the gathering lines, the damage to the streams due to pollution from drilling and the dumping of sludge and the damage to the farmer's livestock thereby—all of these nice confounding problems for each gas well operated in the United States will be a part of the cost of production to be settled individually by the Federal Power Commission.

Many of the Senators who oppose this bill support, as I do, the protection of our public power projects and the proper regulation of the interstate electric facilities of private and public power installations. But if the Federal Power Commission must carry out the Supreme Court's new gas law, the effect will be, as one of my friends has characterized it:

A moratorium on all regulation while the Federal Power Commission has hysterics.

I sincerely believe that that is what will be wished on the Federal Power Commission to the detriment of the other work they are charged with doing.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. DOUGLAS. The Senator is touching on a very important point. What he is saying, in effect, is that the job of regulating an alleged 8,000 producers—as a matter of fact, there are only a total of about 5,000—will be too heavy a task for the Federal Power Commission.

Is the Senator aware of the fact that some Senators have an alternative bill which we intend to propose as a substitute for the present measure, which would exempt from regulation all producers selling less than 2 billion cubic feet or 2 million thousand cubic feet from such regulation, and that this would confine the regulation to only 197 producers, who, however, furnish 90 percent of the gas which moves in interstate commerce? Two hundred producers is a manageable number.

Mr. MONRONEY. I am certain that my distinguished colleague will properly present his proposed amendment to exempt many small producers, as he did with great ability before our committee. However, I wish to hear the Senator in full when he presents his amendment, and not take the time for fragmentary discussion of it. Therefore, we will answer the case which the Senator from Illinois makes in due course and proper order.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PASTORE. On the very point which the Senator is now discussing, if it is indeed in the public interest to supervise producers and gatherers of natural gas, does the Senator think we ought to be moved too much by the argument that it is going to be burdensome upon the Federal Power Commission, and for that reason we ought to ignore the public interest?

Mr. MONRONEY. Oh, no; I think any regulation should be workable and effective. If it is not workable and effective, a point will be reached, as happened in the later days of price control, where the regulation will completely break down. I happen to be one who still felt that, bad as it was, we should have gone forward. But the Senator from Rhode Island is compounding the situation as to needed regulation or protection when he advocates a method that will cause only confusion and chaos.

On that basis we are proposing a substitute that will be very effective. I have tried to demonstrate that, and should like to continue to demonstrate it, if I can. I think one of the best opinions on the question is that of Mr. Justice Jackson in the Hope case.

After noting that production on the one hand and transportation on the other were "components of quite divergent character," Mr. Justice Jackson stated, in what I think is a very important comment by a man who had studied the question carefully:

One, while not a conventional common-carrier undertaking, is essentially a transportation enterprise consisting of conveying gas from where it is produced to point of delivery to the buyer. * * * A rate base calculated on the prudent investment formula would seem a reasonably satisfactory measure for fixing a return from that branch of the business whose service is roughly proportionate to the capital invested. * * *

Parenthetically, I may say he was speaking of the long pipeline.

I continue to read from what Mr. Justice Jackson stated:

The other part of the business—to reduce to possession an adequate supply of natural gas—is of opposite character, being more erratic and irregular and unpredictable in relation to investment than any phase of any other utility business. A thousand feet of gas captured and severed from real estate for delivery to consumers is recognized under our law as property of much the same nature as a ton of coal, a barrel of oil, or a yard of sand. * * *

But gas fields turn this (rate base) method topsy-turvey. Gas itself is tangible, possessible, and does not have a market price in the field. * * * Gas is what Hope sells and it can be directly priced more reasonably and easily and accurately than the components of a rate base can be valued. Hence the reason for resort to a roundabout way of rate base price fixing does not exist in the case of gas in the field.

Later, in the Colorado Interstate Gas case, Mr. Justice Jackson again commented that "these cases vividly demonstrate the delirious results produced by the rate base method," and stated:

I cannot fairly say that the Commission exceeded its jurisdiction in obtaining this evidence and making these calculations, even though the evidence related to production and gathering of gas. But I do think it is a fantastic method of fixing a "just and reasonable" price for gas.

I should like to reverse this case, not because I think the rate reduction is wrong, but because I think the real inwardness of the gas business as affects the future has been obscured by the Commission's preoccupation with bookkeeping and historical matter. Such considerations may be relevant to rate-base theories, but will not be very satisfying to a coming generation that will look back and judge our present regulatory method in the light of an exhausted and largely wasted gas supply.

In Oklahoma and other gas-producing States, we consider that our gas resource is in effect an added farm crop. Let's talk a little about this gas crop.

Another example of over-simplification in this issue is the oft-repeated statement by the opponents of this bill that there are in fact only some 32 corporations who produce and/or own 90 percent of the gas reserves.

Even if this were true, and it is subject to great question, the record will show that there is a greater diffusion by far than in most of our large industries.

Mr. President, as I have pointed out before, the first four companies in the gas industry produce 17 percent of the total net production. The first eight companies produce 28 percent. The first 20 companies produce 46 percent. The first 50 companies produce 66 percent. The first 100 companies produce 78 percent.

I ask unanimous consent to include in the RECORD as a part of my remarks the table I read earlier in answer to a question by the distinguished Senator from Illinois, regarding the concentration of other active industries.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

OTHER INDUSTRIES CONCENTRATION

[Percent]

	1st 4	1st 8	1st 20	1st 50
Copper	80	91	(1)	(1)
Iron ore	62	77	(1)	(1)
Lead	56	70	(1)	(1)
Zinc	42	60	(1)	(1)
Anthracite	41	60	80	(1)
Natural gas	17	28	46	66
Bituminous	16	24	37	53
MANUFACTURERS				
Cigarettes	90.4	99.7	------	------
Motor vehicle	55	63	77	88
Steel works	44.7	62.8	81.1	94.2
Meat packing	41.3	55.6	62.5	68.8
Woolen fabrics	28.1	40.4	56	71.7

[1] Not available.

Mr. MONRONEY. I should like to point out that in the cigarette industry, the first 4 manufacturers have 90.4 percent of total production; the first 8, 99.7 percent.

In the motor-vehicle industry, the first 4 produce 55 percent of the total production; the first 8, 63 percent; the first 20, 77 percent; and the first 50, 88 percent.

In the steel industry, the first 4 produce 44.7 percent of the total production; the first 8, 62.8 percent; the first 20, 81.1 percent; and the first 50, 94.2 percent.

In the meat-packing industry, the first 4 produce 41.3 percent of the total production; the first 8, 55.6 percent; the first 20, 62.5 percent; and the first 50, 68.8 percent.

In the woolen fabrics and worsteds industry, the first 4 produce 28.1 percent of the total production; the first 8, 40.4 percent; the first 20, 56 percent; and the first 50, 71.7 percent.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. GORE. I have listened to the Senator's able argument. He has demeaned himself with credit. I wonder if the recitation of the monopoly suppliers in the particular fields which the Senator has mentioned is intended by him to suggest that they are analogous to the suppliers of natural gas, when the customer has only one pipeline from which he may receive that gas.

To be more specific, the customer can go to a certain tobacco counter and can buy a certain cigarette made by any 1 of the 4 large companies, but a customer of natural gas at Memphis, Tenn., or Boston, Mass., may have no choice whatever. Is he not then more or less a captive consumer?

Mr. MONRONEY. I am very glad that my dear friend asked that question, because, obviously, the customer of a pipeline in Tennessee is a captive customer of the Tennessee pipeline, but the suppliers of the gas to the Tennessee pipeline provide as broad a horizon as the pipeline cares to make it, with gathering lines and with laterals. The maps of pipeline systems will show that the large interstate lines, of which the Tennessee Gas Co. is one, reach into many States and many fields, and are supplied by hundreds, even thousands, of independent gas producers. I am sure the lines will connect with offshore gas which is being produced in increasing quantities off the coasts of Louisiana and Texas. The pipelines will perhaps connect with Mexican gas suppliers. I have heard of a deal pending to bring in Canadian gas, via Chicago, and into the Tennessee area. So while customers are captives of the distribution system, might it be said that the distribution system is also a captive, unless the Federal Power Commission, which has the regulatory right to grant another franchise to build into a given territory, should do so. But the free enterprise of hundreds or thousands of gas producers who can be easily reached is available to the customers, which is one of the reasons why the gas industry has grown. It is due to the competitive supply in the field, which can be reached by additions or extensions or laterals from existing lines. I say this in the face of the oft-repeated fallacy that the consumers in the State of the Senator from Rhode Island [Mr. PASTORE], the Senator from Illinois [Mr. DOUGLAS], the Senator from Michigan [Mr. POTTER] or the Senator from Connecticut, [Mr. PURTELL], are captives of my friends who produce gas in the many gas wells in the State of Oklahoma.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to the Senator from Illinois.

Mr. DOUGLAS. Will the Senator from Oklahoma inform us how many of the producers in the fields of cigarettes, automobiles, textile goods, and so on, have "most favored nation" clauses in their contracts with their suppliers?

Mr. MONRONEY. I suspect that in those cases there are some things worse than the most-favored-nation clauses. I have been investigating some General Motors contracts; and in those contracts they have some "dillies," comparable to some of the provisions under the Pittsburgh-plus arrangements in the case of steel. I suspect that in some of their contracts, the meatpackers have certain clauses which they find to be simpatico, as in the case of others.

Mr. DOUGLAS. Of course, there are certain cases in opposition to the general public interest—cases which the Senator from Oklahoma and I have joined in opposing, and which we shall join in opposing in the future, I am sure.

However, in nearly all the recent gas contracts there are "most favored nation" clauses, with the result that the latest and the highest price becomes very quickly the predominant price. So the protection the Senator from Oklahoma says he finds by means of having so many producers does not in fact exist.

Mr. MONRONEY. I have repeatedly stated, and I am sure the Senator from Illinois knows, that the most-favored-nation clause is one of the things which is regulated by the Fulbright bill. If it comes under an existing contract, it can be completely eliminated; and if it appears in a new contract, we shall refuse to permit the increased price above the reasonable market price to be charged as an expense. I do not know how we can state the matter any more clearly, and I do not know how the commission which advocates this method can fail to enforce it and to throw out such allowances. So the "most favored nation" clauses certainly are prevented from producing anything other than a reasonable price.

In answer to the charge that natural gas is a monopoly, we say we do not believe it is. We think there is wider diffusion of ownership, by far, with the first 50 companies having only 66 percent penetration of the market, and the first 100 companies having only 78 percent penetration of the market. Under those circumstances, we do not believe the monopoly charge is justifiable, and we do not think it is justifiable to argue that the natural-gas industry should be regulated as a utility.

I am sure that the Senator from Illinois is not arguing for utility regulation because of any allegation of monopoly features. Is not that true?

Mr. DOUGLAS. I think we have in the production of natural gas a quasi-monopoly if not an absolute monopoly in all cases. Certainly we do not have free and equal competition.

Mr. MONRONEY. But surely the Senator from Illinois would not argue in favor of regulation because of a monopoly status, and not apply the same reasoning the manufacture of automobiles, and the dozens of other industries with greater concentration?

Mr. PASTORE. Mr. President, will the Senator from Oklahoma yield to me?

Mr. MONRONEY. I yield.

Mr. PASTORE. On the point made by the distinguished Senator from Tennessee [Mr. GORE], I wish to say that I think he put his finger on the nub of the problem. Personally, I do not think the fact that only a few companies deal in natural gas has much effect on the problem, but for the fact that, because of that situation some persons are trying to reach out for the gas, thereby making a seller's market in which very few persons can operate, with the result that a reasonable, fair-market price, about which a number of Senators seem to be talking, cannot be established.

In trying to make a comparison between, let us say, General Motors Corp. or the United States Steel Corp. and the natural gas industry, it is important in that connection to point out that the little fellow at the end of the line, the captive consumer, is being overlooked. He has no authority or privilege or right to sit at the bargaining table, between the pipeline company and the producer. He has no right to say, "This is a good price," or to say, "This is not a good price." He is more or less at the mercy of the pipeline company and the producer, and he must abide by what they agree to do.

The pipeline company is safe enough, because whatever it pays for the gas, it is allowed to charge off. It makes a presentation before the Federal Power Commission; and usually its request is allowed, as a routine matter. Whether the distribution company can, because of a local situation, pass on all that it pays, or whether it must absorb some of it, is another matter.

However, we must realize that the American people have invested, in home appliances, more than $2 billion, and that there are more than 26 million gas users in the United States.

The only reason why we are resisting the enactment of this measure is that we feel that a grave injustice in the public interest is being done to the consumers. However, every time we talk about the consumers, what happens? We are charged with being interested in the pipeline companies or the distribution companies; attempts are made to "wrap those companies around our necks."

However, that is most unfair. Without the existence of the little consumer, this industry would not have developed. Before there was a captive consumer, natural gas was merely a waste product, and used to be burned off. Then the pipeline companies came into existence, because of the large market for natural gas. It was because of that market that this industry has developed into the sixth largest industry in the United States. Without the captive consumer, there would be no market.

So I say it is the absolute right and duty of the Congress to protect the little fellow, the captive consumer. All the talk about where the spread occurs will not protect the consumer in the least, for to him it makes very little difference where the spread is, unless it is just. The fact that a large spread occurs in Rhode Island does not affect the situation, unless the spread is unjust, in which case the unjust portion should be eliminated. If the spread is just, there can be no objection to it. If it is not just, it should be reduced.

Certainly it is not fair to argue that someone else is getting by with an abuse, and therefore an additional group should be allowed to get by with an abuse.

In 1938 the Congress, in passing the bill, said the natural gas industry is affected with a public interest. If Senators believe that they should not vote for this bill, which does not protect the consumers.

Mr. MONRONEY. But the Congress also said that although natural gas transmission is affected with a public interest, the production and gathering of gas are exempt. The charge of my distinguished colleague is that because the utility in Providence, R. I., is a monopoly and because its customers are captive, the independent producer in Texas should be regulated. However, if the Senator from Rhode Island wishes to have an additional utility operate in his State, the regulatory group in Providence, R. I., could, I am sure, bring about that situation; and probably the additional utility could connect with one of the long lines running through Connecticut or New York.

On the other hand, the Senator from Rhode Island is trying to make the gas producer a captive, as a utility, because of something which can be controlled in the State of Rhode Island, particularly in Providence, R. I., where competition can be had if it is desired. But in order to accomplish that purpose, it is not necessary to make the producers become captive producers. A new utility can be established; and it can roam the 48 States and Canada and Mexico, and can bring gas from the farthest reaches or ends of North America, if it wishes to do so.

Mr. PASTORE. What makes the Senator from Oklahoma feel that the Federal Power Commission would adopt the attitude or policy he indicates? To begin with, the Commission has no heart in this supervision; that is the unfortunate thing about it. The Commisison has regularly taken the position that it prefers not to supervise it. I do not know why; it may be because of a certain philosophy, or perhaps because supervision would be a little inconvenient and would require additional work. However, where does the Senator from Oklahoma get the idea that if power is given to a governmental agency, the business to be regulated or controlled will be destroyed?

Mr. MONRONEY. That depends upon the club with which the regulatory body is armed. If the method of regulation is workable and effective, and will prevent unreasonable price increases, such regulation is helpful, and is the kind of regulation the Federal Power Commission proposes, and is the kind of regulation the President's Inter-Cabinet Committee on Fuel Resources proposes, and is the kind of regulation proposed by almost everyone familiar with the gas business, and is proposed by the Harris-Fulbright bill. Not one person ever came forward to explain how this peculiar system of a gas law by the Supreme Court could become anything but a Rube Goldberg piece of machinery.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. FULBRIGHT. I should like to maintain a certain degrees of accuracy. The Natural Gas Act did not provide what the Senator from Rhode Island stated it provided. The Senator from Rhode Island stated that the Natural Gas Act contained the statement that natural gas is affected with a public interest. The first section of the Natural Gas Act reads, in part, as follows:

> It is hereby declared that the business of transporting and selling natural gas for ultimate distribution to the public is affected with a public interest.

Nowhere in the act is it stated that the production of gas is affected with a public interest.

Mr. PASTORE. I did not say the production of gas. I said that natural gas is affected with a public interest.

Mr. FULBRIGHT. Nowhere does the act say that natural gas is affected with a public interest. If we are to get any benefit from these debates, we must maintain a little accuracy in some of the basic assumptions which are being discussed. The act does not say that natural gas is affected with a public interest. The Supreme Court certainly went directly against the express provisions of the act which exempted the production of natural gas, and that is really one of the basic issues.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PASTORE. I do not know on what basis we can assume that the Supreme Court was wrong, and regard such assumption as a fact. The fact of the matter is that the Supreme Court said that natural gas is affected with a public interest. The Senator from Arkansas has a perfect right to say that that is wrong. But let him not say that I am misstating the facts when I tell the Senate what the Supreme Court decision is.

Mr. FULBRIGHT. The Senator stated that the Natural Gas Act says that natural gas is affected with a public interest.

Mr. PASTORE. Yes.

Mr. FULBRIGHT. It does not say any such thing.

Mr. PASTORE. The Natural Gas Act states that the transportation of natural gas is in the public interest, and the Supreme Court said that the production and gathering were in transportation. The Senator can argue all he likes. Does the Senator take the position that the Supreme Court was wrong?

Mr. FULBRIGHT. The Supreme Court did not say that, either.

Mr. President, I will not infringe further on the time of the Senator from Oklahoma, but I think he ought at least to remind the Senate and the occupants of the galleries of some of the incorrect statements as to what the Congress said in the act, or what the Supreme Court said in its decision.

Mr. MONRONEY. I thank the distinguished Senator.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. I wish to summarize and then yield the floor. I am a little embarrassed at having stood here so long, although I do not think my remarks have consumed too many hours of the time of the Senate. I think the debate and interrogation have been very helpful, and I am very grateful for them.

Mr. DOUGLAS. The Senator from Oklahoma has been most courteous, as has the Senator from Arkansas. But inasmuch as the Senator from Arkansas has raised a question as to whether or not the Senator from Rhode Island is misquoting the Natural Gas Act, I should like to read from section 1 (a) of the act. Speaking of natural gas—the act reads:

> The sale thereof in interstate and foreign commerce is necessary in the public interest.

Reading further:

> (b) The provisions of this act shall apply to the transportation of natural gas in interstate commerce—

I now emphasize the following provision—

> to the sale in interstate commercial of natural gas for resale for ultimate public consumption—

So the Senator from Rhode Island was quoting the original act with complete accuracy.

Mr. MONRONEY. I think perhaps he may have been quoting with complete accuracy, but the entire burden of the bill was regulation over long interstate pipelines where none had existed before. When the producer and the gatherer were exempt under the terms of the act, "sale" meant sale by the pipelines. There was no regulation of the producer or gatherer intended. It required a great deal of strange construction by judicial minds to arrive at the conclusion which gave us a Supreme Court Natural Gas Act for 1954.

Mr. DANIEL. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. DANIEL. I should like to read the remainder of the sentence which the Senator from Illinois began. I read from the Natural Gas Act:

> but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution, or to the production or gathering of natural gas.

Mr. MONRONEY. I thank the Senator.

Mr. President, I should like to summarize in a few minutes; but before reaching that point, let me observe that it has been said by our opponents that because there are only 11 long lines, the result is a sort of "Old School Tie" or "Union League Club" arrangement to bid up the price of gas. The record does not sustain this charge. I do not think they wish to bid up the price of gas. I think they realize that the cheaper the price of gas is the more they can sell, and the more they can run through their lines.

Speaking of the absence of competition, I repeat what I said earlier, that half of the gas produced in the seven gas-producing States remains in the State where it is produced. There is an active and competitive free market there. Half of the gas is sold at a well-established market price which exists by reason of the operation of the law of supply and demand. It is a far more accurate price, I think, than all the prices based upon slide-rule computa-

tions, in an endeavor to take into account dry holes, damage to farmers' crops, and all the other things that must enter into a rate base when we consider what it costs to drill, to complete, to cement, to operate, to equip, to install lines to the main gathering line, and so forth.

With the remainder of 50 percent moving in interstate commerce, to many users, I think the reasonable market price will be a better gage than the Supreme Court's idea of how it should be done.

Mr. DOUGLAS. Mr. President, will the Senator yield? The Senator from Oklahoma has been on his feet for a long time, and I do not wish to subject him to an unnecessary physical strain.

Mr. MONRONEY. I have found that speaking hurts my feet more than it does my voice. [Laughter.] I am glad to yield.

Mr. DOUGLAS. May I remind my good friend from Oklahoma that when he speaks of half the gas being used intrastate, he is including wastage in the field, and many other factors?

Mr. MONRONEY. We have been over that question.

Mr. DOUGLAS. He is also including use of gas by the gas and oil companies themselves. He is including a whole series of consumptive acts by the oil and gas producers. If he is considering merely the amount of gas sold in intrastate commerce to other consumers, he will find that the percentage is much less than 50.

Mr. MONRONEY. I placed in the RECORD the facts which will show that one-half of the production, after deducting repressuring, losses in the field from leakage, and so forth, moves in intrastate commerce, and the other half—almost the identical amount—moves in interstate commerce. I am sure the able and distinguished Senator, effective as he is, would not expect us in the oil fields, with an adequate supply of gas coming from a neighboring well, to use electricity to heat boilers, or to burn coal, lignite, or peat moss. We have the gas there, and we use it as fuel. We use it to generate steam in the boilers, to drill wells to produce more oil, to produce more gas, and to sell more gas to the consumer in interstate commerce, under fair regulation of the producer.

Mr. DOUGLAS. Mr. President, will the Senator yield to me so that I may make a correction in the figures which I have just introduced.

Mr. MONRONEY. I have seldom found the Senator from Illinois incorrect. Sometimes he is incorrect in his judgment, but not in his statistics.

Mr. DOUGLAS. I included waste in the field in the item of 50 percent. That is deducted before we get to the figure which I used as eligible for marketing. I am glad to make the correction. But of the 8.4 billion thousand cubic feet which were eligible for marketing, allegedly, in 1953, I emphasize that 1.5 billion thousand cubic feet was used in the field. There were additional losses in transmission of 240 million thousand cubic feet; compressor fuel accounted for 230 million thousand cubic feet. There were other deductions, so the remainder which was sold was only about 6 billion thousand cubic feet, and probably 4.1 or 4.2 billion thousand cubic feet of this moved in interstate commerce, so only about a third of the total amount available for sale went intrastate instead of one-half as the Senator claims.

Mr. MONRONEY. I suggest—and we should keep the figures absolutely accurate—that the loss in transmission does not include solely intrastate losses. There are transmission losses intrastate as well as interstate.

Mr. DOUGLAS. That is true.

Mr. MONRONEY. There seems to be a considerable loss involved in transmission, both intrastate and interstate.

Mr. DOUGLAS. Of the marketable production, something in excess of two-thirds moves interstate, and something less than one-third intrastate.

Mr. MONRONEY. I still disagree on that point. I think the figures which I placed in the RECORD will show our position. Of course, the Senator is entitled to his position.

In summary, the bill provides protection which is workable, in place of what is unworkable. The bill prevents a chaotic condition in regulation by use of the reasonable market price formula, instead of the utility-type cost plus return formula.

The bill provides that all future contracts must be reviewed by the Federal Power Commission to insure that they provide for no more than the reasonable market price.

As to existing contracts, it provides that any rate increase sought by a pipeline, because of the operation of an escalation clause in its gas purchase contracts, will be approved only if the new rate does not exceed the reasonable market price.

It therefore prevents any unreasonable increase in the price because of escalator clauses, the only such clauses which are exempted from FPC review being those for definite amounts at fixed intervals. I could go into that further, but I shall reserve it for later. However, even the opponents of the bill will admit that those are the best types of escalation clauses, and that in that way the pipeline and the consumer and the producer know exactly when the step up is going to occur. As a matter of fact, the same thing is true with respect to 5-year business loans. It gives a pipeline a chance to build up its business. As load builds up, the fixed charges of the pipeline go down, because the cost is amortized on a 20-year basis. As the charges go down, the pipeline company can pay 2 or 3 cents more for gas and absorb that cost because it is saving money every 5 years as it pays on the cost of its pipeline and the interest charge is decreased.

It is as simple as that. It is a fixed step up at fixed times, and amounts to a workable and desirable type of ascalation. No one who understands it has complained about it.

Further, the Federal Power Commission is thus given the power to prevent any unreasonable price from being passed on to the consumer.

I should now like to state the results if the bill is not passed.

Failure to pass this bill means a shortage of natural gas—both nationwide, and particularly in interstate commerce.

Such a shortage means higher prices to the consumers.

Only high-cost gas will be committed to interstate commerce.

It will lead to inefficiency in the gas industry, as it penalizes the efficient producer and subsidizes the producer with the highest percentage of dry holes and reckless expenditure.

Every dry hole will be in the rate base; thus—

Fifty dry holes to one producer at $200,000 equals $10 million cost.

Ten dry holes to one producer at $200,000 equals $2 million cost.

The final test, I believe, is the cost to the consumer, and we are very much interested in that. One does not hunt for birds where there are no birds. If we want to save quarters or 50-cent pieces for the gas consumers, we must not look where the pennies are. We must look where the 50-cent or the dollar spread is. We believe we have shown—and we will show later with charts and graphs—that while the unregulated part of the rate in Washington, D. C., has gone up 1.7 cents since 1950, the regulated long lines raised their rates by 9 cents, and the regulated distributor raised its rates 12 cents.

As I have said, my first experience on a newspaper was in carrying on a fight for lower rates. It was to lower the rate in Oklahoma City from 87 cents. That was the rate to the consumer at the burner tip. The gas was selling at 5 cents in the gas field. We lost that fight.

Finally, public opinion became so aroused because of the spread, that the Oklahoma City Gas & Electric Co. sold its lines and distribution system to the Oklahoma Natural Gas Co. When Oklahoma Natural took over the operation it gave the consumer a 30-cent reduction in the city-delivery cost.

It can be done. There is water in the charges. All we have to do is look for it. If the utility regulatory bodies will delve into all the facts with a good, sharp man, who understands the gas-distribution business, I am certain all of us will be amazed at what will be found in the padded costs—such as are being paid for manufactured gas in the Hartford area—particularly where there has been recent conversion from artificial to natural gas.

Mr. PURTELL. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. PURTELL Would the Senator say that what was lacking in Oklahoma City was adequate and complete control? Is that correct?

Mr. MONRONEY. What we lacked was an aroused public opinion with respect to where the spread was. When the citizens of Hartford and of Providence and of other cities start talking about their gas rates, as we try to do in the bill which has been introduced by the Senator from New Mexico [Mr. ANDERSON], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Texas [Mr. DANIEL], and myself with respect to the

District of Columbia, by showing clearly and in understandable language the three-part division of the gas rate, the citizens will go to the Hartford company and to the Providence company, and pretty soon there will be a reduction in the rate, probably granted voluntarily, even before any gas rate hearings are held.

Mr. PURTELL. In the case the Senator from Oklahoma cited, it resulted in necessary additional control. Is that correct?

Mr. MONRONEY. No; it did not at all. It was voluntary. We lost the fight on control. The company tried to include all the nuts and bolts and gadgets and gimmicks in a 2-year cost survey. Our regulatory body challenged the figures. I sat there for 6 or 7 months listening to the testimony, every day, as to whether the State's inventory of the system included every bolt and every toolhouse. The Senator from Illinois [Mr. DOUGLAS] knows how the companies proceed in such cases. They go on and on and on.

However, when public opinion was aroused, and when we showed clearly the breakdown of the rate between the raw gas and the cost at the burner tip, something started to move.

Mr. PURTELL. Is it not true that if adequate controls had been imposed the condition would not have arisen in the first place?

Mr. MONRONEY. No; I believe that some of the gas companies are perhaps too nice for us to question them about rates. They are very nice people; they are entirely too nice to ask them how they arrive at a 98-cent rate or a $1.25 spread. They belong to the nicest clubs in town and they play golf every Saturday. Therefore we must not bother them. After all, we are getting along. They say, "We borrow a great deal of money from the banks, and we always pay it back." Senators are familiar with the system. It is the old-school-tie system. We cannot bother to regulate such nice people. Let the utility regulatory body conduct hearings, and let us go sound asleep. It is the consumer who pays and pays.

Mr. PURTELL. It is wonderful that at this late hour in the day we should be able to inject a little humor into the debate.

Mr. MONRONEY. I am very serious about saving money for the consumer.

Mr. PURTELL. Perhaps I should say it is fortunate that we should be able to inject into the debate some extraneous matter which is nevertheless humorous and timely. The fact remains that if adequate controls had been imposed the condition to which the Senator from Oklahoma referred would not have arisen in Oklahoma, and would not be continued in other States.

Mr. MONRONEY. What I am saying is that with the meager amount of money usually given to the utility regulatory body at the local level to regulate rates, the fat utility company, whether it be electric or gas is able to overwhelm the best efforts of the utility commissioners and the lawyers for the commissioners. The best the commission can do is to hire an attorney for perhaps $5,000 a year. Along come the $100,000 a year lawyers who work for the gas utility company, and they prove that the $5,000 a year attorney does not know what he is talking about. He cannot get anyone else; he cannot afford to pay $5,000 to some other attorney. But the public utility can. The consumers are paying for that battery of legal help. Perhaps we wangle a few dollars out of the city council for a cost evaluation to check and see who is lying about the cost basis. Maybe we get a 6,000 or 7,000-dollar-a-year engineer who finds that there is 35 or 40 percent water in the rate base. I have heard them for months and months on end being challenged by four or five engineers with salaries of $45,000 or $50,000 a year who were brought in to make another survey. And there are all these lawyers who buttress the engineers. Finally, what happens? The utility regulatory body is run over as an express train would run over a duck. So they say they hope the company will make its rates nice and low. But the rates always seem to be spreading at the city distribution level. It seems to be a much easier job to drill a well 5,000 feet deep in west Texas and figuring out how to get gas three or four hundred miles across the country at reasonable prices in order to keep a little old lady warm in Bridgeport, Conn., than to get the gas from the city limits to her home. We cannot have any sympathy for producers, because that would be illiberal.

Let us again consider this little verse:

> A dollar and a dime,
> A dollar and a dime,
> But only the producer
> Is convicted of crime!

Mr. PURTELL. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. PURTELL. The Senator will admit that when it comes to the little consumer it is a dollar plus a dime.

Mr. MONRONEY. It runs a little more than that in the Senator's home State. I will place the figures in the RECORD later.

I have one for New Haven. The rate is $1.70 for house heating for which the pipeline company pays 10.6 cents. It costs 65 cents to the New Haven company at the city gate, and they get a spread of $1.05 for taking it from the city gate to the burner tip.

Rhode Island is the highest in average value of natural gas at point of consumption, with $3.09. Connecticut is second, with $2.53.

I am sure the Senator would say that 10 cents to the producer is an exorbitant charge, but a few of us from the gas-producing country might think that $2.53 is a more exorbitant charge. The Senator can explain that to all the voting citizens in his State. That is not my problem, because the rate in Oklahoma is only 60 cents for the whole thing.

Mr. PURTELL. Mr. President, will the Senator from Oklahoma yield further?

Mr. MONRONEY. I yield.

Mr. PURTELL. I do not agree that these are unconscionable rates, but, assuming that they are, the Senator does not maintain that because one consumer is soaked a little bit we ought not to be bothered at all?

Mr. MONRONEY. I would not say that 10.6 cents for fuel at the well, which in 1926 cost 9.5 cents, is any example of highway robbery. If all the bankers who live in Manhattan's bedroom in the nice little city of Westport would like to take us back to the Hoover days of 30-cent wheat, 5-cent cotton, and 5-cent hogs, we can go back to the prices of that period, but we do not like these Wall Street boys, socialized though they are, to roll us back to the depression days.

Mr. PURTELL. I should like to correct the Senator. Not only is Westport included, but it goes all the way up to Stamford.

Mr. MONRONEY. I thought Stamford came ahead of Westport.

Mr. PURTELL. The Senator's confusion about our geography is about equal to his confusion about the public utility situation.

Mr. MONRONEY. Does the Senator from Connecticut mean to tell me that Stamford is farther away from Wall Street than are Westport and Green Farms?

Mr. PURTELL. No.

Mr. MONRONEY. I want to keep the RECORD straight on all these facts, and I wish to know how far away from Wall Street the residents of Connecticut are who do business in New York.

Mr. DOUGLAS. Mr. President, will the Senator from Oklahoma yield further?

Mr. MONRONEY. I yield.

Mr. DOUGLAS. Is it not true that most of the residents of the pleasant confines of Connecticut who go to Wall Street to work are employed by the big oil companies, such as the Standard Oil Co., Shell, Texas, Gulf, Cities Service, and so on. I think that my good friend from Oklahoma is going to try to put over a situation in which he has the industry owned by Oklahoma boys singing "Oh, what a beautiful morning!" My good friend from Arkansas [Mr. FULBRIGHT] once tried to put them into Confederate uniforms, saying it was the Yankees from the North who were trying to do the exploiting.

Mr. MONRONEY. We are unable to get sufficient office building space to keep up with the gas and oil companies who find it profitable and expedient and easy to staff their offices with competent scientific personnel in Oklahoma City and Tulsa. We are just about to run out of office space.

So our boys who produce oil do not go to Connecticut. They would not be caught dead in Connecticut. They would rather live in Oklahoma because we have the No. 1 football team.

Mr. PURTELL. I might say that after seeing the way they have used escalator clauses, I would assume that if we took some of them to Connecticut, they would be dead.

Mr. DOUGLAS. Mr. President, will the Senator from Oklahoma yield further?

Mr. MONRONEY. I yield.

Mr. DOUGLAS. The Senator from Oklahoma has referred to oil companies which have their offices in Tulsa and in Oklahoma City. I might remind him that the Persian Empire had satraps, but that did not give the regional populaces self-government. The Roman Empire had provincial governors in the provinces, but that did not give self-government to the populace of the provinces. So I think the Senator is resorting to false logic when he defends these companies which control 50 percent of the gas which moves interstate. Even the Phillips Co. has a New York office on 80 Broadway.

Mr. MONRONEY. I do not say they are all local companies, or that it is a nationwide thing; but the drilling of the wells is done by Oklahoma labor. The equipment is made in Oklahoma, or, at least, we make a great deal of it, and it is very good.

So the costs of capital equipment, "Christmas trees," separators, and all the other costs that go into the modern production of oil are Oklahoma products.

Did the Senator from Illinois know that there are approximately 1 million farmers in the United States who have either gas- or oil-producing leases for their lands, for the production of oil or gas not yet developed?

It is a little astounding, but I found out, in investigating the matter, what the value of the gas crop is. Take $880 million, which was the last figure for interstate, intrastate, industrial, and domestic production, divide it by one-eighth, and it will be found that the farmers are getting $110 million a year royalty from gas. That does not include all the payments for lease rentals; that is for oil and gas.

So when we talk about the satraps, let us not forget that there are many persons in Oklahoma, Texas, Louisiana, New Mexico, and other States who get most of the overhead that goes into the production of gas.

Mr. DOUGLAS. Certainly there are large numbers of farmers who sit underneath the table and secure some of the drops of fat which are allowed to descend upon them by the big producers. That is perfectly true.

Mr. MONRONEY. Undoubtedly the Senator from Illinois remembers the Dust Bowl and the book entitled "Grapes of Wrath." The Senator remembers the Texas Panhandle, Oklahoma, and southwestern Kansas. He remembers the people who had acreage in the vast Dust Bowl in those terrible, barren days of discouragement, panic, and disaster, which persisted year after year. Some of those who had acreage stayed there and mortgaged their then clear land to buy more land as others left the area.

It would do the Senator's heart good to drive through that region today and see the prosperity which has been achieved because of the discovery of the Hugoton gas field. I would be the last to say that those people do not deserve something as good as can be given.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. ANDERSON. A moment ago something was said with reference to the headquarters of oil and gas companies being located in New York. Does not the Senator from Oklahoma agree that, certainly, one of the greatest of the natural gas companies is Phillips?

Mr. MONRONEY. Indeed.

Mr. ANDERSON. Is not its headquarters in Bartlesville, Okla.?

Mr. MONRONEY. Indeed. Also, the Cities Service gas division headquarters is located in Oklahoma.

Mr. ANDERSON. Is it not also true that probably the largest exporter of natural gas is the El Paso company, and that El Paso does not have its office in New York? It has a large office in El Paso, Tex.

Of course, many of the large oil companies have headquarters in New York, due to the financial difficulties which sent most of them there.

I have seen Mr. Skelly in Tulsa. He used to be a great producer. He still lives in Tulsa, but his company is no longer there; it went through the wringer.

I think Marland had a great oil company, perhaps, and lost it. A man named Costen had a large oil company and lost it. They had to move to New York, because somehow New York seemed able to get hold of them.

All that is necessary is to check history, and it will be found that more money has been made above ground than below ground. The oil business has made more paupers than millionaires.

But the natural-gas industry has remained pretty largely in the hands of the individuals who have put it together, when Wall Street did not think it was a good deal.

Gas is now being brought from the northwestern corner of New Mexico and from the four corners area in Utah and Colorado, and is being handled by a company which pretty largely owes its existence to a firm operating from Houston, Tex.

So far as natural gas is concerned, the industry ought to be applauded for the fact that it has been able thus far to stay out of the clutches of New York.

Mr. MONRONEY. I thank the distinguished Senator from New Mexico. I may say that we are all interested in the same problem; how much it is going to cost to keep a little old woman warm and to get gas to her burner tip without excessive, unreasonable rates being occasioned.

I thank the Senators who have stayed to listen to all the discussion on this subject.

Mr. ANDERSON. I wish to express my appreciation to the able Senator from Oklahoma, not only for presenting his material in such interesting fashion, but also for being courteous to those who wished to question him, and for being thoughtful of those individuals who may differ with him in their opinions, but who still have a right to their opinions.

Mr. DOUGLAS. Mr. President, I, too, congratulate the Senator from Oklahoma upon his very able address and his characteristically gentlemanly manner. It is always a pleasure to debate with him. The Senator from Oklahoma knows of the high opinion in which the Senator from Illinois has always held and will continue to hold him. I regret that in this instance the Senator from Oklahoma is on the wrong side of the issue.

Mr. MONRONEY. Even my wife does not always agree with me every time.

Mr. DOUGLAS. Nevertheless, the Senator from Oklahoma has made the very best of a very bad case. And he has behaved in his usual courteous and gentlemanly manner.

Mr. PURTELL. I wish to join in the remarks of my colleagues and to express to the Senator from Oklahoma my thanks for the courteous way in which he answered the questions which were asked and for his presentation of what I consider to be a very poor case.

Mr. JOHNSON of Texas. Mr. President, I simply wish to congratulate everyone who has participated in the debate today for an orderly and comprehensive discussion of the subject. My compliments go not only to the Senator from Oklahoma [Mr. MONRONEY] for his very able statement but to the Senator from Illinois [Mr. DOUGLAS], the Senator from Rhode Island [Mr. PASTORE], and the Senator from Connecticut [Mr. PURTELL] who kept to the issues in their opposition to the position taken by the Senator from Oklahoma.

I have always felt that the Senate was a forum where subjects could be debated and not merely a place in which to consent to something. I am happy that this body is made up of Members who can discuss issues without becoming abusive, and who can speak without rancor and vindictiveness.

I have seen and read statements to the effect that perhaps some friction and bitterness would enter into the debate. But that has been in the newspapers; it has not occurred on the Senate floor.

I hope that in the days, yes, perhaps even in the weeks, ahead, every Member who has an opinion on the subject will express it. I am confident that all of us will follow the debate carefully. Then, when every Senator has had his or her say, we can vote our convictions.

I appreciate the very high quality of the debate and the very fine temper which has been demonstrated by all Members of the Senate. I hope it will continue throughout the debate, and I have no doubt that it will.

Mr. DANIEL. Mr. President, I wish to express my appreciation to the Senator from Oklahoma for his excellent report and presentation of the bill. I join in the remarks of the majority leader, my colleague, the distinguished senior Senator from Texas [Mr. JOHNSON]. Having sat on the committee with the junior Senator from Oklahoma a total of 17 days during the consideration of the bill, I know that no Member of the Senate has studied the problem more thoroughly than he has. In my opinion, he has made an excellent presentation of a very good case.

Mr. MONRONEY. I thank the Senator from Texas.

EXHIBIT 1

Source of total gas produced

[In trillion cubic feet]

	1953	1954
Produced from gas wells	7.1	7.4
Produced from oil wells	3.5	3.5
Gross withdrawals	10.6	10.9

Source: Bureau of Mines, Mineral Market Report No. MSS 2446. Nov. 23, 1955.

Disposition of total gas produced

[In trillion cubic feet]

	1953	1954
Gross withdrawals	10.6	10.9
Vented and wasted	.8	.7
Repressuring	1.4	1.5
Marketed production	8.4	8.7
Interstate shipments	4.2	4.6
Intrastate consumption	4.2	4.1

BRIEF HISTORY OF PIPELINE REGULATION

I. The first interstate pipelines transporting gas from the southwest to the consuming areas were constructed during the period 1927–31. Their construction was made possible by the development of electric welding and the ability of pipe companies to roll large diameter pipe. Among the early pipelines were the Mississippi River Fuel Co., the Memphis Natural Gas Co., and the Southern Natural Gas Co., from the Monroe field in Louisiana to St. Louis, Memphis, and the southeast respectively; Natural Gas Pipe Line Company of America, Cities Service Gas Co., and Panhandle Eastern Pipe Line Co., from the Panhandle-Hugoton fields to Midwestern consuming areas.

II. The Natural Gas Act became law June 21, 1938. C556, section 52, stat. 833.

III. In 1942 the Federal Power Commission in the Hope Natural Gas Co. case, 3 FPC 150, the Colorado Interstate-Canadian River case, 3 FPC 32, and the Panhandle-Eastern Pipe Line case, 3 FPC 273, adopted the rate-base method of pricing natural gas produced by pipeline companies. On appeal the Supreme Court held that the Federal Power Commission was not precluded by the Natural Gas Act from using this method of pricing gas produced by pipeline companies.

IV. The Federal Power Commission in opinion No. 269 (in the matters of Panhandle Eastern Pipe Line Co. et al.) adopted the fair field price method of pricing gas produced by pipeline companies.

V. On appeal to the United States Court of Appeals for the District of Columbia, the court set aside FPC opinion No. 269 and order, on the ground "that allowance of the fair field value of Panhandle's own produced gas as an operating expense is not here supported by the evidence and findings to be in the public interest," and that the Commission failed to treat Panhandle's extraction operations as a jurisdictional business. *City of Detroit* v. *Federal Power Commission*, decided December 15, 1955.

Gas produced as percent of gas produced and purchased for major natural-gas pipeline companies, 1942–54

	1942	1947	1951	1954
Group I	29.6	25.7	18.6	10.4
Groups I and II	29.6	23.2	13.5	7.5

Group I. Major natural gas pipe line companies operating in 1942: Arkansas Louisiana Gas Co., Cities Service Gas Co., Colorado Interstate Gas Co., El Paso Natural Gas Co., Interstate Natural Gas Co., Inc., Lone Star Gas Co., Inc., Mississippi River Fuel Corp., Natural Gas Pipeline Co. of America, Northern Natural Gas Co., Panhandle Eastern Pipe Line Co., Southern Natural Gas Co., United Gas Pipe Line Co.

Group II. Companies beginning operations after 1942 and before 1951: Michigan-Wisconsin Pipe Line Co., Tennessee Gas Transmission Co., Texas Eastern Transmission Corp., Texas Gas Transmission Corp., Transcontinental Gas Pipe Line Corp.

Note: 1942 was the year in which the Federal Power Commission adopted the rate-base method of pricing natural gas produced by the pipeline companies. 1954 is the most recent year for which figures are available.

Source: Statistics of Natural Gas Companies, published by the Federal Power Commission.

UNITED STATES OF AMERICA, FEDERAL POWER COMMISSION, OPINION NO. 269

Page 32: "Yet it is an established fact that this Commission cannot compel natural-gas companies subject to its jurisdiction to engage in exploration, drilling, and related developmental activities or to acquire and attach gas reserves discovered by others; indeed, it is at least doubtful that the Commission can require pipeline systems to retain reserves which they already own, although under certain circumstances it has endeavored, unsuccessfully, to do so. If there is to be natural-gas exploration, development, and production by pipeline systems themselves, therefore—with resultant benefits to the public interest—it follows that this must result from regulatory policies designed to encourage, rather than to penalize, such activities."

Page 33: "When we look to the overall situation, we cannot but be struck by the fact that no new major pipeline which has been certificated since the Commission's pricing practices was first established—including some of the largest systems serving enormous new markets—produces any significant portion of its total supply. That the ratio of pipeline-produced to total gas transported and sold in interstate commerce has declined markedly is clearly apparent from the facts of the record."

Page 34: "We are convinced, from our analysis of all the facts of record, that the ultimate public interest will be better served by permitting the pipeline to receive for the gas which it produces a price reflecting the weighted average arm's-length payments for identical natural gas in the fields (and sometimes from the very same wells) where it is produced than through the application of the rate-base method to this commodity."

THE BUDGET—MESSAGE FROM THE PRESIDENT

The PRESIDING OFFICER (Mr. BIBLE in the chair). The Chair lays before the Senate a message from the President transmitting the budget for 1957. The message having been read in the House, without objection it will be referred to the Committee on Appropriations without being read in the Senate.

(For President's message, see House proceedings of today.)

AMENDMENT OF THE NATURAL GAS ACT, AS AMENDED

The Senate resumed the consideration of the bill (S. 1853) to amend the Natural Gas Act, as amended.

Mr. FULBRIGHT. Mr. President, in one of his essays, Ralph Waldo Emerson observed that we Americans usually look upon history as something that occurred in the past. All too often we neglect the obvious fact that the current events of each passing day are the materials which go to make up the history of tomorrow.

The bill now under consideration—and our decision in regard to this bill—constitute a history-making event of the kind Emerson had in mind.

For the first time in our Nation's peacetime history, a highly competitive segment of our economy has been wrenched from the free enterprise system and converted into a public utility under the direct domination of the Federal Government. For the first time, a Federal agency has been given utility price-fixing powers over a competitively produced commodity at its point of production.

That such a turn of events has resulted, not from the clearly expressed will of Congress, but from a split decision of the Supreme Court, makes the problem even more serious. Under our system of government, only Congress can determine overall national policy in matters of this kind. Only Congress should make the decision—if such a step is deemed to be in the public interest—to scrap competition in favor of this expanded and completely unprecedented utility concept. And I personally do not believe that Congress ever intended—or that it intends now—to attempt the Alice-in-Wonderland feat of making a public utility out of an enterprise which has absolutely none of the characteristics of a public utility.

The Supreme Court's 5-to-3 split decision in the Phillips case did nothing to alter the ultimate responsibility of Congress for deciding this issue. Mr. Justice Douglas made this clear in his vigorous dissent to the majority opinion. The history and language of the Natural Gas Act, he said quite correctly, are against direct Federal jurisdiction over the sale of natural gas at its point of production.

If that ground is to be taken—

Mr. Justice Douglas said in his dissent—

the battle should be won in Congress, not here. Regulation of the business of producing and gathering natural gas involves considerations of which we know little and with which we are not competent to deal.

Some of those who oppose this bill have protested that it would reverse a decision of the Supreme Court. That is not a valid objection. Congress is supposed to write the law, the Supreme Court merely to interpret it. As Mr. Justice Douglas indicated, a strong case can be made for the opinion that the Supreme Court majority, instead of simply interpreting the law, actually rewrote the law through the Phillips decision.

What the bill does propose to do is to clarify the Natural Gas Act and, in the interests of consumers, provide the basis for a workable Federal policy on natural gas. On the one hand, the bill perpetuates the competition already prevailing among natural-gas producers and insures that consumers will reap the benefits of this competition. On the other hand, it guarantees consumers that they will not be charged more than the reasonable market wellhead price for natural gas.

In this opening statement, I want to outline briefly the events which led to the introduction of this bill. I want to

review with my colleagues the provisions of the bill and tell them why, in my opinion, they offer a sound solution—and a fair solution—to the problem before us. I want to discuss the reasons why enactment of this bill is in the best interests of American consumers everywhere. Finally, I want to touch on some of the bugaboos, some of the statistical spectres, and some of the gross misrepresentations on the part of a few which have been raised in opposition to it.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. JOHNSON of Texas. I wonder if the Senator would be willing to yield to me for the purpose of propounding a unanimous-consent request. My request is that the Senator for Arkansas yield to me for the purpose of moving that the Senate stand in recess, with the understanding that he will have the floor at the conclusion of the morning business tomorrow.

The Senator from Arkansas is a very able Senator, and I know he has a very fine address to deliver on his bill. The hour is rather late, it being now about 6 o'clock, and most of the Senators have gone to their offices. I should like to have them hear what the author of the bill has to say, and if the Senator from Arkansas will yield for that purpose, I shall make the unanimous-consent request.

Mr. FULBRIGHT. I yield for that purpose.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senator from Arkansas may have the floor at the conclusion of the morning business tomorrow.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

RECESS

Mr. JOHNSON of Texas. Mr. President, if there is no Senator who desires to present any matter at this time, I move, pursuant to the previous order, that the Senate now stand in recess.

The motion was agreed to; and (at 6 o'clock and 4 minutes p. m.) the Senate took a recess, the recess being, under the order previously ordered, until tomorrow, Tuesday, January 17, 1956, at 12 o'clock meridian.

NOMINATION

Executive nomination received by the Senate on January 12, 1956, but omitted from the CONGRESSIONAL RECORD of that date:

DISTRICT OF COLUMBIA REDEVELOPMENT LAND AGENCY

James E. Colliflower for reappointment as a member of the District of Columbia Redevelopment Land Agency, for a term of 5 years, effective on and after March 4, 1956, pursuant to the provisions of section 4 (a) of Public Law 592, 79th Congress, August 2, 1946.

Executive nominations received by the Senate January 16, 1956:

DEPARTMENT OF STATE

Robert R. Bowie, of Massachusetts, to be an Assistant Secretary of State to which office he was appointed during the last recess of the Senate.

WORLD HEALTH ORGANIZATION

Dr. Frederick J. Brady, of Maryland, to be the representative of the United States of America on the Executive Board of the World Health Organization.

CONFIRMATIONS

Executive nominations confirmed by the Senate January 16, 1956:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Lowell Thelwell Coggeshall, of Illinois, to be Special Assistant on Health and Medical Affairs to the Secretary of Health, Education, and Welfare.

COMMISSIONER OF INTERNAL REVENUE

Russell C. Harrington, of Rhode Island, to be Commissioner of Internal Revenue.

COAST AND GEODETIC SURVEY

PERMANENT APPOINTMENT TO THE RECOMMENDED GRADES IN THE COAST AND GEODETIC SURVEY, EFFECTIVE ON THE DATES INDICATED, SUBJECT TO QUALIFICATIONS PROVIDED BY LAW

To be commissioned captain

Ector B. Latham, effective July 1, 1955.
John Bowie, effective July 1, 1955.
William F. Mainate, effective August 1, 1955.

To be commissioned lieutenant

Arthur R. Benton, Jr., effective June 25, 1955.
Eugene A. Taylor, effective June 25, 1955.
William D. Barbee, effective June 25, 1955.
Herbert R. Lippold, effective June 26, 1955.
Roger F. Lanier, effective June 26, 1955.
John B. Watkins, Jr., effective July 17, 1955.
Jack E. Guth, effective August 3, 1955.
Bruce E. Greene, effective August 29, 1955.
Robert E. Williams, effective September 7, 1955.

To be commissioned lieutenant (junior grade)

Kenneth A. MacDonald, effective June 22, 1955.
Wilfred V. Warner, effective June 22, 1955.
Edwin K. McCaffrey, effective June 22, 1955.
Clifford W. Tupper, effective June 22, 1955.
Richard H. Houlder, effective June 22, 1955.
Howard A. Garcia, effective June 22, 1955.
John J. Dermody, effective June 22, 1955.
Clinton D. Upham, effective June 22, 1955.
George W. Thompson, effective June 22, 1955.
Floyd J. Tucker, Jr., effective June 22, 1955.
Dale E. Westbrook, effective June 22, 1955.

To be commissioned ensign

Vincent J. Franze, Jr., effective August 8, 1955.

WITHDRAWAL

Executive nomination withdrawn from the Senate January 16, 1956:

DEPARTMENT OF STATE

Robert R. Bowie, of Maryland, an Assistant Secretary of State.

HOUSE OF REPRESENTATIVES

MONDAY, JANUARY 16, 1956

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D. D., offered the following prayer:

O Thou whose bountiful providence is everywhere and always available, help us daily to lay hold of those spiritual resources which are the secret of strength and peace.

Humbly we pray for the valor of a faith that will not falter, the joy of a hope that is patient, and the power of a love that will never fail.

Grant that as we take our way through the years and go in and out among our fellow men, our life may be rich in sympathy and fruitful in service.

May we be of one mind and heart with all who seek to know Thee, of one fellowship with those who love Thee, and of one purpose with all who are striving to do Thy will faithfully.

Hear us in the name of the Christ who, being Lord of all, was willing for our sakes to become the servant of all. Amen.

The Journal of the proceedings of Thursday, January 12, 1956, was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Tribbe, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Carrell, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H. R. 5614. An act to amend the Communications Act of 1934 in regard to protests of grants of instruments of authorization without hearing.

The message also announced that the Senate had passed bills and a concurrent resolution of the following titles, in which the concurrence of the House is requested:

S. 51. An act to amend the act entitled "An act to confer jurisdiction on the States of California, Minnesota, Nebraska, Oregon, and Wisconsin, with respect to criminal offenses and civil causes of action committed or arising on Indian reservations within such States, and for other purposes";

S. 2286. An act to amend the Merchant Marine Act of 1936 so as to provide for the utilization of privately owned shipping services in connection with the transportation of privately owned motor vehicles of certain personnel of the Department of Defense; and

S. Con. Res. 59. Concurrent resolution requesting the President to issue a proclamation designating the week of January 29, 1956, through February 4, 1956, as National Junior Achievement Week.

GOVERNMENT BUDGET FOR THE FISCAL YEAR 1957—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 256)

The SPEAKER laid before the House the following message from the President of the United States, which was read and, together with accompanying papers, referred to the Committee on Appropriations and ordered to be printed with illustrations:

To the Congress of the United States:

I send you today the Budget of the United States Government for the fiscal

year 1957 which begins July 1, 1956. This budget also includes the fiscal results of all Government operations for the year ended June 30, 1955, and revised estimates for the current fiscal year ending June 30, 1956.

Budget totals

[Fiscal years. In billions]

	1955 actual	1956 estimated	1957 estimated
Budget receipts	$60.4	$64.5	$66.3
Budget expenditures	64.6	64.3	65.9
Budget surplus (+) or deficit (−)	−4.2	+.2	+.4

The budget I am proposing for 1957 is a balanced budget. It is my expectation that the budget will also be in balance for the fiscal year 1956.

Although balanced, the margin of estimated surplus in each of these budgets is slim. This calls for the utmost cooperation between the executive and legislative branches to prevent increases in expenditures or reductions in receipts that would create a deficit.

The present encouraging budgetary outlook arises from a favorable combination of factors involving both receipts and expenditures. Substantial reductions in Government expenditures have been achieved in the past 3 years. A significant increase in revenues is currently anticipated as the result of our present unprecedented prosperity. In the achievement of this prosperity, the historic 7.4-billion-dollar tax reduction and reform program of 1954—so advisable during the transition to a peacetime economy then taking place—and the confidence born of prudent fiscal and credit management have been strong energizing factors.

Budget expenditures in the fiscal year 1956 are now estimated at 64.3 billion dollars. This is a reduction in Government spending for the third successive year. It is a decrease of 10 billion dollars from the amount actually spent by the Federal Government in the fiscal year which began July 1, 1952. It is a cut of 13.6 billion dollars from the amount proposed in the budget for the fiscal year beginning July 1, 1953, submitted to the Congress in January of 1953 before this administration took office.

For the fiscal year 1957, total expenditures are estimated to rise approximately 1.6 billion dollars over the anticipated level for 1956. This increase will be more than offset by the rise in receipts estimated to result from continued growth in the national economy. Efforts to obtain additional economies in Government operations must continue, for the balance achieved in the budget for 1957 is a balance at a high level of receipts and expenditures. The search for additional savings that can be effected while strengthening our security posture and providing essential Government services must be relentless.

We will take full advantage of the proposals of the Commission on Organization of the Executive Branch of the Government, which has completed with high distinction the task of analyzing the activities of the Government. We will continue to give the taxpayer greater and greater value for each dollar spent. We will continue to foster orderly growth of our economy through sound fiscal policies. The confidence in the future among consumers and businessmen generated by those policies must be maintained.

BUDGET POLICIES

We seek, above all, the attainment of a just and durable peace. Thus, the resources of the world can be directed to building a better life for all people. The people of the Soviet Union and of the countries under its domination are undoubtedly as anxious as the people of other nations to achieve this objective. I regret that the Soviet leaders have not as yet given any tangible evidence of an intention to agree on a plan of disarmament that can be verified by adequate inspection. In the absence of such tangible evidence, we must follow the course reflected in this budget of steadily strengthening the defense of the United States and its allies, so that the free world will remain strong enough to deter possible aggressors or to retaliate immediately and effectively if attacked.

At the same time, the Government of the United States will steadfastly seek all possible ways of further progress toward our goal of peace. We will speed the development of the civilian uses of atomic energy and make the resulting benefits available, under appropriate controls, to other nations for the well-being of mankind. We will propose logical methods for advancing disarmament. We will promote international trade and investment. We will not falter in our cooperative efforts to build the economic, as well as defensive, strength of the free world through the Mutual Security Program.

At home, programs instituted by the Executive and the Congress have helped to nurture an unprecedented prosperity without inflation. Our objective is to foster and encourage conditions in which this prosperity can be sustained and can be more fully shared by agriculture and certain sectors of our industrial economy. The growth and movement of our population and the complexity of our dynamic society are continually creating needs which must be met if we are to build wisely for the future. For years, many activities which are desirable for fostering sound economic growth have been postponed because of the overriding needs of war and defense.

Defense needs are still overriding and must continue to be met in full measure. However, budget revenues now permit us to undertake some new and expanded programs for enhancing opportunities for human well-being and economic growth. This budget reflects that purpose.

These two national objectives of securing a lasting peace and of sustaining widespread prosperity and well-being are closely linked to our third goal of financial strength and stability.

In the words of Washington's Farewell Address, we must meet our defense needs by maintaining a respectable posture of defense. There is no magic number of dollars or of military units and weapons that would solve all our defense problems and guarantee our national security. Neither can total mobilization in peacetime be the answer to our defense needs. It is essential to have a stable, long-range defense program suited to our needs which avoids fluctuations in response to transitory pressures.

We are equally well aware that overenthusiastic and ill-considered Government efforts to promote economic development could lead to inflation, and could also choke off private initiative, which is the wellspring of economic development and of a better life. Inflation would bring suffering to the very groups whose well-being the Government would be trying to serve.

With a sense of proportion and with a sound progressive policy, we can continue our sure advance toward our objectives. The results to date of sound financial management so demonstrate. While continuing substantial expenditures for military defense and mutual security, with some increases where needed, we can now propose the expansion of certain domestic programs, and, at the same time, strengthen our financial position by a balanced budget. But we must make sure that we do not undermine our financial strength by laying the groundwork for future budget deficits.

BUDGET DOCUMENT

A budget is not just a book of figures describing fiscal operations—it is a comprehensive plan of action for meeting our national objectives. As such, it affects every phase of the life and activity of the Nation. It is necessarily complex. Like the plans for a building, the budget must be sketched from various points of view to give a clear idea of its content and composition. Accordingly, despite some repetition, the various items in the budget are classified and grouped in different ways to help in the analysis of their overall significance.

In this section of the budget message, I shall summarize budget expenditures in terms of a few broad purposes and also in terms of their controllability through the budget process. Following this discussion, there are two summary tables setting forth budget expenditures and new obligational authority by major programs and by Government agencies. These tables are followed in the message by a discussion of my recommendations for each of the major programs of the Government.

The detailed part of the budget document which follows the message contains four parts: (1) Additional summary tables; (2) detailed appropriation accounts for each agency; (3) information on trust funds and working funds; and (4) a number of special analyses which throw light on the budget from still different viewpoints. These analyses show, for example, the expenditures for Federal credit programs, public works, aid to State and local governments, research, and economic statistics, all of which are common to many programs and agencies.

The detailed schedules and statements of the budget have been simplified this year to make them more useful to the Congress in general and to the appro-

priations committees in particular. This simplification has also resulted in reducing the size of the budget document 50 pages and the appendix a further 175 pages.

BUDGET EXPENDITURES

Expenditures by purpose: When we look at the budget in terms of a few broad purposes, we find that the greatest portion, 64 percent, of the expenditures in the fiscal year 1957 will be for deterring possible aggression and for strengthening the international alliances to which we belong. The next largest part, 21 percent, will be devoted to civil benefits of various kinds. Interest, largely on the public debt, will amount to nearly 11 percent. Expenditures for civil operations and administration are estimated at 4 percent of the total. Further details of expenditures by broad purposes can be found in special analysis E on pages 1119 to 1121 of the budget document.

Budget expenditures by purpose

[Fiscal years. In billions]

	1955 actual	1956 estimated	1957 estimated
Protection, including collective security	$42.7	$41.4	$42.4
Civil benefits	13.7	13.8	13.9
Interest	6.4	6.9	7.1
Civil operations and administration	1.7	2.1	2.2
Reserve for contingencies	-------	.1	.2
Total	64.6	64.3	65.9

Protection, including collective security: In this summary classification of broad purposes, expenditures for protection include more than the four major national security programs. They embrace the military functions of the Department of Defense, including construction and procurement; the Mutual Security Program; the Atomic Energy Commission; and other programs such as stockpiling, expansion of defense production, civil defense, and our foreign information activities.

Expenditures for protection, including collective security

[Fiscal years. In billions]

	1955 actual	1956 estimated	1957 estimated
Major national security programs:			
Department of Defense—Military functions	$35.5	$34.6	$35.5
Mutual Security Program—Military	2.3	2.5	2.5
Atomic Energy Commission	1.9	1.7	1.9
Stockpiling and defense production expansion	.9	.7	.4
Subtotal	40.6	39.5	40.4
Related programs	2.1	1.9	2.0
Total	42.7	41.4	42.4

In planning such great security programs, it is clear that we must never permit ourselves to be panicked by temporary crises or beguiled by a campaign of smiles without deeds. We continue to maintain and to strengthen our national security forces.

This budget provides for increased expenditures for the military functions of the Department of Defense, emphasizing air-atomic power, guided missiles, research and development, continental defense, and the re-equipping of our forces with new types of weapons. Outlays for conventional weapons and for stockpiling will be decreased. Under the Mutual Security Program, budget expenditures in 1957 for military assistance and for economic and technical assistance are estimated at about the same level as in the fiscal years 1955 and 1956. Expenditures for atomic energy, including peaceful applications, will rise in 1957 to a somewhat higher total than for any previous year. I am also recommending an expansion of our foreign information activities so that we can more successfully advance understanding abroad of our policies and their peaceful intent.

Civil benefits: A great variety of Government programs provide civil benefits and services for the Nation as a whole and for specific groups. They encourage the private development and growth of our economy and provide certain economic safeguards for individuals and groups in order that our dynamic system of free choice may operate effectively in the modern world.

Some of these benefits and services are in the form of public works or loans which add to Federal assets. Expenditures for long-range development, such as those for health research and for grants to States for construction, also lay the foundation for future economic progress and development. However, the bulk of the benefits and services are for current expenses, including veterans' benefits; aids to agriculture; aids and subsidies to shipping, airlines, and the postal service; and grants to States for public assistance and administration of employment offices and unemployment insurance.

Expenditures for civil benefits

[Fiscal years. In billions]

	1955 actual	1956 estimated	1957 estimated
Additions to Federal assets	$3.8	$2.3	$2.4
Long-range development	1.7	2.0	2.4
Current expense items	8.2	9.5	9.1
Total	13.7	13.8	13.9

My recommendations for the fiscal year 1957 under this heading of civil benefits are designed to build for the future by assisting further in the strengthening of agriculture; in the promoting of labor standards; in the building of schools; in the expansion of research and training in science, health, and agriculture; in the modernization of our highways; in the improvement of housing and urban facilities; in the enlargement of our airway traffic capacity; in the replacement of our merchant fleet; and in the conservation of our natural resources.

The estimated expenditure for each of the civil benefits and services (shown in detail on p. 1120) represents the best judgment of this administration of what is required and can be used effectively during the coming year to meet our growing needs.

In discharging the responsibility for fostering a growing prosperity that is widely shared, I have been mindful of two principles.

First, we will progress fastest by relying on private initiative as the mainspring for economic growth and a better life for all. In encouraging economic growth, the Government should act on the basis of enabling private activity to expand and not on a basis of replacing private with public activity. My recommendations, therefore, are designed to encourage private initiative and to contribute toward, or, in some cases, to undertake tasks which private enterprise cannot perform alone.

Second, the interests of our citizens are best advanced by encouraging State and local governments to strengthen themselves and thus keep as much Government responsibility as possible in the States and communities, close to the people themselves. The Federal actions which I am proposing are designed to meet real and pressing needs which most smaller governmental units cannot cope with by themselves. Our endeavor is to help fill the gap between the need for essential services, on the one hand, and the present ability of State and local governments to meet those needs, on the other. Wherever possible and logical, I propose that responsibility and costs be shared by these other governmental units.

A corollary of these two principles is that where Federal action is necessary, it should be taken, if possible, in a way that need not entail large or continuing Federal outlays. For some activities, Federal guaranties will encourage the availability of private credit. For other activities, partnership with private or State and local government interests will multiply the effectiveness of Federal expenditures.

Many services performed and privileges granted by the Government in the public interest also convey a special, added benefit to individuals or groups who can afford to pay for them. In some cases, the services are now provided without charge. In other cases, the fees are substantially below the costs of providing the services. Thus, the general taxpayer is required to subsidize operations which should be self-supporting. The scope and cost of these hidden subsidies have grown considerably during the past decades. I firmly believe in the principle that Government services which give a special benefit to users should be financed by adequate charges paid by the users.

In furtherance of this principle, I strongly recommend that the Congress enact legislation to increase postal rates so that users are no longer subsidized from general funds.

Civil operations and administration: Budget items for civil operations and administration are predominantly the traditional expenses of the Government. They are the largest in number but not the largest in amount. They cover the bulk of the expenditures for the legislative branch, the judiciary, and various regulatory activities, as well as the administrative expenses of many cabinet departments and independent agencies.

They also include expenses for tax collection and various central management services.

These programs have a greater significance than their small proportion of the total budget would indicate. I am recommending selective increases in appropriations and expenditures for a number of them.

For example, we should increase our representation abroad—particularly in a number of countries with which our relations are becoming increasingly vital. A strengthening of our foreign relations will pay dividends in terms of better mutual understanding and friendship. Likewise, my proposals for reducing the backlogs of cases pending in our Federal courts and before our regulatory commissions will bring benefits greater than their costs. Increased funds for central property and records management will enable us to achieve greater economies in carrying out the other activities of our Government.

Expenditures by controllability: Another way of looking at and grouping budget expenditures is from the point of view of their controllability through the budget process. Each year when a budget is being determined, a large amount cannot be substantially modified by actions of the executive branch or of the Congress through the appropriations process but only by longer term review and action. In the fiscal year 1957, about one-quarter of the estimated budget expenditures are dictated by factors not readily subject to administrative discretion through the budget process.

Interest is the largest example of such an expenditure. Most of the other relatively uncontrollable programs, such as agricultural price supports, veterans' compensation and pensions, and various grants to States, are in the field of civil benefits as classified in the previous section.

Budget expenditures indicating controllability

[Fiscal years. In millions]

Description	1955 actual	1956 estimated	1957 estimated
Major national security programs	$40,626	$39,467	$40,370
Major programs which are not readily controllable:			
Veterans' compensation, pensions, and selected benefit programs	3,519	3,770	3,842
Veterans' unemployment compensation	106	115	118
Grants to States for public assistance	1,427	1,488	1,478
Commodity Credit Corporation (net) [1]	3,414	2,211	1,694
Removal of surplus agricultural commodities	59	225	265
Conservation of agricultural land resources	235	220	220
Federal-aid highway grants	595	740	800
Grants to States for unemployment compensation and employment service administration	194	230	255
Payment to the unemployment trust fund	64	87	81
Claims and relief acts	142	168	185
Payments to Federal employees' retirement funds	30	234	296

[1] For purposes of comparability, includes expenditures from appropriations to reimburse the Corporation.

Budget expenditures indicating controllability—Continued

[Fiscal years. In millions]

Description	1955 actual	1956 estimated	1957 estimated
Major programs which are not readily controllable—Con.			
Payment to railroad retirement fund for military service credits	-------	-------	$2
Unemployment compensation for Federal employees	$19	$32	33
Legislative and the judiciary	96	135	164
Interest	6,438	6,875	7,066
Total	16,338	16,530	16,499
All other programs	7,606	8,273	8,996
Total	64,570	64,270	65,865

NEW AUTHORITY TO INCUR OBLIGATIONS

Before any budget expenditures can be made, the Congress must first authorize Federal agencies to incur obligations. This authority, ordinarily provided in the form of appropriations, may or may not lead to the immediate expenditure of funds. In the case of salaries and the purchase of supplies, the expenditure will ordinarily follow closely the incurring of the obligation. For other items such as ships, aircraft, and complex military equipment, the expenditure may follow the incurring of the obligation by several years.

Unexpended balances of appropriations carried over from prior years ran to nearly 80 billion dollars when this administration took office and represented an enormous backlog of commitments for which expenditures had to be made in the fiscal year 1954 and subsequent years. These balances represented, in effect, c. o. d. orders which had to be paid for in cash when the goods were delivered and constituted a heavy overhanging load for the budget on top of the appropriations being enacted currently.

By the end of fiscal year 1956 we expect to have reduced these balances by well over a third, to below 50 billion dollars, a level believed more reasonable in its relation to actual needs for current operations.

For the fiscal year 1957, requested new authority to incur obligations is about the same as estimated budget receipts and slightly greater than estimated expenditures. However, the backlog of unexpended balances of appropriations will be further reduced as some appropriations enacted in prior years will be allowed to lapse. This continues the policy of the two previous budgets I sent to the Congress, in which I emphasized the importance of actions to eliminate excessive accumulations of unexpended balances, which so frequently invite commitments leading to unnecessary future expenditures.

Of the total new authority I am recommending for the fiscal year 1957, action by this session of the Congress will be required for 58.3 billion dollars. The remainder consists of previously enacted permanent authorizations under which new authority becomes available each year without new action by the Congress. An example is interest on the public debt.

New authority to incur obligations

[Fiscal years. In billions]

	1955	1956	1957
Proposed for enactment in this session:			
Recommended at this time	-------	-------	$49.7
Proposed for later transmission:			
Under existing legislation	-------	$0.6	.1
Under proposed legislation	-------	.2	8.5
Total	-------	.8	58.3
Enacted prior to this session:			
Current authorizations	$49.3	52.7	-------
Permanent authorizations	7.8	8.5	8.0
Total	57.1	62.0	66.3

LEGISLATIVE PROGRAM

I have outlined in my message on the state of the Union the legislative proposals which I consider vital to our continued progress. Detailed recommendations will be presented to the Congress on certain of these proposals. The budgetary estimates for the fiscal year 1957 for my legislative proposals are summarized in the table below.

Summary of legislative proposals

[Fiscal year 1957. In millions]

Program	Recommended new authority to incur obligations	Estimated expenditures
NEW LEGISLATION		
Agriculture—soil bank and accompanying proposals	[1] $450	[1] $400
Area redevelopment	50	10
Atomic energy plant construction	144	40
Bureau of Reclamation and Corps of Engineers projects	46	21
Department of Defense—military public works and personnel incentives (net)	1,117	200
Flood indemnity	100	25
Postal rate increases	−350	−350
Public health—new proposals	76	24
School construction—general assistance program	376	150
Tennessee Valley Authority steam plants (revenue bonds)	68	24
Other proposals	68	47
Total, new legislation	2,145	591
EXTENSION OF EXISTING LEGISLATION		
College housing	100	-------
Federal-aid highways and forest highways	898	-------
Mutual Security Program	4,860	990
Public assistance grants	166	166
School construction—assistance in federally affected areas	88	5
Other proposals	6	29
Total, extension of existing legislation	6,118	1,190
Reserve for contingencies	250	225
Total, legislative proposals	8,512	2,006

[1] In addition, proposed refunds to farmers of Federal taxes on gasoline used in farm operations are estimated at $60 million in 1957.

These estimates cover only the proposals for which financial authorizations cannot be enacted prior to enactment of enabling legislation. Often they supplement programs for which expenditures are included elsewhere in the budget.

For example, the amounts shown in the above table for my proposals for strengthening agriculture are only part of the total in the budget for agricultural programs.

Pending final determination of the amounts required for the recommended program for highways, the dollar estimates included in this budget under proposed legislation cover only the continuance of the present annual authorization. The new highway program should be soundly financed so as not to create budget deficits.

BUDGET RECEIPTS AND TAX POLICY

I have already indicated in my state of the Union message the broad outlines of our tax policies. I shall summarize them here.

We have noted that in 1954 reductions in spending made possible—and appropriate in the existing circumstances of transition to a peacetime economy—the largest dollar tax cut in any year in our history. Almost 7½ billion dollars were cut from the sums required of the taxpayers and every taxpayer in the country benefited. Almost two-thirds of the savings went directly to individuals. This tax cut also helped to build up the economy, to make jobs in industry, and to increase the production of the many things desired to improve the scale of living for the great majority of Americans.

The strong expansion of the economy, coupled with a constant care for efficiency in Government operations and an alert guard against controllable waste and duplication, has brought us to a prospective balance between income and expenditure. This is being achieved while we continue to strengthen the military security forces and enlarge services to the public.

To reach a balanced budget in the fiscal year 1956 and in the fiscal year 1957, it will be necessary in addition to continuing everyday efforts to keep spending under control, to continue all the present excise taxes without any reduction and the corporation income taxes at their present rates for another year beyond April 1, 1956.

Based on the extension of these tax rates, budget receipts in the fiscal year 1957 are estimated at 66.3 billion dollars, 1.8 billion dollars higher than in the current year.

Budget receipts

[Fiscal years. In billions]

	1955 actual	1956 estimated	1957 estimated
Individual income taxes	$31.7	$33.6	$35.1
Corporation income taxes	18.3	20.3	20.3
Excise taxes	9.2	9.9	9.9
Other taxes (net of transfers to trust funds)	2.1	2.0	2.1
Miscellaneous receipts	2.6	2.5	2.8
Refunds of receipts (−)	−3.4	−3.8	−3.9
Total	60.4	64.5	66.3

It is unquestionably true that our present tax level is very burdensome and, in the interest of long term and continuous economic growth, should be reduced when we prudently can. It is essential, in the sound management of the Government's finances, that we be mindful of our enormous national debt and of the obligation we have toward future Americans to reduce that debt whenever we can appropriately do so. Under conditions of high peacetime prosperity, such as now exist, we can never justify going further into debt to give ourselves a tax cut at the expense of our children. So, in the present state of our financial affairs, I earnestly believe that a tax cut can be deemed justifiable only when it will not unbalance the budget, a budget which makes provision for some reduction, even though modest, in our national debt. In this way we can best maintain fiscal integrity.

PUBLIC DEBT

On the basis of present estimates, we should be able to end the current fiscal year with a small reduction in the public debt, and a small further reduction is anticipated for the fiscal year 1957.

Public debt

[Fiscal years. In billions]

	1955 actual	1956 estimated	1957 estimated
Public debt at start of year	$271.3	$274.4	$274.3
Change due to budget deficit (+) or surplus (−)	+4.2	−.2	−.4
Other changes in public debt	−1.1	+.1	−.1
Public debt at end of year	274.4	274.3	273.8
Public debt subject to legal limit at end of year	273.9	273.8	273.3

The immediate economic effects of the public debt depend partly on its management. During each year various issues of Government securities become due and refinancing must be arranged. In the past several years the Treasury has cooperated closely with the Federal Reserve System to assure that the management of the debt is consistent with our general monetary and credit policies. These actions have helped sustain a sound and growing business activity without inflation or deflation.

The Treasury has also taken steps toward lengthening the average maturity of the debt so as to avoid its becoming concentrated too heavily in short-term issues. Further, the number of financing operations each year has been reduced. These actions lessen the impact of Treasury financing on the market, and give the Federal Reserve System greater freedom in its operations.

Last year the Congress extended through June 1956 a temporary increase during the fiscal year in the statutory debt limit from 275 billion dollars to 281 billion dollars, so that the Treasury could meet its heavy temporary borrowing needs during the first half of the fiscal year 1956, when tax receipts are seasonally low. The Treasury is currently operating within 1 billion dollars of the temporary debt ceiling, and on cash balances that at some periods offer little flexibility in the management of Government finances. Even with a balanced budget in 1956 and 1957, seasonal borrowing in the first half of fiscal year 1957 will temporarily bring the debt above the 275 billion dollar limit. Therefore, a continuation of the legislation allowing a temporary increase during the year in the statutory debt limit is required.

RECEIPTS FROM AND PAYMENTS TO THE PUBLIC

The budget receipts and expenditures discussed so far reflect transactions in funds belonging to the Federal Government. The Government also collects and pays out sizable sums for the various funds which it holds in trust for others, such as old-age and survivors insurance, railroad retirement, unemployment compensation, veterans' life insurance, and Federal employees' retirement.

Summary of major trust funds

[Fiscal years. In billions]

	1955 actual	1956 estimated	1957 estimated
Balance in funds at start of year	$44.9	$45.9	$48.4
Receipts	9.1	11.2	11.5
Expenditures	8.1	8.7	9.7
Balance in funds at close of year	45.9	48.4	50.2

These trust funds are currently accumulating surpluses because payments into them are being made by a great many more people than are now drawing benefits. The rate of accumulation is gradually declining as more people become eligible for benefits, but will still amount to an estimated 1.8 billion dollars in the fiscal year 1957.

The flow of money between the public and the Government as a whole is shown in the table below by consolidating budget transactions with trust fund transactions and by eliminating intragovernmental payments and receipts. The relationship of receipts from and payments to the public is sometimes used to measure the inflationary or deflationary impact, if any, of Government financial operations on the economy. More detail on this consolidation can be found in special analysis A, pages 1083 to 1085 of this budget.

Receipts from and payments to the public, excluding borrowing

[Fiscal years. In billions]

	1955 actual	1956 estimated	1957 estimated
Receipts from the public	$67.8	$73.5	$75.4
Payments to the public	70.5	71.0	72.9
Excess of receipts from the public	-------	2.4	2.4
Excess of payments to the public	2.7	-------	-------

An excess of Federal cash receipts from the public is estimated for both the fiscal years 1956 and 1957.

SUMMARY TABLES

The following two pages present tables showing key budget figures on both new authority to incur obligations and expenditures for each major program and for each major agency. These tables are followed by a discussion of the programs covered by the budget, including the legislative recommendations.

Summary of New Obligational Authority

BY FUNCTION AND AGENCY

[1] Receipts of certain Government corporations, the postal service, and other revolving funds the receipts of which come primarily from outside the Government. These funds are listed in the respective chapters of pt. II as "Public enterprise funds."

[a] Deduct, excess of repayments and collections over expenditures.

[b] Less than one-half million dollars.

MAJOR NATIONAL SECURITY

Budget expenditures for major national security programs in the fiscal year 1957 are estimated at 40.4 billion dollars, 903 million dollars more than estimated for the fiscal year 1956.

To build our military strength effectively and efficiently, peaks and valleys in security spending and in defense production must be avoided. I want to emphasize again the importance of a sound, long-range program which does not arbitrarily assume a fixed date of maximum danger. Military planning must combine present defense with the probable needs of a long period of uncertain peace.

[a] Less than one-half million dollars.

Department of Defense: During the past 3 years our defense program has been successfully reoriented to reflect the changing nature of the threat to our security, the revised requirements brought about by the end of the Korean conflict, and the increasing availability of new weapons of unprecedented strategic and tactical importance.

This reorientation has been accomplished by developing our defense program on the basis of the following policies and concepts:

1. Gearing our defense preparations to a long period of uncertainty instead of to a succession of arbitrarily assumed dates of maximum danger.

2. Maintaining the capability to deter a potential aggressor from attack and to blunt that attack if it comes—by a combination of immediate retaliatory power and a continental defense system of steadily increasing effectiveness.

3. Developing military forces which minimize numbers of men by making maximum use of science and technology.

4. Relating the number and degree of readiness of major units in the active forces to the practical limitations on the rapid deployment of major military forces from the United States immediately upon the outbreak of aggression, and relying, for the remainder, on ready reserve forces.

5. Utilizing military personnel on active duty with maximum effectiveness so as to hold to a minimum the number of men withdrawn from work in the civilian economy.

6. Concentrating our efforts on those forces which best complement the forces our allies are most capable of raising and supporting.

7. Maintaining a strong and expanding peacetime industrial structure, readily convertible to the tasks of defense and war.

The readjustment of our military forces in line with these principles is providing this Nation with the greatest military power in its peacetime history. My recommendations for the fiscal year 1957 continue the same basic policies and concepts.

This budget provides funds for an average of 2,815,700 military personnel on active duty during the fiscal year 1957. Total military personnel on active duty will increase to 2,838,400 at the end of fiscal year 1957 from the number of 2,814,100 estimated to be on active duty at the end of the current fiscal year. In order to permit flexibility in planning and operations, a military personnel ceiling has been authorized for the fiscal year 1957, totaling 2,906,000, excluding Army cadets, Navy aviation cadets, and midshipmen. However, no increase will be made above the military personnel levels provided for in this budget except upon detailed justification to, and approval by the Secretary of Defense.

During the fiscal year 1957 there will be significant increases in certain combat elements, particularly units employing new weapons and units assigned to continental defense. These increases, together with the continued modernization of the weapons and equipment, will further enhance the combat power and effectiveness of our forces.

My recommendations for the military functions of the Department of Defense for the fiscal year 1957 will require congressional authorizations amounting in total to 35.7 billion dollars. Of this amount, it is proposed that 785 million dollars be provided by transfer of existing authority from revolving funds. Thus, the new authority proposed for 1957 is 34.9 billion dollars, which is 1.8 billion dollars more than the amount voted by the Congress for the current fiscal year. Expenditures are expected to total 35.5 billion dollars, compared with a present estimate of 34.6 billion dollars for the current fiscal year.

The increases in new authority to incur obligations and in expenditures in the fiscal year 1957 reflect, in large part, the cost of keeping our forces modern.

Continued improvements in technology and weapons can be expected and they will tend to increase costs unless offsetting savings can be found. Replacement, maintenance, and operations will require a high level of expenditures in the fiscal year 1957 and for years to come. Therefore, the management of our military programs must have continuing study and scrutiny. Constant efforts must be made to plan carefully in advance, to increase efficiency, and to reduce costs and expenditures.

Department of Defense costs by major categories

(Based on existing and proposed legislation)
[Fiscal years. In millions]

Cost category	Net budget expenditures			Recommended new obligational authority for 1957
	1955 actual	1956 estimated	1957 estimated	
Military personnel:				
Active forces	$10,643	$10,341	$10,336	$10,506
Retired pay	419	494	520	525
Operation and maintenance	7,905	8,351	9,100	9,603
Major procurement and production	(12,997)	(11,823)	(11,719)	(10,305)
Aircraft	8,037	6,880	6,751	5,315
Ships	1,009	955	1,032	1,336
Guided missiles	631	918	1,276	1,776
Other	3,319	3,070	2,659	1,878
Military public works	1,582	1,899	1,817	1,702
Reserve components	717	863	1,087	1,199
Research and development	1,397	1,370	1,430	1,532
Establishmentwide activities	235	258	263	320
Working capital (revolving) funds	−364	−824	−725	
Transfer from Department of Defense revolving funds to general accounts (proposed legislation)				−785
Total	35,532	34,575	35,547	34,907

Military personnel costs for the active forces, which include pay, allowances, subsistence, clothing, and related items, will be the same in the fiscal year 1957 as in 1956.

Retention of trained and experienced personnel is one of the most difficult problems confronting the armed services today. Every reasonable measure must be taken to increase the attractiveness of a service career. Therefore, I am again recommending legislation to provide added incentives for the members of our Armed Forces. My principal proposals are for the uniform provision of medical care for dependents,

adequate and equitable benefits for survivors, improved career inducements for medical personnel, and reasonable rentals for those occupying substandard Government quarters. This budget also provides for a proposed increase in the proportion of career officers to total officer personnel.

The cost of operation and maintenance will rise in the fiscal year 1957, notwithstanding a decrease in the number of civilian personnel. Major reasons for the higher costs are (1) the greater number of air bases, radar sites, and other installations which must be supported in the coming fiscal year, (2) the sizable increase in the numbers of weapons and amount of equipment which must be operated and maintained, and (3) the growing complexity of new weapons and equipment.

Major procurement and production expenditures in the fiscal year 1957 will be about the same as in the current fiscal year. However, there will be a shift in emphasis within this total in line with the policy of modernizing our forces.

Approximately 6.8 billion dollars is estimated for procurement of aircraft, chiefly for the Air Force and the Navy. The accelerated production programs for the B–52 long-range jet bomber and the F–101 and F–104 supersonic interceptors will be continued in the fiscal year 1957. In addition, there will be substantial procurement of the Navy's new supersonic F–8U fighter.

Expenditures for the procurement of guided missiles will be the highest in our history, increasing by more than one-third over 1956 and about double the amount spent for this purpose during 1955.

Expenditures for electronic and communications equipment will remain high during the fiscal year 1957, to meet the needs for continental defense and our combat forces. Expenditures for ammunition, combat vehicles, trucks, and other major equipment items, will continue to decline because our requirements have now been met in large part.

This budget provides for continuation of the Navy shipbuilding program at a slightly higher level than in the fiscal year 1956 in order to carry forward the modernization of the fleet, most of which was built during World War II. In addition to those already authorized by the Congress, there is included in the proposed shipbuilding program for 1957 the construction of a sixth carrier of the *Forrestal* class, additional nuclear-powered submarines, guided-missile destroyers and frigates, and an experimental nuclear-powered cruiser. Provision is also made for developing a practical nuclear powerplant for future installation in ships of the large carrier class. Conversion of ships now in the fleet will be undertaken to provide them with additional nuclear weapons and with guided missile capabilities, and to permit them to operate modern high-speed aircraft.

Military public works will continue slightly below the level of the current year. This budget provides for the construction in the fiscal year 1957 of facilities associated with the continental air defense system, including *Nike* sites; further additions to the aircraft warning systems, including the *Distant Early Warning Line;* guided missile facilities; and air bases for the Navy and Air Force.

Expenditures for our Reserve components in the fiscal year 1957 will be considerably greater than in 1956, reflecting an increase during the year of about 130,000 reservists in drill pay status and further expansion of facilities for the Reserve forces. The number of Reserve personnel engaged in regularly paid drills is expected to increase to 1.1 million by the end of 1957. In addition, this budget provides for 6 months' active duty training under the Reserve Forces Act of 1955 for about 80,000 Reserve forces personnel.

Research and development expenditures will be somewhat higher in the fiscal year 1957 than in the current year. Major emphasis will be placed on projects related to guided missiles, continental air defense, and to the application of nuclear energy for the propulsion of aircraft and ships. It is my belief that increased returns in military research and development can be obtained through a relatively stable program at approximately the present level which can utilize effectively our scientific and technological resources. Military research and development now engages a substantial proportion of the scientists and engineers employed in research and development in the Nation. Care must be exercised in selecting the projects to be supported, and efforts must be concentrated on those of high priority.

Continued progress has been made during the past year in improving the management of the Department of Defense. The Secretary of Defense is giving careful study to the recommendations of the Commission on Organization of the Executive Branch of the Government and its task forces on defense activities. Some of these recommendations have already been put into effect; in certain other cases, they have been adopted in modified form, consistent with the objectives of the Commission report. Responsibility for supplying all food, which costs 1.2 billion dollars annually, has been placed under the Secretary of the Army. A single food-supply system for bulk procurement and storage will eliminate duplicate storage facilities and costly crosshauling. The three military departments have also been directed to undertake joint planning and utilization of all the health and medical resources of the Department of Defense.

Financial management has been made more effective by increasing the scope of stock funds. These funds currently cover inventories of over 8.2 billion dollars, and their coverage will be expanded. Stock funds are used to buy supplies and equipment, and to control inventories centrally. Each of the services then meets its needs by purchasing from this central stock. This method makes possible a better distribution of supplies and equipment with a minimum inventory. It encourages cost consciousness throughout each of the services. As a result, in the last 3 fiscal years 2.5 billion dollars have been recovered from the stock funds as inventories were reduced. Further reductions in inventories this year will make available additional surplus capital of 785 million dollars in the Army, Navy, and Marine Corps stock funds. This surplus is applied in this budget to reduce the amount of new authority to incur obligations which would otherwise be required for the fiscal year 1957.

Industrial funds are being used to serve the same kind of businesslike purpose in commercial- and industrial-type installations. During the fiscal year 1957 industrial fund financing will be extended to additional activities in each of the services. This will greatly increase the volume of business, currently amounting to about 1.8 billion dollars, conducted under such funds.

Civil defense: The key to our civil defense is the expanded continental defense program, including the distant early warning system. Additional progress has been made in the civil defense program under the Federal Civil Defense Administration, whose expenditures are classified with those for civil disasters in the commerce and housing section of the budget. Comprehensive studies are being conducted jointly by the Federal Civil Defense Administration, the States, and critical target cities to determine the best procedures that can be adopted in case of an atomic attack. Such planning has vital national importance and parallels the necessity for maintaining a strong military establishment.

This budget provides for a strengthened effort on the part of the Federal Government to assist the States and cities in devising the most effective common defense. It includes funds to extend civil defense preparations in more metropolitan target zones in accordance with recent recommendations of a special committee on civil defense. Funds also are included to accelerate procurement of field-type emergency hospitals and increase stockpiles of medical and radiological supplies.

Development and control of atomic energy: We have long sought and we continue to seek, jointly with other nations, means to banish the threat of nuclear warfare which still confronts the world. Pending a trustworthy agreement, however, we must continue to increase our nuclear weapons stockpile which, together with the means of delivery, is the principal deterrent to armed aggression in the world. At the same time, we shall speed the development of the peaceful uses of atomic energy and make the resulting benefits, under appropriate controls, available to other nations for the well-being of all mankind. To this end we continue to hope that an international atomic energy agency will be established at an early date.

The United Nations Conference on the Peaceful Uses of Atomic Energy at Geneva last summer, which grew out of a proposal by the United States, not only facilitated the exchange of technical information but served to emphasize the great promise of atomic energy for peace.

So that we may further demonstrate this great promise, I recommend again that the Congress take early action to authorize the construction of a nuclear-powered ship, using an atomic propulsion plant already developed, which will carry the message of "Atoms for Peace" to the ports of the world. The Atomic Energy Commission has sufficient funds available for construction and installation of the propulsion plant and machinery, and I shall request additional funds for the fiscal year 1956 for the Department of Commerce for construction of a suitable hull.

Total expenditures for atomic energy in 1957 are estimated at 1.9 billion dollars, 230 million dollars more than in 1956.

Operating expenditures will increase from 1.4 billion dollars in the fiscal year 1956 to 1.6 billion dollars in 1957. Greater quantities of uranium ores and concentrates will be purchased. Production from the Commission's plants will increase but at reduced unit costs as the expanded facilities, soon to be completed, come into full operation. Research and development work in numerous areas, both civilian and military, will be expanded.

Capital expenditures in the fiscal year 1957 are expected to decline somewhat from 1956 levels. I shall propose to the Congress legislation to authorize new construction in 1957, principally for improvements to increase the efficiency, capacity, and safety of production plants and for research and development facilities.

The civilian applications of nuclear energy will receive even greater attention, not only in terms of Government expenditures, but also through the Commission's efforts to stimulate more participation and investment by private and public groups, particularly in the development of atomic power. As such participation increases, the share of power development costs financed by the Government should decrease. As part of its encouragement of the development of atomic power, the Commission plans in 1957 to continue specialized training of nuclear engineers and to expand its support of the training of nuclear engineers through fellowships and through provision of specialized training equipment to a number of universities. The Commission will also construct a special reactor for use by the Department of Defense in developing methods for preserving food through irradiation.

Great emphasis is being placed on the development of a larger variety of nuclear propulsion plants. To this end, funds are included under proposed legislation for additional developmental facilities at the National Reactor Testing Station in Idaho.

The Atomic Energy Commission will also step up research on controlled thermonuclear reactions as new discoveries may justify. This program, while long range, gives promise of yet greater dimensions to the potential peaceful uses of nuclear energy.

Continuing progress in basic research is fundamental to further advances in nuclear energy. The Commission will increase in the fiscal year 1957 its support of basic research in the physical and life sciences, including development and design studies of high-energy particle accelerators. The 1957 construction program will include new buildings at three of the Commission's laboratories.

Stockpiling and defense production expansion: As a result of the financial assistance provided under the Defense Production Act, substantially increased supplies of aluminum, copper, nickel, and other strategic materials are now available both for industry and for the national stockpile. To assure continued flexible authority for mobilization preparedness to meet future emergencies, I recommend extension of the Defense Production Act for 2 years.

An increasing number of stockpile objectives are being filled. Moreover, the high level of industrial activity has reduced the availability of some materials for stockpiling and required diversion of part of the new supply of a few materials to meet shortages in key industries. As a result, net expenditures for the stockpile and for defense production expansion are expected to decline from 713 million dollars in the fiscal year 1956 to 378 million dollars in 1957. No new authority to incur obligations is recommended for the fiscal year 1957, since sufficient authority is already available for continued rapid progress toward completion of established minimum objectives and for limited procurement to maintain essential elements of the mobilization base.

Under the administration's policy of finding constructive uses for our surplus agricultural commodities, strategic materials are being acquired by barter transactions with foreign suppliers. The Department of Agriculture plans to acquire additional strategic materials by barter during 1957. In the fiscal years 1956 and 1957, expenditures amounting to about 65 million dollars will be made under the appropriations for stockpiling to reimburse the Department of Agriculture for materials added to the national stockpile.

Mutual Security Program: Through the Mutual Security Program we shall continue to work jointly with our friends and allies in building and maintaining the defensive and economic strength of the free world. This long-range program, which includes military, economic, and technical assistance, is essential to our national security. Our assistance supplements the major efforts of other free nations, who themselves are bearing a large proportion of the total cost of our joint efforts. I shall subsequently transmit to the Congress my specific requests for authorization of appropriations for the fiscal year 1957 Mutual Security Program. These requests will cover my recommendations for military assistance and direct forces support, discussed in this section of the message, as well as for economic, technical, and other programs which are discussed in the international affairs and finance section.

Expenditures for the total Mutual Security Program in the fiscal year 1957 are estimated at 4.3 billion dollars, about 100 million dollars more than in 1956. Recommended new authority to incur obligations is 4.9 billion dollars, an increase of 2.2 billion dollars over the 2.7 billion dollars enacted for 1956. Requested new obligational authority for 1957 exceeds estimated expenditures for 1957 by approximately 600 million dollars reflecting the amount for additional funding of long lead-time items for delivery in future years.

Wherever possible, foreign currency proceeds from the sale of surplus agricultural products abroad under the Agriculture Trade and Development Act will be used to meet mutual security objectives.

Mutual security program

[Fiscal years. In millions]

	Net budget expenditures			Recommended new obligational authority for 1957
	1955 actual	1956 estimated	1957 estimated

Total	4,219	4,190	4,292	[2] 4,860

[1] Discussed in the international affairs and finance section of this message.

[2] Compares with new obligational authority of 2,781 million dollars in 1955 and 2,703 million dollars in 1956. Excludes an estimated 130 million dollars of authorizations to use existing balances.

Mutual Security Program, military: The program of military assistance for the fiscal year 1957 is planned primarily to continue equipping and training forces which we have helped develop and strengthen over the past years. Total expenditures for military assistance and direct forces support in the fiscal year 1957 are estimated at approximately the current rate of 2.5 billion dollars annually. To carry forward these programs, I am recommending new obligational authority of 3 billion dollars. Within this amount, 445 million dollars is requested for direct forces support in the fiscal year 1957 to supply items such as petroleum, rations, uniforms, and military construction services directly to the military forces of our allies.

In the fiscal years 1955 and 1956, the backlog of unexpended balances made it possible to maintain an adequate level of expenditures and deliveries while the amount of new authority to incur obligations was reduced. The backlog of unexpended balances for military assistance (including reservations for common-item orders) is being reduced from a total of 7.7 billion dollars at the beginning of the fiscal year 1955 to an estimated 4.5 billion dollars at the end of the current fiscal year. If deliveries of military equipment are to be maintained at the current rate, as I believe they must be, this level of unexpended

balances should not now be further reduced.

Our planning for the future includes helping to provide modern weapons that the forces which we help support can effectively use. In view of the long lead-time required, funds must be made available in advance so that the necessary negotiations and planning may be undertaken and procurement initiated for complex items such as jet aircraft, missiles, and electronics systems. Hence, for the fiscal year 1957, I am requesting new authority to incur obligations somewhat above the projected level of expenditures. Deliveries of equipment and the expenditure of funds will necessarily be spread over a number of years as defense plans involving modern weapons are completed and as our allies demonstrate their readiness to support a modern defense system adequately.

My recommendations will enable us to provide our NATO partners with the modern defense weapons and equipment which we are furnishing in increasing numbers to our own NATO forces in Europe. Although many European countries are now in a position to finance a greater share of the cost of maintaining their existing forces, they will require continuing help if our common defense effort is to be strengthened by modern weapons and techniques.

About one-half of the fiscal year 1957 program will be concentrated in Korea, Pakistan, Taiwan, and Turkey. The program will provide for necessary replacements and effective maintenance of materiel furnished in past years, and will also permit the further training of existing forces. In addition, we will continue to supply basic military equipment where necessary to strengthen further defensive capabilities in the Far and Middle East. Likewise, we will continue to provide moderate amounts of equipment to help maintain certain military units of our friends in Latin America who are cooperating in the development of hemispheric defenses.

INTERNATIONAL AFFAIRS AND FINANCE

The international programs which I am recommending for the fiscal year 1957 will vigorously carry forward our fundamental national policy to maintain peace and help build a strong, prosperous, and unified community of free nations.

During this past year, the United States has made positive new proposals aimed at relaxing international tensions. But it remains clear that the search for lasting peace will require patience, strength, and continued vigilance.

We will persist in exploring every possible means of solving the difficult problems which continue to divide the world. Meanwhile, we must further strengthen and improve the system of collective security. Moreover, it is of the utmost importance that, in cooperation with other free nations, we proceed steadily with long-range, positive programs to sustain and improve the conditions of human well-being which are necessary if peace with freedom is to endure.

To accomplish these objectives, I am proposing expenditures of 2.1 billion dollars in the fiscal year 1957 for our international programs.

Mutual Security Program, economic: My recommendations for continuing military assistance under the Mutual Security Program were discussed previously, and the amounts involved were included as part of our major national security activities. Some of the countries to which we provide military assistance, however, do not have the economic capacity to support effective defensive forces which are necessary to our mutual security. We must continue to provide assistance to such countries to enable them to support the greater defensive strength that is our common goal. It is particularly important that we continue to help those nations which require assistance in order to participate effectively in regional collective security arrangements, notably those in Asia. This budget, therefore, includes funds for carrying on the defense support program in critical areas in southern Europe, the Middle East, South Asia, Southeast Asia, and the Far East.

The development of military strength as a deterrent to aggression, however, meets only a part of the challenge which faces the free world. Because the conditions of poverty and unrest in less developed areas make their people a special target of international communism, there is a need to help them achieve the economic growth and stability necessary to preserve their independence against Communist threats and enticements.

For our assistance to be as effective as possible, it must be based upon a realistic appraisal of potentialities for economic development and a careful determination of priorities among the many pressing needs in the less developed areas. My recommendations for the Mutual Security Program include funds for continuing selective loans and grants to certain less developed countries following experience gained in past years.

I am also recommending continuation of the worldwide technical cooperation program at a slightly increased level. Technical cooperation is an indispensable element in the successful attack which is being made on the basic problems of hunger, disease, and illiteracy. Through the efforts of American experts working in cooperating countries and by the training of foreign technicians in the United States, the knowledge and experience of our people are being shared in a cooperative effort to solve fundamental problems in health, education, public administration, agriculture, and industry which confront less developed countries. By these means we are helping to provide the skills which are required for economic development. In addition to continuing our own technical cooperation program, my recommendations provide for our annual contribution to the expanded technical assistance program of the United Nations and to the similar work of the Organization of American States.

We shall also continue and expand in the fiscal year 1957 our international program to provide training in the peaceful uses of atomic energy. Funds for this purpose are included in this budget as part of the Mutual Security Program.

Provision should be made for further contributions for the relief and rehabilitation of refugees from Palestine. In view of the current unrest in the Near East, our continued support is essential both for humanitarian reasons and to assist in achieving peace and stability in the area.

The budget also includes amounts for the escapee program and for contributions to the Intergovernmental Committee for European Migration and the

United Nations Refugee Fund, which aid in the relief and resettlement of refugees from behind the Iron Curtain and in emigration from Europe.

I shall recommend effective flexibility in the use of funds under the Mutual Security Program to enable us to respond to new situations which may arise. I also consider it essential that the Mutual Security Act be amended to assure greater continuity in providing economic assistance for development projects and programs which we approve and which require a period of years for planning and completion. Accordingly, I shall ask for limited authority to make longer term commitments for assistance for such projects, to be fulfilled from appropriations made in future years.

In furtherance of our basic foreign economic policy objective of stimulating international trade and investment, I am requesting a review of existing legislation to determine whether changes will be necessary to permit an expansion of the investment guaranty program. Under this program, private United States investors may be guaranteed against loss of their foreign investments or earnings through expropriation or inconvertibility of foreign currencies. The number of private investors and foreign governments participating in this program has steadily increased. We also need to encourage investment overseas by avoiding unfair tax duplications, and to foster foreign trade by further simplification and improvement of our customs legislation.

Export-Import Bank: The Export-Import Bank is assisting in the expansion of international trade and investment through direct loans and guaranties of private loans. Its loan and guaranty commitments are estimated at 960 million dollars in the fiscal year 1957, an increase of 255 million dollars over the previous year. Because of greater participation in loans by commercial banks and other sources of private capital, direct Federal disbursements in the fiscal year 1957 are estimated at less than one-third of the total new commitments. Repayments on loans made in prior years are expected to exceed disbursements from Export-Import Bank funds, thus providing estimated net receipts of 100 million dollars. Sales of portions of the existing loan portfolio to private financial institutions may increase this return.

Foreign information and exchange activities: The present international situation has made the work of the United States Information Agency increasingly vital to our national interest. I consider it of paramount importance that we expand our effort to bring the truth before the people of the world, explain our peaceful objectives, and show in its true light the Communist attempt to divide and destroy free world unity.

To this end, I strongly recommend that appropriations for our information program be increased by 48 million dollars from the level in the current fiscal year. This increase will provide for expanded use of overseas exhibits and other techniques to emphasize such subjects as our Atoms for Peace program, our proposals for mutual aerial inspection as a first step toward disarmament, and the many scientific and cultural achievements by which progressive capitalism under free, representative government is contributing to a peaceful, prosperous world. Overseas libraries will be expanded, and increased emphasis will be given to supplying books to foreign readers at low prices. Where appropriate, the program will capitalize on the effectiveness of television.

I am recommending a modest increase in appropriations for the educational exchange programs of the Department of State which constitute a basic element of our long-term effort to attain a better mutual understanding with other peoples of the world. These programs bring to this country leaders of public opinion and facilitate the mutual exchange of students, teachers, and research scholars. In addition to appropriated funds, part of the foreign currencies received from the sale of surplus agricultural commodities abroad will be used to meet certain overseas costs of educational exchange.

With the financial support of the President's Emergency Fund for International Affairs, we have sponsored, in cooperation with private industry, agricultural and industrial exhibits at international trade fairs which have effectively demonstrated the achievements of private enterprise in a free economy. Similarly, our cultural achievements have been presented throughout the world by American actors, dancers, and musicians during the past year. These trade fair and cultural presentations have been enthusiastically received abroad and have contributed significantly to a better understanding of our values and objectives as a nation. In view of the effectiveness of these activities, legislation will be recommended to authorize them on a continuing basis.

Conduct of foreign affairs: The Department of State is not now adequately equipped with either the staff or facilities which are required if it is to provide the timely, informed, and coordinated policy guidance which is vital to the success of our total international effort. I strongly recommend, therefore, that the Congress enact the requested increase of 89 million dollars in the appropriations for the Department of State for the fiscal year 1957.

A substantial part of this increase is for construction of an extension to the present Department of State building. This extension will permit all the Washington staff of the Department, including the International Cooperation Administration, to be accommodated in a single building rather than scattered, as at present, among 30 separate buildings. In addition, my recommendations include funds to cover costs in the first year of a long-range program to provide adequate physical facilities, including housing, for our diplomatic and consular establishments abroad.

Steps are already underway to strengthen the staff of the Department. This budget provides for further improvements, as well as for carrying forward the recruitment, training, employee benefit, and other programs initiated during the past 2 years. Increases are also proposed to permit the prompt and efficient discharge of our expanding consular responsibilities and to provide for the collection of more comprehensive commercial and economic data needed by American businessmen and Government agencies.

To provide for closer international economic cooperation and continued expansion of United States trade abroad, it is particularly important that our membership in the Organization for Trade Cooperation be approved. While this will not alter congressional control of our tariff, import, and customs policies, it will help us to remove discriminations against American exports and further strengthen our ties with other nations of the free world.

VETERANS' SERVICES AND BENEFITS

The greatest portion of budget expenditures for veterans is for direct benefits, such as compensation and pensions, indemnity payments, readjustment benefits, and hospital and medical care. These direct benefit costs have been increasing. At the same time overhead costs are being reduced through improved administration.

Budget expenditures for veterans' programs are estimated to total 4.9 billion dollars in the fiscal year 1957, 86 million dollars more than in 1956 and 422 million dollars more than in 1955.

We now have more than 22 million veterans. When benefits for dependents and survivors are considered, nearly one-half of our population is potentially entitled to veterans' benefits.

Therefore, continuing and careful attention must be given to veterans' services and benefits. These services and benefits will be increasingly significant as the veteran population ages, because benefit entitlement resulting from nonservice-connected infirmities associated with advancing age will replace eligibility for service-connected benefits as the major factor in the cost of veterans' programs.

The Congress and the public will want to join with this administration in giving careful consideration to the findings of the Commission on Veterans' Pensions which I appointed to study this problem. This Commission, which will report later this year, is reviewing thoroughly the relation of the existing nonmedical programs for veterans to each other and to the numerous civil benefits which the Nation now provides for the aged, the needy, the infirm, and the disabled—both veterans and others.

Steps to relate military service survivor benefits to old-age and survivors insurance benefits are already underway in a bill pending before the Congress. The additional cost of this legislation for those receiving veterans' benefits is provided in this section of the budget. The estimates of miltary expenditures, under proposed legislation, include an amount to cover the Government's share, as employer, of the old-age and survivors insurance contribution.

Veterans' services and benefits

[Fiscal years. In millions]

Program or agency	Expenditures			Recommended new obligational authority for 1957

[1] Compares with new obligational authority of 4,369 million dollars in 1955 and 4,805 million dollars in 1956.

Readjustment benefits: A year ago, I issued a proclamation terminating accrual of eligibility for various wartime benefits. While it is still necessary to draft individuals for service in our Armed Forces, this service at present imposes neither the hazards of conflict nor as serious a disruption of education and other preparation for civilian life as was imposed upon our combat servicemen. The forthcoming report of the Commission on Veterans' Pensions will provide a useful framework for further consideration of the needs of our servicemen for readjustment benefits under present conditions.

The program of readjustment benefits for World War II veterans is drawing to a close. World War II veterans will account for less than 7 percent of the 1957 readjustment expenditures of the Veterans' Administration. For most of these veterans, unemployment compensation rights ended July 25, 1952, and educational programs will cease July 25, 1956. The ending of the loan guaranty program on July 25, 1957, will bring to a close a third major program. In each case, the law has set a termination date which establishes a proper balance between the nature of the benefit and a reasonable time for using it.

The timeliness and aptness of our veterans' readjustment programs are attested in many ways. Under the "GI bill," 7.8 million World War II veterans have received education and 4.5 million have acquired homes. Practically all World War II veterans have assumed their civilian status in our economy and share equitably in the general prosperity. As a group, they have made the transition from military to civilian life and do not require extension of these readjustment benefits. For those few individuals who have not completed the change to civilian life in 10 years, approaches other than veterans' readjustment benefits seem to be indicated.

The education and training of Korean veterans will account for the bulk of the readjustment benefit expenditures during 1957. The average of 540,000 veterans in training under this program during the year will be the highest for any year.

Loan guaranty expenditures are estimated to increase slightly, requiring 38 million dollars for acquisition of properties and for losses on defaulted loans. It is expected that 640,000 new loans, totaling 7.3 billion dollars, will be guaranteed or insured during the fiscal year. As in the past, nearly all will be for housing. This program will continue until 1965 for veterans of the Korean conflict.

Veterans who served in the Armed Forces during the period June 27, 1950, to January 31, 1955, are eligible for unemployment compensation under Federal law. These benefits are estimated at 118 million dollars in the fiscal year 1957.

Compensation and pensions: The most important elements in the continuing upward trend in expenditures for veterans' programs are compensation and pensions. Under existing legislation, significant increases in the cost of these direct payments may be anticipated annually until the end of this century, when payments may be twice their present yearly total of nearly 3 billion dollars. This long-term outlook arises chiefly from the very large number of veterans who may become entitled to pension benefits not connected with disabilities arising from their service.

In the fiscal year 1957, expenditures are estimated to increase 119 million dollars as a result of three factors. The largest is the increased number of pensions paid to veterans of World War I and their dependents. These pensions are non-service-connected benefits granted widows in financial need or needy veterans with disabilities which prevent them from following a substantially gainful occupation. Expenditures for these programs have doubled since 1950 and may double again in the next 5 years if the current trend continues.

Recently discharged veterans of the Korean conflict and of peacetime service who have service-connected disabilities are a second source of growth in compensation and pension expenditures. It is estimated that about 35,000 new cases will be added to the disability compensation rolls during the next fiscal year.

Third, under the pending legislation to provide old-age and survivors insurance benefits to survivors of military personnel, many widows and children now receiving veterans' benefits would be eligible for increased compensation payments. These increased benefits would be partially offset by decreased payments from the veterans' indemnity and insurance appropriations. In the fiscal year 1957, the net additional expenditures are estimated at 30 million dollars, but in subsequent years this amount is expected to be somewhat lower.

During the fiscal year 1957 almost 3 billion dollars of compensation and pensions will be paid to approximately 2.8 million veterans, plus the survivors of over 850,000 deceased veterans. More than 10 percent of the veterans of World War II will be receiving compensation payments totaling 1 billion dollars for service-connected disabilities. About 20 percent of the veterans of World War I will draw non-service-connected pensions in the fiscal year 1957. The possible trend is indicated by the fact that 85 percent of the living veterans of earlier wars will draw such pensions.

Hospitals and medical care: Veterans' hospital and medical expenses will continue to rise through the fiscal year 1957 as the number of patients in Veterans' Administration hospitals is expected to increase 1.4 percent over 1956 to a daily average of 111,500. Almost two-thirds of these hospital patients and most of the 17,000 veterans in Veterans' Administration homes are receiving treatment for conditions which are not related to their military service.

Outpatient care, which is only for service-connected conditions, is expected to be somewhat below the levels of 1955 and 1956. The number of medical and dental examinations and treatments is estimated to be 2,398,000 in 1957, a decline of 20,000 from 1956.

I recommend the enactment of 53 million dollars of new authority to incur obligations for construction and improvements at Veterans' Administration facilities. About one-half of this amount is for urgently needed replacement of a major part of one mental hospital and for preparation of architectural plans for replacement of four 500-bed general medical hospitals. The other half provides for additional modernization and improvement work at existing facilities.

Insurance and servicemen's indemnities: Budget expenditures under this heading are primarily for indemnities to survivors of servicemen who die during active duty and for reimbursements to the life insurance trust funds for claims traced to military hazards. These expenditures are estimated at 80 million dollars in the fiscal year 1957. This amount is substantially lower than in 1956, when a large number of insurance settlements were made for servicemen previously reported missing during hostilities in Korea.

Veterans' life insurance trust funds

(Based on existing legislation)
[Fiscal years. In millions]

Item	1955 actual	1956 estimated	1957 estimated
Balance in funds at start of year	$6,541	$6,587	$6,701
Receipts:			
Transfers from general and special accounts	28	81	24
Interest on investments	200	201	205
Premiums and other	441	438	446
Total	668	721	675
Payments:			
Dividends to policyholders	179	183	170
Benefits and other	443	423	423
Total	622	606	593
Net accumulation	46	114	82
Balance in funds at close of year	6,587	6,701	6,783

Trust funds: Insurance protection of over 38 billion dollars is provided through nearly 6 million national service and United States Government life insurance policies. The number of these policies in force has steadily declined, as issuance of additional insurance was ended in 1951. During the past calendar year, 25,000 policies matured and 319,000 were terminated.

Transactions of these trust funds are excluded from budget receipts and expenditures. For the fiscal year 1957, cash receipts will exceed disbursements on policies held by World War II veterans, while benefit payments will exceed premiums on insurance held by the older age groups. The net accumulation tion is reserved for future claims.

LABOR AND WELFARE

The labor and welfare programs of the Government contribute notably to the achievement of our objectives of greater human well-being and a growing economy. These programs are designed to promote individual opportunity and foster self-reliance by assisting in the improvement and protection of people's health, the promotion of education and research, the training and placement of workers, the rehabitation of the disabled, and the provision of security against economic want.

Most of the labor, health, education, and welfare services are administered by the States and their subdivisions. In fact, four-fifths of the 3 billion dollars of budget expenditures estimated for labor and welfare in the fiscal year 1957 is for grants to State and local governments. Outside the regular Federal budget, substantial benefits are provided through the social insurance and retirement trust funds.

Budget expenditures for labor and welfare in the fiscal year 1957 are an estimated 228 million dollars greater than in the current fiscal year, and 442 million dollars higher than actual expenditures in 1955. The increase in 1957 stems largely from my proposals to strengthen and expand education, health, and research services substantially. These budget recommendations will contribute greatly to the well-being of all our people, both through those activities which relate directly to individuals and families and those which operate indirectly through improved community services and private enterprise.

In some instances, legislation will be required. My legislative recommendations therefore include measures to authorize assistance to States for building schools, for promoting occupational safety, and for reducing juvenile delinquency; a broad program for improvement of the Nation's health; completion of the program of poliomyelitis immunization grants to States; continuance of the present Federal formula for grants for State public assistance payments, with adjustments for old-age insurance benefits in certain cases; and further expansion of coverage of the old-age and survivors insurance system.

Under existing laws, I am recommending increased appropriations directed mainly to the expansion of medical research, greater support for basic scientific research and training, enlargement of protective and preventive services in the fields of health and welfare, improvement of our labor and manpower services, and construction of hospitals and other necessary health and research facilities.

[b] Less than one-half million dollars.

Labor and manpower: Recently enacted legislation has resulted in substantial improvements in the economic safeguards for workers. Minimum wages set by Federal law have been raised from 75 cents to 1 dollar an hour, and coverage of the Federal-State unemployment compensation system has been extended to employees of small firms and of the Federal Government. This budget provides for the enforcement and administration of these improvements.

To improve economic safeguards further, I recommend that the Congress extend the protection of the minimum wage law to additional workers. The facilities of the executive branch will be available to assist the Congress in finding ways of achieving this goal. Legislation is also needed to raise benefits and provide more funds for rehabilitation under the federally administered Longshoremen's and Harbor Workers' Compensation Act. In addition, a system of benefits for workers who are temporarily disabled from nonoccupational causes should be established in the District of Columbia. This budget also provides for studies by the Department of Labor to assist the States in improving their workmen's compensation laws.

In addition to improved workmen's compensation, we need effective measures to advance occupational safety. Therefore, I recommend that the Congress enact a new program to provide

technical aid and limited financial assistance to the States for promoting occupational safety.

The current high level of general prosperity spotlights the adverse economic plight of low-income rural areas and of urban areas with persistent unemployment. As part of governmentwide efforts to alleviate these problems, additional work will be done in the labor and manpower field. This will include the designation of areas eligible for special assistance, the provision of labor market information, and vocational advice for individuals.

The 1957 budget recommendations for grants for administration of the employment services and unemployment insurance provide for stepping up job counseling and testing in the public employment offices. For example, job counseling interviews will be increased from 1.6 million in the fiscal year 1956 to 2 million in 1957. These increased activities are aimed at better utilization of our labor force—with particular emphasis on placing the older and the handicapped workers in jobs most suitable for them. Procedures for taking and reviewing unemployment compensation claims will also be improved. In addition, the budget estimate covers increases by the State governments in salary rates for the State employees who administer this program.

The Federal payment to the unemployment trust fund is estimated at 81 million dollars in the fiscal year 1957. This is the part of the Federal unemployment tax collections during the fiscal year 1956 which it is estimated will not be used for the unemployment insurance and employment service program. Almost 50 million dollars of this payment will be used to complete a reserve of 200 million dollars available for loans to States which deplete their own reserves for benefit payments. About 32 million dollars will be credited to the unemployment trust accounts of the States.

During the current year significant improvements were authorized in our labor and manpower statistics programs. This budget provides, at minor additional cost, for further improvements, particularly in the consumer price index and in reports on labor turnover and current employment.

Public assistance and old-age and survivors insurance: Grants to the States for old-age assistance and aid to dependent children, the blind, and the totally disabled are estimated at 1.5 billion dollars in the fiscal year 1957, the largest expenditure item in the welfare category of the Federal budget.

Our welfare policies have a twofold emphasis: To provide basic economic protection for older people and for widowed mothers and children through self-sustaining social insurance; and, where possible, to prevent need as well as to relieve it. My budget recommendations for both existing and proposed programs reflect this emphasis.

Old-age and survivors insurance—financed through a trust fund outside the regular budget—is now providing benefits at a rate of more than 5 billion dollars a year to more than 6 million persons over age 65 and to 1½ million mothers and children. The number of beneficiaries is growing. More than nine-tenths of all employed persons in the country are now insured. Legislation should be enacted to bring in the groups still excluded—for example, employees of the Federal Government.

For a large group of needy people not receiving OASI benefits, public assistance remains the only public resource. One out of every three people over 80 years of age is on the public assistance rolls, as compared with only about 1 in every 10 in the age group 65 to 69 which, for the most part, has the insurance protection. To avoid hardship to present public assistance recipients, I propose that the present formula for determining the Federal share of assistance payments be temporarily extended. This will allow time to reappraise the need for the present high level of the Federal contribution to public assistance as the effects of the recent strengthening of old-age and survivors insurance protection become more fully apparent. Meanwhile, to reflect the fact that more and more people are becoming eligible for old-age and survivors insurance benefits, I recommend legislation to fix at 50 percent the Federal share of supplementary old-age assistance payments by the States to beneficiaries of this insurance who are added to the assistance rolls after the fiscal year 1957.

The Federal Government should also do more to assist the States to adopt preventive measures which will reduce need and increase self-help among those who depend upon public welfare. Likewise, special provision should be made for improving medical care of public assistance recipients through legislation to permit separate Federal matching of State and local expenditures for this purpose.

Promotion of public health: One of the most important goals of this administration is to assure continued progress in research, training, and provision of health facilities so that the medical professions can help the American people to enjoy better health. To this end I am proposing a substantial, yet orderly, expansion of our existing health services and new measures necessary to fill significant gaps in the Nation's programs for promoting good health.

I again urge the Congress to act favorably and promptly on recommendations made last year to provide mortgage insurance for the construction of health facilities, to train health personnel, to expand mental health programs, to abate water pollution, and to strengthen State and local public health services.

In addition, provision should be made to assist the extension and improvement of health insurance protection for our people. The Congress has taken no action on my legislative proposals to meet these objectives. The Secretary of Health, Education, and Welfare is working on plans whereby private insurance organizations generally may pool risks to cover abnormal losses possible under broader health plans, and, if necessary, appropriate permissive legislation will be recommended. Should this approach not be successful, a Federal reinsurance service should receive renewed consideration.

I recommend also that the Congress enact legislation to authorize Federal assistance for the construction of medical and dental research and teaching facilities. Expansion of these facilities is necessary to provide for a continuing increase in the medical research program of the Nation, and will help our hard-pressed medical and dental schools to provide better training for more students.

The law providing for a poliomyelitis immunization program, which was enacted last year, should be extended beyond its present expiration date of February 15, 1956. This budget includes, under proposed legislation for the fiscal year 1956, the necessary funds to complete the program of grants to assist States in the immunization of children and expectant mothers.

Special services are needed to promote the health of our Indian population and to assist the Territory of Alaska in dealing with the problem of mental health. I recommend legislation to authorize construction of sanitation facilities on certain Indian reservations and tribal lands. Legislation should be enacted also to transfer to the Territorial Government of Alaska responsibility for care of the mentally ill, with temporary Federal aid for building and operating treatment centers.

I recommend the transfer of Freedmen's Hospital to Howard University, with provision for construction of a new teaching hospital.

For health legislation proposals, the total of additional expenditures in the fiscal year 1957 is estimated at 44 million dollars.

Under presently existing legislation, budget expenditures for public health programs other than the poliomyelitis vaccination grants are estimated at 395 million dollars for the fiscal year 1957. A major increase of 24 million dollars is proposed for the research and training activities of the National Institutes of Health. Grants to States for construction of hospitals and other health facilities will increase by 18 million dollars, and the recommended appropriation will result in further increases in later years. As part of our policy of strengthening enforcement of the food and drug laws I am recommending a substantial increase for the Food and Drug Administration. In addition, I am recommending increased appropriations to attack the problem of air pollution; to expand grants to States for child welfare services; and to expand health services to Indians, including construction of three hospitals. These increases are partly offset by reduced construction expenditures, primarily for the District of Columbia hospital center.

Promotion of education: The educational problems of the Nation are acute. School enrollments are growing. Classrooms are overcrowded. We do not have enough teachers.

Americans are demonstrating their increased concern with these problems by working together now, more than ever, in parent-teacher organizations and other citizen groups. Members of these groups—many of which participated in the recent White House Conference on Education—have stressed the need for measures by all levels of Govment to improve our schools.

As a principle of our governmental system, we believe in State and local responsibility for public education. This means not only local direction of public schools but also local financial support augmented by the States. States and communities have made definite progress toward meeting our educational problems. They are reducing the classroom shortage by building an increasing number of schools each year. But we still lack more than 200,000 classrooms. In order to increase further the number of new buildings completed over the next 5 years, I propose that the Federal Government supplement the current efforts of the States and their subdivisions in financing public school construction.

In continued recognition of the special school enrollment problems created in many communities by military and civilian activities of the Federal Government, I am recommending extension for 2 years of the authority for providing assistance in paying for new school buildings in federally affected areas. Under present law no applications can be received after June 30, 1956. An additional appropriation of 88 million dollars for the fiscal year 1957 is recommended for the proposed extension. With the enactment of legislation to authorize general Federal assistance for school construction, the necessity for the further extension of special Federal aids for construction and for maintenance and operation in these school districts will require reconsideration.

The United States Office of Education, through its advisory services and its research and statistics, affords another channel whereby the Federal Government can aid in the improvement of our schools. I am recommending a substantial increase for the fiscal year 1957 in the budget of the Office, mostly for the new cooperative research program authorized by the Congress, which will assist the States in their efforts to deal effectively with educational problems.

An increase of 4 million dollars in estimated expenditures for the education and welfare of our Indian population will make it possible to complete the necessary staffing of schools and to increase the number of Indians relocated in urban areas.

General-purpose research, libraries, and museums: Because of the direct importance of basic research to our defense program and our national welfare and economic progress, this budget purposes a substantial increase in Federal support of general-purpose research and education in the sciences. This increase is considered by our national security and scientific research agencies to be vitally necessary. Even with this added support, basic research will constitute less than 10 percent of the Government's annual investment in research and development.

For these reasons, I recommend that the appropriation for the regular activities of the National Science Foundation be substantially increased from 16 million dollars in the current fiscal year to 41 million dollars in the fiscal year 1957. This will enable the Foundation to extend an additional 13 million dollars of support to meritorious basic research projects in colleges and universities; will provide 7 million dollars for the construction of special-purpose facilities needed for basic scientific research, including the Nation's first major radio astronomy center; and will make available an additional 5 million dollars for expanding the Foundation's experimental program designed to improve science teachers in our schools and colleges and to encourage a greater number of able students to enter careers in science.

A supplemental appropriation for the Foundation of 28 million dollars will be required in the current year to complete financing of the United States program for the International Geophysical Year. The additional amount is mainly for the earth-circling satellite project, in which the Department of Defense is also participating.

Also fundamental to science is the work of the National Bureau of Standards. Increased expenditures of 4 million dollars are recommended in the fiscal year 1957 to strengthen research in the physical sciences and to plan new buildings to replace present inadequate research facilities.

For the Bureau of the Census, I am recommending appropriations for collecting needed data on two important aspects of our national life. The census of governments will provide, for the first time since 1942, comprehensive financial information about the more than 100,000 State and local government units. The national housing inventory will measure the significant changes in the Nation's housing supply which have taken place since 1950. Expenditures for the Census Bureau as a whole will decline, however, as work on the current censuses of agriculture, business, manufactures, and mineral industries draws to a conclusion.

In addition to necessary operating funds for the Smithsonian Institution, I am recommending an appropriation of 34 million dollars for the construction of a Museum of History and Technology authorized at the last session of the Congress. This museum, the first new Smithsonian building to be federally financed in more than 40 years, will permit for the first time an adequate permament display of collections which now far exceed the capacity of existing buildings.

Correctional and penal institutions: Construction of two new prison institutions is required to help ease overcrowded conditions in existing penitentiaries and to provide for youthful offenders and more adequate custody of the most dangerous and troublesome prisoners. These new facilities account for almost all of an 18-million-dollar increase over 1956 in appropriations requested for the Federal prison system.

Other welfare services: The school lunch program is supported with surplus commodities as well as by regular appropriations. Increased efforts in the removal of agricultural surpluses are expected to result in a greater distribution of such foods to schools, reaching an estimated value of up to 130 million dollars in the current fiscal year. These increased efforts will continue in the fiscal year 1957. Additionally, the recommended direct appropriation of 83 million dollars for the school lunch program for the fiscal year 1957 will provide the same level of such expenditures as in 1955 and 1956.

This Nation still has hundreds of thousands of disabled citizens who should be restored to productive employment and thereby helped to achieve economic independence. This budget continues full support of the expanded State-Federal vocational rehabilitation program at a rate which will permit the States to continue enlarging their rehabilitation services as rapidly as their own funds permit.

Another growing social problem of concern to the entire Nation is juvenile delinquency. During the last 8 years there has been a 60-percent increase in the number of children appearing before our courts. The States and communities need technical assistance and financial aid to help them halt this trend. I therefore renew my request that Congress enact legislation promptly to authorize Federal aid to the States for strengthening their services for prevention and treatment of juvenile delinquency.

Social insurance and retirement trust funds

(Based on existing legislation)

[Fiscal years. In millions]

Fund and item	1955 actual	1956 estimated	1957 estimated
Federal old-age and survivors insurance trust fund:

Net accumulation (+) or withdrawal (−)	−540	+170	+7
Balance in fund at close of year	8,454	8,624	8,631

[1] Includes 8 million dollars of unappropriated receipts.
[2] Excess of Federal unemployment tax collections over Federal expenditures for unemployment compensation and employment service administration.

Social insurance and retirement trust funds: Unemployment insurance, old-age and survivors insurance, railroad retirement, and Federal civilian employees' retirement are financed from trust funds, the transactions of which are not included in budgetary receipts and expenditures. The balances in the funds, now about 40 billion dollars, are invested in Government bonds.

Increased coverage in the old-age insurance program, increases in the interest paid to this trust fund, and improved coordination of income and old-age insurance tax collection procedures are recommended elsewhere in this message. The estimates of trust fund receipts and disbursements for the fiscal year 1957 do not reflect proposed legislation.

AGRICULTURE AND AGRICULTURAL RESOURCES

This budget carries forward the broad agricultural objectives that we have been striving to achieve through new legislation, redirection of emphasis, and improved administration during the past 3 years. It provides for the strengthened agricultural program which I proposed in my recent special message to the Congress.

Thus, this budget permits an intensification of our efforts to aid farmers in making the difficult readjustment from the abnormal situation of the war and postwar period to a realistic peacetime outlook for markets, so that they may share more equitably in the prosperity which other sectors of the economy are now enjoying. It also provides for continued emphasis on research and educational activities and on soil and water conservation, and for an enlarged program to help low-income farmers improve their situation.

Gross budget expenditures for agricultural programs are estimated at 9.1 billion dollars in 1957. These expenditures include loans made and commodities purchased by the public enterprise agencies in the Department of Agriculture and the Farm Credit Administration. Receipts from agricultural programs, which reflect loan repayments and commodity sales of these public enterprise agencies, are estimated at 5.7 billion dollars in 1957. The resulting estimate of net budget expenditures is 3.4 billion dollars, about the same as estimated for 1956.

New authority to incur obligations of 2.9 billion dollars is recommended for the fiscal year 1957, as compared with 3.3 billion dollars in 1956. Excluding the Commodity Credit Corporation, new authority to incur obligations for agricultural programs will be 621 million dollars higher in 1957 than in 1956.

Agriculture and agricultural resources

[Fiscal years. In millions]

Program or agency	Gross budget expenditures			Net budget expenditures			Recommended new obligational authority for 1957
	1955 actual	1956 estimated	1957 estimated	1955 actua.	1956 estimated	1957 estimated

Disaster loans and emergency feed	100	114	55	10	−19	−19	----------
Agricultural land and water resources:							
Land conservation programs	274	263	263	212	231	245	225
Soil Conservation Service, flood prevention and other	74	83	89	74	83	89	93
Research and other agricultural services	177	219	224	177	212	211	229
Total	9,324	8,575	9,070	4,411	3,376	3,364	[2] 2,872

[1] Net expenditures for the Farmers' Home Administration and for rural electrification and telephone loans do not reflect loan collections, since these collections go directly into miscellaneous receipts of the Treasury. In 1957 these collections are estimated at 167 million dollars and 124 million dollars, respectively.
[2] Compares with new obligational authority of 2,672 million dollars in 1955 and 3,324 million dollars in 1956.

Most of the increases are for the new measures which were set forth in detail in my recent special message on agriculture. New authority to incur obligations of 450 million dollars is included under proposed legislation primarily for that part of the program dealing with the soil bank. This includes an acreage reserve to reduce current and accumulated surpluses of crops in most serious difficulty, and a conservation reserve to achieve other needed adjustments in the use of agricultural resources. In addition to reducing production of surplus crops and shifting land to more desirable uses, it will aid farmers in financing the transition to a farming pattern appropriate for today's markets.

The budget also provides funds for other measures recommended in the special message. These measures are mainly for strengthening and redirecting existing programs. They include stepped-up purchasing and distribution of perishable commodities which are temporarily in excess supply; a strengthened program for disposal of surplus stocks of staple commodities; a strengthened rural development and credit program for low-income farm families; additional research emphasizing both lower costs of production and new products and markets; and the program for farm improvement and better land use in the Great Plains States.

I am also recommending new legislation to permit refunds to farmers of Federal taxes on gasoline used in their farm operations. It is estimated that tax refunds to farmers under this legislation will amount to 60 million dollars in 1957.

Taken together my new proposals will entail new outlays of 500 million dollars in the fiscal year 1957.

Stabilization of farm prices and farm income: Programs to stabilize farm prices and farm income account for over 60 percent of the estimated gross budget expenditures for agriculture and agricultural resources in the fiscal year 1957. The principal part of these expenditures is for the price support operations of the Commodity Credit Corporation. Gross expenditures for these operations, reflecting new price support loans and purchases of commodities during the year, are estimated at 5.1 billion dollars.

Applicable receipts from repaid loans and sales of commodities will amount to 3.5 billion dollars, leaving net expenditures of 1.6 billion dollars. In recent years receipts have been substantially less than new outlays, and inventories of the Commodity Credit Corporation have been rising steeply. On October 31, 1955, CCC loans and commodity inventories amounted to 7.7 billion dollars as compared with 6.6 billion dollars a year earlier.

Government support of farm prices above world prices under programs which were attuned to war and were too long continued has been a major cause of the present accumulation of farm surpluses. These now overhang the market and create uncertainty and great concern on the part of the producers. World War II, with its terrible losses and destruction, enabled the liquidation of our prewar surpluses, and the Korean conflict helped to liquidate those that accumulated after the end of World War II. But the sharp rise of world prices during these war periods, together with our high rigid price supports, encouraged expansion of production throughout the world.

The chief domestic beneficiaries of our price-support policies in the past have been the 2 million large highly mechanized farming units representing about 35 percent of our farms but producing about 85 percent of our agricultural products. Under the price support program that has been functioning the greater proportion of the dollars go to the largest producers; in the case of wheat, for example, approximately three-fourths of the loan dollars go to one-third of the borrowers. Individual cotton loans in excess of 1 million dollars have been made.

We should today resist new efforts to have the Government restore high rigid price supports which would aggravate the problem. The Agricultural Act of 1954 and the new programs recommended in my special agricultural message are designed to make a broad frontal attack on the surplus problem without repeating our previous mistakes of stimulating production beyond available markets and thus piling up price-depressing surpluses.

In contrast to expenditures, the price support operations of the Commodity Credit Corporation should be reviewed from the standpoint of losses actually sustained in the disposition of commodities. In the main, these losses represent the difference between commodity acquisition and storage costs on the one hand, and receipts from sale of the same commodities on the other. Since the commodities usually are not sold in the same fiscal year in which they are acquired, realized losses for a year are not the same as the net expenditures for that year. In the fiscal year 1955, realized losses amounted to approximately 800 million dollars, of which more than one-half were losses on dairy products. Estimated future losses on the loans and commodity inventories the Corporation held at the end of that year are 2.4 billion dollars, of which about two-thirds represent anticipated losses on corn and wheat.

As a nation, we have in the past and, if necessary, will in the future provide substantial sums of money as a part of our efforts to have farmers share more fully in the prosperity of the country. But farmers know that Government money alone will not do the job. Furthermore, farmers do not want to be dependent on Government assistance. They want the opportunity to obtain a better living standard for their families through their own efforts. The Government's responsibility is to help create the conditions in which farmers can have this opportunity.

We intend to continue our vigorous efforts to find markets at home and abroad for our present surpluses of farm commodities.

The Agricultural Trade Development and Assistance Act of 1954 was amended in the past session of the Congress to permit an increase from 700 million dollars to 1.5 billion dollars in the amount of loss that the Corporation might incur in sales of commodities for foreign currencies. Agreements negotiated up to December 31, 1955, under this law provide for disposition of commodities worth 504 million dollars at market value, which in many cases is substantially below amounts paid the farmers. The actual loss cannot be calculated until the foreign currencies are used. Additional agreements which may amount to as much as 385 million dollars are under negotiation.

The International Wheat Agreement, a multilateral agreement between wheat importing and wheat exporting countries of which the United States is a member, expires on July 31, 1956. The desirability of extending this agreement is under study and a determination will be made at a later date. This budget assumes that wheat exports during the 1956–57 marketing year will total about 275 million bushels and that most of this wheat will move at world prices under federally assisted programs.

Expenditures under the permanent appropriation for the disposal of surplus agricultural commodities are expected to be substantially higher in the fiscal years 1956 and 1957 than in 1955, consistent with our determination to stand ready with purchase programs to remove temporary market gluts whenever serious ones occur, and to utilize effectively the surplus commodities acquired. Our present pork buying program, which was started in November of last year, is an example.

While our special efforts to expand exports and our increased purchases of perishable commodities have an important place in our overall agricultural program, they should not be expected to take the place of vigorous competition for markets, based on price and production adjustments. My recommendations for new legislation, increased research and education, and the further operation of the Agricultural Act of 1954 will all contribute to his first line of attack on the agricultural surplus problem.

Rural electrification, rural telephones, and farm credit: The budget recommendations for the Rural Electrification Administration represent a continuation of our policy of making loans available to meet the farmers' needs for electrification and telephones. The budget provides for approval of loans for electrification in the amount of 185 million dollars in 1957, which is the same as that for 1956 and 20 million dollars higher than in 1955. It also provides for approval of loans for rural telephones in the amount of 80 million dollars, the same as for 1956, and 27 million dollars higher than for 1955. Disbursements on loans and expenditures for administration for both programs are estimated at 239 million dollars, 16 million more than in 1956.

The total of Farmers' Home Administration direct and insured loans is expected to approach 260 million dollars in 1957 as compared with 193 million dollars in 1955. A substantial part of this expansion is in insured private loans, which are not reflected in budget expenditures. Legislation will be proposed to broaden the authority under the Bankhead-Jones Farm Tenant Act to permit the Farmers' Home Administration to make certain loans for farm housing previously possible only under title V of the Housing Act of 1949, as amended. With this change, further extension of the authority for farm housing loans under title V beyond its present termination date of June 30, 1956, will not be necessary.

Several agencies will increase their participation in the Rural Development Program that I recommended in my special message during the past session of the Congress. This program will be conducted broadly as well as in selected counties, and will involve special educational work by the cooperative Federal-State Extension Service, research on farming and marketing problems of low-income farmers by Federal and State agencies, and assistance in providing employment information by the Department of Labor. To assure adequate funds and to permit broader coverage in the financing of small farms, I am recommending an additional 15 million dollars of lending authority for the Farmers' Home Administration under proposed legislation.

Consistent with our policy of withdrawing the Federal Government from activities that can more properly be carried on privately, legislation was recommended and enacted last year providing for systematic retirement of the Federal investment in the banks for cooperatives which are supervised by the Farm Credit Administration. Although the effect of this legislation on the budget will be small, it is expected that farmers through their cooperatives will be able to acquire, over a period of years, the present equity of the Federal Government in these credit institutions.

Agricultural land and water resources: My recommendations for agricultural land and water resources for the fiscal year 1957 are an integral part of a broad program designed to give additional emphasis to conservation of our natural resources. They provide for an increase in the regular services of the Soil Conservation Service and for the expected growth in the relatively new watershed

protection and flood prevention program. The soil bank program proposed in my special agricultural message will contribute also to our conservation objectives.

Expenditures under the existing agricultural conservation program assist farmers in applying soil conservation practices and in making proper use of land diverted from the production of surplus crops. Payments to farmers in the fiscal year 1957 will be principally to cover the cost of the program carried out for the crop year 1956, as authorized in the 1956 appropriation act. I recommend a forward authorization of 250 million dollars for the 1957 crop year agricultural conservation program—the same level as for 1956.

Research and other agricultural services: My budget recommendations provide for further expansion of research, mainly in cooperation with State agencies. Additional funds requested for educational activities will permit greater concentration of effort on direct counseling of individual farmers in the development of programs for their entire farms; also, on the educational phases of our Rural Development Program for low-income families.

The budget includes funds for the recommendations on research and education in my special message on agriculture. The seriousness of the production adjustment and income problems of American agriculture arising from increased production at home and abroad and from declining prices of major agricultural commodities requires that we materially strengthen selected areas of research in agriculture.

NATURAL RESOURCES

Resource development is the responsibility of everyone. In many cases State, local, and private groups can best carry out needed programs themselves. In other cases, Federal participation is the necessary element in accomplishing broad national aims, where projects are beyond the means or needs of local groups. Under the partnership policy of this administration, emphasis is placed on sharing the cost of projects with the groups which receive direct benefits from them. This approach serves to multiply the effect of Federal expenditures in the stimulation of conservation and development. The recommendations in this budget will result in further advances toward our broad goal of a steadily growing program for resource development through the cooperative efforts of States, local communities, private citizens, and the Federal Government.

The importance of the partnership policy in the development of water resources is being emphasized in a report of the Advisory Committee on Water Resources Policy. This report will also stress the need for strengthening our procedure for the formulation and review of proposed water resources projects. Some of the Advisory Committee's recommendations will require changes in existing law, and specific legislative proposals will be transmitted to the Congress.

Budget expenditures for natural resources programs in the fiscal year 1957 are estimated at 1 billion dollars, about the same level as in 1956. Programs for flood control, reclamation, and multiple-purpose water resources development will expand over the 1956 levels and will require about 60 percent of the net expenditures in 1957. The management and development of the national forests, parks, public domain lands, and Indian lands will require about 25 percent of the total. The remainder will be for minerals programs, fish and wildlife resources, and other developmental activities.

In addition to their economic returns, many resource development programs yield financial receipts. These receipts come mostly from sale of power generated at Government facilities, sale of timber from national forests and public lands, and mineral leases on public lands including the Outer Continental Shelf. Some of the receipts are used to finance current operations and are applied against the gross expenditures of the agency; these are estimated at 266 million dollars in the fiscal year 1957. Other receipts, estimated at 544 million dollars in 1957, are deposited directly in the Treasury, and are then shared with States and counties as authorized by the Congress, appropriated for specific Federal programs, or added to the general revenues of the Government.

Natural resources

[Fiscal years. In millions]

[1] Compares with new obligational authority of $966 million in 1955 and $1,045 million in 1956.
[2] Does not include revenues which go into miscellaneous receipts of the Treasury.

Land and water resources: The policies underlying recommendations for water and related land resources in this and other sections of the budget are intended to help provide an adequate water supply for our people in the years to come and to aid in checking destructive forces of water, as well as to achieve the benefits for navigation, fish and wildlife conservation, and recreation resulting from the proper development of these resources.

A large share of the net expenditures of 690 million dollars for land and water resources in 1957 will be for continuation or completion of construction on water resources projects of the Corps of Engineers and Bureau of Reclamation, and for maintenance and operation of existing facilities.

These agencies will continue construction in 1957 on 187 projects and units for flood control, beach erosion control, irrigation, and multiple-purpose developments which will provide such additional benefits as hydroelectric power, municipal water supply, or navigation. Funds recommended for these projects will maintain present construction schedules on power projects and will continue nonpower projects at economic rates of construction. Under the recommendations in this budget, 10 of these projects and units can be completed.

In accordance with the policy of encouraging non-Federal responsibility for water resources projects, with Federal cooperation where national interests are involved, I have supported legislation which would change certain presently authorized Federal projects to partnership projects. Funds for the Federal share of the Markham Ferry project in Oklahoma were appropriated for the fis-

cal year 1956, and construction by non-Federal interests of this project and the Priest Rapids project in Washington is expected to be underway in the fiscal year 1957. Work on the Cougar multiple-purpose project in Oregon, begun as a Federal project in the fiscal year 1956, will continue in 1957 on a basis which, under pending partnership legislation, will permit local interests to install power facilities and assure adaptation of the power features to requirements of the city of Eugene.

This budget provides for starting construction on a number of new projects which are already authorized and on which advance planning has reached the stage where the design and scope of the major structures have been clearly determined, a firm estimate of cost has been prepared, and a current analysis of economic justification shows a favorable relationship between benefits and costs.

A supplemental appropriation is recommended for 1956 to enable the Corps of Engineers to accelerate its flood-control work in the Northeastern States and to reimburse the Corps for expenditures made for relief work following the floods in August and October 1955. The supplemental appropriation will allow 5 flood-control reservoirs to be started in the fiscal year 1956. Additional flood-control projects for this area are included in the budget for 1957.

The Corps of Engineers is also actively engaged in emergency repair work, in cooperation with the Federal Civil Defense Administration, in the far western flood areas, and will be appaising without delay the need for additional flood-protection measures.

For the fiscal year 1957, I recommend that the Corps of Engineers start work on 18 local flood-protection projects, 11 flood-control reservoirs, 2 beach erosion projects, and a new power plant at the Fort Peck Dam in Montana, all of which are authorized. I also recommend that the Bureau of Reclamation start work on 4 authorized projects or major features to provide irrigation benefits and to utilize available power at existing dams. The total cost of these authorized projects recommended for starting in the fiscal year 1957 is estimated at 189 million dollars, with first year expenditures of 10 million dollars.

Some steps have been taken by the Congress to enact legislation authorizing the Bureau of Reclamation to construct the Upper Colorado River Basin and the the Fryingpan-Arkansas developments. These comprehensive developments are needed for irrigation, power, flood control, and industrial and municipal water supply and are beyond the capacity of local initiative, public or private. I again urge their authorization and have made provision in this budget under proposed legislation for their initiation. I also recommend authorization and funds for the Bureau of Reclamation to initiate 3 other projects for further development of water resources in the West. The estimated total cost of the 5 proposed projects is 1.1 billion dollars, with 1957 expenditures estimated at 9 million dollars.

This budget includes 20 million dollars under proposed legislation to enable the Corps of Engineers and the Bureau of Reclamation to participate, in 1957, in new partnership water developments, such as the Green Peter-White Bridge Reservoir in Oregon, the Bruces Eddy Reservoir in Idaho, and the John Day Reservoir in Washington and Oregon. The proposed legislation would also authorize the Bureau of Reclamation to assist local organizations by means of loans and grants for small reclamation projects.

Budget recommendations provide for progress in the collection of basic data on hydrology, topography, and other physical factors needed in the planning and design of water development projects. Investigations of proposed projects and advance planning of authorized projects will go forward at rates which will provide for the orderly development of needed water resources.

I also hope that the Congress will complete action to authorize a new survey to determine whether hydroelectric power can be economically developed from the tides at Passamaquoddy Bay in Maine, and have included 1 million dollars under proposed legislation to begin this survey in the fiscal year 1957.

The Bonneville Power Administration will continue construction of transmission lines based on power generation schedules for Federal dams under construction in the Pacific Northwest. Expenditures of the Southeastern and Southwestern Power Administrations will be for operation and maintenance of transmission systems and for marketing power.

The Tennessee Valley Authority will continue work in the fiscal year 1957 on steam-electric generation units started in 1955 and prior years, under previous appropriations.

Since nearly all major hydroelectric sites in the Tennessee Valley have now been developed, an additional steam-electric unit at the John Sevier plant and two additional units at the Johnsonville plant will be needed to meet currently anticipated power loads through the calendar year 1958. There is pending before the Congress legislation which the administration has proposed for financing steam-power facilities of the TVA through the sale of revenue bonds. So that the work may begin promptly, a starting supplemental appropriation for 1956 is recommended for the Sevier unit. Items are included in the budget to finance the continuation of this work and initiate construction of the Johnsonville units in 1957 with the proceeds of the revenue bonds.

When these new units are completed, the Tennessee Valley Authority will have a capacity of 6.7 million kilowatts in its steam-electric plants and 2.7 million kilowatts in its hydroelectric plants.

Construction will also begin in the fiscal year 1957 on a new navigation lock at Wilson Dam. The present locks are structurally weak and inadequate to handle growing traffic demands. The construction will be financed from appropriated funds. The TVA will also continue work in the development of the resources of the region in cooperation with State and local agencies.

Under these recommendations, gross expenditures of the Tennessee Valley Authority in the fiscal year 1957 are estimated to decline by 57 million dollars from the 1956 level, as construction nears completion on power facilities underway. Receipts from operation are expected to increase by 9 million dollars. As a result of these trends, it is estimated that the Authority will have net receipts of 27 million dollars in 1957 as compared with net expenditures of 39 million dollars in 1956. It is expected that in 1957 the TVA will return to the Treasury 75 million dollars from power revenues as repayment of principal only on Treasury advances made in earlier years for construction of power facilities.

National forests and other public lands: Funds are provided in this budget to expand forestry research and soil conservation work on the lands in the national forests, public domain, national parks and wildlife refuges, and on Indian lands which are held in trust by the Government. Increases are also provided for timber sales and mineral leasing activities on Federal and Indian lands. These recommendations will result in increased receipts from management of public lands.

The recommendations for the National Park Service will provide additional facilities and services to meet more adequately the requirements of the constantly increasing number of visitors, which will approximate 54 million in 1957. These recommendations move toward realization of a comprehensive development plan to make possible the accommodation of the estimated 80 million persons who will use areas of the national park system by 1966.

Increases are recommended for more adequate operation and maintenance of fish hatcheries and wildlife refuges, and for maintenance and repair of physical facilities of the Bureau of Indian Affairs.

Mineral resources: This budget gives recognition to the recommendations of the Cabinet Committee on Minerals Policy. The Bureau of Mines and the Geological Survey will expand investigations and research directed toward discovery of additional sources of essential minerals, improvement of mining techniques, and better utilization of mineral supplies. Funds are provided for the Office of Minerals Mobilization to continue to develop and evaluate supply data for metals and minerals so that adequate supplies and production facilities will be assured for our national security and economic growth.

COMMERCE AND HOUSING

The major role of commerce and housing programs is to encourage economic growth and the development of private enterprise and local communities.

Toward this goal, I am proposing both legislative action and increased appropriations to improve and expand our basic transportation facilities, especially the Interstate Highway System, the Federal airway system, the federally operated waterways and navigation aids, and the merchant fleet.

Commerce and Housing

[1] Less than one-half million dollars.
[2] Compares with new obligational authority of 2,919 million dollars in 1955 and 3,492 million dollars in 1956.

Similarly, to assure continued high levels of residential construction we shall encourage private financing primarily through the use of Government guaranties, insurance and other aids. As in the past, direct Government expenditures will be confined to meeting those housing and community needs which cannot be financed by private enterprise alone. Accordingly, to stimulate balanced development of local communities, this budget makes further proposals for removal and prevention of slums, for housing for minority groups and for older people, and for other special community needs. It also provides for new measures to aid local communities with persistent unemployment in discovering a sound basis for redevelopment, and to help victims of future flood disasters rehabilitate themselves.

Gross expenditures for commerce and housing, including proposed legislation, are estimated at 6.3 billion dollars in the fiscal year 1957. Applicable receipts, chiefly for the Post Office and for various housing programs, are estimated at 4.2 billion dollars. Net budget expenditures of 2.1 billion dollars will be less than in 1956 because of the increases in postal rates which I am again proposing.

Highways: Obviously, a greatly improved highway system is vital for both economic development and national defense, as well as to reduce traffic deaths and injuries. The Federal Government has a special interest in completing as early as possible the 40,000 miles of the Interstate Highway System, which connects major centers of population and industry. Last February in a special message to the Congress I endorsed the recommendation of an advisory committee that the Federal Government assume the principal responsibility for financing completion of this key highway network. This program is even more urgently needed today.

I consider it essential that construction of the interstate system be fully authorized now as a single integrated program in order that it may be accomplished over a period of approximately 10 years with the greatest economy. I am confident that the expanded program can be soundly financed so as not to create budget deficits.

Pending final determination of the amounts involved for the Interstate Highway System, therefore, the dollar estimates included in this budget under proposed legislation cover only the continuance of the present annual level of 875 million dollars in authorizations for Federal-aid highways including 175 million dollars exclusively for the interstate system. The budget also includes 22.5 million dollars for forest highways, continuing the present level.

Expenditures for highways by the Department of Commerce and the Department of the Interior under previous authorizations will continue to rise to an estimated 844 million dollars in 1957. These include additional grants under a supplemental authorization of 10 million dollars which I am proposing for the fiscal year 1956 in order to rebuild Federal-aid highways damaged in last year's widespread floods.

Promotion of aviation: During the past 5 years, the rapidly expanding use of the Federal airway system and the increasing speeds of both conventionally powered planes and military jet aircraft have produced serious traffic congestion. To maintain our high standards of safety, aircraft have had to be delayed or flights canceled, with a resulting heavy cost in time and money to both the operators and users of the planes.

As a step in meeting the immediate problem, I am recommending new authority to incur obligations of 40 million dollars in 1957. This will enable the Department of Commerce to expand further the capacity of the present airway system by installing greatly improved air navigation and traffic control facilities.

To keep pace with further advances in aviation, I shall shortly initiate a comprehensive study of the Nation's long-range needs for aviation facilities. This study will take into account both civil and military needs in order to avoid costly duplication of equipment and systems. I shall expect it to point the way to the development, installation and operation of the most efficient and economical air navigation system within the capabilities of our technology.

In addition to the expenditures to expand the capacity of the airway system, expenditures for operating the present airway system must rise substantially to handle the expanding traffic, to operate new facilities provided under earlier appropriations, and to take over from the Department of Defense the costs of operating certain radar installations serving common military-civilian needs. Federal grants to help local communities build airports are also increasing as a result of the legislation enacted last year. In total, expenditures of the Civil Aeronautics Administration will rise by an estimated 50 million dollars to 200 million dollars in the fiscal year 1957.

Subsidy payments by the Civil Aeronautics Board to commercial airlines will again be reduced in the fiscal year 1957 as a result of rising profits of the carriers and continued vigilance of the Board in keeping subsidy rates at the lowest possible level. These subsidies amounted to 58 million dollars in the fiscal year 1955 and are estimated at 34 million dollars in 1957.

The research achievements of the National Advisory Committee for Aeronautics are making possible significant advances in the capabilities of our military aircraft and guided missiles. However, increased effort is needed for

timely solution of the problems of flight at faster speeds, higher altitudes, and longer ranges. Accordingly, I am again recommending an increase in the appropriations for this important work.

Promotion of water transportation: The Department of Commerce and the shipping industry have begun systematic replacement of the merchant fleet built during World War II. Negotiations are now underway with the operators to advance their ship construction plans and to determine replacement schedules for the next 15 to 20 years. Three long-term contracts have already been signed. The program is designed to (1) assure a modern merchant fleet adequate for commercial and defense needs, (2) maintain the shipyard employment and facilities which are essential to our mobilization base, and (3) minimize construction costs by avoiding peak demands. As next year's installment, I am recommending the funds necessary for construction subsidies and defense allowances for 22 new ships, as well as trade-in allowances for the ships replaced. In addition, this budget proposes appropriations for the design and construction of two new types of cargo ships—types which could be produced cheaply and in quantity in event of mobilization.

I am renewing for the fiscal year 1956 my earlier recommendation for a supplemental appropriation of 13 million dollars for the Commerce Department's share of a nuclear-powered peace ship, to be built jointly with the Atomic Energy Commission. Work on this ship should go forward as rapidly as possible. Moreover, funds are included in the budget for a nuclear-powered merchant ship, to be built over a longer period, incorporating experience gained from the peace ship and from later research and development.

To finance construction of both conventional and nuclear-powered ships, I am recommending new authority to incur obligations for the Department of Commerce of 165 million dollars in the fiscal year 1957. Because of the long lead-time required for ship construction, only a small part of this new authority will be spent in 1957; the anticipated expenditures of 75 million dollars are mainly from appropriations made for ship construction in earlier years. Operating subsidy payments of 124 million dollars in 1957 are estimated to cover the differences in selected costs between operating American-flag and foreign ships.

Expenditures for navigation aids and facilities are rising as projects recently initiated reach active construction phases. In addition to providing for continuation of work by the Corps of Engineers on 61 projects started in prior years, this budget includes funds for starting 41 new authorized navigation projects including 28 small projects costing less than 150,000 dollars each.

Funds were added by the Congress to the 1956 budget to begin construction of Eufaula Reservoir and Dardanelle lock and dam. This would, in effect, commit the Federal Government to a cost of over 1 billion dollars for the development of the Arkansas River for navigation, since the major benefits from these two structures would not be realized until the entire navigation development is completed. I regard the development of the Arkansas River for navigation as not being of sufficiently high priority at this time to justify this large financial commitment. Therefore, I am not requesting funds for continuation of work on these two structures.

Postal service: The Post Office Department is progressing steadily toward its goal of a better postal service at lower costs. Decentralization of management into 15 regions, first recommended in 1908, has finally been accomplished, permitting decisions by experienced field personnel able to understand the needs of their customers. Changes in laws and personnel policies have encouraged better use of staff and brought new incentives for employee efficiency. Overhaul of the Department's fiscal operations has eliminated nearly 5,000 needless positions, speeded up information required for good management, and reduced backlogs of all types, including a 2-year backlog in overdue railroad and airline claims. We have begun to acquire, through long-term leases and the recently enacted lease-purchase authority, modern postal buildings and other facilities long needed to speed up and reduce the cost of handling the ever-increasing volume of mail.

Despite these achievements, the Post Office Department cannot be self-sustaining if it pays salaries, transportation rates, and other costs based upon 1956 conditions, but must continue to charge rates which were largely determined before Pearl Harbor. The postal deficit of 467 million dollars estimated for the fiscal year 1957 represents a subsidy averaging more than 15 cents per dollar of postal service. Legislation is again being proposed that would initially increase postal revenues by 350 million dollars a year. Legislation is also being proposed to pay the Department for services to certain groups which it is now required to perform either free or at greatly reduced rates.

I urge prompt congressional action on this legislation, which will drastically reduce the 1957 postal deficit and will make it possible for the postal service to become self-supporting in subsequent years.

Community development and facilities: The great population growth in the past 15 years and the accompanying shifts—from farms to cities, from rural communities to metropolitan areas, and from central cities to suburbs—have accelerated the decay of large sections of our major cities, and caused many metropolitan areas and small towns to outgrow their basic facilities.

With the help of Federal grants and loans for slum clearance and urban renewal, major progress in removing urban blight is in sight for the first time. By the end of the fiscal year 1957, an estimated 233 communities will have workable plans providing for a wide range of local actions needed to prevent or eliminate slums. Such plans are now required as a condition of Federal assistance for urban renewal. In these and other cities 49 specific projects will have been completed by the end of 1957; 237 other redevelopment projects will be actively underway; and 112 projects will be in the planning stage. Net expenditures, chiefly for grants and loans, will increase to 74 million dollars; these include the additional grants for community planning by metropolitan areas and smaller cities under legislation that will be proposed to increase the present limited program.

Substantial increases are also expected in the fiscal year 1957 in loans to small communities for building public facilities and in advances to local governments for planning public works. Additional appropriations for planning advances are recommended for 1957.

As part of the new program to assist in the industrial redevelopment of chronic labor surplus areas, I am proposing revisions in the present urban renewal and other community facilities legislation. The main emphasis in these programs, however, should continue to be improvement of the homes and living environment of our families.

Public housing: Continued Federal assistance for low-rent public housing will be necessary in 1957 to meet the most critical needs of low-income families. An increasing number of such families will be displaced by the clearance of slums and by the enforcement of housing codes under the growing urban renewal program. I am, consequently, recommending that the Public Housing Administration be authorized to enter into annual contributions contracts with local housing authorities for an additional 35,000 dwelling units a year for 2 years. In addition, I urge that the Congress restore the provisions of the Housing Act of 1954, repealed in 1955, which limited new public housing to communities with workable programs for the prevention and elimination of slums, or with slum clearance projects underway.

As the number of older people in our population has increased, action to meet their special housing needs has become highly important. Several administrative steps have already been taken in the public housing program. In addition, legal restrictions on admission to public housing projects should be amended to provide a limited preference to elderly low-income families, as well as to permit admission of elderly single persons.

Gross expenditures for public housing programs, chiefly for construction loans and payment of annual contributions to local housing authorities, are estimated at 598 million dollars in 1957. Receipts, mostly from private refinancing of Federal loans, are estimated at 515 million dollars, leaving net expenditures of 83 million dollars.

Other aids to housing: Applications for insurance of mortgages and home improvement loans by the Federal Housing Administration under its regular programs are expected to continue in the fiscal years 1956 and 1957 close to the 1955 levels. In addition, applications for the special urban renewal mortgage insurance authorized by the Housing Act of 1954 are expected to rise from less

than 2,000 units in 1955 to 75,000 units in 1957.

To make this full program possible, legislation will be required to increase the present mortgage insurance authority. The authority to insure home improvement loans, now scheduled to expire on September 30, 1956, should be made permanent and broadened to assure effective Federal assistance in the national campaign to rehabilitate and modernize existing housing. Amendments are also needed to encourage construction of private units for rental or sale to elderly persons.

The Department of Defense expects to arrange for financing and construction of 100,000 military housing units during 1956 and 1957 under new mortgage insurance authorized by the Housing Amendments of 1955. This insurance authority should be extended beyond the present expiration date of September 30, 1956.

The Federal National Mortgage Association will make commitments for immediate or deferred purchases of 423 million dollars in mortgages insured under the urban renewal, armed services, cooperative, and other especially urgent housing programs which I have specifically designated. Sales of mortgages together with repayments and other receipts, however, are expected to be 255 million dollars greater than expenditures.

In addition, purchases of mortgages by the Association under its secondary market program are expected to increase in 1957 to 290 million dollars. Except for temporary Treasury loans, the funds required will be obtained from sale of debentures and stock to private investors, and the purchases are shown as trust expenditures, rather than budget expenditures. By the end of the fiscal year 1957, private purchases of stock will have made an excellent start toward the goal of replacing a Government activity with a private company.

One of the most successful measures authorized by the Housing Act of 1954 is the Voluntary Home Mortgage Credit Program. Under this program, applications to the Veterans Administration for direct loans and to the Federal National Mortgage Association for mortgage purchases are referred to private lenders. This program has already made conspicuous achievements in encouraging private financing of housing for members of minority groups and other borrowers in credit-short areas. Moreover, the rapidly increasing volume of veterans housing mortgages placed privately has made it unnecessary to use a large part of the additional authority provided for direct housing loans. Net expetnditures for the veterans loan program, consequently, are expected to show only a minor increase to 71 million dollars in the fiscal year 1957.

College housing: The Housing Amendments of 1955, which broadened and increased the authority for college housing loans, also reduced the maximum interest rate to 2¾ percent and required use of private financing only if it were available at the same low interest rate. As a result, the Government is required to make long-term loans at a lower interest rate than the rate at which it can borrow for comparable maturities.

These amendments have eliminated all possibility of private financing, which cannot compete with these interest rates, save for the earliest maturities of tax-exempt issues. Many larger institutions, which previously obtained private funds at reasonable rates, have now filed applications for Government loans. Net reservations of funds are estimated to increase from 21 million dollars in 1955 to 211 million dollars in 1956 and 120 million dollars in 1957, exhausting the available lending authority. Most of the impact on expenditures will not be felt until 1958.

The Federal Government should help colleges and universities meet the urgent housing problems which rapid growth in enrollment will produce over the next decade. The program, as revised in 1955, however, does not serve the best interests of either the colleges or the taxpayers. For the sake of a modest saving in interest costs, it would destroy the promising private market for these obligations. This private market will be sorely needed, for the Government cannot be expected to supply the full or even the greater part of the estimated 2 to 4 billion dollars needed for dormitories over the next decade. The administration is accordingly recommending legislation which will increase the total authorization by 100 million dollars for 1957, but allow interest rates adequate to cover costs to the Government. I hope that this will encourage private lenders to reenter this expanding market.

Other aids to business—present programs: In addition to other appropriations required to finance the broad range of existing aids to business, I am recommending increased appropriations for the Patent Office in the Department of Commerce to begin a systematic 8-year program that would reduce the backlog of patent applications to a more reasonable level. I believe that the Congress should also enact legislation increasing patent fees so that the Patent Office can be more nearly self-supporting.

Through the Small Business Administration, we shall continue to help small business concerns obtain access to adequate financing, to a fair share of Government procurement, and to competent counsel on management, production, and marketing problems.

I also recommend improvements in construction statistics so that more accurate data can be supplied to business, labor, and government on major changes in this vital industry.

Area redevelopment: All of us are greatly concerned because certain chronic labor surplus areas are not sharing in our general prosperity. The primary responsibility for promoting the economic redevelopment of these areas rests with the local community and the States. However, I believe that the Federal Government should give much broader assistance than is possible under present law. Accordingly, the administration is recommending new legislation authorizing Federal loans and grants, in cooperation with the States, to assist communities suffering from substantial and persistent unemployment. Under this program the Secretary of Commerce would take the lead for the Federal Government, utilizing also the facilities of the Department of Labor, the Housing and Home Finance Agency, and other interested agencies.

Regulation of commerce and finance: As our economy grows and becomes more complex, the responsibilities of Federal agencies regulating business also increase. While the amount of money required to finance these agencies is relatively small, their influence on economic growth is very significant. In this budget I am recommending increased appropriations to strengthen every major regulatory program, including specific increases to (1) triple the staff of the Federal Trade Commission charged with enforcing controls over corporate mergers; (2) assure effective review by the Department of Justice of possible antitrust aspects of the newly authorized interstate compacts for the conservation of oil and gas; (3) provide for more adequate review by the Securities and Exchange Commission of the vast new capital offerings and the increased trading in securities; and (4) improve enforcement by the Interstate Commerce Commission of motor carrier regulations and assure better compliance with safety regulations.

To continue the export controls necessary for our national security, the existing legislation should be extended.

Disaster insurance, loans, and relief: The flood disasters during the past year in the Northeastern States, the Far West, and other areas have shown the urgent need for increased assistance to the victims of floods. Since private insurance is not generally available, legislation should be enacted authorizing, on an experimental basis, an indemnity and reinsurance program, under which the financial burden resulting from flood damage would be carried jointly by the individuals protected, the States, and the Federal Government. The budget includes an estimate of 100 million dollars of new authority to incur obligations to initiate such a program.

I am requesting a supplemental appropriation of 25 million dollars in the current fiscal year to replenish the disaster relief fund which was depleted as a result of the recent flood disasters. It will also be necessary to amend the Small Business Act to increase the authority for disaster loans.

Civil defense: Expenditures for civil defense are grouped with those for peacetime disasters for budget classification purposes, but the program is discussed in connection with continental defense in the major national security section of this message.

GENERAL GOVERNMENT

General government programs include many of the traditional domestic, civil activities of government, as well as certain governmentwide activities, such as personnel and property management, which cannot readily be allocated to any single category. Our primary objective is to perform these central activities efficiently and thus reduce the cost of all

the services provided to our citizens for their tax dollars.

Net expenditures for general government programs are expected to increase by 146 million dollars to 1.8 billion dollars, largely because of (1) increased outlays to replace or improve inadequate Government buildings and (2) a larger payment to the retirement fund for civilian employees.

General government

Total	1,201	1,611	1,757	[2] 1,621

[1] After deducting applicable receipts of 3 million dollars each year, mainly for Virgin Islands Corporation.

[2] Compares with new obligational authority of 1,138 million dollars in 1955 and 1,525 million dollars in 1956.

Legislative functions: During the fiscal year 1957 construction of the new Senate Office Building will be almost completed and a substantial start will be made on both the new House Office Building and the extension of the Capitol authorized by the Congress at its last session. These new facilities account for the increase in estimated expenditures for legislative activities from 87 million dollars in 1956 to 111 million dollars in 1957.

Federal financial management: The reorganization of the Internal Revenue Service and the adoption of improved methods and procedures have led to a more equitable and effective enforcement of the revenue laws. The audit of tax returns has been improved and more delinquent taxes have been collected. It is expected that in the fiscal year 1957 the efficiency of tax collection will be improved even further, without a significant increase in expenditures for this purpose.

I urge that the Congress enact pending legislation to reduce the frequency of information returns submitted by employers withholding income and social security taxes. This legislation will simplify tax procedures for both the Government and the employers, and will also provide a basis for stronger enforcement of the tax laws.

General property and records management: In the fiscal year 1957, major increases are planned in expenditures for construction and improvement of Government buildings to increase the efficiency of Government operations. To this end I am recommending appropriations to enlarge and remodel certain buildings and to begin the long-needed air conditioning of buildings in areas where temperature and humidity conditions are most adverse to economic operation. Additional appropriations are also recommended for the new building previously authorized for the Central Intelligence Agency, and, as noted in other sections of this message, for extension of the Department of State building and for new buildings for the National Bureau of Standards.

While these recommendations involve substantial appropriations of Federal funds, most of the Federal building improvement program will be financed with private funds under the lease-purchase authority of the General Services Administration and the Post Office Department. Already 53 projects involving private financing of construction costing 105 million dollars have been approved, and additional projects involving about 250 million dollars are under consideration. Additional appropriations of 5 million dollars are requested to purchase sites and prepare plans for future projects.

This program as a whole will make a substantial start toward nationwide improvement in working conditions of Federal employees. In the Washington area alone, buildings already approved or under consideration for approval will permit relocation of about one-third of the 60,000 employees now working in temporary and other substandard buildings.

Central personnel management and employment costs: The Government's payments to the retirement funds for civilian employees are estimated at 297 million dollars in 1957, of which 295 million dollars will be for the civil service retirement trust fund and 2 million dollars for special annuitants. The proposed contribution to the retirement fund will be equivalent to the Government's share of benefit payments to be made from the fund during the fiscal year 1957. This contribution constitutes 35 percent of the sum estimated to be required to fund (1) the Government's part of the normal cost for current service of Federal employees, and (2) annual interest on the existing accrued liability of the Government to the fund.

Unemployment compensation payments to individuals who become eligible through Federal employment are estimated at 33 million dollars, about the same amount as in the fiscal year 1956. As the current 1956 appropriation provides only 20 million dollars, a supplemental appropriation will be requested.

Accident compensation payments to Federal employees and the related administrative expenses of the Department of Labor are estimated to continue at 50 million dollars in both 1956 and 1957. To encourage precautionary safety measures, the administration will propose legislation which will provide, in conformity with the best business practices, that employing agencies shall bear the cost of benefits paid for their employees.

Civilian weather services: I am recommending for the fiscal year 1957 additional appropriations for the Weather Bureau to strengthen further its hurricane and tornado research program and to provide more storm detection radar. The budget also provides for additional equipment to measure visibility on airport runways and for needed improvements in housing at remote weather stations.

Protective services and alien control: Increased appropriations are recommended to strengthen the border patrol operations of the Immigration and Naturalization Service, primarily on our southern border. The Federal Bureau of Investigation will continue at its present employment level.

I shall recommend a supplemental appropriation for the Commission on Government Security which has recently been established to study the entire Government security program.

Territories and possessions and District of Columbia: I am recommending legislation to authorize an increase of 2 million dollars in the Federal payment to the District of Columbia. This represents a reasonable Federal share of the increased cost of operating the government of our Capital City.

Legislation will also be proposed to carry out a treaty and agreement recently negotiated with the Republic of Panama. Following its enactment, the Canal Zone Government will make expenditures to replace schools and other civic improvements being transferred to Panama under the legislation.

Other general government: Again I recommend legislation by which wider appreciation of the arts and encouragement of creative artistic endeavors may be promoted and national recognition for distinguished civilian contributions to the advancement of the arts and the welfare of mankind may be given.

INTEREST

Interest payments now account for about 11 percent of net budget expenditures. They are determined by the size of the public debt and by interest rates on that debt. They are included in budget expenditures as they accrue. Interest is paid from permanent appropriations.

Interest

[Fiscal years. In millions]

Item	Net budget expenditures and new obligational authority		
	1955 actual	1956 estimated	1957 estimated
Interest on public debt	$6,370	$6,800	$7,000
Interest on refunds of receipts	62	69	69
Interest on uninvested funds	5	6	6
Total	6,438	6,875	7,066

Interest on the public debt: Interest payments on the public debt in the fiscal year 1957 are estimated at 7 billion dollars. This is an increase of 200 million dollars over estimated expenditures for the current fiscal year and 630 million dollars above actual expenditures in 1955.

The high level of prosperity has created a heavy demand for credit by private enterprises. As a result the average rate payable on the interest-bearing public debt has risen during the last 12 months from 2.29 percent to 2.49 percent at present, and maturing obligations are being refinanced at the higher rates prevailing in the money market.

The administration is recommending legislation so that the interest paid to the Federal old-age and survivors insurance trust fund will reflect more closely the long-term character of investments by that fund.

CONCLUSION

This is the third budget I have transmitted to the Congress.

As a result of the substantial reductions in Government expenditures made by the administration subsequent to assuming office, I noted in the first of these three budgets—for the fiscal year 1955—that a budget surplus was actually in sight. However, so that part of our savings through economies during that transitional period could be passed along to the taxpayers of the Nation as a whole, with beneficial effects for the growth of our economy, I stated that I believed it best "to adopt a course leading toward the twin goals of a balanced budget and tax reductions."

Tax reduction was thus achieved with the administration's first budget, which made possible a 7.4-billion-dollar tax reduction program, enabling us to make progress of historic dimensions in reducing tax burdens and improving the tax structure.

A balanced budget is now being achieved in the administration's second and third budgets, both of which we now estimate will be brought into balance.

This course of Government policy has helped to lay a sound basis for the greatest volume of business, the highest employment, and the highest national income in the history of this country. As an essential element in this prosperity, private spending has more than replaced reductions in Federal spending. Federal expenditures have declined from 20.6 percent of total national production in the fiscal year 1953 to 17.3 percent in 1955. This budget is designed to continue that trend.

We have freed the economy from needless controls and from inflationary deficits, and have reduced the tax burdens which threatened to destroy the incentives to work and save and invest. State and local governments are now in an excellent position to obtain revenues and meet their responsibilities.

This budget carries forward the policies this administration has been following in the interest of all our 167 million Americans. The success of our country depends not upon centralized Government control, but upon the efforts of all our people to do more for themselves, to better themselves, their families, and communities. The role of Government is to encourage these efforts.

Some parts of our society, however, have not shared fully in the present prosperity of America. This budget provides for new steps to help create the conditions under which all Americans may share in the abundance we as a nation are enjoying.

There has also been developed an armed strength more efficient and better organized than ever before, and we shall continue building our defenses. We have started a worldwide, cooperative effort for peaceful uses of atomic energy which is already beginning to show results. We have worked with other free countries on a mutual basis to increase their economic and military strength and will continue to work with them. Our future prosperity, perhaps our very survival, will be linked with the strength of our allies and in the development of good will rather than fear and distrust among the nations.

This Nation has reached a new high of material prosperity. The rest of the free world has come to expect our leadership in cooperative efforts for peace and in defense of our common liberties. We should be very thankful for the resources of this country, for the efforts and accomplishments of our forebears. We should also be very humble. America must continue to be the land of faith, of promise, and of unbounded opportunity. There is much yet to do. With God's help, we will all go forward.

DWIGHT D. EISENHOWER.

JANUARY 16, 1956.

THE PRESIDENT'S BUDGET MESSAGE

Mr. CANNON. Mr. Speaker, I ask unanimous consent to address the House and to have my remarks appear directly after the President's Budget message in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CANNON. Mr. Speaker, in the message which we have just heard we listened to one of the most important and most significant messages ever sent by a President of the United States to the Congress. It involves directly the welfare of the people, the economic progress and prosperity of the Nation, the last hope of world peace, and the survival of our form of government.

When it has been processed, when it is finally disposed of by this Congress, we shall have completed the work of this session.

But, Mr. Speaker, it is not only one of the most important messages ever received from the President, it is one of the most disappointing budget messages that has ever come to the House.

The American people had every right to expect in this budget the retrenchment of expenditures, material and systematic reduction of the national debt, recommendations and surpluses warranting reduction of taxes, and especially they expected a balanced budget.

There is no assurance of any of these in the message to which you have just listened.

Here is a typical message just handed to me as I came on the floor:

REPRESENTATIVE CLARENCE CANNON: We pay our income tax under protest against its unconstitutional use for foreign gifts that are in excess of war needs and are a tremendous increase over pledges made in Republican platform to cut below previous spending.

MINUTE WOMEN OF MARYLAND.

Instead of a reduction of expenditures there is throughout this budget a consistent increase in requests for money.

Department after department is accorded vast increases. This budget, instead of recommending reduction in expenditure, asks for an increase of $1,600,000,000 over the spending budget for the current year.

Where is the meat ax we have heard so much about?

Recommendation is made for what amounts to a purely nominal decrease in the Federal debt. But there is no definite plan for mandatory and systematic reduction in the greatest national debt the world ever saw.

And one of the most significant features of our fiscal situation today is that since this administration assumed control, under a pledge of economy, under a pledge of retrenchment of expenditures, under a pledge of reduction of the national debt, this monstrous debt has steadily and consistently increased until it is today $7.7 billion more than it was when this administration took over (from $266,100,000,000 to $273,800,000,000), an increase during the four fiscal years of this administration as shown in the following table:

The public debt

[In billions]

	Beginning of year
Fiscal year 1954 (July 1953)	$266.1
Fiscal year 1955 (July 1954):	
President Truman's budget	269.8
Actual result	271.3
Fiscal year 1956 (July 1955)	274.4
Fiscal year 1957 (July 1956) estimated	274.3
Fiscal year 1958 (July 1957) estimated	273.8
Increase, July 1953 to July 1957, as estimated in the budget	+7.7

But there are deeper disappointments in the message. The public has been given assurances which led them to expect such savings and surpluses as would

care for all legitimate needs and still leave balances permitting long-anticipated tax reductions.

Only recently the Associated Press carried the headline "Three Billion Budget Surplus Possible in 1956, Say Experts." Under this title the St. Louis Post-Dispatch and other metropolitan newspapers continued: "Three economists said yesterday the Government may amass a surplus of $3 billion," and so forth.

As we listen to the reading of this message with its tenuous touch-and-go articulation of income and outgo, we realize that on the basis of the figures carried by the budget as outlined, all hope of tax reduction is gone glimmering.

Instead of $3 billion surplus we have at most $200 million this year and $400 million next year. They are using the meat ax, all right. But they are using it on the Treasury instead of the budget.

The message offers absolutely no encouragement whatever of redemption of the glowing promises of tax reduction—no comfort, no hope, no prospect whatever of any easing of the tax burden under this budget.

For the current year 1956, the projected surplus is $0.2 billion, or one-third of 1 percent of expenditures. For 1957, it is $0.4 billion, or two-thirds of 1 percent of expenditures. Little wonder the President felt compelled to point out that the margins were slim and that the Congress must do nothing in the way of increasing expenditures or reducing recepits—no tax cuts, in other words—to disturb the precarious situation.

The following table reflects budget receipts, expenditures, deficits, and projected surpluses for the 4 fiscal years of the present administration:

Budget receipts, expenditures, and deficit (−) or projected surplus (+), fiscal years 1954–57

[In billions]

	Receipts	Expenditures	Deficit (−) or surplus (+)
1. Fiscal year 1954 (July 1953–June 1954)	$64.7	$67.8	−$3.1
2. Fiscal year 1955 (July 1954–June 1955)	60.4	64.6	−4.2
3. Current fiscal year 1956 (July 1955–June 1956):			
(a) Original budget (January 1955)	(60.0)	(62.4)	(−2.4)
(b) Revised executive estimates after action by Congress (August 1955)	(62.1)	(63.8)	(−1.7)
(c) Current estimates (January 1956)	64.5	64.3	+0.2
4. Fiscal year 1957 (budget message, January 1956)	66.3	65.9	+0.4
Total, all 4 years	255.9	262.6	−6.7

NOTE.—The last year in which a surplus—a significant surplus—occurred was fiscal year 1951 when, under a previous administration, there was a surplus of $3.5 billion.

Mr. Speaker, let us examine these figures. When the President submitted his budget for fiscal 1955 two years ago, a deficit of $2.9 billion was estimated. Notwithstanding the cuts Congress made in the appropriation requests, the year was closed with a $4.2 billion deficit.

A year ago the budget for 1956 called for expenditure of $62.4 billion. Just 5 months ago, after the Congress had reduced the 1956 budget requests by $2 billion, the administration issued a budget review in which expenditures estimates were then raised to $63.8 billion—$1.4 billion above original amounts. What does the budget received today show? Estimated expenditures in fiscal year 1956 of $64.3 billion, or $1.9 billion above estimates of a year ago. Mr. Speaker, these variations will cause many to doubt the soundness of the projected surpluses of only $0.2 billion and $0.4 billion.

To be more specific, the budget for 1956, a year ago, reflected Defense Department expenditures of $35.750 billions offset by an unallocated reduction of $1.750 billion to get down to an even $34 billion. I stated on the floor of the House at the time that it was one of the most deceptive, misleading, beguiling budget items ever submitted to the American Congress. What happened? When the administration budget review was issued last August, $1 billion was still unallocated but still adhered to so as not to exceed the original $34 billion even. But now this entry has been discarded and the result is a current estimate of $34.575 billion for 1956, almost $600 million over previous estimates. Again, a source of dismay when pondering the basis for the projected surpluses.

There are other items, Mr. Speaker. The one mentioned on page 23 of the message is worth nothing, dealing with military personnel strengths. The ceiling on numbers has been fixed in such manner as to definitely leave the way open to go beyond the budgeted strength. The time-honored way of budgeting appears once again to be violated and doubt is cast upon firmness of the expenditure estimates.

The President recommends a 10-year program for completion of the interstate highway system, but no budgetary provision has been made for it. It is the President's prediction that the program can somehow be financed other than by deficit spending. Only time will tell what effect this budgetary anomoly will have on the projected surplus.

FUTURE BUDGET PROSPECTS

Mr. Speaker, both sides of the isle have serious cause for alarm as to the future if the budget is adopted as presented. Above all things, the people expected expenditures to be held down. Relief from the stupendous burden of a huge public debt is ever to be hoped for. But even cursory examination of the message offers no tangible hope for the immediate future. Expenditures for 1957 are up $1.6 billion over 1956, to a total of $65.9 billion. This is a reversal, a start in the other direction—upward. If anyone challenges the basis for this statement, let him look at the record of increased obligating authority. All manner of increases are proposed when substantial payment on the debt, in a period of the highest income in our history, ought to be the first order of business.

In many programs, spending is the heaviest in years following the appropriations, especially in major procurement, construction, and other large items. Following is a tabulation which rearranges in simple, understandable form, table 5 on pages A8 and A9 of the budget:

Appropriations and estimates

[A rearrangement of budget table 5]

[Figures in millions]

	Enacted 1955	1956		1957		Change (1957 versus 1956)	
		Enacted	Total proposed	Recommended in this budget	Total proposed	Enacted versus recommended	Total
1. Appropriations:							
Annual	$45,774	$50,023	$50,877	$50,302	$57,753	+$279	+$6,876
Permanent	6,819	7,303	7,303	7,565	7,565	+262	+262
Total	52,593	57,326	58,180	57,867	65,318	+541	+7,138
2. Authority to expend public debt receipts	3,047	3,130	3,135	482	766	−2,648	−2,369
3. Contract authorizations	960	1,189	1,199	274	1,171	−915	−28
4. Reappropriations	1,207	413	413	20	20	−393	−393
Total all forms of authority	57,807	62,058	62,927	58,643	67,275	−3,415	+4,348
5. Less amounts to liquidate prior contract authority	731	839	943	984	984	+145	+41
Net new obligation authority	57,076	61,219	61,984	57,659	66,291	−3,560	+4,307

The figures are astonishing. They show the trend. Requests for appropriations are $7.1 billions above 1956. Requests for all forms of obligating authority are up $4.3 billion over 1956. Compared to fiscal 1955—which ended only 6 months ago—appropriation estimates are up $12.7 billions and all forms of obligating authority are $9.2 billions higher. There are explanations. An important one is the innumerable increases in existing programs and sundry new spending proposals. Nearly every conceivable kind of program is provided for, many on a larger scale than ever before. Foreign aid is nearly doubled.

Another major item is in defense. The 1st session of the 83d Congress cut all appropriation estimates about $12 billion. The second session cut about $2.6 billion. The lion's share was against defense, and in particular the Air Force. The estimates submitted by the administration to the 1st session of the 84th Congress were necessarily several billions of dollars above the previous year,

partially reflecting the inevitable results of such earlier heavy cuts. I mentioned this situation on the floor of the House at the conclusion of the last session of Congress. More of this same sort of thing is reflected in the present budget—new obligating authority for defense military functions is up another $1.8 billion over 1956 and this had to be held down by resorting to a transfer of $785 millions from revolving funds where it is lying idle.

It is true that war-swollen unexpended carryover balances have been drawn upon to help meet expenses, as they should have been. But according to the budget figures and the message the bottom point has just about been reached in this area, so that the upturn in new requests surely signals an increased expenditure level in the future. Even if revenues at current high tax rates can keep pace there can be no real hope that our staggering debt will be appreciably lowered. If not, we will continue to pay $7 billion a year, or more, just to carry it.

Mr. Speaker, the present administration delights in looking back to the budget submitted in January 1953 by the previous administration for the fiscal year 1954. I think they have made comparisons to it in every budget submitted since that time. Tables, charts, and words are profusely used to make the record look far more favorable for the present administration than the facts warrant. Look at the very first page. The table goes back to 1953; the chart to 1952. Why the difference? If the chart went back just 1 more year it would show a $3.5 billion surplus—by the previous administration. If the table went back just 1 more year it would show a much smaller deficit—a year, incidentally, when we were at war in Korea.

The message, on the very first page, takes pains to point out that spending in fiscal 1956 is estimated at $13.6 billion less than proposed in the 1954 budget of the previous administration. This is claimed as a "cut" by the present administration. What is not pointed out is that fiscal 1953 was a war year and that we were still at war in Korea when the 1954 budget was prepared and presented. There can of course be no valid comparison under those circumstances and it is absurd to do so. All of the 4 fiscal years of the present administration have been or are projected as peace years. And it is interesting to note that in the very budget which the administration continually deprecates, the public debt was shown at $269.8 billion while it turned out to be $271.3 after being administered by the new administration for 1 year.

Furthermore, on the claimed "cut"—a reduction which was to be expected once fighting stopped in Korea—President Truman had this to say in his 1954 budget message:

> Under our present defense program, military expenditures are expected to reach their peak in the fiscal year 1954 and to start declining in subsequent years. * * * It is difficult to forecast with any precision the amount by which total Federal expenditures may be expected to drop in future years under these assumptions, but it may be in the neighborhood of $15 billion. In my judgment, however, a drop of this magnitude cannot be expected for at least 2 or 3 years.

CONTROLLABILITY OF EXPENDITURES

Mr. Speaker, the message calls attention to the degree to which expenditures and appropriations are readily subject to adjustment in the annual appropriation processes. The following, taken from executive figures, serves to point up the situation:

Expenditures

[In billions]

(See table, p. M13 of message)

	1954	1955	1956, estimated	1957, estimated
1. Major national security programs	$46.5	$40.6	$39.5	$40.4
2. Major programs not readily controllable	14.3	16.4	16.5	16.5
3. All other	7.0	7.6	8.3	9.0
Total	67.8	64.6	64.3	65.9

Two things stand out. In the aggregate, national security is the only category showing a cut over the last 4 years. The "all other" group—where lack of controllability is not in question—shows a 28 percent increase over the 4-year period. Furthermore, the President recommends grant of authority to make certain long-term commitments under the foreign-aid program to be fulfilled from appropriations of later years, an action which if approved would accentuate the very thing the message seems to lament.

The potential cost of carrying the national debt staggers the imagination. The interest alone for the ensuing year is estimated at $7 billion. The average rate of interest on the debt is now up to 2.49 percent, and in the past year some bonds have been refunded at 3 percent. This cost will no doubt increase in subsequent years. And the President has again requested legislation waiving the debt ceiling of $275 billion, the third straight year he has made that request.

These continued extensions affect the buying power of the dollar. Those who are entering the retirement bracket, those who hold Government bonds, those who have been building up a life-insurance schedule and especially those who are subsisting on pensions, annuities, and old-age assistance are being systematically mulcted. Retirement annuities are inadequate. Dollars invested in Government securities every year of the last 3 years have bought less on the market than when they were invested. And the millions of increased expenditures recommended in this message offer little comfort.

It has been a matter of surprise to hear from time to time reference to the national debt as a Democratic debt. It is a debt contracted to provide arms and ammunition for the American soldiers who fought in defense of the Republic. Without those expenditures they would have died and we would have died with them. And every man on this floor on either side of the aisle, who was here at that time voted for them—voted to create them. Most of the appropriation bills creating this debt were passed practically unanimously. It is reprehensible to attempt to make political capital out of the war expenditures which contributed to this debt. But if they were Democratic debts incurred in war times what about the more than $7 billion increase incurred in peacetime—in the last 3 years?

Mr. Speaker, this is not only the most disappointing budget in many years but it is the largest peacetime budget in history. It proposes to consume the largest Federal revenues ever enjoyed by this Nation or any other nation in all the tide of time.

May I urgently suggest that this Congress make such needed reductions in the estimates as to provide a surplus that will leave no doubt about the balancing of the budget and provide means for carrying out a progressive fiscal program.

ADDITIONAL OFFICE PERSONNEL FOR THE MINORITY LEADER

Mr. McCORMACK. Mr. Speaker, I offer a resolution (H. Res. 374) and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That effective January 3, 1956, the position of secretary to the minority leader of the House, at the basic salary rate of $6,000 per annum, shall be vacated and in lieu thereof there shall be paid from the contingent fund of the House, effective January 3, 1956 until otherwise provided by law, compensation for additional office personnel for the minority leader, to be appointed by him, at rates of compensation totaling not more than $6,000 basic per annum.

The resolution was agreed to, and a motion to reconsider was laid on the table.

HISTORY, DULLES STYLE

Mr. SIKES. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. SIKES. Mr. Speaker, Mr. Harold Stassen accuses the 1952 standard bearer of the Democratic Party, Mr. Adlai Stevenson, of playing politics with America's foreign policy. I could say that this is a case of the pot calling the kettle black, but I cannot in good conscience so elevate Mr. Stassen's thinking. Governor Stevenson said that Mr. Dulles is playing Russian roulette with America's security. Obviously, much of the free press in America and elsewhere agrees.

I call attention to two significant editorials in leading Washington newspapers, the Post and the Star, deploring Mr. Dulles' ill-considered statements and I ask that they be reprinted in the RECORD.

(The matter referred to is as follows:)

[From the Washington Post of January 14, 1956]

HISTORY, DULLES STYLE

Bragging seldom makes or holds friends. The panegyric to John Foster Dulles in the

current issue of Life, written by James Shepley on the basis of consultation with the Secretary of State, is not distinguished for its understatements. It relates in matter-of-fact fashion that Mr. Dulles "had probably devoted more thought to the subject of war and peace than any other man alive," and it evaluates Mr. Dulles' work as "the greatest display of personal diplomacy since the great days of the Franklin-Adams-Jefferson triumvirate." The basis for these encomiums is the thesis that Mr. Dulles has three times saved world peace by taking the United States to the brink of nuclear war. Quite apart from the subjective version of history it presents, the article is in incredibly bad taste.

For the effect is about as subtle as if this country had dropped a bomb on London. The article portrays Mr. Dulles as a reckless gambler, a sort of military-minded Hairbreadth Harry who specializes in narrow escapes. "The ability to get to the verge without getting into the war," it quotes him as saying, "is the necessary art." This is a little like saying that the closer you get to war the better you serve peace, or that Russian roulette is a good game by which to steel your nerves and impress your adversaries. It assumes that Mr. Dulles, by some undisclosed omniscience, was able to control all the factors that governed whether the world would have been plunged into nuclear war. Other nations will find the article highly offensive, and Communist propaganda will find it a windfall. Surely, if this is the theory on which American policy has be conducted, it would have been better left unsaid.

Mr. Dulles' belief that the threat to enlarge the Korean war is what finally brought the truce has long been familiar. There is no way to prove it or disprove it. It is reasonable to think that the Truman administration could have had a truce if it had been willing to accept stalemate and division. But it did not accept these terms; and Mr. Dulles and his colleagues are entitled to credit for bringing the Korean war to a conclusion.

The history of the Indochina war is considerably more confused. The Life article maintains that Mr. Dulles and the administration never contemplated merely an air strike to save Dien Bien Phu. This is at substantial variance with the version widely understood after the event, which was that the President was prepared to go to Congress for authority to intervene at Dien Bien Phu. Whether the British changed their minds or whether there was misunderstanding in the first instance is still in dispute. One story is that Admiral Radford's talk about atomic bombing in China is what caused the British to pull back.

Nor does the assertion that at the 1954 Geneva Conference on Indochina Mendes-France and Eden found themselves able to bargain from Dulles' strength square with the impression at the time. If Mr. Dulles was confident that the Geneva solution would turn out well all along—which is a little like his after-the-fact expression of confidence in the Bandung conference, although he seemed at first to want to play it down—he managed to conceal his feelings to a remarkable degree. When Mr. Dulles packed his bags and came home from Geneva in the middle of the negotiations, he seemed to have concluded that the whole affair was an unmitigated disaster and to have washed his hands of it. Prime Minister Eden, who as British Foreign Secretary was credited generally with salvaging the best settlement obtainable on Indochina, doubtless will be glad to know that Mr. Dulles planned it that way. (It also will be instructive to Eden to know that the Dulles policies are what brought acceptance of the Paris treaties after the failure of EDC.)

Similarly, on the question of what to do if the Chinese Communists attacked in the fall of 1954, the article claims credit for Mr. Dulles' policy of deterrence. What actually deterred the Communists no one knows for sure; and certainly the revision of American policy respecting Formosa was a useful step. But what the article does not say, in extolling the Dulles policy and President Eisenhower's support of it, is that the President overruled the kind of response which Mr. Dulles had at first endorsed to counter an attack on Quemoy and Matsu.

No one with a knowledge of diplomacy will contend that it is not necessary sometimes to take large risks. This newspaper also believes firmly with Mr. Dulles that it is desirable to let a potential enemy know precisely where we stand. But there is a difference between undertaking risks as a necessity and regarding risk taking as a virtue in itself. There also is a difference between risks and threats that can be interpreted as bluffs. Moreover, if Mr. Dulles originated the doctrine of deterrence, as the article indicates, the Strategic Air Force must have been twiddling its thumbs between 1946 and 1953. What our allies will find especially annoying is the implication in the article's praise of massive retaliation and other Dulles policies that this country, through some superior wisdom, has a right to incur risks for them without consultation. Their apprehensions will not be lessened by the article's concluding reference to Mr. Dulles' recent call for a revival of the American crusading spirit and missionary zeal of the last century.

What purpose is served by this boastful exercise in slanted history and massive hindsight? If it was intended as a political document to encourage the Republicans and impress the Democrats, it is likely to have the opposite effect. Electioneering of this sort will not advance the cause of bipartisan foreign policy. If it was intended to deter the Russians, the dismay it will create among our allies and in neutral nations will give the Soviet Union an undreamed-of opportunity. Like the Duke of Wellington's soldiers, the article may not frighten the enemy, but it will certainly terrify our friends. Popularity at home and abroad are not necessarily the index of effective policies; but strong policies and imaginative execution are their own best advertisement and do not require shouting from the housetops. The current state of American foreign relations at least raises some doubt as to whether all Mr. Dulles' policies have been an unqualified success. Perhaps the worst effect of the article is that its total absence of modesty serves to cast discredit on the good things Mr. Dulles has done.

[From the Washington Evening Star of January 14, 1956]

"BRINK OF WAR"

Secretary of State John Foster Dulles is up to his ears in boiling-hot water, and he has only himself to blame.

Mr. Dulles' troubles stem from an exclusive interview which he gave to Life magazine. Why he did this is anyone's guess. Presumably, however, Mr. Dulles thought it would be nice to start off an election year with a friendly article in a friendly magazine. There is nothing inherently wrong with this. Mr. Dulles is not the first man in public life, nor will he be the last, to welcome a bit of publicity which he thinks will be helpful to himself and his party. What is wrong, or, rather, what is incomprehensible, is that Mr. Dulles, or whoever acted for him in the matter, should have failed to realize that this particular article, far from being helpful, was certain to be harmful. Both in tone and content, the interview is damaging to our relations with our allies and should be embarrassing to Mr. Dulles.

The article says that on three occasions Mr. Dulles, with the President's full support, walked up to the brink of war—war in Korea after the truce negotiations had started, in Indochina, and in Formosa. Then came this direct quotation of the Secretary of State:

"You have to take chances for peace just as you must take chances in war. Some say that we were brought to the verge of war. Of course we were brought to the verge of war. The ability to get to the verge without getting into the war is the necessary art. If you cannot master it, you inevitably get into war. If you try to run away from it, if you are scared to go to the brink, you are lost."

The impression that the world will get from this portrayal of Mr. Dulles, in his own words, as a master of the art of going to the verge of war without getting into war—as a man who has thrice marched to the brink of war and who, if need arises, will march again. There are other comments in the article which imply that the French and British have not mastered this art, and there is one which suggests that the British backed out of an agreement for joint action in the Indochina matter.

It may be that Mr. Dulles is right in thinking that his deterrent policy, a policy of putting the enemy on notice that force would be met with superior force, saved this country from three wars. It would be quite understandable if he had said these things in private conversation. But it is incredible that the Secretary of State would consent to the publication, with direct quotes, of such views and comments.

It is even more incredible that Mr. Dulles, having given the interview, did not know what form it was going to take for publication. Now that the fat is in the fire, Mr. Dulles has read the article and he says that the statements specifically attributed to him "do not require correction from the standpoint of their substance." But in a press conference Wednesday he said that he had not read the article up to that time and that he had no precise recollection of what he had said during the interview.

To paraphrase an old saying, this is a deplorable way to run a State Department. Mr. Dulles is in serious trouble of his own making. He has marched to the brink of a diplomatic fiasco, and he is going to need all of his skill in extrication to keep from toppling over.

PAUL LEACH

Mr. O'HARA of Illinois. Mr. Speaker, it is my happy assignment by the beloved dean of the Illinois Democratic delegation, the Honorable THOMAS J. O'BRIEN, to express for him and for every Member of our delegation our affection and best wishes for Paul Leach and his brilliant and charming wife in the years ahead.

Paul Leach in 45 years as a newspaper man has never once broken faith or his word. He leaves the Washington scene respected and beloved by everyone. He has lived for almost half a century in the spirit and the letter of the highest traditions of the fourth estate. His name forever will be enrolled among the all-time greats of that brilliant and peerless galaxy of Washington newspaper correspondents. His successor as the Washington correspondent of the Chicago Daily News is one of national fame and stature, the lovable and ever stimulating Ed Leahy, to whom for the dean and the Members of the Illinois Democratic delegation I extend warm welcome and best wishes always.

It is our hope that Paul Leach will devote some of the time of his retirement

to writing an autobiography, covering his colorful and historic career, and which we of the Illinois Democratic delegation predict would take its place with the autobiography of another great newspaperman whose 250th birthday anniversary is being celebrated this year of 1956.

I am extending my remarks to include the following from the Washington Post of January 15, 1956:

PAUL LEACH RETIRING AS NEWSMAN

Forty-five years in the newspaper business, covering everything from golf matches and fires to revolutions, depressions, and national politics. * * *

Paul R. Leach, who retires today as Washington bureau chief of the Chicago Daily News, looks back fondly over those exciting years.

Leach, one of the Nation's top reporters, has had a first-row seat as 20th century history was made. A friend of bums and Presidents, he has spent the last 22 years in Washington.

At 65, he is a bright-eyed man with a springy step, a youthful figure, and a love of living.

He always wanted to be a reporter, and he always was.

Leach started with the Daily News as a $10-a-week sportswriter, and he never worked for any other paper.

Looking ahead to his retirement day, in a recent letter to Everett Norlander, his managing editor, he wrote:

"Now that I am retiring I can butter the bosses for the first time.

"I have worked with the four publishers of the Daily News Victor F. Lawson, Walter A. Strong, Col. Frank Knox, and John S. Knight.

"They have progressively grown in stature and influence. Each has been a power greater than the last, each has been an outstanding publisher.

"In 45 years no publisher of the Daily News has asked me to color copy to his way of thinking. Editorial opinion has been confined to the editorial page.

"I never have had to apologize for the newspaper. Instead, I always have been proud of it."

As an example of his reportorial independence, Leach recalled the 1936 presidential election in which Franklin D. Roosevelt won a second term. Leach's boss Colonel Knox, was the Republican vice presidential candidate on the Alf Landon ticket.

"The story I wrote at the closing of the campaign showed how unlikely it would be for Landon and Knox to win, though Knox thought there were elements of a GOP landslide in the picture," Leach recalled.

"I figured Landon would win about eight States. He actually won Maine and Vermont."

John Hamilton, GOP national chairman, phoned Knox in horror about Leach's preelection story in Knox's own newspaper.

"Leach is writing the politics, not me," was the Knox reply.

On Pearl Harbor Day Leach spent 24 hours at the Navy Department without letup. World War II was on.

Leach's son, Paul, Jr., was in the infantry and his son-in-law, Frederic B. Clark, was a submarine operations officer.

He recalls much pressure on him from VIP's seeking intercession with Knox to get their sons out of dangerous war posts.

"I never did intercede," says Leach. "I'd simply say I had a son in the infantry and a son-in-law in submarines, and what could I do?"

Leach is proud of his active part in the Gridiron Club. He was club president in 1952.

Looking back over his 45 years of newspapering, he says they have been "fascinating and grand."

"Many friends have made a lot more money than I have, but I've had satisfaction in my job," he says.

Mr. AYRES. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield to the gentleman from Ohio.

Mr. AYRES. I would like to associate myself with the remarks made by the gentleman from Illinois, as Mr. Leach, associated with the Knight newspapers, has also been very helpful in working with those of us from Ohio who appreciate what he has done through the media of the Akron Beacon-Journal.

Mr. O'HARA of Illinois. I thank the gentleman.

PRESIDENTIAL MESSAGE

Mr. FLOOD. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. FLOOD. Mr. Speaker, this is the time for the coming to the House of a series of Presidential messages.

I have in my hand reference to one of the most dramatic. The press states that when this excerpt was read the Republican side of the House rose to its feet and yelled.

Mr. Speaker, I quote that part of the message of February 2, 1953:

I am, therefore, issuing instructions that the 7th Fleet no longer be employed to shield Communist China.

TAXATION OF COOPERATIVES' INCOME

Mr. DAVIS of Tennessee. Mr. Speaker, I ask unanimous consent to extend my remarks at this point.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. DAVIS of Tennessee. Mr. Speaker, I have sent to the desk for proper reference a bill entitled "a bill to provide for the taxation of all cooperatives' income in the year earned, either to the cooperative or to the patron member, to protect persons required to treat noncash patronage dividends as income for Federal income tax purposes by providing for collecting tax at the source on such dividends."

The purpose of this bill, Mr. Speaker, is to implement the recommendations for taxation of cooperatives which were sent to this Congress last July by the Secretary of the Treasury.

For several sessions of the Congress, Mr. Speaker, I have introduced a bill seeking to correct the inequity in present law under which cooperative associations are privileged to do business without paying much of any Federal income tax on their earnings. This privilege dates back to 1916—nearly 40 years ago—when the tax situation was quite different from what it is today. Then, the corporate tax rate was one percent; now it is 52 percent. Then, the cooperatives were little, while now many of them are multimillion-dollar businesses, whose aggregate Federal income tax escape is reckoned at nearly $400 million a year.

And that is not the only damage to our economy that results from our failure to tax cooperative earnings. Taxpaying competitors, big and little, are put to a harmful disadvantage and in recent years many of them have been forced to sell to the co-ops or simply to quit and go out of business.

Cooperatives today are in all kinds of business. They manufacture and distribute farm machinery, hardware, automobile and tractor tires, batteries and supplies; household electric appliances; cigars and cigarettes; lipstick, face creams, leg makeup, toothbrushes, vitamin pills, soft drinks, groceries, and a host of other products.

Co-ops drill oil wells, refine petroleum, and sell gas at filling stations. They are in mining, banking, insurance, lumbering, publishing, paper making, and home building. They run electric systems, a railroad, telephone lines, and funeral parlors. They operate hospitals, summer camps, and radio stations.

Go into the grocery store and you'll find well-known brands like Land O' Lakes eggs and butter, Sunkist oranges and lemons, C & H sugar, Eatmor cranberries, Diamond walnuts, Blue Diamond almonds, Sunsweet prunes, Sunmaid raisins, Donald Duck frozen orange juice, Welsh's grapejuice, and scores of others. The big corporations that put up these familiar grocery products, and a great many more besides, are cooperatives, which pay little or no Federal income tax on their big earnings.

Obviously it is a situation that should be corrected. That is why I introduced to the Congress several years ago a bill which I looked upon as a first step toward correction of an utterly unfair and inequitable situation. I didn't try to go the whole way, because I thought it only fair that the cooperatives and their members should have a little time to adjust themselves to the payment of tax. Therefore my bill provided that the cooperative corporations should be taxed on all of their earnings, but that the members of those co-ops should be given a credit for the amount of tax that had been paid on their share of the patronage dividends.

Almost everyone has to agree that it is a perfectly fair proposition. No cooperative corporation would be hurt by paying income tax on its earnings—and the farmer would be relieved of paying individual income tax on his patronage dividends as he is now required to do.

But unhappily there has been no action—and meanwhile the situation has grown even worse than before. In my own district, the cotton industries—growing, ginning, marketing, warehousing, and cotton-oil extraction—have been badly hurt by cooperative competition. What with direct limitation of cotton acreage, the localized nature of ginning and the relationship between various cotton industries, the income-tax escape of co-op gins, compresses, warehouses,

marketing organizations, and oil mills has become of critical importance. Furthermore, any increase in the volume of cooperative cotton business must be reflected by loss of volume of the taxpaying cotton business.

Just before the first session of this Congress adjourned, the Secretary of the Treasury, Mr. George M. Humphrey, sent to the Congress his recommendations for the correction of this inequity. I accept them in principle, because Mr. Humphrey's proposals are based on a compromise which was offered in a Senate debate about 4 years ago by the two Democratic Senators from Virginia—Mr. HARRY BYRD and Mr. WILLIS ROBERTSON. The Secretary says in his letter:

It was intended in 1951 that cooperative income should be taxable as it was earned either to the cooperative itself, or to its members. However, several courts now have held that when allocation certificates issued to patron-members have no fair market value, they are not properly includible in the taxable income of the patron-members when issued. Thus, the 1951 act has failed to accomplish its purpose and, contrary to congressional intent, in at least some instances cooperatives may retain earnings with no tax imposed either on them or their members.

The general plan of the 1951 legislation, to tax all income from cooperatives' operations as it is earned either to the cooperative or to its patron-members, might now be made effective by appropriate action of Congress in the following manner.

It could be provided that cooperatives could take deductions in computing their taxable income only for cash distributions and noncash allocations issued in such form or under such circumstances as would make them currently taxable to the patron-members receiving them, and the amount deductible by the cooperative itself should not exceed the amount so currently taxable to patron-members.

This would not interfere with the proper function or financing of cooperatives, but would make it certain that all income is taxed in one place or the other as it is earned. The traditional handling of cooperative affairs would not be impeded.

The Secretary goes on to say that cooperative members often object to paying tax on patronage dividends paid to them in scrip or stock or by book allocation, and this is where he recommends the Byrd-Robertson proposal; like this:

These difficulties can be eliminated by the adoption of a withholding system comparable to that on wages and salaries. The tax could be withheld at the bottom rate for individuals, now 20 percent. As in the case of wages and salaries, refunds automatically would be made to those entitled to them and additional taxes paid by those subject to higher tax rates. Withholding at source would help both patron members in payment of their taxes and the Treasury in its enforcement and administration problems.

The preceding changes would make it sure that noncash allocations would be taxable, and that tax would actually be paid on behalf of the recipients. Further wholly tax-free additions to the capital of cooperatives would be prevented.

That is what the Secretary of the Treasury proposes as a way to tax cooperatives. I do not think it is so good a way as I have proposed in my old bill, but I am willing to go along.

In simple language, Mr. Speaker, the bill which I am now introducing would require cooperatives to pay Federal income tax to the full extent on earnings that are not taxed to their patron members; would impose a 20-percent withholding tax which would be paid by the co-op corporation and would be credited to patron members; and would repeal the special co-op income-tax privilege of deducting dividends paid on stock.

Adoption of this bill of mine would, I am convinced, close a large part of the loophole through which cooperatives may now escape almost all liability to Federal income tax. What is more, it would produce a measure of tax equality that would ease the unfair competitive situation at once.

OUR NATION CAN ENDURE

Mr. TRIMBLE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Askansas?

There was no objection.

Mr. TRIMBLE. Mr. Speaker, we are beginning a new session of the Congress. At no time in the history of our country have we been faced with a greater challenge. There is no peace, only a stalemate. We face a strong and determined foe, an ungodly foe who has atomic weapons, Russia. Our Armed Forces are stationed at outposts around the world.

We are the leader of the free world, put there by the fates of history. How we meet that challenge is up to us and the people back home whom we represent. Our way is not easy, nor will it be without cost in time, in material substance, and in heartache.

There is no time for hate, fear, and misunderstanding. If each of us will continue to read his Bible with a prayerful and understanding heart; continue to salute the flag of our country with courage and determination; and daily recite this pledge with sincerity:

> "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation under God, indivisible, with liberty and justice for all,"

our beloved Nation will endure.

SOUTHERN CALIFORNIA'S WATER SUPPLY: A STRUGGLE FOR SURVIVAL

Mr. McDONOUGH. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. McDONOUGH. Mr. Speaker, I doubt that the Members of Congress, most of the people of the Nation, and in fact, many of the people in southern California, fully realize the great importance of an adequate water supply to the 8 million people now living in southern California, and with the population increasing more rapidly than in any other section of the United States, the problems of protecting our water supply become more difficult daily. In the city of Los Angeles alone last year new water users increased at the rate of 3,730 every month.

Because water is now available when you turn on your hose to sprinkle your lawn, to take a shower, to wash your car, or for any other purpose is no assurance that it will continue.

Our vital water supply is seriously threatened. We are fighting a two-front battle to protect and preserve our legal rights to Colorado River water. There is no issue of more immediate importance to the people of Los Angeles and the entire southern part of the State. It is a fight for survival.

On one front we are fighting in the United States Supreme Court in the case of Arizona against California. On the other front we are fighting in the House of Representatives against legislation to build the upper Colorado project and the Fryingpan-Arkansas project, both of which would seriously damage our legitimate supplies of Colorado River water and power.

The outcome of these battles will affect every resident of Los Angeles and southern California. With our swiftly rising population we cannot afford to lose 1 gallon of Colorado River water or 1 kilowatt of power. In fact, we can already look ahead to the place where we must have more water and power to meet our demands. We cannot get it from the Colorado River, and we are not asking for more from that stream. What we are struggling to do is to protect and preserve what we already have under our legal contracts and our appropriative rights.

In the Supreme Court suit Arizona is seeking to limit our use of Colorado River water to an amount far below our present rights. The quantity of Colorado River water which Arizona seeks to limit California to would be less than our firm vested rights before Hoover Dam was built. If Arizona wins, California would be stripped of all the increase in water supply made possible by that dam, which California underwrote and Arizona opposed.

As I have done before, I shall vigorously oppose the proposed upper Colorado River project and the Fryingpan-Arkansas project, both of which would be disastrous to California, and which would cost ultimately at least $4.5 billion.

These upper Colorado River Basin developments have been planned in almost total disregard of the interests of California. Both projects would materially decrease our vital Colorado River water and power. For instance, Hoover Dam power output would be cut at least 25 percent. We cannot stand such a reduction.

The truth of the matter is that the upper basin States are endeavoring to engineer a huge grab of Colorado River water in excess of their rightful share. At the same time, an attempt is being made to raid the Federal Treasury at the expense of the Nation's taxpayers in order to obtain the immense subsidies required to build these unsound irrigation projects.

It is a money grab to support a water grab.

The sponsors of these bills so detrimental to California were unable to get them through Congress last year. I am proud to say that I was among the Congressmen who voiced a firm "No" when the effort was made to call the bills before the House.

Our opposition prevailed, but once again we are faced with the same fight.

The upper Colorado River project is mainly a hydroelectric project. Power revenues are needed to pay for the irrigation units of the gigantic plan. These irrigation units the Bureau of Reclamation admits cannot pay for themselves.

The upper Colorado River project would:

Saddle an enormous new burden of more than $4 billion on all taxpayers.

Provide water for only a favored few who would pay only a minute fraction of the cost.

Furnish water to grow the kind of crops which are already in great surplus in this country, and which are already heavily subsidized by the taxpayers.

Cost the American taxpayers $5,000 an acre to subsidize the proposed irrigation units.

Cost the taxpayers $750,000 for each 150-acre farm in the project.

Require the States which benefit—Colorado, Utah, Wyoming, and New Mexico—to pay less than 2 percent of the great new tax burden. Taxpayers of the other 44 States, including California, second largest taxpaying State of the Union, to pay 98 percent.

Thus, California would be in the position of paying to have its own water stolen, should this project be approved.

The Fryingpan-Arkansas project would:

Take enormous amounts of the purest Colorado River water out of the river and transport it over the Rocky Mountains. Therefore, the quality of the water coming down to California would be seriously impaired. We would get water containing heavy concentrations of salts and minerals.

Inflict a concealed subsidy on the taxpayers of $500 million, or about $1,400 an acre to be irrigated on the eastern slopes of the Rocky Mountains.

We must and we will continue to oppose these two projects. Every legitimate means will be used to defeat them.

Victory in this fight is vital to our present and future economy, and I pledge myself to make every effort to win it.

I am determined to be able to say to my constituents when this Congress is adjourned next summer: "The water and power upon which you depend for your homes and industries has been protected and preserved."

LEGISLATION PROVIDING DEATH PENALTY FOR DESTRUCTION OF AIRPLANES, BUSES, AND MOTOR CARRIERS IN INTERSTATE COMMERCE

Mr. HILL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. HILL. Mr. Speaker, last November the people of this country were shocked and dismayed by the wanton murder of 44 innocent men, women, and children when a United Airlines plane leaving Denver was sabotaged by a planted bomb.

Under Federal law the maximum penalty that could be meted out to the prepetrator of this horrible crime is far less than we expect from deeds of this kind.

To remedy this situation I am today introducing legislation that will increase penalties under the Federal code so as to provide death penalties, if a jury so recommends, for anyone who deliberately destroys any airplane, bus, or motor carrier operating in interstate commerce.

The increase of penalties will not by themselves prevent future crimes of this type, but certainly the knowledge of swift and severe punishment will deter those who would murder in this horrible manner. I have been in contact with the Chairman of the Civil Aeronautics Board and have been assured that the entire safety division of that bureau is making strenuous efforts to find a suitable method of preventing such acts in the future. If further legislation is necessary to protect the public, I shall do everything in my power to see that it is enacted.

EXEMPTION FROM EXCISE TAX ON GASOLINE FOR FARMERS

Mr. HILL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. HILL. Mr. Speaker, today I am introducing legislation to provide for the relief of our hard-pressed farmers from the burden of the Federal excise tax on gasoline.

When this tax was imposed, little if any gasoline was used by farmers on the farm. Today nearly $60 million is extracted from our farmers by taxes on fuels that are not used on highways.

My bill would provide for the granting of credit for any tax collected from the sale to the farmer of gasoline or lubricating oils for nonhighway agricultural uses. And could be applied against any tax liability the farmer may incur. Many of our States grant a rebate to the farmer for the tax collected on the gasoline and oil he uses on his farm. This bill would in effect provide similar treatment for the Federal tax on gasoline and oil.

To grant rebates on the Federal tax, which unlike State taxes is levied at the manufacturers' level, might create administrative problems that would be so burdensome as to cost much more than the amount of tax involved. For that reason I have adopted the relatively simple method of treating the tax collected as an overpayment to be applied as a tax credit.

The President, in his farm message to Congress last week, recommended relief for the farmer from these taxes, and I hope the House will act with dispatch to enact the necessary legislation.

INCREASES IN ANNUITIES UNDER FOREIGN SERVICE RETIREMENT AND DISABILITY SYSTEM

Mr. RICHARDS. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (S. 1287) to make certain increases in the annuities of annuitants under the Foreign Service retirement and disability system, insist on the amendment of the House and agree to the conference asked by the Senate.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina? [After a pause.] The Chair hears none and appoints the following conferees: Mr. RICHARDS, Mr. CHATHAM, Mr. SELDEN, Mr. VORYS, and Mr. BENTLEY.

CONSENT CALENDAR

The SPEAKER. This is Consent Calendar day. The Clerk will call the first bill on the Consent Calendar.

AMENDING VETERANS REGULATIONS TO PROVIDE INCREASED COMPENSATION

The Clerk called the bill (H. R. 1614) to amend the Veterans Regulations to provide an increased statutory rate of compensation for veterans suffering the loss or loss of use of an eye in combination with the loss or loss of use of a limb.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. DEANE. Mr. Speaker, a rule has been granted on this bill, and I ask unanimous consent that it be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

FORWARDING OF CHECKS FOR VETERANS

The Clerk called the bill (H. R. 1821) to provide that checks for benefits provided by laws administered by the Administrator of Veterans' Affairs may be forwarded to the addressee in certain cases.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. ASPINALL. Mr. Speaker, a rule has been granted on this bill, and I ask unanimous consent that it be passed over without prejudice.

The SPEAKER. Is there objection?

There was no objection.

FEES CHARGED VETERAN FOR FURNISHING COPY OF DISCHARGE

The Clerk called the bill (H. R. 6274) to provide that no fee shall be charged a veteran for furnishing him a copy of his discharge or a copy of his certificate of service.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. FORD. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

Mr. VINSON. Mr. Speaker, a parliamentary inquiry. This bill appears to have been passed over without prejudice on July 18, 1955, and was objected on July 30, 1955. My inquiry is: Does it not now require three objectors?

The SPEAKER. It does.

Mr. VINSON. Mr. Speaker, I object to the present consideration of the bill.

Mr. FORD. I object.

Mr. DEANE. I object.

The SPEAKER. Three objections are heard and the bill is stricken from the calendar.

SUPPORT OF FREE NATIONS IN THE UNITED NATIONS

The Clerk called the resolution (H. Con. Res. 186).

The SPEAKER. Is there objection to the present consideration of the resolution?

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this resolution be passed over without prejudice.

The SPEAKER. Is there objection?

There was no objection.

PORT OF ENTRY ON ALASKA HIGHWAY

The Clerk called the bill (H. R. 604) to provide port of entry and related facilities on the Alaska Highway at the Alaska-Canadian border in the Territory of Alaska, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That, in order to provide proper facilities for the public visiting Alaska, to assure the efficient discharge of governmental responsibilities and functions in connection therewith, and to promote and encourage travel to Alaska, the Secretary of the Interior is authorized and directed to select a suitable site for, and prepare a unified development plan of, the facilities needed for the comfort and convenience of the public visiting Alaska, and for the office and housing needs of cooperating Federal agencies operating near the Alaska-Canadian border in the vicinity of the Alaska Highway in the Territory of Alaska.

SEC. 2. The site selected by the Secretary of the Interior in accordance with the provisions of section 1 hereof shall consist of lands owned or controlled by the United States. If any lands within the site so selected by the said Secretary are under the jurisdiction of another department or agency of the Federal Government, they may be included in the site after the written approval for their inclusion therein has been obtained from the head of the department or agency having jurisdiction thereover.

SEC. 3. The Secretary of the Interior is authorized to construct such facilities, including utilities for their operation, as may be considered necessary by him in accordance with the provisions of section 1 hereof.

SEC. 4. The Secretary of the Interior is also authorized to make such arrangements with cooperating Federal, Territorial, or other governmental agencies as may be deemed by him to be necessary and appropriate for the use of the site and facilities selected and developed in accordance with the provisions of this act.

SEC. 5. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the provisions of this act: *Provided*, That the Secretary of the Interior may expend any funds made available by other Federal agencies or the Territory of Alaska to carry out the provisions of this act.

With the following committee amendments:

Page 1, line 4; strike the "comma" and insert in lieu thereof the word "and."

Page 1, lines 5 and 6; strike the words ", and to promote and encourage travel to Alaska,."

Page 1, lines 9 and 10; strike the words "visiting Alaska."

Page 2, line 2; strike the words "in the vicinity of" and insert in lieu thereof the words "adjacent to."

Page 2, line 10; after the word "site" insert the words "without reimbursement to such other Department or agency."

Page 2, line 13, strike all of section 3 and renumber subsequent sections.

The committee amendments were agreed to.

Mr. ENGLE. Mr. Speaker, I offer an amendment on behalf of the committee.

The Clerk read as follows:

Page 2, line 11, after the word "site", insert "without reimbursement to such other department or agency."

Mr. ENGLE. Mr. Speaker, this amendment was adopted by the committee but through inadvertence was not printed in the bill.

The amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AMEND ACT TO PROVIDE FOR ACCEPTANCE OF GIFTS

The Clerk called the bill (H. R. 5894) to amend the act providing for membership and participation by the United States in the United Nations Educational, Scientific, and Cultural Organization to provide for the acceptance of gifts, and for other purposes.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. GROSS. Mr. Speaker, reserving the right to object, I wonder if we might have an explanation of the bill?

Mr. ZABLOCKI. Mr. Speaker, this bill permits the United States National Commission on UNESCO, organized under and pursuant to Public Law 565, 79th Congress, to accept gifts or bequests of money to carry out the purposes of the Commission. These gifts or bequests are to be exempt from District of Columbia and Federal taxes, as gifts to or for the United States.

Mr. GROSS. Does the gentleman recall testimony before a House committee less than a year ago that a considerable amount of dirt was being swept under the UNESCO rug? Can the gentleman tell me whether the dirt is now being swept in some other direction?

Mr. ZABLOCKI. The gentleman knows I am in no position to answer that.

Mr. GROSS. Does the gentleman think it is right for the House today in view of the testimony given less than a year ago with respect to certain things that have been going on in UNESCO, to pass a bill to provide tax exemption for gifts to UNESCO?

Mr. ZABLOCKI. I believe UNESCO should not be discriminated against. If an individual wants to donate money to the United Nations educational fund I do not see why there should be any restrictions on it. UNESCO should be given equal consideration with other charitable organizations. I think this bill is worthy of consideration, and I hope the House will pass it. I hope the gentleman will withdraw his objection.

Mr. GROSS. Does the gentleman think it right to grant tax exemption on gifts to UNESCO that might be used to pay indemnities to people in UNESCO who refuse to come before the United States Loyalty Board and testify as to their loyalty to the United States? Does not the gentleman feel this should be held in abeyance until that situation is cleared up and until someone comes forward to say that dirt is not being swept under the UNESCO rug?

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. GROSS. Mr. Speaker, I object and ask that the bill be passed over without prejudice.

The SPEAKER. Objection is heard.

EXPORT SALE OF SURPLUS STORABLE COMMODITIES

The Clerk called the bill (H. R. 7252) to permit sale of Commodity Credit Corporation stock of basic and storable nonbasic agricultural commodities without restriction where similar commodities are exported in raw or processed form.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. DEANE. Mr. Speaker, I ask unanimous consent that the bill (S. 2170) to permit sale of Commodity Credit Corporation stocks of basic and storable nonbasic agricultural commodities without restriction where similar commodities are exported in raw or processed form, be substituted for the House bill.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

The Clerk read the Senate bill, as follows:

Be it enacted, etc., That section 407 of the Agricultural Act of 1949, as amended, is amended by adding at the end of such section the following: "For the purposes of this section, sales for export shall not only include sales made on condition that the identical commodities sold be exported, but shall also include sales made on condition that commodities of the same kind and of comparable value or quantity be exported, either in raw or processed form."

The bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider and a similar House bill (H. R. 7252) were laid on the table.

RESTRICTIONS ON ADMISSION OF CATTLE AND POULTRY INTO THE VIRGIN ISLANDS

The Clerk called the bill (S. 1166) to amend section 6 of the act of August 30,

1890, as amended, and section 2 of the act of February 2, 1903, as amended.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That section 6 of the act of August 30, 1890 (26 Stat. 414, 416; 21 U. S. C. 104), "An act providing for an inspection of meats for exportation, prohibiting the importation of adulterated articles of food or drink, and authorizing the President to make proclamation in certain cases, and for other purposes," as amended, is further amended by deleting the words "and the admission into the Virgin Islands" immediately following the word "Texas" in the first sentence of such section; deleting the period at the end of such sentence; and adding the following clause after the word "therefrom" in such sentence: ", and the admission from the British Virgin Islands into the Virgin Islands of the United States, for slaughter only, of cattle which have been infested with or exposed to ticks upon being freed therefrom.".

SEC. 2. That section 2 of the act of February 2, 1903 (32 Stat. 791, 792; 21 U. S. C. 111), "An act to enable the Secretary of Agriculture to more effectually suppress and prevent the spread of contagious and infectious diseases of livestock, and for other purposes," as amended, is further amended by deleting the proviso reading: "*Provided*, That no such regulations or measures shall pertain to the introduction of live poultry into the Virgin Islands of the United States."

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DISPOSAL OF LANDS UNDER BANKHEAD-JONES FARM TENANT ACT

The Clerk called the bill (H. R. 6815) to provide for the orderly disposition of property acquired under title III of the Bankhead-Jones Farm Tenant Act, and for other purposes.

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

COMMISSION ON INTERNATIONAL RULES OF JUDICIAL PROCEDURE

The Clerk called the bill (H. R. 7500) to establish a Commission and Advisory Committee on International Rules of Judicial Procedure.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. GROSS. Mr. Speaker, reserving the right to object, I wonder if we may have an explanation of this proposal.

Mr. WALTER. The measure under consideration contemplates the creation of a commission to study procedures in dealing with international legal proceedings and judicial assistance. Every bar association in the United States is urging the enactment of this legislation because lawyers are largely in the dark as to procedures in effect in various nations in which our nationals have business dealings. Further, it is of vital importance to United States citizens with business interests which have some international aspect that existing problems concerning judicial procedures be studied by such a commission as is proposed by this legislation.

The bill provides for the creation of a commission to consist of 7 members, 3 to be appointed by the President, 2 by the State Department, and 2 by the Department of Justice. The Commission is given the authority to erect a committee consisting of 15 leaders of the American bar.

The Commission will then study the procedures in effect in the 48 States and also procedures in effect in the countries with which we have had the most dealings at the start and ultimately of all the nations, with the idea of providing some sort of uniformity in the taking of depositions, in the obtaining of the evidence of witnesses, and of authenticating documents and other court records. The function of the Commission will be to sit in consideration of proposed recommendations to be made to the Secretary of State.

Mr. GROSS. Does this go to criminal proceedings?

Mr. WALTER. No; this does not go to criminal proceedings.

Mr. GROSS. Criminal proceedings are not excluded under the terms of this bill, though, are they?

Mr. WALTER. They are not specifically excluded, but if a commission's jurisdiction is limited as this is by being spelled out in the act, then it is impossible to read further authority in the law.

Mr. DAVIS of Georgia. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Georgia.

Mr. DAVIS of Georgia. I notice on page 2, line 2, the commission shall draft for the assistance of the Secretary of State international agreements to be negotiated by him. What does that mean?

Mr. WALTER. It means that this commission, with the advice of the experts that we are sure it will surround itself with, can suggest to the State Department the kind of procedures and agreements that ought to be incorporated into a treaty. Frankly, I think the Secretary of State has the authority to do that very thing right now in the absence of this legislation.

Mr. DAVIS of Georgia. To do what?

Mr. WALTER. To prepare a treaty for submission to the Senate dealing with the subjects contemplated in this bill.

Mr. DAVIS of Georgia. I see that this makes it incumbent upon the commission to draft for the assistance of the Secretary of State international agreements. That seems to me to be putting quite a bit of authority in this commission.

Mr. WALTER. Of course, it is only suggestive. The Secretary of State does not have to accept any advice coming from this commission.

Mr. DAVIS of Georgia. But should it not be so expressed in here?

Mr. WALTER. I think it is. That is very clearly the intention. The matter is well covered in the report and it was discussed in the hearings.

Mr. DAVIS of Georgia. Does not the gentleman think a bill of this importance ought to come to the floor for discussion in the regular way?

Mr. WALTER. No, I do not think so. I do not think this is more than a mere method of obtaining advice of experts in a field that is causing a great deal of annoyance to American lawyers today.

Mr. GROSS. Mr. Speaker, may I ask the gentleman from Pennsylvania: Does this in any way go to the question of the status of forces agreements and treaties and certain secret agreements involving the trial of American servicemen in foreign courts?

Mr. WALTER. No, indeed, it does not.

Mr. GROSS. It has nothing whatever to do with that?

Mr. WALTER. Nothing whatsoever to do with that.

Mr. GROSS. This is rather a strange situation. When the status of forces treaties were before the other body in July of 1953 for ratification, there had been no investigation on the part of the State Department or anyone else of trial procedures in foreign courts.

If I remember correctly, it was not until August 1953 that a mission was finally established to go to various foreign countries, where these treaties and agreements would be in effect, to investigate the procedures under which American servicemen and their dependents would come under the foreign civil courts for trial. Now, then, here is the State Department in this instance joining in an investigation of procedures dealing with dollars—mind you, dollars—but made no investigation before the legislation was called before the other body, legislation affecting human liberty and the lives of American servicemen and their dependents. I do not understand this procedure at all.

Mr. WALTER. The gentleman realizes that the State Department is not instituting this proposal at all. It comes from the Department of Justice as the result of action taken by the bar associations, all the bar associations, the American Bar Association and the bar associations of the several States.

Mr. GROSS. May I say to the gentleman that two representatives of the State Department will be on the commission that is proposed to be established, and if the gentleman wants to test how interested the State Department is in this legislation, just offer an amendment to exclude the State Department from having any representation on the Commission and he will find out very quickly how much interest they have.

Mr. WALTER. I think it would be a mistake to exclude the State Department.

Mr. BOW. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Ohio.

Mr. BOW. It has been stated that this does not apply to criminal procedures. Of course, the gentleman knows I am interested in the status of forces question. But, under section (c) on line 16, page 2, we find this provision: "Recommend to the President such other action as may appear advisable to improve and codify international practice in civil, criminal, and administrative proceedings."

I wonder if the gentleman from Pennsylvania could give us some light on what

effect that might have on the Status of Forces Treaty Agreements.

Mr. WALTER. I frankly do not think it would have any effect whatsoever. By that language it is contemplated that whatever criminal statutes are in effect in the various nations, the courts of this country or in other countries interested would take judicial notice of the existence of those statues, assuming, of course, that procedures would be set up whereby judicial notice would be taken in such a situation.

Mr. CELLER. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from New York.

Mr. CELLER. For example, in Switzerland they have a statute which precludes the taking of testimony before a notary. Now, that is a common practice in many of our States. The courts in Switzerland are so jealous of their jurisdiction that they have induced the Government of Switzerland to pass a law providing a criminal penalty for the taking of such testimony before a notary. Now, this commission would endeavor to see changes made in that regard so that Americans abroad could not get enmeshed in such a statute, and that is why they have the word "criminal" in that provision.

Mr. GROSS. Does not the gentleman from Pennsylvania think that this legislation ought to be handled under the ordinary procedure?

Mr. WALTER. Of course, it is of no concern to me. This is an administration measure. The chairman of the Committee on the Judiciary introduced this bill at the request of the administration. It came to the subcommittee, of which I happen to be chairman, in purely routine fashion. I have no personal interest in it at all, but I do not think that it has the implications that the gentleman from Iowa places on it.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. GROSS. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

BENEFITS FOR CADETS AND MIDSHIPMEN

The Clerk called the bill (H. R. 5055) to provide that service of cadets and midshipmen at the service academies during specified periods shall be considered active military or naval wartime service for the purposes of laws administered by the Veterans' Administration.

Mr. WALTER. Mr. Speaker, a point of order.

The SPEAKER. The gentleman will state it.

Mr. WALTER. The previous bill was objected to, was it not?

The SPEAKER. The gentleman from Iowa asked unanimous consent that the bill be passed over without prejudice, to which there was no objection.

Mr. WALTER. I object, Mr. Speaker.

The SPEAKER. The objection comes too late.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. DEANE. Mr. Speaker, a rule has been granted on this bill. I ask unanimous consent that it be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

AMENDING THE HATCH ACT

The Clerk called the bill (H. R. 3084) to amend certain provisions of the laws relating to the prevention of political activities to make them inapplicable to State officers and employees.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That (a) section 12 of the act entitled "An act to prevent pernicious political activities," approved August 2, 1939, as amended (5 U. S. C., sec. 118k), is hereby repealed.

(b) Section 18 of such act is amended by striking out "or in the second sentence of section 12 (a)."

SEC. 2. (a) The first paragraph of section 595 of title 18 of the United States Code is amended by striking out "or by any State, Territory, or possession of the United States, or any political subdivision, municipality, or agency thereof, or agency of such political subdivision or municipality (including any corporation owned or controlled by any State, Territory, or possession of the United States or by any such political subdivision, municipality, or agency) in connection with any activity which is financed in whole or in part by loans or grants made by the United States, or any department or agency thereof,".

(b) The second paragraph of such section is amended by striking out "by any State or political subdivision thereof, or by the District of Columbia or by any Territory or possession of the United States" and inserting in lieu thereof "by the District of Columbia."

(c) The heading of such section is amended to read as follows:

"§ 595. Interference by administrative employees of Federal Government"

(d) That portion of the analysis at the head of chapter 29 of title 18 of the United States Code which reads:

"595. Interference by administrative employees of Federal, State, or Territorial Governments"

is amended to read as follows:

"595. Interference by administrative employees of the Federal Government."

With the following committee amendment:

Page 1, after line 7, insert:

"(c) Section 21 of such act is amended by striking out ', or 12.'

"(d) Section 9 (b) of such act is amended by striking out the following: '*Provided further*, That in no case shall the penalty be less than 90 days' suspension without pay:'."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DESIGNATING NATIONAL FARM-CITY WEEK

The Clerk called the resolution (H. J. Res. 317) designating the last week in October of each year as National Farm-City Week.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. FRAZIER. Mr. Speaker, I ask unanimous consent that House Joint Resolution 317 be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

PATENT OFFICE FEES

The Clerk called the bill (H. R. 7416) to fix the fees payable to the Patent Office and for other purposes.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. QUIGLEY. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

SALE OF GOVERNMENT-OWNED HOUSING PROJECT TO CITY OF HOOKS, TEX.

The Clerk called the bill (H. R. 7540) to provide for the sale of a Government-owned housing project to the city of Hooks, Tex.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. CUNNINGHAM. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice, for the following reasons: There is no report from the Bureau of the Budget and the Department of Defense makes no recommendation in favor of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

EXTENDING PROTECTION AGAINST BODILY ATTACK TO UNIFORMED MEMBERS OF THE ARMED FORCES

The Clerk called the bill (H. R. 5205) to extend to uniformed members of the Armed Forces the same protection against bodily attack as is now granted to personnel of the Coast Guard.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That section 1114 of title 18, United States Code, is amended by striking out the words "man of the Coast Guard," and inserting in lieu thereof the words "uniformed members of the Army, Navy, Air Force, Marine Corps, or Coast Guard."

With the following committee amendments:

Strike the word "uniformed" from the title of the bill.

On line 5, strike the words "uniformed members" and insert in lieu thereof the word "member."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to extend to members of the Armed Forces the same protection against bodily attack as is now granted to personnel of the Coast Guard."

A motion to reconsider was laid on the table.

DESIGNATING THE GENERAL GRANT TREE AS A NATIONAL SHRINE

The Clerk called the resolution (H. J. Res. 194) designating the General Grant tree (known as the Nation's Christmas Tree) in Kings Canyon National Park, Calif., as a national shrine.

There being no objection, the Clerk read the joint resolution, as follows:

Whereas the General Grant tree, growing in the Kings Canyon National Park, Calif., was dedicated by the Federal Government on April 28, 1926, at the request of the citizens of Sanger, Calif., as the Nation's Christmas Tree; and

Whereas Sanger, Calif., was, on October 1, 1949, recognized by the Post Office Department as the Nation's Christmas Tree City; and

Whereas because of such dedication, and because of the work done and the interest shown by the citizens of Sanger, Calif., the Nation's Christmas Tree has become known nationally and internationally; and

Whereas it is appropriate and desirable at this time to provide further recognition of the Nation's Christmas Tree as a living symbol of our American heritage: Therefore be it

Resolved, etc., That the General Grant Tree, which is located in the Kings Canyon National Park, in Fresno County, Calif., and which was dedicated by the Federal Government in 1926 as the Nation's Christmas Tree, is hereby declared to be a national shrine in memory of the men and women of the Armed Forces who have served and fought and died to keep this Nation free and to preserve the spiritual, human, and civil rights which are the essence of our American heritage. The Secretary of the Interior, through the National Park Service, shall make appropriate provision for the perpetual care and maintenance of such shrine.

SEC. 2. The Postmaster General is authorized and directed to issue a special postage stamp in commemoration of the Nation's Christmas Tree, which is located in Fresno County, Calif., and is declared to be a national shrine by the first section of this resolution. Such special postage stamp shall be in the denomination of 3 cents and of such design as the Postmaster General may determine. Such stamp shall be first placed on sale in Sanger, Calif., on November 15, 1955, and shall not be made available to the public elsewhere until January 1, 1956.

With the following committee amendments:

Page 2, lines 14 to 23, strike out all of section 2 and insert in lieu thereof the following:

"SEC. 2. Nothing in this act shall be deemed to change the name of the General Grant Tree."

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "Joint resolution to designate the General Grant tree (known as the Nation's Christmas Tree) in Kings Canyon National Park, Calif., as a national shrine."

A motion to reconsider was laid on the table.

HABEAS CORPUS

The Clerk called the bill (H. R. 5649) to amend section 2254 of title 28 of the United States Code in reference to applications for writs of habeas corpus by persons in custody pursuant to the judgment of a State court.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. ASPINALL. Mr. Speaker, a rule having been granted on this bill, and this bill being scheduled for debate this Thursday, I ask unanimous consent that it be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

REPAYMENT CONTRACT WITH YUMA MESA IRRIGATION AND DRAINAGE DISTRICT

The Clerk called the bill (H. R. 5806) to authorize the Secretary of the Interior to execute a repayment contract with the Yuma Mesa Irrigation and Drainage District, Gila project, Arizona, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Interior is authorized to execute a contract with the Yuma Mesa Irrigation and Drainage District, Gila project, Ariz., on such terms and conditions as the Secretary deems appropriate, which shall provide, among other things, for repayment by the district to the United States over a period of not exceeding 60 years from the end of the development period for each irrigation block established by the Secretary for lands situate within said district of (1) an average of $200 per acre for lands in said district for which irrigation facilites have been constructed, to be allocated as determined to be appropriate by the Secretary among the twelve thousand two hundred fifty-two and seven-tenths acres of class 2 lands and the seven thousand seven hundred seventeen and three-tenths acres of class 3 lands in the district, as classified in the Bureau of Reclamation report titled "Land Classification Report, Unit 1, Yuma Mesa Division, Gila project, Arizona, May 1949," as amended, made pursuant to subsection (d) of section 4 of the act of December 5, 1924 (43 Stat. 702, 43 U. S. C. 462); (2) the unpaid operation and maintenance charges which accrued prior to June 30, 1954, totaling $297,167.45, as allocated by the Secretary to said lands situate within the district; and (3) the costs of the works authorized in section 2 hereof, not exceeding $1,350,000, and further providing for the release, on such terms and conditions as the Secretary finds appropriate, of the existing predevelopment contracts and mortgages held by the United States on the lands situate within the district which were predeveloped by the United States, and for the repayment to the United States by the lands benefited by said predevelopment of the amounts provided for in said mortgages in the same period within which the costs for the construction of the irrigation facilities are to be repaid.

SEC. 2. The Secretary is authorized on such terms and conditions as he deems appropriate to make drainage surveys and investigations of the lands within the district, to construct drainage facilities and works therefor, to install additional pump capacity in the Yuma Mesa Pump Plant of not to exceed two hundred and seventy-five cubic feet per second, to construct such buildings determined by him to be appropriate in connection with the operation and maintenance of the lands situate within the district, and to provide in the contract referred to in section 1 hereof for the performance of such work.

SEC. 3. Expenditures by the United States in excess of the amounts to be repaid by the district as provided in section 1 hereof, which have been allocated by the Secretary (a) to acreage eliminated from the Gila project pursuant to the act of July 30, 1947 (61 Stat. 628), (b) to dust control on the Yuma Mesa Division, Gila project, (c) to that portion of predevelopment costs not heretofore covered by contracts and mortgages covering predevelopment charges on lands situate within the district, and other costs allocated by the Secretary to the lands situate within the district not otherwise covered by the repayment obligation in section 1 hereof to be assumed by the district or not otherwise allocated by the Secretary to other contracting entities and which are assumed or are to be assumed by them, shall be nonreimbursable: *Provided*, That all revenues from the disposal of public lands within the district or from special water service contracts other than those which the Secretary determines are allocable to operation and maintenance costs of the district shall be retained by the United States.

SEC. 4. The authority granted in section 1 of this Act to execute said contract shall terminate on December 31, 1957.

SEC. 5. This act is declared to be a part of the Federal reclamation laws as they are defined in the Reclamation Project Act of 1939 (53 Stat. 1187).

With the following committee amendments:

Page 2, lines 4 and 5, strike the words "twelve thousand two hundred fifty-two and seven-tenths" and insert the words "twelve thousand twenty-three and six-tenths."

On page 2, line 6, strike the words "seven thousand seven hundred seventeen and three-tenths" and insert the words "seven thousand nine hundred forty-six and four-tenths."

Page 3, line 22, following the words "and", insert the designation "(d)."

Page 4, line 2, strike the words "assumed or are" and insert the words "not assumed or are not."

Page 4, line 4, following the word "district", insert the words "(which disposition is hereby authorized on terms and conditions satisfactory to the Secretary)."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. ASPINALL. Mr. Speaker, there is on the Speaker's desk Senate bill 1689, a bill similar to the one just passed. I ask unanimous consent for the immediate consideration of S. 1689, move to strike out everything after the enacting clause and insert the bill just passed (H. R. 5806), and lay the House bill on the table.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Clerk read as follows:

Amendment offered by Mr. ASPINALL: Strike out all after the enacting clause and insert the provisions of H. R. 5806, as passed.

The amendment was agreed to.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H. R. 5806) was laid on the table.

ASSISTANCE FOR CERTAIN LANDLESS INDIANS IN STATE OF MONTANA

The Clerk called the bill (H. R. 7433) to provide assistance for certain landless Indians in the State of Montana.

The SPEAKER. Is there objection to the present cosideration of the bill?

Mr. SAYLOR. Mr. Speaker, I object.

PRELIMINARY SURVEY OF McGIRTS CREEK, FLA., FOR FLOOD CONTROL

The Clerk called the bill (H. R. 5556) authorizing a preliminary examination and survey of McGirts Creek, Fla., for flood control.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Army, acting through the Chief of Engineers, is hereby authorized and directed to make a preliminary examination and survey with a view to determining the advisability of making improvements for flood control in McGirts Creek, a tributary of St. Johns River, in Florida.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CONSENT OF CONGRESS TO STATES OF KANSAS AND OKLAHOMA TO ENTER INTO A COMPACT

The Clerk called the bill (H. R. 6256) granting the consent of Congress to the States of Kansas and Oklahoma to negotiate and enter into a compact relating to their interest in, and the apportionment of, the waters of the Arkansas River and its tributaries as they affect such States.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the consent of Congress is hereby given to the States of Kansas and Oklahoma to negotiate and enter into a compact relating to the interests of such States in the development and protection from pollution of the water resources of the Arkansas River and its tributaries, and providing for an equitable apportionment among them of the waters of the Arkansas River and its tributaries flowing between such States, and for matters incident thereto, upon the condition that one qualified person appointed by the President of the United States shall participate in such negotiations as chairman, representing the United States, and shall make a report to the Congress of the proceedings and of any compact entered into. Such compact shall not be binding or obligatory upon any of the parties thereto until it shall have been ratified by the legislatures of each of the respective States, and by the Congress of the United States.

SEC. 2. There is hereby authorized to be appropriated the sufficient sum to pay the salaries and expenses of the representative of the United States appointed hereunder: *Provided*, That such representative, if otherwise employed by the United States while so employed, shall not receive additional salary in the appointment hereunder.

With the following committee amendments:

Page 2, line 5, after the words "to the", insert "President and to the."

Page 2, line 9, strike out "approved" and insert "consented to."

Page 2, line 10, after "United States", strike out the period and insert a colon and the following: "*Provided*, That any compact negotiated under the authority of this act shall recognize the respective rights of the States of Kansas and Colorado in the waters of the Arkansas River, as established by the Arkansas River compact consented to by Public Law 82, 81st Congress, 1st session."

Page 2, line 12, strike out the first "the" and insert "a."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DISPOSAL OF FEDERALLY OWNED PROPERTY AT OBSOLESCENT CANALIZED WATERWAYS

The Clerk called the bill (H. R. 7596) to provide for the disposal of federally owned property at obsolescent canalized waterways and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That (a) whenever the Secretary of the Army, upon recommendation of the Chief of Engineers, determines that any of the following listed Federal project structures and appurtenances, including real property acquired therefor, no longer economically serve the purpose for which they were constructed or acquired, such property may be disposed of in accordance with the provisions of existing law. Upper White River, Ark. (3 locks and dams); Big Sandy River, Ky. (5 locks and dams); Rough River, Ky. (1 lock and dam); Osage River, Mo. (1 lock and dam); Muskingum River, Ohio (11 locks and dams); Yamhill River, Oreg. (1 lock and dam); Congaree River, S. C. (1 lock and dam); Little Kanawha River, W. Va. (5 locks and dams).

(b) If any of the project structures and appurtenances (including real property) listed in subsection (a) will be rendered inoperable by flooding caused by current construction by the United States, disposal of such structures and appurtenances under this act shall be deferred so long as local interests defray the costs of maintenance and operation of such project structures and appurtenances (including real property) under arrangements satisfactory to the Secretary of the Army.

SEC. 2. There is hereby authorized to be expended from appropriations heretofore or hereafter made for civil functions administered by the Department of the Army, such funds as may be necessary to restore drainage and otherwise prepare the project structures for abandonment with a minimum of adverse effect on adjacent areas.

SEC. 3. The Administrator of General Services is hereby authorized to transfer or to convey by quitclaim deed to local interests defraying the cost (in whole or in part) of maintaining and operating such project structures and appurtenances (including real property), States, political subdivisions thereof, adjacent property owners, or others, all or any part of the right, title, and interest of the United States in and to such property upon such terms and conditions as the Administrator may determine to be in the public interest, after making allowance for any capital investment which local interests maintaining and operating such project structures and appurtenances (including real property) may have made, regardless of any other provision of law: *Provided, however*, That preference shall be given first, to local interests who, on the date of enactment of this act, are defraying the cost (in whole or in part) of maintaining and operating such project structures and appurtenances (including real property), and second, to State or local governmental agencies, to acquire property not transferred to other Federal agencies. Providing that the provisions of this act, relating to the Palestine Dam (lock and dam No. 4) on the Little Kanawha River in West Virginia, be inoperative until such time as the Federal Government has reimbursed the State of West Virginia through its conservation commission, the sum of $20,000 to cover the cost of damage to the State-owned fish hatchery near Palestine, which was damaged by the failure of the Government to keep the dam in proper repair.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ENFORCEMENT OF CUSTOMS AND IMMIGRATION LAWS

The Clerk called the bill (H. R. 6769) to amend the act entitled "An act to provide better facilities for the enforcement of the customs and immigration laws," to increase the amounts authorized to be expended.

There being no objection, the Clerk read the bill, as follows:

Be it enacted, etc., That the act of June 26, 1930 (46 Stat. 817), as amended by the act of October 10, 1940 (54 Stat. 1091), and by the act of September 26, 1951 (65 Stat. 336; U. S. C., 1952 edition, title 19, sec. 68), is further amended by striking from the proviso the figures "$15,000" and $30,000," and substituting therefor the figures "$30,000" and "$60,000," respectively.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

The SPEAKER. That concludes the list of bills eligible to be called on the Consent Calendar.

AMENDMENT OF VETERANS REGULATIONS

Mr. THORNBERRY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 365 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 1614) to amend the Veterans Regulations to provide an increased statutory rate of compensation for veterans suffering the loss or loss of use of an eye in combination with the loss or loss of use of a limb. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Veterans' Affairs, the bill

shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. THORNBERRY. Mr. Speaker, this resolution makes in order the consideration of the bill (H. R. 1614) to amend the veterans regulations to provide an increased statutory rate of compensation for veterans suffering the loss or loss of use of an eye in combination with the loss or loss of use of a limb.

Mr. Speaker, I know of no one who is opposed to the rule. I now yield to the gentleman from Illinois [Mr. ALLEN].

Mr. ALLEN of Illinois. I have no requests for time, Mr. Speaker.

Mr. THORNBERRY. Mr. Speaker, I yield 7 minutes to the gentleman from Massachusetts [Mr. McCORMACK].

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to extend my remarks and include certain correspondence that I had with Secretary Wilson, and also replies that I received from the Department of Defense relating to the same matter.

The SPEAKER. Is there objection?

There was no objection.

Mr. McCORMACK. Mr. Speaker, I have noted with considerable pleasure that the budget message contains what I consider valuable information concerning the recent action of the Secretary of Defense with reference to integrating the buying, storage, and distribution of food under a single manager, and in this case, the Department of the Army. This means that in connection with all food products, the Department of the Army will procure for and distribute the subsistence items to the other services of the Defense Department.

It has been conservatively estimated that this action, if properly executed, will save the taxpayers at least $250 million per year. While this action was long delayed, nevertheless it is pleasing to those of us who have been following this matter to note that it has finally been put into operation. We hope that it will not be revoked in the future, as happened in the case of medical supplies.

It is the hope of myself and other Members of both branches that this is but the beginning of a much delayed program which can save the taxpayers many hundreds of millions of dollars more.

In 1947, the National Security Act was passed. It was the intention of the Congress that within the provisions of the bill that unification should proceed as rapidly as possible. Certainly, in one field in which unification could proceed with rapidity and as Congress intended was in connection with common supplies and services, and that they should be handled in a way to avoid overlapping, duplication, waste, and unnecessary expenditures. In 1949, Congress amended the act and presumably strengthened it. Administrative action on the strengthening of the 1947 act has been very slow.

It became apparent to those familiar with the Department of Defense activities that very little was being accomplished to bring about economy, particularly in the supply field where many hundreds of millions of dollars were being unnecessarily spent in building up unnecessary inventories, or putting them in overstuffed warehouses, not only in the United States but all over the world.

The so-called Eisenhower-Spaatz agreement between the Departments of the Air Force and the Army intended, as did the basic act, that the Air Force would continue to get common supplies where practicable from the Department of the Army as it has been in the past when the Air Corps was a part of the Army; but with the establishment of a separate and independent Department of the Air, the Air Force began breaking away from the Army in supply matters, in engineering functions and in other spheres of activity. It is only recently that some of the engineering functions have been returning to the United States Corps of Army Engineers, particularly in overseas activities. It is hoped that the complete return will take place in the near future. Unfortunately, instead of unification taking place as intended by the Congress by the 1947 act and amendments thereto, in many respects in administrating the existing law, unification led in some cases to duplication, with operating procedures and costs unnecessarily increased.

In 1951 and 1952 the Bonner committee, the Hébert committee and the Hardy committee investigated this situation and made strong recommendations. I might also say that Senators O'MAHONEY and DOUGLAS were manifesting deep and keen interest in the elimination of unnecessary duplication and cooperated very effectively. As a result, the military appropriation bill for fiscal 1953 carried what is known as the O'Mahoney amendment which called upon the Secretary of Defense to integrate common use service functions as steps to decrease the unnecessary expenditures of the taxpayers money.

Under former Secretary Lovett a single medical supply test had begun at Alameda, Calif.; as a result of which the Department of the Army stored and distributed medical supplies and equipment to the three services on the west coast and in the Pacific, including the Korean theater. The Bonner committee held hearings at Alameda in August of 1952 and found out that the the operation was successful, and that there was every expectation that this policy would spread to all the other medical depots as well as to other common use supplies—food, clothing, petroleum products, general stores, parts, transportation facilities, and other activities.

However, in 1953, certain persons in the Department of Defense who were opposed to a single manager plan in any field undertook steps to wipe out the single manager medical supply test at Alameda, Calif.; and in 1954, this operation was discontinued despite protests from many Members of both branches of the Congress.

In the meantime, the Hoover Commission had reviewed the common supply situation and in connection with that review of this body, the gentleman from California [Mr. HOLIFIELD], and the gentleman from Ohio [Mr. BROWN], played a very important part. That group was of the opinion that the Secretary of Defense should carry out the intent of the O'Mahoney amendment of 1952. Strong recommendations were made by the appropriate task force of the Hoover Commission and were confirmed by the Hoover Commission itself.

I became very much concerned over the fact that the Department of Defense was not cooperating effectively in this important field, and on October 24, 1955, I wrote a letter to the Secretary of Defense inquiring what his intentions were about carrying out the O'Mahoney amendment and the intent of Congress as clearly expressed therein. I pointed out that great savings were possible through such act, and that the money saved would be for the benefit of the taxpayers but could be used in other fields of activities which required urgent consideration, such as health, school construction, highway construction, tax reductions, and other essential activities.

On November 4, 1955, the Secretary of Defense issued directive No. 5160.11 which established the single manager system for subsistence. A press release on November 7, 1955, spoke glowingly of this "new method for the unified supply of common use commercial type items."

While I am gratified at the action taken, I was surprised, as were other Members who recalled that 1 year before the single-management system for medical supplies had been abandoned as being unworkable. Having this in mind, on December 13, 1955, I wrote Secretary Wilson asking him to explain the apparent inconsistency and advise me as to what he had in mind as to the overall plan for all common use items and services on an integrated basis as contemplated by the O'Mahoney amendment of 1952.

While to date I have not as yet received a reply to my letter to the Secretary, I hope that the Secretary now sees the necessity for such a plan, which will be in accordance with the law and which will save the taxpayers many hundreds of millions of dollars, and even into the billions of dollars.

This has been a bipartisan matter, and I wish to give recognition to Members of both branches who have interested themselves in this matter. In particular, I want to compliment the gentleman from North Carolina [Mr. BONNER], the gentleman from Louisiana [Mr. HÉBERT], the gentleman from Virginia [Mr. HARDY], the gentleman from Missouri [Mr. CURTIS], the gentleman from Ohio [Mr. BROWN], as well as Senators O'MAHONEY and DOUGLAS.

I also want to compliment the gentleman from Illinois [Mr. DAWSON], who in more recent months has conducted very excellent hearings, as chairman of the Committee on Government Operations, which hearings were conducted by the subcommittee of which he was also chairman, and which subcommittee

is about to make a report to the full Committee on Government Operations.

The single manager plan for the purchase, storing, and distribution of subsistence is now established and is carried in the budget message as follows:

Responsibility for supplying all food, which costs $1.2 billion annually, has been placed under the Secretary of the Army. A single food-supply system for bulk procurement and storage will eliminate duplicate storage facilities and costly crosshauling.

I am also pleased to note the budget message contains the following:

The three military Departments have also been directed to undertake joint planning and utilization of all the health and medical resources of the Department of Defense.

It should be carried out as quickly as possible.

It is also felt that this same policy, if applied to clothing, transportation, common parts, petroleum products, and other common supplies and services, would result in a tremendous saving to our taxpayers.

DECEMBER 13, 1955.

Hon. CHARLES E. WILSON,
Secretary of Defense,
Department of Defense,
Washington, D. C.

DEAR MR. SECRETARY: I have read with interest and considerable surprise the letter dated November 9, 1955, from the Deputy Assistant Secretary of Defense (S. & L.), Mr. R. C. Lanphier, Jr., in response to my letter of October 24, 1955.

My surprise comes from the fact that I have also reviewed Mr. C. S. Thomas' memorandum of November 13, 1953, Mr. T. P. Pike's communication (Supply and Logistics-DN) of July 27, 1954, to Congressman RIEHLMAN, his letters of September 3, and 20, 1954, to Congressman GEORGE P. MILLER, those of November 18, 1954, and January 4, 1955, to Congresswoman HARDEN, and your press releases No. 1140–54 and 1094–55.

I am sure that a personal review of these and related documents will convince you of the absence of an overall plan and that your office has adopted opposite positions within a year as to the method of handling two categories of common supply items—medical and subsistence for the military services.

It appears to me that the Department of Defense has retrogressed to where it was on July 17, 1951, when your predecessor's directive stated:

"Priority study shall be given to the feasibility of assigning to a single military department the responsibility for procurement, distribution, including depot storage and issue for classes of common items of supply and equipment, and depot maintenance of such equipment. Medical supply items shall be the first category to be studied."

After 4½ years, subsistence has been substituted for medical supply for another testing, and in Mr. Lanphier's words, paraphrasing the 1951 directive:

"We are also currently considering the feasibility of applying this concept to other commodity areas."

It would seem to me that the inevitable result must be that medical supply will either be assigned to Navy which did not support this concept before, or again to the Army. As there will eventually be a number of common supply categories to be assigned, it seems necessary that an integrated plan be developed as contemplated by the O'Mahoney amendment. Please advise me on this point at your earliest convenience.

As indicated in my letter of October 24, 1955 I am sending copies of this and Mr. Lanphier's letter, with related correspondence to those intimately concerned and to the press.

Sincerely yours,

JOHN W. MCCORMACK.

NOVEMBER 9, 1955.

Hon. JOHN W. MCCORMACK,
House of Representatives.

DEAR MR. MCCORMACK: Secretary Wilson has asked me to reply to your letter of October 24, 1955, in which you expressed concern about our administration and management of the military supply system.

While it is true that our surplus-property program generates $2 billion annually, a tremendous quantity of that property consists of materiel which has been made obsolete through technical advances or changes in design; additionally, much of this property represents scrap from military-type items having a high acquisition value which have served their purpose. Usable surplus items are given a thorough screening by the services for possible utilization. During fiscal year 1955, 14.6 percent of all surplus property, based on original cost, was utilized by the services. Over and above this use, the civilian agencies of the Government also used surplus Department of Defense property, after screening by the General Services Administration.

Donations of surplus property are also made to schools and other public institutions through the Department of Health, Education, and Welfare, pursuant to Public Law 152 of the 81st Congress, as amended by Public Law 61 of the 84th Congress. The full potential of the donation program was not fully realized until passage of Public Law 61. This donation program is being vigorously pursued throughout the Department of Defense.

You have also commented on the actions taken by the Department of Defense pursuant to the National Security Act of 1947, as amended, and the O'Mahoney amendment to the Department of Defense Appropriation Act, 1953. You referred to the fact that this subject was raised in a letter to the Secretary of Defense from Congressman CURTIS earlier this year.

After receipt of Congressman CURTIS' letter, the Department of Defense extensively reviewed the entire subject. We recognize that while Congress has expressed its desire that the Secretary of Defense eliminate unnecessary duplication and overlapping and establish a practical, integrated supply system, it has never directed the establishment of any specific type of supply or distribution system. Instead, Congress has specifically entrusted to the discretion of the Secretary of Defense the power to determine the best methods for meeting the supply and distribution problems of the Department of Defense.

The basic Department of Defense implementation of the O'Mahoney amendment is our directive 4000.8. It is upon this directive that our entire program of supply management is based, and it is my express intention to maintain the policies set forth in this directive.

Pursuant to the discretion invested in the Secretary of Defense by Congress to determine the best methods of eliminating unnecessary overlapping and duplication in the supply field and of establishing a practical, integrated supply system, the Alameda medical supply test was established and subsequently discontinued. The establishment of the test and its discontinuance were both acts clearly within the discretion vested in the Secretary of Defense by the Congress.

The basis for this interpretation of the National Security Act of 1947, as amended, and the O'Mahoney amendment is set forth in greater detail in a memorandum to the Secretary of Defense from the General Counsel Wilber M. Brucker of June 20, 1955. A copy of that legal memorandum is attached for your information.

In proceeding to eliminate unnecessary overlapping and duplication in the supply field, I must bear in mind at all times that our fundamental objective in that field is the establishment of the most effective and economical logistic support for our worldwide military forces. This Department has adopted aggressive measures designed specifically to accomplish this fundamental objective. During the last year Department of Defense directives and instructions have been developed and issued which provide for even greater cross-servicing, interservice supply and positioning of material within and among the military departments.

These policy issuances are representative and indicative of our sincere and continued efforts to implement Department of Defense Directive 4000.8. They have provided common guidelines to the military services to achieve our objectives, and joint implementation of these issuances by the services has been achieved. The Department of Defense and the Nation as a whole have realized measurable benefits of considerable proportion from this singleness of purpose and coordinated support on the part of the services. It will interest you to know that in the areas of interservice supply support and cross-servicing alone, we can point to specific transactions involving approximately $1.4 billion in goods and services interchanged within and among the military departments in fiscal year 1954. I look for an even greater volume of business in interservice supply support and cross-servicing in the future.

You may be further interested to know that in our efforts to eliminate unnecessary overlapping and duplication in the supply management field we have evolved and are putting into action a new concept. This concept was formally adopted in the area of subsistence on November 4, 1955, through the issuance of Department of Defense Directive 5160.11, Single Manager Commodity Assignment for Subsistence. This directive, a copy of which was forwarded to you on November 7, and an additional copy of which is inclosed herewith, assigns to the Secretary of the Army the authority and responsibility of providing for the needs of all the military services, using the facilities and services of the other military departments where necessary and desirable. This assignment encompasses the entire supply field, from research and development through issue or disposal, including cataloging, standardization, requirements determination, procurement, production, inspection, storage, distribution, transportation, and maintenance.

Under this concept, stocks will be distributed through a single system whereby, for each distribution area, one military service, whether Army, Navy, Air Force, or Marine Corps, will administer a single area distribution depot from which all military installations in that area will requisition and receive subsistence. Items will be carried in a stock fund, which the Secretary of the Army will administer and control, from which suppliers will be paid and to which the military services will reimburse on the basis of withdrawals. The Department of the Army will initiate all procurement in this area and authorize local procurement. It will screen all excesses and redistribute as necessary, authorizing property to be declared excess to Department of Defense needs. The Department of the Army's responsibility for distribution is such that back-hauls and cross-hauls as well as duplicate items are eliminated.

We are also currently considering the feasibility of applying this concept to other commodity areas.

I hope that the foregoing discussion will illustrate the efforts which the Department of Defense is making to achieve the most effective and economical logistic support for the military forces. I am sure you will appreciate that objective is not one which may be reached without profound and detailed study of possible methods of attaining the desired goal.

On behalf of Secretary Wilson, I should like to thank you very sincerely for your advocacy of a strong national defense. The strengthening in every possible way of our national defense and our basic institutions will, in my opinion, be promoted by our continued progress in the logistics field. I have appreciated this opportunity to acquaint you more fully with our program.

Sincerely yours,

R. C. LANPHIER, Jr.,
Deputy Assistant Secretary of Defense (Supply and Logistics).

[News release, Department of Defense, Office of Public Information, Washington, D. C., November 7, 1955]

NEW UNIFIED FOOD SUPPLY SYSTEM ANNOUNCED BY DEFENSE DEPARTMENT

A new method for the unified supply of common-use commercial-type items to all military services was announced today by Mr. Reuben B. Robertson, Jr., Deputy Secretary of Defense.

This system, developed over the past year in the Office of the Secretary of Defense, is called the single manager commodity assignment, and places all supply responsibilities for a given commodity under a single military department which will supply the needs of all services. "This system is a product of our never-ending search for improved efficiency and economy," Mr. Robertson said, "and I am sure the American public will be gratified to learn of unification progress in this area. Although the broad recommendations made by the Hoover Commission in this area are still under review in the Department of Defense, the adoption of this single manager supply system for subsistence items is in line with some of the objectives of the Hoover Commission reports."

Mr. Robertson also stated in his announcement that the system was being applied immediately to all Army, Navy, Air Force, and Marine depot stocks of food held in the United States, with the Secretary of the Army designated as single manager, and that other commodity areas were being studied for future application.

The single manager commodity assignment is a process whereby the Secretary of one military department, designated by the Secretary of Defense, is made responsible for the performance of all supply management functions related to a specified commodity, for all military services. This assignment encompasses the entire supply field, from research and development through issue or disposal, including cataloging, standardization, requirements determination, procurement, production, inspection, storage, distribution, transportation, and maintenance.

Its purpose is to reduce inventories and eliminate unnecessary duplication and overlapping of functions within the Department of Defense supply system, provide the highest degree of effectiveness in supply at the least possible cost, and to provide a single management control of wholesale stocks of a single commodity category or type for the Department of Defense as a whole.

The Secretary of a military department is assigned to act as single manager for a particular commodity. All of the other military services then provide him with basic data for computation of requirements. Ownership of all service wholesale depot stocks in the United States is then transferred to the single manager. After developing all requirements and matching them against what he now owns to meet total demand, the single manager then initiates procurement for the net deficit. He will carry all stocks in a revolving fund, and as the services require stock, they will purchase from him.

Once given the assignment, the single manager then surveys the location of military stations within a geographical area and selects the most desirably located depot to support all services in the area. This selection is done without regard to the service which owns the depot. That depot then stores the depot stocks for the single manager, acting as his agent, and issues as required to all services. It is possible for the Army to be the single manager for a commodity category and to have stocks in Army, Navy, Air Force, and Marine Corps depots. Only one depot will serve a given area, however, and the stocks would belong to the single manager, in this case the Army.

As noted above, the authorities given the single manager are broad and cover the complete gamut of introduction of items into the system through their consumption. The single manager will direct and coordinate all research and development, standardization, and cataloging activities. He will be the only buyer of depot stock items, and he will be the only seller. As well, he will designate those items to be bought locally. Since he has knowledge of all assets, there should be no concurrent buying and selling, and he is in a position to shift depot stocks to meet varying area needs. Greatest possible use of stocks is assured, and only that which is truly surplus will find its way to disposal, since only he can determine that it is no longer required.

Operation of this system will provide a responsible single management for requirements and distribution, purchase, storage space, inventory records, and standardization. It eliminates duplicate pipelines, duplicate depot storage facilities, and costly cross and back hauling; makes interservice supply automatic; provides for effective rotation of mobilization reserves; and insures effective utilization of stocks, services, and facilities.

The evolution of the single manager system has been progressive. It is also the result of considerable study of several existing joint service operations, and avails itself of the lessons learned from these.

Joint-service operations, because of their very basic construction, permit no single ownership of stocks. As a consequence, very costly equity accounts have to be maintained to show what belongs to each service. The joint agency is largely a service organization, able to provide for certain functional tasks such as procurement and contract administration. The agency can only perform at the call of the stockowner, and cannot provide single direction since there is no single head. This is not the case in the single-manager plan. There is only one wholesale stock, effectively positioned, and centrally controlled, yet designed for the total Department of Defense requirement, with the single manager reporting only to the Secretary of Defense.

Deputy Secretary of Defense Robertson stated, "I consider this new unified approach to Department of Defense supply management another significant management improvement for obtaining more defense per dollar."

CONGRESS OF THE UNITED STATES,
OFFICE OF THE MAJORITY LEADER,
Washington, D. C., October 24, 1955.

Hon. CHARLES E. WILSON,
Secretary of Defense, Department of Defense, Washington, D. C.

DEAR MR. SECRETARY: I have read with great interest and appreciation your memorandum of September 2, 1955, to the three service Secretaries and Assistant Secretary of Defense (M. & P.) on the subject of "Implementation of DOD Directives."

The first paragraph of the memorandum states:

"I am increasingly concerned over the growing criticism in the Congress and elsewhere of the lack of consistency in the manner in which the military departments carry out the purpose and intent of DOD directives. Some of the Hoover Commission reports are quite explicit on this point."

Your concern with respect to DOD directives is similar to mine with respect also to congressional statutes. I am sure we both agree that our constitutional form of government is in jeopardy whenever the executive agencies, regardless of motives, good intentions, or even greater wisdom in a given instance, choose the laws they will execute and those they will disregard.

My growing concern was further aroused a year ago when the DOD decided to bypass the clear intent of law with respect to the transfer of surplus property needed by our grossly inadequate educational and health institutions.

More recently, the issue is raised again by the decision of the Comptroller General of the United States with respect to the important SAGE program.

One of the most disturbing examples is that involving the so-called O'Mahoney amendment to the DOD Appropriations Act, 1953. The amendment, which is permanent law and, as such, is actually an amendment to the National Security Act (Unification Act) of 1947, calls upon the Secretary of Defense to develop an "Integrated Supply System" and the Senate Report No. 1861 spells the intent out in detail.

It should be stated that the O'Mahoney amendment was predicated to a great extent upon comprehensive hearings and reports of the Bonner and Hardy subcommittees of the House and the Preparedness Subcommittee of the Senate which pointed out the excessive overlapping, duplication, and waste within and among the services with respect to common supply and related matters.

DOD Directive 4000.8 of November 19, 1952 constituted a good attempt to carry out the statute although it was limited to an intraservice basis generally rather than the intended integrated interservice basis. The directive did add some strength to the Alameda medical supply test which had been directed a year prior by the Secretary's order of July 17, 1951. Unfortunately, the service pressure became too great and the Alameda operation was broken up last Spring though it was generally acclaimed a success.

The whole story of the Alameda test was detailed to you in Congressman THOMAS B. CURTIS' 13-page letter of January 19, 1955. Certain of the Hoover reports confirm the conclusions of the congressional reports and enactments as to the need for more integration among the military services with respect to common supplies and services and as to the necessity of following applicable laws and regulations.

As I view the situation, Mr. Secretary, not only is the basic problem of constitutional government involved but many other issues of real concern to the American people. I will comment briefly on some of them.

The facts are conclusive that our educational facilities—though basic to defense—need great assistance. Large sums are required for the development and conservation of basic natural resources. Billions are needed for highways and public works. Costly outlays for fundamental and applied research are "a must" if we are to keep ahead in the technological race. Our health institutions are not in the state we desire. Oppressive taxes should be reduced, especially for the low-income groups. The budget requires balancing in its turn and the ever-growing national debt reduced.

As you know, I am, and have always been an advocate for a strong national defense upon which to support a foreign policy. It is also essential to our survival. I will not be beguiled into laxity by the palliative tactics now emanating from the Kremlin. No one dares be. I believe that our defenses and basic institutions should be strengthened in every possible way for the long pull ahead.

But the evidence is conclusive that the overlapping, duplication, and waste is of such magnitude in and among the military services as to make possible enormous savings, with no loss of efficiency or military effectiveness, and thus release funds badly needed for the objectives listed above.

Presently, the stock funds for essentially common supply items in the four services (Army, Navy, Air Force, and Marines) have an unallotted cash reserve of $45,300,000; cash of $1,870,500,000 and inventories of $8,103,000,000 or a total of $10,018,800,000. This total, large though it is, is only a fractional part of the total personal property inventories in the services. Competent testimony before congressional committees points to the long supply in many of these items, to their duplication and triplication in the separate depot systems embracing millions of square feet of valuable space.

The current surplus property disposal program which involves an estimated $2 billion annually, plainly shows that there is not integration among the services as to procurement, storage, utilization, or disposal of the numerous items. On the contrary, the daily lists of proposed purchases and sales which come to my attention show the evident need for common control and management of these common items.

I should appreciate learning of any plans underway which are designed to carry out the full intent of the O'Mahoney amendment.

It is my purpose to furnish copies of this letter and your reply to Members of the Congress in both Houses who are intimately concerned with this matter, and to keep the public advised.

Sincerely yours,

JOHN W. MCCORMACK.

[Press release, Department of Defense, Office of Public Information, Washington, D. C., November 23, 1954]

ARMY ALAMEDA MEDICAL DEPOT TRANSFERS TO NAVY; MEDICAL TEST CEASES

The proposed transfer of facilities at the Alameda Medical Depot from the Army to the Navy, pending congressional approval by the Armed Services Committees, was announced today by the Department of Defense. Arrangements for the transfer are under way, Thomas P. Pike, Assistant Secretary of Defense (Supply and Logistics), said, and it is planned that it will be accomplished prior to July 1, 1955.

The depot contains 1,178,000 square feet of warehouse space, and existing medical supplies in storage will be issued or transferred prior to the transfer of the depot. The Navy will utilize the installation to augment the storage facilities of the adjoining Naval Air Station. It is not now known how many of the civilian employees currently employed by Army will be required by the Navy. However, in accordance with civil-service regulations, civilian employees will be offered opportunities for employment by the Army at Sharpe General Depot and by the Navy at Alameda, as required.

Mr. Pike also announced the discontinuance of the medical supply test, which has been in operation at the Army's Alameda Medical Depot, Alameda, Calif., since April 1952. The test was an experiment to determine the feasibility of distributing and storing medical supplies for all three Military Departments through one regional distribution point for the support of the services in that area.

The test is being discontinued, Mr. Pike stated, only after a thorough analysis and evaluation of the factors involved in this military supply support area. Its results, he said, have materially assisted the Department of Defense to develop a comprehensive program for eliminating unnecessary duplication and overlapping in supply and stock management practices of the military departments.

Experience gained from the Alameda medical supply test, Mr. Pike said, has clearly demonstrated the efficiency and economy attendant with the utilization of military items of supply on a cross-servicing basis by all military services, regardless of the ownership of the stock. This principle forms an important part of the Department of Defense program.

The Alameda cold-storage plant, of the Oakland Quartermaster Market Center, and the 6022d ASU, Central Dental Laboratory, will continue as tenants of the Navy at the installation as will the 49th Infantry Division, National Guard.

Common storage and issue functions performed at the Alameda Depot have proven satisfactory to the Army and Air Force, and are being transferred intact to the Army's Sharpe General Depot, Lathrop, Calif. Factors and conditions set up for the test made the operation uneconomical for the Navy. The Navy's storage and issue functions and the partial stock of medical supplies involved will be returned to the Naval Supply Center at Oakland, Calif.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield?

Mr. MCCORMACK. Yes; I yield to my friend.

Mr. CURTIS of Missouri. I want to commend the gentleman for bringing this to the attention of the House, and join in his expressions and views about this matter. It has been a bipartisan approach, and I, too, am very hopeful that we will have further economies exercised in this field. We all think there will be a great deal more defense per dollar on account of it. Again I want to commend the gentleman from Massachusetts for his support of this measure.

Mr. MCCORMACK. I thank the gentleman. I cannot too strongly compliment my friend from Missouri, because he has worked very hard on this as have other members of this subcommittee.

Only in recent months a subcommittee of the Committee on Government Operations, of which the gentleman from Illinois is chairman, has made a study and is about ready to make a report. We are having a meeting tomorrow.

Mr. BONNER. Mr. Speaker, will the gentleman yield?

Mr. MCCORMACK. I yield to the gentleman from North Carolina.

Mr. BONNER. I am delighted to see the gentleman supporting this measure because I happen to be chairman of the subcommittee that worked on this matter in the field and had set up at Alameda, Calif., two posts of the medical depot which proved conclusively the feasibility of supplying all branches of the service from one depot. Following the Korean war the armed services have split it up into 3 different posts, making 3 different costs of the matter where only 1 cost should take care of it and did take care of it during the Korean war.

Mr. MCCORMACK. The gentleman is absolutely correct.

So we have a continuous history of prodding by Members of Congress for this proposition the gentleman from North Carolina referred to, and it was checked and proved in practice. The gentleman is correct. I hope they will come back to a single management plan in the procurement, warehousing, and disposition of medical supplies. We are aware of what is taking place and we want to congratulate the officials of the Defense Department responsible for bringing it about, but we want them to realize that we are watching, that we think it should be extended to other fields of common supply and common service.

Mr. MCCORMACK. Mr. Speaker, I ask unanimous consent to include extraneous matter in my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. THORNBERRY. Mr. Speaker, I yield 5 minutes to the gentleman from Texas [Mr. MAHON].

Mr. MAHON. Mr. Speaker, inasmuch as the annual budget message has just been read to the House, I think it appropriate to call attention to the staggering and alarming expenditures of the Federal Government.

I have before me a copy of the Federal Budget in Brief from the office of the Bureau of the Budget for the current fiscal year. Page 52 contains some very interesting and illuminating statistics. It will be noted that the Federal budget has not been balanced since the fiscal year 1951, the fiscal year ending June 30, 1951. During that fiscal year, there was a Federal surplus of $3½ billion.

The new budget for the fiscal year 1957, the budget for the period beginning July 1, 1956, and ending June 30, 1957, the one which has been read to us today, calls for an expenditure in fiscal 1957 of $65,865,000,000. This is a shocking sum. In looking at the Budget in Brief, which is before me, I observe that during the fiscal year 1950, Federal expenditures were only $39,606,000,000. For fiscal year 1951, which included 1 year of the Korean war, the expenditures were $44,058,000,000. For the fiscal year 1952, the second year of the Korean war, Federal expenditures were $65,410,000,000. The point is that during the second year of the Korean war, Federal spending was less than is proposed by the administration for the fiscal year which begins on July 1.

During the fiscal year 1953, one half of which was during the Democratic administration, and one half of which was under the Republican administration, Federal spending went to $74,274,000,000. The Korean war ended and Government spending receded.

I do not discount the fact that we are living in a dangerous world, and that heavy defense spending is necessary, but I do think it worthy of note that such disappointing progress has been made by this administration in reducing Government spending. I hope that the Congress during this session, will be able to substantially trim the budget which has been submitted to us today, and that

some degree of economy may be achieved.

According to page 21 of the budget message which has been presented to us today, Government spending in fiscal 1955 was $64,570,000,000, and the estimated figure for fiscal 1956, the current fiscal year, is $64,270,000,000. The proposed budget for fiscal 1957 is a step in the wrong direction insofar as reducing Government costs is concerned.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. Back 3 years ago, when the present administration took over, the gentleman will remember the country was told that under Democratic administrations billions of dollars were appropriated unnecessarily. The Republicans at that time made some mystical argument that appropriations for pipeline purposes were unnecessary, leaving the impression that the entire amount, involving, as I remember, in foreign aid over $9 billion, was wasted. We know that during the last 3 years they have drawn upon the appropriations made for pipeline purposes, and obligated and used those funds for other purposes. That is the reason that now, they have to come here and ask for $2 billion additional. The pipeline is down to about $4 billion, which is dangerous. That is why they have to come in and ask for $2 billion more for foreign aid.

Mr. MAHON. I would like to point out to the gentleman that, regardless of the pipeline to which the gentleman refers, in actual expenditures out of the Treasury the proposed expenditures for the coming year are greater than the expenditures for the year 1952, the second year of the Korean war. We are supposedly in a peacetime period at this time.

Mr. McCORMACK. I understand that, and I appreciate the point very much; but I think attention should also be called to the fact that the pipeline arguments of the past 3 years were fallacious. Time has now passed and caught up with them, and they have to come to the Congress to get additional appropriations to replenish the pipeline money which has been obligated.

Mr. MAHON. The gentleman is correct. Pipeline reductions were claimed to be savings. They were bookkeeping transactions, not economies.

I would like to restate what I have said. The administration's new spending budget is $26 billion greater than the budget of 1950, a pre-Korean war budget. It is $21 billion above 1951 expenditures, which includes the first year of the Korean war. It is $400 million above the 1952 expenditures, the second year of the Korean war.

Mr. THORNBERRY. Mr. Speaker, I yield 2 minutes to the gentleman from Texas [Mr. PATMAN].

BRADLEY VETERANS COMMITTEE

Mr. PATMAN. Mr. Speaker, I have a high regard for and great confidence in Gen. Omar Bradley, who has been selected by the President of the United States to head a commission. I was opposed to the commission. I know that General Bradley will do a good job within restrictions and limitations. But I recognize he is carrying out directions from the executive branch of the Government and will be under instructions.

The veterans of the country are apprehensive that the commission will be devastating to their cause. They point out to me in correspondence that General Bradley himself is only here in Washington once every 2 or 3 months, that the staff is doing the work in carrying out the instructions of other people. The veterans are apprehensive that unfair regulations will be issued that they do not know about now and will not have an opportunity to answer before they are issued.

Mr. Speaker, I ask unanimous consent to insert in the RECORD at this point a letter I have written to General Bradley and also a letter I received from certain DAV organizations concerning this commission, and also to include other extraneous matter at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Texas [Mr. PATMAN]?

There was no objection.

LETTER TO GENERAL BRADLEY

TEXARKANA, TEX., *December 15, 1955.*

Gen. OMAR N. BRADLEY,
Chairman, President's Commission on Veterans' Pensions, Executive Office of the President, Washington, D. C.

DEAR GENERAL BRADLEY: I have recently received a number of inquiries from war veterans in my district, asking whether I can be of any assistance to them in seeing that their views are conveyed to the President's Commission on Veterans' Pensions. They are concerned about the forthcoming recommendations of the Commission. They fear that the Commission's recommendations will adversely affect the veterans of World War I, World War II, and the Korean conflict.

The position of my war veteran constituents, General Bradley, is simply this: They agree there is need for careful scrutiny of Government expenditures to make sure that the taxpayers' funds are not wasted, but are spent solely for purposes approved and intended by the Congress. They point out, however, that Congress has provided for such auditing by creating the General Accounting Office. Moreover, they remind me that in its annual consideration of the Federal budget, Congress constantly reviews the various programs and policies of the Federal agencies, including veterans' programs and policies, and may modify or even terminate these programs if it so desires. My constituents have no objection to such procedures; they are in hearty accord with them. They are convinced, however, that certain pressure groups interested in whittling away at particular programs with which they are out of sympathy are, in the guise of promoting studies, actually doing nothing more than lobbying against the programs they oppose. I am also reminded that the veterans' programs are a favorite target of these lobbies and that the studies they are promoting are intended to force public opinion against the veteran.

You are highly respected by all our veterans. Your splendid work in behalf of the veteran as Veterans' Administrator and earlier your advocacy of the GI bill of rights are appreciated widely. Above all, veterans hold you in their esteem, because they know you have a basic human approach to the problems and needs of the veteran. They are placing their trust in you. They hope that under your chairmanship the Commission on Veterans' Pensions will not lose sight of the human aspect in evaluating existing veterans' programs and in making recommendations to the President regarding future veterans' policies and programs.

May I, at this time, take this opportunity to offer a personal observation for your consideration? We have a huge national debt of $280 billion. It is virtually all war debt, incurred to finance the costs of World War I, World War II, postwar defense, and the Korean conflict. We recognize this as a continuing obligation, the price of preserving our political and economic institutions and our freedoms. We make no attempt to repudiate this obligation or to qualify or modify the terms upon which we assumed this debt. As far as I know, we have not set up a commission to evaluate the desirability of continuing to service the war debt. We have not inquired whether the annual interest charge, some $7 billion a year compared with $4.8 billion for veterans' benefits, is too high. We do not conduct field studies to ask the veteran how he feels about the policies of the Secretary of the Treasury and the Federal Open Market Committee and their program for managing the war debt, even though their program has adversely affected the veteran as a taxpayer and as a user of credit.

We do not conduct studies to determine the earnings or the financial characteristics of the various classes of holders of the war debt, in order to "constructively reappraise" the "standards" under which we shall pay them interest on their bond holdings. We do not compare them with the rest of the population in order to ascertain whether or not the interest they receive, in the light of the other Federal programs they derive benefits from, is excesive. I am not proposing that we do this. Yet, this is precisely what is being done to the veteran population by the various task forces and field study groups operating under the President's Commission on Veterans' Pensions.

It is my sincere hope that the Commission will consider this point of view when it evaluates the results of its comprehensive, fact-gathering studies.

Sincerely yours,

WRIGHT PATMAN.

WORK CARRIED OUT PURSUANT TO PRESIDENT'S DIRECTION

PRESIDENT'S COMMISSION ON VETERANS' PENSIONS,
Washington, D. C., December 23, 1955.

Hon. WRIGHT PATMAN,
Texarkana, Tex.

DEAR MR. PATMAN: Receipt is acknowledged of your letter of December 15, 1955, concerning the study of pensions being made by this Commission. Apparently neither you nor the veteran constituents for whom you speak are in favor of such a study.

In reply to your letter I can only say that the Commission was appointed by the President and that the work is being carried out pursuant to his direction. Under these circumstances, it would not be appropriate for me to debate the White House directive in regard to the Commission's objectives or its validity. I can say, however, that our research teams are dedicated to the finding of facts, and the Commission may be counted on to give those findings a most realistic and impartial appraisal.

You may rest assured, however, that your views will be carefully considered by the members of the Commission.

Sincerely yours,

OMAR N. BRADLEY,
General of the Army, Chairman.

JANUARY 6, 1956.

Gen. OMAR N. BRADLEY,
Chairman, President's Commission on Veterans' Pensions, Executive Office of the President,
Washington, D. C.

DEAR GENERAL BRADLEY: Thank you for your letter of December 23, 1955.

Since I wrote you on December 15, the Veterans' Administration has announced that it rejected the principal recommendations of the Hoover Commission. I am impressed by the fact that on 2 occasions and in 2 different administrations, the Hoover Commission has sought to modify or in some way restrict the benefits, which we have obligated ourselves to provide to those, who have served their country. In both cases, the Hoover Commission has failed.

Could you send me copies of the various questionnaires that have been developed for use by the Committee in the study of pensions?

Thanking you for your courtesy, I am

Sincerely yours,

WRIGHT PATMAN.

MORE QUESTIONS ASKED GENERAL BRADLEY

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 16, 1956.

Gen. OMAR N. BRADLEY,
Chairman, President's Commission on Veterans' Pensions, Executive Office of the President, Washington, D. C.

DEAR GENERAL BRADLEY: This will acknowledge receipt of the various questionnaires that have been sent out in connection with the surveys of disabled veterans by the President's Commission on Veterans' Pensions.

Since writing to you on December 23, 1955, I have received disquieting reports from various disabled veterans' organizations concerning the impact of the Commission's studies. The truth is, General Bradley, that in many communities disabled veterans receiving Government payments from the Veterans' Administration are so upset by these questionnaires that they are cutting down on their purchases because they do not know whether their payments are going to be continued.

I frankly am very disturbed about the entire procedure that has been employed in the conduct of this study. For example, I am informed that notices have been carried in some local dailies reportedly to the effect that any veteran who fails to answer the questionnaire relative to his income and financial status will have his compensation check held up thereafter. I am further informed that in one community, there were announcements over the radio approximately in the same vein. I do not know whether these announcements were made pursuant to recommendations or suggestions by your Commission or the Veterans' Administration, but it seems to me that such tactics merely serve to create apprehension among the disabled veterans; and, as a consequence, there have been the unfortunate economic repercussions I mentioned earlier.

Regarding the questionnaires, I wonder whether you could explain the purpose of the survey of veterans conducted by the Bureau of the Census and why certain of the Census Bureau questions were identical with those contained in your disabled veterans' questionnaires? I wonder why it was necessary to have a duplicate expenditure of funds and collect the same information twice? In this connection, I should like to be advised as to the number of veterans who received the Census questionnaire and the number who received the two questionnaires sent out subsequently by your Commission? Is any check being made as to the similarity or conflict in answers given in response to the Census and Commission questionnaire? How did veteran receive the questionnaires? Were they mailed separately, or did veterans receive the commission's questionnaires at the same time they received their VA checks?

Although I was considerably disturbed by the manner in which the disabled veterans' questionnaires was handled, I think the idea behind the special questionnaire sent out by your Commission to selected members of the medical profession disturbed me even more. Ostensibly, the purpose of this survey is "to determine the extent to which the Veterans' Administration schedule for rating disabilities, and the related statutory awards and presumptions are medically valid and equitable." While I make no claim to being either a medical expert or a specialist in devising survey questionnaires, the net impression I had, after carefully reading those questions, was that they were primarily designed to elicit critical answers, which could then be used as a basis for restrictive recommendations. I hope my impression is erroneous.

I know that you are carrying out this veterans' pension study pursuant to the direction of President Eisenhower and I know that both you and the President would not want to do an injustice to our disabled veterans. Unfortunately, the information I have is that the study has adversely affected the morale and well-being of the disabled veterans.

Thank you for every courtesy you have shown in meeting my recent requests for information.

Sincerely yours,

WRIGHT PATMAN.

VETERANS WARNED TO ANSWER QUESTIONNAIRES

DISABLED AMERICAN VETERANS,
BORDERLAND CHAPTER NO. 10,
El Paso, Tex., January 13, 1956.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: Your letter of December 16, 1955 addressed to Gen. Omar N. Bradley, Chairman of the President's Commission on Veteran's Pensions, was presented to us, the members of the Borderland Chapter No. 10, Disabled American Veterans, at our meeting yesterday, January 12. Your action was considered and discussed. By a vote of the organization, I was instructed to transmit to you our compliments and thanks.

Your sources of information are very apparently far-reaching. There are two small items of very recent occurrence which were reported to me and which might be of interest to you, as they are very vitally so to us.

1. Two small notices in the El Paso, Tex., daily newspapers reportedly to the effect that any veteran who fails to answer the Veterans' Administration's questionnaire relative to his income and financial standing will have his compensation check held up thereafter.

2. Two or more announcements over the local El Paso, Tex. radio stations approximately in the same vein. We feel sure, from the knowledge of the situation shown by your letter of December 16, that you will have been apprised of this development before receipt of this letter.

May I add the expression of appreciation of the officers and the executive committee of our local Disabled American Veterans Chapter, as well as my personal thanks and encouragement for your hard-hitting and intelligent action in this and other matters affecting the well-being and morale of the disabled veteran. It will not soon be forgotten by us.

Very respectfully,

BROOKS THOMAS,
Post Judge Advocate.

Mr. THORNBERRY. Mr. Speaker, I move the previous question.

The previous question was ordered.

The resolution was agreed to, and a motion to reconsider was laid on the table.

VETERANS' LEGISLATION

Mr. TRIMBLE. Mr. Speaker, by direction of the Committee on Rules, I offer a resolution (H. Res. 366) and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 1821) to provide that checks for benefits provided by laws administered by the Administrator of Veterans' Affairs may be forwarded to the address in certain cases. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Veterans' Affairs, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. TRIMBLE. Mr. Speaker, I know of no objection to the rule. I yield 30 minutes to the gentleman from Illinois [Mr. ALLEN].

Mr. ALLEN of Illinois. Mr. Speaker, there is no objection to the rule on this side.

Mr. TRIMBLE. Mr. Speaker, I move the previous question.

The previous question was ordered.

The resolution was agreed to, and a motion to reconsider was laid on the table.

VETERANS REGULATIONS

Mr. TEAGUE of Texas. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 1614) to amend the Veterans Regulations to provide an increased statutory rate of compensation for veterans suffering the loss or loss of use of an eye in combination with the loss or loss of use of a limb.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H. R. 1614, with Mr. WRIGHT in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. TEAGUE of Texas. Mr. Chairman, this bill relates entirely to service-connected compensation for disabled veterans.

The existing rates of compensation for war service-connected veterans

ranges from $17 per month for a 10-percent disability, to $181 per month for total disability. In addition, there is provided certain other rates for the more severely disabled veterans which range from $279 to $420.

As a part of the structure of the compensation payable to the more severely disabled group, there is included the rate of $47 per month for certain specified statutory losses—loss or loss of the use of a creative organ, a foot, hand, or blindness.

The law provides that only one such statutory award shall be added to the basic disability finding. For example, a veteran today who is blind in one eye, who has lost an arm, and the use of a creative organ will probably be rated at 80 percent disabled. This would provide him with a basic compensation rate of $145 per month plus $47 a month for one of the statutory losses cited in the example. Under the provisions of this bill, H. R. 1614 the veteran would receive $145 for the 80 percent disability plus $47 each for each statutory loss, to make a total compensation of $286.

The additions of $47 per month for each such loss would in no event exceed the overall ceiling of $420 a month.

The Veterans' Administration has advised the committee it does not have any available data on which to base an estimate of the cost of H. R. 1614.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. TEAGUE of Texas. I yield to the gentleman from Texas.

Mr. PATMAN. The Bradley Commission has been appointed and is functioning. Is that Commission duplicating the work of the distinguished gentleman from Texas as chairman of the Committee on Veterans' Affairs of the House? Is it doing the same work or practically the same work, or is it making investigations that the gentleman's committee has already made or is making?

Mr. TEAGUE of Texas. There is no question that the work of the Bradley Commission does, to a great extent, duplicate the work of our committee. I might say to the gentleman that there is a great amount of work going on in our committee, and I am sure the Bradley Commission will be covering the same field. However, we expect to proceed and complete our investigations because whatever work is done, if it involves necessary legislation, it must come back to the Committee on Veterans' Affairs.

Mr. PATMAN. Is it not a fact that this is the third time the Executive has appointed commissions or committees to go into veterans' matters? The first time it was under another President, through the Hoover Commission. The second time it was under the present administration through the Hoover Commission, and now the third time, under the same administration, they are going into the same matters involving veterans?

Mr. TEAGUE of Texas. That is correct.

Mr. PATMAN. And the Veterans' Administration has turned down the recommendations of the Hoover Commission not only the first time but the second time as well. This new commission is going into the same matters.

Mr. TEAGUE of Texas. The Veterans' Administration turned down the majority of the Hoover Commission's recommendations, as did the American Legion and other veterans' groups.

Mr. PATMAN. Mr. Chairman, may I invite the gentleman's attention to the fact that the Bradley Commission has sent out apparently a lot of copies of questionnaires for veterans to answer. There are a great many questions in them. I am told by the Disabled Veterans' organization in El Paso, Tex., that last week the daily newspapers in that city carried articles to the effect that if these questionnaires were not filled out and returned, the veteran would not receive any compensation check in the future; that is, they had to answer these questionnaires. Furthermore, the same information was broadcast over the radio in El Paso, that unless these questionnaires were filled out and sent in to the Bradley Commission, the Veterans' Administration would cut off compensation checks.

Mr. TEAGUE of Texas. The Committee on Veterans' Affairs of the House has received some of that same information. Of course, it is most unfortunate because I am sure everyone knows that the veterans do not have to answer these questionnaires and that their compensation checks or pensions will not be cut off if they do not answer the questionnaires.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. TEAGUE of Texas. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. I should like to add my word of support of this bill and of another bill, which the gentleman has coming up shortly. My recollection is that the entire membership of the Committee on Veterans' Affairs was strongly in favor of both of these bills, considered them urgently needed to correct some inequities and deficiencies. I certainly think there is every justification for their passage.

Mrs. ROGERS of Massachusetts. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I heartily endorse this bill. It came out of our committee unanimously. Other Members had similar bills in past years and in this year.

I should like to point out the case of a blind man that I heard of recently. He has arthritis in both hands. His hands are the only "eyes" he has to see. This is clearly an example of why this bill should be passed, and I am sure it will pass unanimously.

I would like to say that the Veterans' Administration, in view of the pressure under which they have been working during many years, is using Gestapo methods to frighten veterans, threatening that they will take away their compensation if they do not file these questionnaires in time, or if certain nonservice-connected veterans' questionnaires are not returned in time. I believe they and their dependents do not receive notices that if the income limitation is not filed in time, their pension will be taken away retroactively.

It is very important to stop some of the investigations. Sometimes as many as 5 or 6 different groups are investigating the Veterans' Administration at one time. These investigations have been going on for many years.

Mr. Chairman, I yield such time as he may desire to the gentleman from Indiana [Mr. ADAIR], the ranking Republican member of our committee.

Mr. ADAIR. Mr. Chairman, I have nothing to add except to say, as those who preceded me have already said, that this proposed legislation is good and meritorious. It has been carefully considered. It is quite clear in its terms and, I think, should be acted upon favorably.

Mrs. ROGERS of Massachusetts. Mr. Chairman, I yield 5 minutes to the gentleman from Ohio [Mr. Bow].

Mr. BOW. Mr. Chairman, I ask unanimous consent to proceed out of order.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. BOW. Mr. Chairman, I have been impressed today by statements that have been made on the floor in reference to the President's budget message. It was interesting to hear the distinguished gentleman from Missouri [Mr. CANNON], who is chairman of the Committee on Appropriations, and the distinguished gentleman from Texas [Mr. MAHON], who is the ranking majority member of the Committee on Appropriations, take exception to this budget and talk about its being too high.

In the last 20 years budgets have increased and increased. Today this Nation is faced with a national debt of some $280 billions, on which we are now paying interest amounting to about $7 billions annually.

It is not necessary for me to say it, but history itself will show who has been in control of the budgets and the finances of this Nation during the period of time that great deficits have been piling up, during the period of time that the $280 billions of debt have been accumulated, and during the period of time they were paying $7 billions of interest. During that time the administration of the party of the gentlemen who have spoken was in power, and they controlled the Appropriations Committee except during the 2 years of the Republican 80th Congress when we balanced the budget.

I am sure the Nation will be delighted to find that the chairman of the Appropriations Committee and the ranking majority member of the Appropriations Committee have come on this floor today talking economy. I hope they will not only talk economy but that in the future their votes will be for economy, for the distinguished gentlemen who have made these speeches here today have supported much of the legislation that has created these great deficits for us.

There is one thing they overlooked in their comments on this budget, that on the very first page there is something new, because when we look at the item of budget surplus or deficit, for the first time in years, in fact, since the Republican 80th Congress, we find that instead of the minus mark in front of the totals here we finally have the plus sign in-

dicating a surplus of $200 millions in 1956 and a plus sign indicating a surplus of $400 millions in 1957.

This budget balance and this expected surplus would never have materialized under the spending program of the previous administration.

Just 3 years ago that previous administration, which these gentlemen supported, asked us to provide $13.6 billion more than is proposed today. In 3 years our new administration has made a 20-percent cut in Federal spending. That is no mean achievement.

Let me recall to you that within a few weeks of his inauguration President Eisenhower undertook extensive revisions in the Truman budget. During the late winter and early spring he recommended reduction of nearly $10 billion in Mr. Truman's budget. Spurred by his example, Congress found opportunities to reduce it an additional $5 billion. In the first few months of this administration the American taxpayer was saved some $14 billion from the amounts that would have been spent under the previous administration program. This is, in fact, the third successive annual budget reduction proposed by Mr. Eisenhower.

It seems to me that it comes with ill grace for representatives of the greatest spenders in American history to criticize this budget as being too high.

If they are sincere in what they have said, they will examine this budget and help us to find some place further to reduce it. Then, perhaps, at long last we will begin to pay on this great deficit.

However, may I remind you that there is one place where the Democratic Party pretty much makes up a budget. The legislative branch happens to be under the control of the Democratic Party.

I point this out to you: In 1955 the appropriation for the operation of the legislative branch of the Government was $65 million. In 1956 it was $98 million, but in the estimate for 1957 the legislative budget is $123 million. So in this area in which the Democratic leadership has exclusive control in setting up a budget, there is a very large increase.

I am not complaining if the gentlemen have suddenly experienced a conversion or transformation and have joined the ranks of those of us who for 5, 10, or 20 years have been preaching economy. I want to welcome them into our ranks with open arms.

No doubt there are places in this budget where further reductions can be made. I think I know a few of them.

All of us and all Americans should be grateful for an administration that has done its level best to cut expenses. I think we should recognize that in so large and complex an organization as this Federal Government, any administration, no matter how earnestly it strives to stop waste, may not be able to eliminate all of the unnecessary expenditures from its budget, but it must continue to try.

The important thing, and the hopeful thing, is that we have here a budget in balance. We have here an opportunity to begin the reduction of our terrific national debt. And we should all approach the weeks ahead with the earnest desire to cooperate with the administration to achieve that balance and to build up the largest possible surplus for debt reduction or tax relief.

Mr. ADAIR. Mr. Chairman, I yield such time as he may require to the gentleman from California [Mr. TEAGUE].

Mr. TEAGUE of California. Mr. Chairman, I want to associate myself with the remarks of the members of the House Committee on Veterans' Affairs who have spoken in behalf of the bill, H. R. 1614. The bill is entirely meritorious and merely provides for a well deserved increase in compensation for those veterans who unquestionably are seriously disabled as a result of their efforts on our behalf in defending our country.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted, etc., That subparagraph (k) of paragraph II, part I, Veterans Regulation No. 1 (a), as amended, is hereby amended to read as follows:

"(k) If the disabled person, as the result of service-incurred disability, has suffered the anatomical loss or loss of use of a creative organ, or one foot, or one hand, or blindness of one eye, having only light perception, the rate of compensation therefor shall be $47 per month for each such loss or loss of use independent of any other compensation provided in part I, paragraph II, subparagraphs (a) to (j); and in the event of anatomical loss or loss of use of a creative organ, or one foot, or one hand or blindness of one eye, having only light perception, in addition to the requirement for any of the rates specified in subparagraphs (l) to (n), inclusive, of part I, paragraph II, the rate of compensation shall be increased by $47 per month for each such loss or loss of use, but in no event to exceed $420 per month."

SEC. 2. Any increased compensation because of a combination of blindness of one eye with another disability, as herein authorized, shall be effective as of the first day of the first month, following this enactment.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. COOPER) having resumed the chair, Mr. WRIGHT, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H. R. 1614) to amend the veterans' regulations to provide an increased statutory rate of compensation for veterans suffering the loss or loss of use of an eye in combination with the loss or loss of use of a limb, pursuant to House Resolution 365, he reported the bill back to the House.

The SPEAKER pro tempore. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER pro tempore. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill just passed and on the next bill from the Committee on Veterans' Affairs, which is to be taken up now.

The SPEAKER pro tempore. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

FORWARDING VETERANS' BENEFIT CHECKS IN CERTAIN CASES

Mr. TEAGUE of Texas. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 1821) to provide that checks for benefits provided by laws administered by the Administrator of Veterans' Affairs may be forwarded to the addressee in certain cases.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas [Mr. TEAGUE].

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H. R. 1821, with Mr. WRIGHT in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Texas [Mr. TEAGUE] will be recognized for 30 minutes, and the gentlewoman from Massachusetts [Mrs. ROGERS] will be recognized for 30 minutes.

The Chair now recognizes the gentleman from Texas [Mr. TEAGUE].

Mr. TEAGUE of Texas. Mr. Chairman, the purpose of this bill is to permit the forwarding of Veterans' Administration checks for compensation, pension, insurance, or other allowances provided by laws administered by the Veterans' Administration to the addressee.

The existing law provides that the Post Office Department must return to the Veterans' Administration such checks where the payee has moved or where the payee is a widow and the person delivering the mail has knowledge that the widow has remarried. The Post Office Department is thus prevented from forwarding Veterans' Administration checks even though a regular change of address has been filed at the post office.

This is in sharp distinction to checks payable for service-connected benefits in that checks of this type may be forwarded to the addressee if he or she has moved or filed a regular change of address notice. Provision is made for the postmaster to notify the sending agency or if the addressee is deceased to return the letter with the date of death, if known.

Inasmuch as all checks drawn on the Treasury of the United States are negotiable instruments, it is difficult to see why such a sharp distinction should be drawn.

The Acting Secretary of the Treasury, under date of December 3, 1954, advised that the enactment of the proposed bill might result in a reduction of the workload of handling returned checks. He cited certain disadvantages at the same time. In conclusion, he pointed out that—

> It does not appear that the net effect on the Treasury of the enactment of the bill would be significant in any important degree.

In view of the fact that the Treasury would appear to be the agency most vitally concerned with this question, that the objections of the other administrative agencies could be somewhat discounted.

The enactment of this proposal would not require any additional appropriation and it is possible that considerable savings might be accomplished by reducing workloads in both the Veterans' Administration and the Treasury.

I yield such time as he may desire to the author of this bill, the gentleman from Florida [Mr. MATTHEWS].

Mr. MATTHEWS. Mr. Chairman, first of all, may I express my appreciation to the House Committee on Veterans' Affairs, for their interest in my bill, H. R. 1821. I am grateful epecially to the distinguished chairman and the ranking minority member. Similar bills have been introduced by Members of the House.

This bill provides that checks for benefits provided by laws administered by the Administrator of Veterans' Affairs may be forwarded to the addressee in certain cases. During my service as a member of the House Committee on Veterans' Affairs of the 83d Congress, I became familiar with a number of problems encountered by our veterans and their dependents. One problem which came to my attention was the delay encountered by veterans and their dependents when a check would come to an address from which they had recently removed, with their new address not having yet been made effective on the rolls of the Veterans' Administration or the Treasury Department. Under existing law, the Post Office Department must return to the Veterans' Administration checks for pension, compensation, insurance, or other allowances or benefits administered by the Veterans' Administration where the payee has moved or the payee is a widow believed by the person delivering the mail to have remarried unless the mail is addressed in the name which the widow acquired by remarriage. The Post Office Department cannot forward the check under any circumstances, even though a regular change of address has been filed at the post office.

In checking into the background and history of the existing law which prohibits forwarding of veterans' checks, I discovered that the principal reason for its enactment appeared to be to prevent abuses which might well result from sending checks abroad after the war. Many of us will recall that immediately after World War II, thousands of American veterans remained overseas after their discharge either to secure employment or to enroll as students in foreign schools and colleges under the GI bill. No doubt this safeguard against forwarding veterans' checks was necessary and proper at that time in view of the different languages and postal systems involved and the tendency of our overseas veterans to move around frequently. However, this situation no longer exists, in my opinion, and this reasoning should no longer control. Therefore it seems that the one good reason for the prohibition has now abated, while there exists a number of good reasons for changing this law and allowing our veterans and their widows to have their Government checks forwarded the same as other classes of citizens. I respectfully submit that veterans checks should be forwarded to the addressee if he has moved and filed a regular change-of-address notice with his postmaster, and I hope that my bill to accomplish this objective will be approved on the following grounds:

The present situation works a great deal of inconvenience and often hardship on veterans and their widows. A large proportion of the persons who receive these checks obviously depend on such funds for their major means of subsistence. These people live from month to month on the compensation or pension which they receive. When this money is delayed for even a few days, it can mean a very real deprivation for them if they have no other resources on which to depend. If the delay stretches into months, then a near tragic situation can result. I have a great admiration for our Veterans' Administration and I think the loyal employees of this agency are doing a fine job of giving good service to the veterans. However, when an agency is responsible for servicing the claims of hundreds of thousands of veterans, and must distribute many millions of dollars regularly in pensions and compensation, it is inevitable that mistakes and delays will creep in. It has been my experience in Congress that some of my constituents' checks are occasionally delayed or lost even where the veteran has fully complied with the requirements of the Veterans' Administration, and I have been asked by my veteran constituent to contact the agency and try to have the missing check expedited. No doubt all of the Members of the House have had similar requests in their own experience. And even if the check is promptly returned to the Veterans' Administration for readdressing or revouchering, some loss of time is thereby unavoidable.

Under the law now, a veteran may leave a valid forwarding address with his postmaster when he goes on a trip, or is away for the summer, for example. But the postmaster cannot honor the change of address for the veteran's check, even though he can promptly forward all other mail which the veteran may have. The postmaster has to return the check, with resulting delay and inconvenience to the payee and with additional work on the part of the Veterans' Administration in reissuing a new check or remailing the old one when a current address is finally established. If the veteran is away temporarily, this means the whole process must again be repeated when he returns to his permanent home address. Such a law does not seem to conform either to economy or to good sense.

One of the striking features of the present situation is that checks for veterans' benefits appear to be an exception to the general rule of allowing Federal checks to be forwarded under appropriate safeguards. For example, checks for social-security benefits may be forwarded if the addressee has moved and filed a regular change-of-address notice. In fact, the envelopes containing social-security checks bear the following notation:

> Postmaster: Please forward if addressee has moved and filed a regular change-of-address notice. If addressee is deceased, return the letter with date of death, if known.

It is difficult to see why a distinction is drawn between checks going to social-security claimants and those going to veteran claimants. If there is a danger of fraud or deliverance to unauthorized persons in the one case, then the danger must also exist in the other case. Since the Social Security Administration is apparently satisfied with the system which it uses, and has not asked Congress to change the law, we may assume that the system is working in good order. The only possible difference between social-security checks and veterans' checks which occurs to me is that the social-security claimant has usually contributed to the fund from which his checks are paid, while the veteran receives a check for compensation or pension awarded to him by his Government for service in time of national emergency. This difference has no bearing on the problem which we are discussing, and is not relevant.

At this point I would like to emphasize that my proposal does not call for any appropriation of Federal funds. In fact, it would cost the Federal Government nothing and would very likely result in considerable savings through reduced administrative costs in both the Veterans' Administration and the Treasury Department. Up to now I have emphasized the results which my proposal would have in terms of convenience and advantages to the veterans involved. But we must not overlook the advantages to the Government in terms of financial savings, less work, and increased efficiency. It is a pleasure to be able to offer a bill which, in my opinion, would improve the operations of our Government and render better service to our veterans, and yet which does not call for any additional outlay from the United States Treasury.

You will note that H. R. 1821 provides that the envelope or cover of each veterans' check shall have printed on it this notice:

> Postmaster: Please forward if addressee has moved and filed a regular change-of-address notice. If addressee is deceased, return the letter with date of death, if known.

Such a notice would adequately protect the interests of the Government. This is the same notice as now used on

the envelopes for social security and other Government checks.

I am pleased to state that there is considerable support for my proposed legislation. The Veterans of Foreign Wars, at its national convention in Milwaukee last year, passed a resolution in favor of this change in the law. The proposal was earlier approved by the Florida Department of the Veterans of Foreign Wars, and also has the endorsement of the postmasters of Florida. The Treasury Department, one of the major agencies involved, has stated that it would not object to the enactment of my bill in a letter to the chairman of the Committee on Veterans Affairs of the House of Representatives, dated December 3, 1954.

The few objections which have been raised to my bill are vague, uncertain, and problematical. The reasons for its enactment are clear and compelling. Therefore I hope H. R. 1821 will pass unanimously.

Mr. REES of Kansas. Mr. Chairman, will the gentleman yield?

Mr. MATTHEWS. I yield.

Mr. REES of Kansas. Of course, I am supporting the legislation, but I must say I assumed the Veterans' Administration had such authority already. I was under the impression this was a matter that could be handled administratively and that the Veterans' Administration could, if it chose to do so, handle the mailing of these checks in similar manner as applies to social-security checks.

Mr. MATTHEWS. I am glad the distinguished gentleman suggested that. As the chairman of the committee said, this is a small matter. We tried to get it passed on the Consent Calendar. However, it is not true that the Veterans' Administration now has this authority. We must pass an act of Congress to give them that right. I think the reason for that is because immediately after World War II we had thousands of our veterans remain in Europe to get their GI training, and there was a tremendous amount of difficulty in getting the checks to them. But I think that the emergency reason for this rule has now been eliminated, and I am glad we have a chance to give the committee an opportunity to change it.

Mr. REES of Kansas. I am sure there could be no objection to this legislation. I appreciate the gentleman's explanation of it.

Mr. MATTHEWS. I thank the gentleman.

Mr. Chairman, I yield back the balance of my time.

Mrs. ROGERS of Massachusetts. Mr. Chairman, I yield myself such time as I may need.

Mr. Chairman, I heartily endorse the bill. I introduced a similar bill myself last March. I am delighted also that this bill bears the name of the gentleman from Florida, because he was such a valued member of the committee, appreciated by both sides of the aisle when he served on our Committee on Veterans' Affairs.

I am delighted to have the bill go through, because it will facilitate the veterans receiving their checks.

I wish it were possible to have 2 or 3 committees appointed to study ways and means of helping veterans, facilitating their receipt of benefits, instead of devising ways in which they can be stopped and cut. The redtape involved has become a very serious question and very costly. It does not do the veteran any good; in fact, it does him decided harm.

Mr. Chairman, I yield such time as he may desire to the gentleman from Indiana [Mr. ADAIR].

Mr. ADAIR. Mr. Chairman, it seems to me this proposed bill does several good things. In the first place, as author of the bill, the gentleman from Florida [Mr. MATTHEWS] has pointed out, it should expedite the matter of the receipt of checks by some veterans who are entitled to them; thus it should save some time, some worry, and some concern on the part of those who have moved or who for some reason or other connected with mail forwardings are not receiving their checks.

Secondly, I believe it would effect an economy in that there would be time saved in the Veterans' Administration and perhaps among the employees of the Post Office Department due to the fact that they would not have to rehandle this mail.

And thirdly, it ought, in my opinion, to reduce the administrative load in the Veterans' Administration itself, the load which would arise out of readdressing such communications.

It seems to me, therefore, that the arguments are all in favor of this legislation, particularly since certain other agencies of the Federal Government do have similar laws in effect with respect to the forwarding of checks.

Mrs. ROGERS of Massachusetts. Mr. Chairman, I have no further requests for time.

Mr. TEAGUE. Mr. Chairman, I have no requests for time.

The Clerk read the bill, as follows:

Be it enacted, etc., That (a) the first paragraph of section 3 of the act entitled "An act making appropriations for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1913, and for other purposes," approved August 17, 1912, as amended (38 U. S. C., sec. 50), is hereby amended to read as follows:

"SEC. 3. Pensions, compensation, insurance, or other allowances or benefits provided for by laws administered by the Veterans' Administration shall be paid by checks drawn, pursuant to certification by the Administrator of Veterans' Affairs, by the Secretary of the Treasury in such form as to protect the United States against loss, without separate vouchers or receipts, and payable by the Treasurer of the United States, except in any case in which the Administrator of Veterans' Affairs may consider a voucher necessary for the protection of the Government. Such checks shall be transmitted by mail to the payee thereof at his last known address, and if he has moved and filed a regular change of address notice with the Post Office Department, shall be forwarded to him. The envelope or cover of each such check shall bear on the face thereof the following notice: 'Postmaster: Please forward if addressee has moved and filed a regular change-of-address notice. If addressee is deceased, return the letter with date of death, if known'."

(b) The second paragraph of such section 3 is hereby amended by striking out "or removed".

SEC. 2. Sections 4764, 4765, and 4767 of the Revised Statutes of the United States are hereby repealed.

The CHAIRMAN. There being no amendments, under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. WRIGHT, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H. R. 1821) to provide that checks for benefits provided by laws administered by the Administrator of Veterans' Affairs may be forwarded to the addressee in certain cases, pursuant to House Resolution 366, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

IMPORT LIMITATIONS UNDER CERTAIN CIRCUMSTANCES

Mr. WILSON of California. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. WILSON of California. Mr. Speaker, I have joined several of my colleagues in introducing a bill that calls for placing imports under quota limitations under certain specified circumstances.

The experience of the tuna-fishing industry which is heavily concentrated in my district at San Diego, shows clearly the need for a reasonable limit on imports.

Repeated efforts have been made through legislation and under the escape clause of the Trade Agreements Act to bring tuna imports under control, but without success. The result has been that the domestic industry has suffered discouraging reverses while imports of tuna in several forms have risen relentlessly to a point that threatens the very life of the tuna fisheries of the west coast.

Imports come not only in the form of frozen tuna but also in canned form.

As recently as 1950 imports of frozen tuna amounted to only 14.5 percent of the domestic catch. By 1954 this had grown to 38.3 percent and during the first 8 months of 1955 to 72.4 percent. Since 1952 the number of tuna clippers operating out of San Diego declined from 214 to 158. During this same period, by contrast, Japan has built a whole new fleet of long-range long-line tuna-fishing vessels. This is the writing on the wall. Our industry is exposed to a form of competition that is beyond its power to meet, given the American wage and living standard.

Frozen tuna is on the free list. Albacore, which is an important species of tuna, was bound on the free list in the recent Geneva agreement under GATT. The duty on tuna canned in oil was reduced from 45 to 35 percent. The rate on tuna canned in brine was retained at 12½ percent.

This represents not only very unequal tariff treatment of the various tuna products but one that is completely inadequate to meet the import problem.

The imports of canned tuna compete not only with our domestic canners but with domestic catch. Every imported can of tuna means that much less demand for the catch of our own fleet.

What then are the prospects?

They are bleak.

Several years of experience with the problem have convinced me that the most effective way of meeting this problem is to limit imports by means of import quotas. A given share of total consumption could be given over to imports. A ceiling placed against the relentless encroachment on the domestic industry would enable our own producers to look to the future with confidence. They could promote domestic consumption with the knowledge that as it expanded they would benefit from the expansion rather than see it supplied by imports.

The quota bill that I have introduced would not shut out imports or even cut them back sharply, but it would hold them within bounds. I recognize the need of Japan to sell extensively in this country, but I do not for a minute admit that our industry is bound to stand by and allow the domestic market to be taken away from it. The principal advantage of those who supply these imports after all comes from the much lower wage standards to which they are wedded.

The bill would encourage the raising of such standards by giving a more liberal share of any quota to sources of higher standards. Any country could, by moving on to higher levels in wages, receive the same additional share of our market.

I am aware that this legislation would be in conflict with certain provisions of the General Agreement on Tariffs and Trade, known as GATT. It is clear, however, that it would be in full conformity with the Constitution of the United States.

This fact shows that the State Department in making the general agreement went too far. No executive department can sign away the authority of Congress by the simple expedient of making international agreements. Yet that is exactly what the State Department has undertaken to do. This represents an unjustifiable grasp for power and the sooner the lines of authority are again set straight, the better.

The bill has been referred to the Committee on Ways and Means, and I hope that public hearings will be held in the near future. The import problem is a very pressing one, not only in the tuna industry but in a number of others, and time is a very important element in our search for relief.

NATURAL GAS

The SPEAKER. Under previous order of the House, the gentleman from Massachusetts [Mr. HESELTON] is recognized for 30 minutes.

Mr. HESELTON. Mr. Speaker, you will recall that the bill to exempt producers of natural gas from Federal regulation passed the House on July 28, 1955, by the narrowest of margins.

Prior to action here on the floor, there were other most significant votes.

On June 7, a tie vote in the House Committee on Interstate and Foreign Commerce killed the bill temporarily. On June 8, this vote was reconsidered and the bill was approved by a vote of 16 to 15.

The bill was reported on June 28.

It was not until July 26 that the Rules Committee granted a rule for the consideration of the bill. The vote was 6 to 5. One member of that committee did not vote.

The bill was debated and passed on July 28.

A motion to recommit the bill lost by a vote of 203 to 210.

The vote on final passage was 209 to 203. This vote came on Thursday. Congress adjourned the following Tuesday, August 2.

The extraordinary pressure and remarkable haste need no elaboration.

This proposal, as it passed the House, may be killed.

It now seems more likely that it will go to conference in spite of the hope of the proponents of the bill.

Anyone who has followed developments as to this proposal as reported in the press, in magazines, and columns, and by radio and television knows how dangerous such a conference is in the minds of the proponents of the bill. A single brief quotation from an exceptionally well-informed source, published here in Washington late last week, emphasizes this. Referring to the proponents' hope of preventing any change in the bill as it passed the House, this comment is that any amendment would mean returning the bill to the House where it might run into trouble with elections coming up.

Consequently, certain features of the proposal are worthy of renewed consideration by all Members of the House in view of the probability that they will have another opportunity to pass judgment upon the proposal when the conference report comes before us.

With this in mind, I have undertaken to have some of the more important facts with reference to this proposal brought as far up-to-date as possible. I had hoped to have some of this ready for presentation at this time but some further data is being prepared. I hope it will be available in the next few days. If so, I shall submit it in the form of one or more additional special orders.

Mr. HESELTON. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include certain tabulations, correspondence, and editorial matter.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

PROPOSALS FOR STRENGTHENING THE CELLER-KEFAUVER ANTIMERGER ACT

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. PATMAN. Mr. Speaker, I include in the RECORD the statement made by me before the Antitrust Subcommittee of the Committee on the Judiciary, House of Representatives, United States Congress:

PROPOSALS FOR STRENGTHENING THE CELLER-KEFAUVER ANTIMERGER ACT

Mr. Chairman and members of the committee, I am honored and gratified by your invitation to give you my views on proposals for strengthening the Celler-Kefauver Antimerger Act.

I will begin with a premise which I know the committee already holds, which is that we must have an antimerger law which is genuinely effective against mergers of the kind which do substantial injury to the competitive system, and we must have a law which can be enforced in an efficient and timely way. The need for the antimerger law and the current merger problems have recently been covered by this committee's excellent investigations and report.

THE FAILURE HAS BEEN IN ENFORCEMENT

Before taking up the proposals which the committee has under consideration today, I might make two other premises clear.

First, the utter failure which the antimerger law has met with to date is in no way a measure of the inadequacy of the law. The failure has been in enforcement. I agree with the findings of this subcommittee that the Department of Justice and the Federal Trade Commission "have made but a token gesture at enforcement."[1] The great wave of corporate mergers and consolidations which has been taking place during the past 3 years, and continuing now, has elicited from the Department of Justice and the Federal Trade Commission not even a wholehearted pretense at enforcing the law. No matter how much the law might be improved therefore, the practical effect will be inconsequential so long as the enforcement agencies refuse to enforce it.

Second, no antimerger law would get at the root causes of the present wave of mergers, even if the enforcement agencies were devoted and skillful in their assigned tasks. These causes lie in the realm of finance, and it is absurd to think that the Federal Government can adopt a set of economic policies, then hold back the tide of inevitable consequences of those policies by passing an antitrust law.

TAX POLICIES ARE PRINCIPLE CAUSE OF MERGERS

The principle impetus for the merger movement is coming from the fact that today the lion's share of the investment funds are being channeled to the giant industrial corporations. These corporations have been

[1] House Committee on the Judiciary, Antitrust Subcommittee, interim report on corporate and bank mergers, 1955, p. 38

given the function of investment bankers. This has resulted, for the most part, from the 1953 and 1954 changes in the tax laws which shifted the income shares to favor big corporations and high-income families. The administration sponsored these changes on the theory that they would stimulate investment in new productive capacity. The effect has been to stimulate the big corporations to an orgy of buying up previously existing capacity.

The effect has also been, conversely, to create a necessity for many small firms to sell out. The tax changes, particularly removal of the excess profits tax, which were supposed to stimulate investment in new capacity have also provided the monopoly industries with an incentive for raising prices and taking more profits. Faced with a continuous inflation in most industrial prices, the administration has been able to maintain the over-all buying power of the dollar only by bringing about rapid deflation in the more competitive segments of the economy—namely the small business and farm segments. This has left less savings among small investors and has left small business even more capital-starved than before.

We are now being swept along a current which, if not checked, will end with a few giant corporations owning all of the wealth of the country. The economic bust for which we are rapidly heading will not check this trend. When the wave of bankruptcies starts, it will be the smaller businesses that go bankrupt, and the concentration of productive wealth into the hands of the corporate giants will continue.

CORRECTIONS NEEDED IN TAXES AND FINANCE

If we are serious about checking the merger movement, as well as other movements which are concentrating business, then I think we must do two things.

First, we must make substantial changes in the corporate tax rates. Specifically, I would recommend reducing the normal tax rate from the present 30 percent to a rate of not more than 22 percent. Then to retain present levels of revenue, I would recommend that the surtax be graduated with each million dollars of net income. I am not recommending a return to an excess-profits tax; and I am not recommending a reduction in overall corporate taxes. I am recommending relieving the tax pinch on corporations receiving net income of less than $10 million, and a compensating graduation of tax rates which will be similar to, but less steep than the graduated rates which apply to personal incomes. In short, I am recommending an end to the insane tax policy which takes the same percentage of the income of a corporation receiving an income of, say a million dollars, as one receiving $2 billion—or one which is 2,000 times as big.

In addition, there are several less important, but quite direct incentives to merger built into our present law. These too should be corrected.

The second thing we must do to check the amalgamation of wealth into the giant corporations is to help create an organization which will make accessible to small- and medium-sized firms funds which are available for long-term business investment. The country does not now have such an organization, either private or public. The problem is not to create more money; the problem is to create a market place, as it were, where funds which are available for investment will come together with the businesses seeking such funds.

These two things would, I think, solve most of the merger problem as well as some of the deeper problems of which mergers are only a symptom.

ANTIMERGER LAW NEEDS IMPROVEMENT

Even if all of the incentives to merger were removed from our tax laws, however, and even if the follies of our other economic policies were corrected, we would of course still need an antimerger law. We would still have the old problem of some mergers being generated from no substantial cause except that competition will be lessened and corporate profits will be enhanced.

For this purpose, the law should be improved. It would be a strange thing if a few years of experience with a new law did not reveal ways in which the law can be improved.

The improvements which the committee is considering today are procedure improvements. I think I am correct in saying that none of the bills before the committee make any changes in substantive law—in the sense that they would change the standards by which a merger is declared illegal, or change the scope of commerce now covered by the law.

The bill which I introduced, H. R. 6748, is entirely procedural. These procedural changes would, however, make sweeping changes in the practical effect of the law—assuming the enforcement agencies wish to enforce the law. These changes would, moreover, remove much of the uncertainty which now plagues businessmen who are making or considering making a merger.

EXPERT DRAFTING OF H. R. 6748

At this point I might explain that while I refer to H. R. 6748 as my bill, actually what I have done is to put into this bill certain amendments which were suggested by Senator Mead after he had several years' experience in administering the law, as Chairman of the Federal Trade Commission. In addition, I had the assistance of two staff members of the House Small Business Committee, one distinguished lawyer and one economist, who were formerly on the staff of the Federal Trade Commission, and had about 4 years of first-hand experience with the practical problems of administration. It was for the reason that I had benefit of Senator Mead's suggestions and expert counsel that I undertook to draft and introduce a bill on this subject. It is for this reason also that I highly commend H. R. 6748 to the committee.

There is more involved than first-hand experience, of course. There is also a matter of the individual's perspective and concern for the public interest. I know the perspectives and the attitudes of Senator Mead and the two staff members who have helped me. In other words, these people want the antimerger law enforced and they would want to prevent any merger which would result in any substantial lessening of competition.

Other people with first-hand experience in administering the law may, of course, have basically different ideas about what the law ought to do. There are a great many people who think that it is entirely satisfactory, from a competition standpoint, for an entire industry to become concentrated into a big 4, a big 3, or perhaps even a big 2 corporation. And some of these people seem genuinely to believe that it is quite fitting and appropriate to read a "rule of reason" into the law, in order to allow these things to come to pass.

MERGERS ARE NOT REPORTED

Perhaps the simplest and clearest way of outlining what H. R. 6748 would do, is first to outline the enforcement procedures now being followed and then explain how these procedures would be amended by the bill.

Section 7 of the Clayton Act, as amended, makes it illegal for one corporation to acquire the stock or assets of another corporation where the effect is a substantial lessening of competition or a tendency to monopoly. There is, however, no requirement that merging corporations make the merger known to the enforcement agencies, either before a merger is consummated or after a merger is consummated. There is, moreover, no penalty for making an illegal merger, except possibly the losses which may be incurred in disposing of assets, should there later be an order of divestiture. But as I shall show in a moment, there will be situations where the purpose of an illegal merger can be fully accomplished even should there later be an order of divestiture.

The Federal Trade Commission and the Department of Justice have concurrent jurisdiction. The Federal Trade Commission has no power to stop a merger before it takes place. The Department of Justice has injunctive power, but this is effective only where the Department learns of a proposed merger in sufficient time, and is able to gather sufficient market information to show the probable effects of the merger, before the merger is consummated.

Let us consider then what the major procedural steps are in the Federal Trade Commission.

First, the FTC has to ascertain that a merger has taken place. For this purpose it has a staff of several people engaged full time in screening newspapers, trade journals, such commercial references as Moody's Industrial Manual, and other sources of public information, just making up lists of the names of companies which are reported to have merged.

DELAYING AND WITHHOLDING INFORMATION

The second step is then to gather up enough information about the companies and the products involved to make a preliminary determination as to whether the merger is an inconsequential matter, or whether a thorough investigation should be made. This involves finding a mailing address for the companies in question and sending them a brief questionnaire. Where the merger has already taken place, the companies in question are of course in no hurry to answer the questionnaire; nor are they particularly desirious to answer it fully. Collecting these questionnaires also involves a great loss of time as well as Government expense which should be unnecessary.

Third, in the case of mergers which look as though they may run counter to the law, on the basis of abbreviated information, there is the problem of making a more complete investigation. This involves collecting information as to the companies' production or operations, the markets in which they operate, the proportion of the market affected, what patents might be involved, and a variety of other matters. Here again a major part and a vital part of the information must come from the companies themselves. And here again the companies are in no hurry to supply the information and under no compulsion to supply the information in a form which is most revealing or pertinent to the question of adverse effects upon competition. On the contrary, they have every incentive to delay and evade. Certainly they have no incentive to gather or organize original data which they are in the best position to supply, and perhaps only they can supply. In other words, the merger has already taken place, and the companies in question are certainly not anxious to help build a case against themselves.

PROLONGING THE LITIGATION

Next, there is the problem of litigation. Here again companies which have already merged have good reason to delay and drag out the proceedings, and these proceedings are lengthy at best. Look, for example, at the first case brought under the new law. The Pillsbury mergers took place in June of

1951. After a year of investigation, the Federal Trade Commission issued a complaint, in June of 1952. Shortly thereafter hearings started before an FTC hearing examiner, and these hearings are still going on. In other words, the mergers took place 4½ years ago, litigation has been going on for 3½ years, and the end of the litigation is nowhere in sight.

Now, we do not want to argue here the merits of the Pillsbury case; and I do not want anything I say to be taken as an expression of my attitude on the merits of that case. I simply make this point: If the presumption on which the FTC brought that case is correct, then the public interest has been injured—competition has been lessened. Then is it not absurd that the public should be denied the benefits of competition for 4½ years, when the issue could have been settled before the mergers took place?

Certainly this experience indicates that merger litigations can be kept going almost indefinitely. And it should be obvious that when large corporations are involved in these litigations, where tens or hundreds of millions of dollars of sales are at stake, the simple expedient is to put a small legal staff on the payroll and treat the matter as a more or less permanent cost of doing business.

In any event, the longer the matter is delayed the less likely it is that the Federal Trade Commission will issue a dissolution order, and the less likely it is that the courts will sustain a dissolution order. As we know, antitrust issues quickly become moot in the eyes of the courts. As a practical matter, the courts are not willing to try to undo things which occurred in ancient history.

Allow me to sum up to this point: present procedures are unnecessarily costly to the Government, which fact dilutes the effectiveness of the enforcement dollar; these procedures result in protracted delays while the public interest suffers; they yield less complete and satisfactory market facts on which to base finding and dissolution decrees; and they result in untimely decrees which are unlikely to be sustained, assuming that under present procedures effective dissolution decrees can be drawn. This brings me to the next problem.

COMPETITION CANNOT BE RECREATED

Actually our courts and our enforcement agencies have had little experience in trying to draw dissolution orders. As yet they have had no experience in trying to draw an order under the Celler-Kefauver Antimerger law. As for that matter, there have been relatively few dissolution decrees under the Sherman Act during the 65 years that law has been on the books. But experience under the Sherman Act has demonstrated that it is about as difficult to unscramble the assets of a corporation as it is to unscramble an egg. In addition to this difficulty, however, there is a vital weakness in the law which attempts to undo mergers rather than to prevent mergers. The law is not concerned with assets as such. Its purpose is to maintain competition. Yet the remedy in the law deals in fact with assets, and not with attaining the purpose of the law. In short, the law contains powers for ordering the divestiture of assets but there are no powers for recreating competition or even recreating a competitor. There are no powers for saying to whom the assets shall be sold or for what purpose they shall be used. Let me illustrate with two cases in which the Federal Trade Commission is now involved.

It is generally agreed that Pillsbury's purpose in acquiring the Ballard Co. was to acquire a ready-made market for its flour, in the southeastern United States. Ballard had an established market in this section, its brand name enjoyed wide consumer acceptance, and Ballard's sales organization had long enjoyed the confidence and good will of the wholesale and retail merchants. Ballard's principal assets, insofar as Pillsbury was concerned, were its sales organization and the consumer acceptance which its brand name enjoyed.

Of course, Pillsbury might have used other methods to attain volume sales in the Southeastern States. It might have reduced its prices, for the benefit of consumers, or put on advertising campaigns, or done a variety of legitimate things to try to take business away from Ballard. This would have been competition, which is what we want to maintain.

ASSETS ARE FREQUENTLY NOT TRANSFERABLE

Now let us assume that the FTC ultimately tries to write an order requiring Pillsbury to divest itself of Ballard.

One fact is, I am told, that Pillsbury has now added its own brand name along with Ballard's brand name on the cartons in which its flour is sold. Pillsbury's name has now acquired the popularity and the consumer acceptance which formerly attached to Ballard's trade name.

A second fact is, I am also told, that Ballard's salesmen and other personnel are now absorbed into the Pillsbury organization.

How then can an order be written which will take away the consumer acceptance which Pillsbury's brand name has now acquired and invest that consumer acceptance in a competitor? And how can an order be written which would, contrary to our constitutional limitations on involuntary servitude, transfer Ballard's old salesmen to some new competitor. In short, what are the assets which the Government could order Pillsbury to divest itself of that would restore a competitor?

Now consider the Farm Journal-Country Gentlemen-Better Farming merger. Here we had two competing magazines where we now have one magazine. The magazines themselves have been merged into a single publication. The new publication has an identity and character of its own, and there is now a single subscription list. The merger took place more than 6 months ago, and we could reasonably expect many months more to pass before the litigation is completed. I would assume that after a year's time, certainly, even the advertising contracts will have expired and new contracts will have been entered into. Furthermore, there is the same problem of people—writers, editors, makeup people, etc.—as we have in the Pillsbury matter.

What then are the assets that could be unscrambled? There may or may not be some printing equipment which could be sold for printing operations of one kind or another. I do not know for a fact whether or not there was any printing equipment. It may well have been that both magagines hired their printing done. But in either event, I can conceive of no order of divestiture which would create two magazines where there is now one.

FTC ORDERS ALLOW ONE "FREE" VIOLATION

Now I come to the final inadequacy in the procedural steps provided in the present law. An order issued by the Federal Trade Commission under the Clayton Act does not become final, valid, or binding—until such time as a court of appeals confirms it. There is, moreover, a serious omission in the Clayton Act in that it sets no time limit for appealing such orders. This puts the recipient of a Clayton Act order in a position where by failing to appeal, he can ignore the order until such time as the Federal Trade Commission appeals it and before the Federal Trade Commission can appeal it, it must prove that the order is being violated. This results in what is called one free violation. In other words, the Federal Trade Commission must prove its case twice and with two separate sets of evidence, one set pertaining to the time before the order was issued, and one set pertaining to the time after the order was issued.

Insofar as orders under section 7 of the act are concerned, this will mean that the Federal Trade Commission will have to supervise the firm, for a long period perhaps, to see that its order is carried out. I presume that orders of divestiture, if any are ever issued, will provide a "reasonable time" for the firm to carry out the divestiture, to find a buyer who will pay a reasonable price for the assets, etc. Thus, we have an invitation to further delays. The company with an order of divestiture may use up its allotted time, then appeal the order, which will mean a long period of litigation in court, after which the court will inevitably allow the company an additional "reasonable" time in which to carry out the divestiture.

This problem is not limited to section 7 of the Clayton Act. The same thing is true of the orders issued under any other section of the act, such as those issued against illegal price discriminations, illegal exclusive dealing contracts, etc. For example, the order against the United States Steel Corp. in the famous Pittsburgh Plus case was issued in July 1924. After the passage of 14 years, in May 1938, United States Steel filed a petition with a circuit court to have the order set aside, and after the passage of another 10 years, in October 1948, the order was finally confirmed—almost a quarter of a century after it was issued.

The Federal Trade Commission has recommended many times over a period of years that this deficiency in the Clayton Act be corrected, suggesting that a provision similar to that in the Federal Trade Commission Act be adopted. Orders issued under the Federal Trade Commission Act automatically become final and enforceable, if not appealed within 60 days after issuance of the order.

H. R. 6748 REQUIRES ADVANCE INFORMATION

H. R. 6748 now becomes readily understandable in terms of the procedural difficulties which I have described. It is those procedural difficulties which the bill would overcome. Taking the bill up section by section, it does the following things.

Section 1 requires that the Attorney General and the Federal Trade Commission be notified in advance of the merger. It does not require such notification for all mergers, but it requires such notification where any of the corporations involved has capital, surplus and undivided profits totaling more than $1 million. This goes on the presumption that mergers of corporations having less than $1 million of assets are de minimus and very probably will not bring about a substantial lessening of competition. This provision is set out beginning at line 9 on page 1 and going down to line 9 of page 2.

Section 1 of the bill also provides that the companies must furnish all pertinent information requested by the Attorney General and the Federal Trade Commission before the merger can be consummated, and it gives the enforcement agencies 30 days in which to request such information. This provision is set out in lines 9 through 14 on page 2.

The effect of these two provisions is, first, to create an automatic 30 day cooling-off period, or estoppel, against consummation of the merger, during which time the enforcement agencies may request information. Second, it serves as a further injunction against consummation of the merger until such time as the requested information has been furnished.

H. R. 6748 WOULD PREVENT, RATHER THAN UNSCRAMBLE

In addition, section 1 of the bill provides a further estoppel for 60 days following the furnishing of the requested information, during which time the Attorney General or the Federal Trade Commission may institute legal proceedings against the proposed merger. And should such proceedings be started they would serve, in effect, as an injunction against consummation of the merger until the litigation is concluded. This provision is set out in lines 14, page 2 to line 1 of page 3.

Finally however, section 1 of the bill provides that the failure of the Federal Trade Commission or the Department of Justice to institute proceedings within the specified 60 days does not serve as a bar to such proceedings at a later time. This provision is set out in lines 1 through 8 of page 3.

Now what is the practical effect of these provisions?

First, companies proposing to merge—at least the larger companies—must notify the enforcement agencies, and they must notify them before the merger is consummated.

Second, there is what I call an automatic cooling-off period of 30 days. Actually this would not serve as a cooling-off period at all. Certainly after a merger decision has been reached and conditional contracts have been entered into, the normal business requirements for making closing arrangements take more than 30 days anyway. This provision simply means that somewhere in the late stages of the negotiations, the companies in question would have to notify the enforcement agencies.

If within 30 days, however, the enforcement agencies call upon the companies in question for information, this information must be furnished before the merger can be consummated; and the request for such information also puts the companies on notice that the merger cannot be consummated for another 60 days after the information is furnished, unless, of course, they can obtain earlier advice from the enforcement agencies that they consider the merger unobjectionable.

The effect of this would be to create an incentive for the companies to supply the information and to supply it promptly. It would be just the reverse of what we have now where the merger has already been consummated and the public interest, rather than the company's interest, suffers from delays and evasions in supplying information.

H. R. 6748 WOULD MINIMIZE UNCERTAINTY

I come now to the most delicate part of the procedure.

Certainly we must have a procedure by which objectionable mergers can be stopped before they are made. Unscrambling clearly will not work. On the other hand, an advanced clearance procedure usually implies that when the enforcement agencies have the facts of a proposed action put before them, and they fail to object to the action, they are foreclosed from objecting after the action is taken. But, as we know, there are serious objections to allowing enforcement agencies to grant sanctions which are absolutely binding at all times and under all circumstances. Such sanctions are open to serious abuse.

Yet it seems to me not only desirable, but necessary, that the procedure must ultimately be one which provides businessmen with at least a high degree of confidence and assurance. When businessmen have put the facts of the proposed action before the enforcement agency and there is no objection within the allotted time, then in normal circumstances they should be able to proceed with safety.

I believe that H. R. 6748 would provide an advance clearance procedure which would both safeguard the public interest against the rare abuses and at the same time provide businessmen with the needed assurances. The bill specifically disallows the granting of binding sanctions, but in practice I believe that mergers which have not been objected to within the allotted time will not later be objected to, except in rare and abnormal circumstances. Only in rare circumstances, I think, such as where the merging companies have misrepresented facts or there has been conspicuous misfeasance on the part of enforcement officials will the court sustain the enforcement agencies in objecting to a merger which had not been objected to prior to consummation. If instances should arise where the enforcement agencies merely change their minds or reevaluate the facts, the courts will surely behave as the Supreme Court did in the Columbia Steel case. Here we find the Court refusing to object to U. S. Steel's acquisition of the Columbia Steel Co., principally on the ground that the Court considered that acquisition economically and logically related to the corporation's previous acquisition of the Geneva Steel plant, which the Government had approved.

The procedure as to sanctions with which H. R. 6748 would provide is the procedure I would like to see tried. From the Government's point of view, it is certainly no worse than the procedure we now have. On the contrary, as a minimum, it would utilize the pressures which business generates, to speed up enforcement actions. Business pressures now are all on the side of foot dragging. On the other hand if it should work out that this procedure creates abuses to business, we will learn about it quickly enough, and we can then try something else.

H. R. 6748 ELIMINATES FREE VIOLATIONS

Section 2 of the bill would amend section 11 of the act in two major respects.

At page 4, lines 11 through 15, there is new language. It merely gives the Federal Trade Commission authority to seek injunctions in Federal district courts, where necessary to obtain compliance with the procedure set out in section 1. Specifically, this section amends section 11 of the act to give the FTC authority to seek an injunction to restrain consummation of a merger, after the FTC has instituted legal proceedings as provided for in section 1 of the bill. Furthermore, since three other independent commissions and boards—namely, the Interstate Commerce Commission, the Civil Aeronautics Board, and the Federal Reserve Board—are charged with enforcement of the Clayton Act with respect to certain kinds of commerce, section 2 would provide like authority for these agencies to seek injunctions.

The language beginning at page 7 in lines 12 through 15, and the language beginning at page 9, line 1, would also be new to section 11 of the Clayton Act. This would make cease-and-desist orders issued by the Federal Trade Commission under the Clayton Act automatically final unless a petition for review has been filed with the court of jurisdiction within that 60 days. The procedure set out here has been thoroughly tested and proven fully successful. It has been in effect for many years for orders issued under the FTC Act, and this language of the bill is a mere paraphrasing of the language which appears in the FTC Act. This language would thus eliminate the one free violation which I described earlier.

Section 3 of the bill merely makes it clear that the bill does not create retroactive law.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House following the legislative program and any special orders heretofore entered, was granted to:

Mr. POWELL (at the request of Mr. METCALF), on Thursday, January 19, 1956, for 10 minutes.

Mr. HESELTON, for 30 minutes today.

SPECIAL ORDER VACATED

Mr. WILLIAMS of Mississippi asked and was given permission to have the special order previously scheduled for him this afternoon vacated.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. LANE and to include extraneous matter.

Mrs. KEE and to include extraneous matter.

Mr. FORAND and to include the script of a radio debate between Mr. MCCORMACK and Mr. ARENDS over the ABC Radio Network on January 8, regardless of the cost of printing.

Mr. PRIEST and to include a short speech he made on the occasion of a luncheon launching the 50th anniversary of the Pure Food and Drug Act.

Mr. METCALF and to include extraneous matter.

Mr. WRIGHT and to include extraneous matter.

Mr. TEAGUE of Texas and to include extraneous matter.

Mr. HESS and to include extraneous matter.

Mr. MCGREGOR.

Mr. LOVRE and to include extraneous matter.

Mr. VAN ZANDT.

Mr. PRICE and to include extraneous matter.

Mr. KLUCZYNSKI.

ENROLLED BILLS SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H. R. 5614. An act to amend the Communications Act of 1934 in regard to protests of grants of instruments of authorization without hearing.

SENATE BILLS AND CONCURRENT RESOLUTION REFERRED

Bills and a concurrent resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 51. An act to amend the act entitled "An act to confer jurisdiction on the States of California, Minnesota, Nebraska, Oregon, and Wisconsin, with respect to criminal offenses and civil causes of action committed or arising on Indian reservations within such States, and for other purposes"; to the Committee on Interior and Insular Affairs.

S. 2286. An act to amend the Merchant Marine Act of 1936 so as to provide for the

utilization of privately owned shipping services in connection with the transportation of privately owned motor vehicles of certain personnel of the Department of Defense; to the Committee on Merchant Marine and Fisheries.

S. Con. Res. 59. Concurrent resolution requesting the President to issue a proclamation designating the week of January 29, 1956, through February 4, 1956, as National Junior Achievement Week; to the Committee on the Judiciary.

ADJOURNMENT

Mr. TEAGUE of Texas. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 57 minutes p. m.) the House adjourned until tomorrow, Tuesday, January 17, 1956, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1363. A letter from the Postmaster General, transmitting a comprehensive report of operations under title II of the Postal Field Service Compensation Act of 1955, including the specific information required by section 205 (a), pursuant to section 205 of the Postal Field Service Compensation Act of 1955 (Public Law 68, 84th Cong.) (H. Doc. No. 313); to the Committee on Post Office and Civil Service and ordered to be printed.

1364. A letter from the Comptroller General of the United States, transmitting the report on the audit of Export-Import Bank of Washington for the fiscal year ended June 30, 1955, pursuant to the provisions of the Government Corporation Control Act (31 U. S. C. 841) (H. Doc. No. 314); to the Committee on Government Operations and ordered to be printed.

1365. A letter from the Chairman, United States Atomic Energy Commission, transmitting a report of an overobligation of $10,105.55 in an Atomic Energy Commission allotment account on September 30, 1955, pursuant to section 3679 of the Revised Statutes; to the Committee on Appropriations.

1366. A letter from the Assistant Secretary of the Treasury, transmitting a report certifying by rank and age group the number of officers above the rank of major of the Army and Air Force or lieutenant commander of the Navy receiving average monthly flight pay for the 6-month period preceding the date of this report, pursuant to Public Law 301, 79th Congress; to the Committee on Armed Services.

1367. A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation entitled "A bill to amend the Revised Statutes, as amended, relating to reports required to be made by national banking associations"; to the Committee on Banking and Currency.

1368. A letter from the president, Georgetown Barge, Dock, Elevator & Railway Co., transmitting the annual report of the Georgetown Barge, Dock, Elevator & Railway Co. for the year ended December 31, 1955, pursuant to an act of Congress approved, September 26, 1888; to the Committee on the District of Columbia.

1369. A letter from the Secretary, Department of Health, Education, and Welfare, transmitting a draft of proposed legislation entitled "A bill to authorize a 5-year program of Federal assistance to States and communities to enable them to increase public elementary and secondary school construction"; to the Committee on Education and Labor.

1370. A letter from the Secretary of Commerce, transmitting a draft of proposed legislation entitled "A bill to amend section 610 (a) of the Civil Aeronautics Act of 1938, as amended, to provide for the imposition of civil penalties in certain additional cases, and for other purposes"; to the Committee on Interstate and Foreign Commerce.

1371. A letter from the Assistant Secretary of the Interior, transmitting the 4th Annual Report on Saline Water Conversion, pursuant to Public Law 448, 82d Congress; to the Committee on Interior and Insular Affairs.

1372. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession permit with William R. and Georgia Fullerton, which, when executed by the superintendent of Olympic National Park, will authorize the concessioners to provide a store, gasoline station, and cabin-camp facilities for the public at Ruby Beach resort in Olympic National Park, Wash., during a 5-year period beginning January 15, 1956, pursuant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1373. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession permit with Anton Ashenbrenner, which, when executed by the superintendent, Olympic National Park, will authorize the concessioner to provide a store and gasoline station in Olympic National Park, Wash., for a 1-year period beginnning January 1, 1956, puruant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1374. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession permit with O. P. Patton and J. W. Mills, which, when executed by the superintendent, Everglades National Park, will authorize the concessioners to sell bait to charter boat operators at Coot Bay, Coot Bay Pond, or Flamingo, in Everglades National Park, Fla., during a 1-year period beginning January 1, 1956, pursuant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1375. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession permit with Leroy Orme and John Scudder, which, when executed by the superintendent, Everglades National Park, will authorize the concessioners to sell bait to charter boat operators at Coot Bay, Coot Bay Pond, or Flamingo, in Everglades National Park, Fla., during a 1-year period beginning January 1, 1956, pursuant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1376. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession permit with Lewis C. Watson, which, when executed by the superintendent, Everglades National Park, will authorize the concessioner to provide charter boat service for sport fishing in Everglades National Park, Fla., during the 6-month period beginning January 1, 1956, pursuant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1377. A letter from the Assistant Secretary of the Interior, transmitting a proposed concession permit with the Sequoia Ski Club, which, when executed by the Superintendent, Sequoia and Kings Canyon National Parks, will authorize the concessioner to provide ski tows in the Wolverton ski area of Sequoia National Park, Calif., during a 5-year period beginning December 1, 1955, pursuant to the act of July 31, 1953 (67 Stat. 271); to the Committee on Interior and Insular Affairs.

1378. A letter from the Chief Commissioner, Indian Claims Commission, transmitting a report that proceedings have been finally concluded with respect to the following claim: *The Suiattle-Sauk Tribe of Indians on relation of George Enick, Chairman of the General Council, claimant,* v. *The United States of America, defendant,* Docket No. 97, pursuant to provisions of section 21 of the Indian Claims Commission Act of August 13, 1946 (60 Stat. 1055; 25 U. S. C. 70); to the Committee on Interior and Insular Affairs.

1379. A letter from the Chairman, United States Atomic Energy Commission, transmitting a draft of proposed legislation entitled "A bill to authorize appropriations for the Atomic Energy Commission for acquisition or condemnation of real property or any facilities, or for plant or facility acquisition, construction, or expansion, and for other purposes; to the Joint Committee on Atomic Energy.

1380. A letter from the executive director, Reserve Officers Association of the United States, Inc., transmitting the audit report of the association as of March 31, 1955, pursuant to section 15 (b) of Public Law 595, 81st Congress; to the Committee on the Judiciary.

1381. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the United States Army, dated November 29, 1955, submitting a letter, together with accompanying papers on East River and Hell Gate, N. Y., requested by a resolution of the Committee on Rivers and Harbors, House of Representatives, adopted April 17, 1940; to the Committee on Public Works.

1382. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated November 29, 1955, submitting a letter, together with accompanying papers on Black Bayou, La., for flood control, drainage, and navigation. This report is submitted in partial response to the authorities for preliminary examinations and surveys of all streams and bayous in Louisiana lying between the East Atchafalaya Basin protection levee and the Mississippi River, authorized by the Flood Control Act approved December 22, 1944, and the River and Harbor Act approved March 2, 1945; to the Committee on Public Works.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the clerk for printing and reference to the proper calendar as follows:

Mr. ENGLE: Committee on Interior and Insular Affairs. H. R. 1774. A bill to abolish the Verendrye National Monument, and to provide for its continued public use by the State of North Dakota for a State historic site, and for other purposes; with amendment (Rept. No. 1643). Referred to the Committee of the Whole House on the State of the Union.

Mr. ENGLE: Committee on Interior and Insular Affairs. H. R. 4680. A bill affirming that title to a certain tract of land in California vested in the State of California on January 21, 1897; with amendment (Rept. No. 1644). Referred to the Committee of the Whole House on the State of the Union.

Mr. ENGLE: Committee on Interior and Insular Affairs. H. R. 6772. A bill to authorize the Secretary of the Interior to convey certain federally owned land under his jurdiction to the school district No. 24 of Lake County, Oreg.; without amendment (Rept. No. 1645). Referred to the Committee of the Whole House on the State of the Union.

Mr. LONG: Joint Committee on the Disposition of Executive Papers. House Report No. 1646. Report on the disposition of certain papers of sundry executive departments. Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BATES:

H. R. 8454. A bill to appropriate funds for preliminary planning and for construction of necessary flood control measures in Massachusetts; to the Committee on Appropriations.

By Mr. BELL:

H. R. 8455. A bill to establish a national policy with respect to commercial fisheries; to establish the office of Assistant Secretary of Commerce for Commercial Fisheries, and define his functions, powers, and responsibilities; to strengthen the commercial fisheries segment of the national economy; and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. BERRY:

H. R. 8456. A bill to preserve the family farm; to the Committee on Agriculture.

By Mr. BLATNIK:

H. R. 8457. A bill to amend section 5051 (a) of the Internal Revenue Code of 1954 to aid small business and discourage continued concentration in the brewing industry; to the Committee on Ways and Means.

H. R. 8458. A bill to amend Veterans Regulation No. 10 to provide that the widow of a veteran of the Spanish-American War (including the Philippine Insurrection and the Boxer Rebellion) who married the veteran before January 1, 1938, may be eligible for death compensation; to the Committee on Veterans' Affairs.

By Mr. BONNER:

H. R. 8459. A bill to provide for a flood indemnity plan on an experimental basis and for other purposes; to the Committee on Banking and Currency.

By Mr. BROYHILL (by request):

H. R. 8460. A bill to establish an internal revenue district consisting solely of the District of Columbia; to the Committee on Ways and Means.

By Mr. COOPER:

H. R. 8461. A bill to provide tax relief for farmers and a simplified method of computing farm income by means of an optional standard deduction for certain farmers; to the Committee on Ways and Means.

By Mr. FORAND:

H. R. 8462. A bill to provide for a national cemetery in the State of Rhode Island; to the Committee on Interior and Insular Affairs.

H. R. 8463. A bill to repeal the cabaret tax; to the Committee on Ways and Means.

By Mr. GEORGE:

H. R. 8464. A bill to create a corporation to restore normal employment in labor-surplus areas of group IV classification and produce industrial development in such areas; to the Committee on Education and Labor.

By Mr. GRANAHAN:

H. R. 8465. A bill declaring Good Friday in each year to be a legal holiday; to the Committee on the Judiciary.

By Mr. HALE:

H. R. 8466. A bill to establish a national policy with respect to commercial fisheries; to establish the Office of Assistant Secretary of Commerce for Commercial Fisheries, and define his functions, powers, and responsibilities; to strengthen the commercial fisheries segment of the national economy, and for other purposes; to the Committee on Merchant Marine and Fisheries.

H. R. 8467. A bill to increase from $50 to $75 per month the amount of benefits payable to widows of certain former employees of the Lighthouse Service; to the Committee on Merchant Marine and Fisheries.

By Mr. HAYWORTH:

H. R. 8468. A bill to amend section 203 of the Social Security Act to increase the amount of outside earnings permitted without deductions from benefits, and to liberalize the provisions under which such earnings are charged for purposes of such deductions; to the Committee on Ways and Means.

By Mr. HILL:

H. R. 8469. A bill to amend the Internal Revenue Code of 1954 to relieve farmers from the excise tax on gasoline and lubricating oils used exclusively in farm tractors or farm machinery or for other agricultural purposes; to the Committee on Ways and Means.

H. R. 8470. A bill to provide the death penalty for willfully wrecking an airplane, bus, or other motor vehicle in cases where passengers or other persons are killed, and for other purposes; to the Committee on the Judiciary.

By Mr. HOPE:

H. R. 8471. A bill to expand and extend the brucellosis-eradication program; to the Committee on Agriculture.

By Mr. HYDE:

H. R. 8472. A bill to assist areas to develop and maintain stable and diversified economies by a program of financial and technical assistance and otherwise, and for other purposes; to the Committee on Banking and Currency.

By Mr. JOHNSON of California:

H. R. 8473. A bill to appropriate $500,000 for advance planning of the New Melones Dam on the Stanislaus River in California; to the Committee on Appropriations.

By Mr. JONES of Alabama:

H. R. 8474. A bill to quiet title and possession with respect to certain real property in the State of Alabama; to the Committee on Interior and Insular Affairs.

By Mr. BONNER:

H. R. 8475. A bill to provide that the United States shall aid the States in wildlife-restoration projects; to the Committee on Merchant Marine and Fisheries.

By Mr. KARSTEN:

H. R. 8476. A bill to repeal the cabaret tax; to the Committee on Ways and Means.

By Mr. KILDAY:

H. R. 8477. A bill to amend title II of the Women's Armed Services Integration Act of 1948, by providing flexibility in the distribution of women officers in the grades of commander and lieutenant commander, and for other purposes; to the Committee on Armed Services.

By Mr. LANE:

H. R. 8478. A bill to establish a national policy with respect to commercial fisheries; to establish the Office of Assistant Secretary of Commerce for Commercial Fisheries, and define his functions, powers, and responsibilities; to strengthen the commercial fisheries segment of the national economy, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. LANHAM:

H. R. 8479. A bill to provide that in determining income of beneficiaries, the Administrator of Veterans' Affairs shall not include certain amounts which are not considered as income for the purposes of the Internal Revenue Code of 1954; to the Committeee on Veterans' Affairs.

H. R. 8480. A bill to provide that in determining income of beneficiaries, the Administrator of Veterans' Affairs shall not include the value of certain property acquired by bequest, devise, or inheritance; to the Committee on Veterans' Affairs.

By Mr. LOVRE:

H. R. 8481. A bill relating to the adjustment of wheat support prices for grade, etc.; to the Committee on Agriculture.

By Mr. McMILLAN:

H. R. 8482. A bill to amend the Agricultural Trade Development and Assistance Act of 1954 to remove certain restrictions on the sale in foreign countries of surplus cotton and tobacco; to the Committee on Agriculture.

H. R. 8483. A bill to amend the Agricultural Adjustment Act of 1938 to encourage the sale abroad of surplus cotton and tobacco; to the Committee on Agriculture.

By Mr. METCALF:

H. R. 8484. A bill to assist the several States in providing scholarships to enable high-school graduates of Indian blood to pursue their education at colleges and universities; to the Committee on Interior and Insular Affairs.

By Mr. MULTER:

H. R. 8485. A bill to exempt from income tax compensation and pensions paid by the United States to its employees; to the Committee on Ways and Means.

By Mr. NELSON:

H. R. 8486. A bill to amend the act of September 1, 1954, to correct certain inequities with respect to the compensation of prevailing wage rate employees, to provide longevity compensation for such employees, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. PERKINS:

H. R. 8487. A bill to extend the duration of Public Laws 815 and 874, 81st Congress, which provide for assistance to local educational agencies in areas affected by Federal activities, and for other purposes; to the Committee on Education and Labor.

By Mr. PRICE:

H. R. 8488. A bill to provide free barber services to all Armed Forces personnel; to the Committee on Armed Services.

By Mr. PRIEST:

H. R. 8489. A bill to amend the Civil Aeronautics Act of 1938, as amended, the Federal Airport Act, as amended, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. RAYBURN:

H. R. 8490. A bill authorizing the Administrator of Veterans' Affairs to convey certain property of the United States to the city of Bonham, Tex.; to the Committee on Veterans' Affairs.

By Mrs. ROGERS of Massachusetts:

H. R. 8491. A bill to assist areas to develop and maintain stable and diversified economies by a program of financial and technical assistance and otherwise, and for other purposes; to the Committee on Banking and Currency.

By Mr. SILER:

H. R. 8492. A bill to amend the Railroad Retirement Act of 1937 to provide that an individual with 30 years' service may retire regardless of age, to provide increased annuities, and to increase the amount of outside income which certain individuals may earn without losing the right to receive their annuities; to the Committee on Interstate and Foreign Commerce.

By Mr. SIMPSON of Illinois:

H. R. 8493. A bill to exempt from taxation certain property of the General Federation of Womens Clubs, Inc., in the District of Columbia; to the Committee on the District of Columbia.

By Mr. SIMPSON of Pennsylvania:

H. R. 8494. A bill to repeal the cabaret tax; to the Committee on Ways and Means.

By Mr. SHELLEY:

H. R. 8495. A bill to provide for national earthquake and flood disaster insurance, and for other purposes; to the Committee on Banking and Currency.

By Mr. TEAGUE of Texas:

H. R. 8496. A bill to amend and supplement the Federal-aid Road Acts, approved July 11, 1916 and November 9, 1921, as amended and supplemented, to authorize appropriations for continuing the construction of highways; to affirm a policy of user taxation; to fix qualifications and responsibility of the Commissioner of Public Roads, and for other purposes; to the Committee on Public Works.

By Mr. THOMPSON of New Jersey:

H. R. 8497. A bill to establish a program for participation in international affairs; to the Committee on Foreign Affairs.

By Mr. THOMPSON of Texas:

H. R. 8498. A bill to establish a national policy with respect to commercial fisheries; to establish the Office of Assistant Secretary of Commerce for Commercial Fisheries, and define his functions, powers, and responsibilities; to strengthen the commercial fisheries segment of the national economy, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. VINSON:

H. R. 8499. A bill to amend the Armed Services Procurement Act of 1947; to the Committee on Armed Services.

H. R. 8500. A bill to provide for the procurement of medical and dental officers of the Army, Navy, and Air Force; to the Committee on Armed Services.

By Mr. WESTLAND:

H. R. 8501. A bill to provide for the conveyance of certain real property of the United States to the port of Port Townsend, Wash.; to the Committee on Government Operations.

By Mr. WRIGHT:

H. R. 8502. A bill to provide for the appointment by the Postmaster General, subject to the civil service laws and rules and regulations, of postmasters at first-, second-, and third-class post offices, to prohibit prior approval or clearance on a political basis of appointments to positions in the classified (competitive) civil service and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. YOUNGER:

H. R. 8503. A bill to establish a national policy with respect to commercial fisheries; to establish the Office of Assistant Secretary of Commerce for Commercial Fisheries, and define his functions, powers, and responsibilities; to strengthen the commercial fisheries segment of the national economy, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. HAYS of Arkansas:

H. J. Res. 473. Joint resolution to change the name of Bedloe's Island in New York Harbor to Liberty Island; to the Committee on Interior and Insular Affairs.

By Mr. THOMPSON of New Jersey:

H. J. Res. 474. Joint resolution to establish a joint congressional committee to be known as the Joint Committee on United States International Exchange of Persons Programs; to the Committee on Rules.

By Mr. TRIMBLE:

H. J. Res. 475. Joint resolution proposing an amendment to the Constitution relating to the selection of the successors of the President, Vice President, or Members of Congress who become unable to perform their duties; to the Committee on the Judiciary.

By Mr. KARSTEN:

H. Res. 375. Resolution to authorize the Committee on Post Office and Civil Service to conduct investigations and studies with respect to certain postal matters; to the Committee on Rules.

By Mr. TEAGUE of Texas:

H. Res. 376. Resolution to authorize the Committee on Veterans' Affairs to investigate and study appeals for charitable contributions made in the name of the American veteran; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

By Mr. FORAND: Resolution of the Rhode Island General Assembly memorializing Congress to enact legislation for the creation of Federal disaster insurance; to the Committee on Banking and Currency.

Also resolution of the Rhode Island General Assembly respecting the Woonsocket Channel improvement project and the Pawtucket flood-wall project, integral parts of the flood-control plan for the Blackstone River Basin authorized by the Flood Control Act, approved on December 22, 1944 (Public Law 534, 78th Cong.); to the Committee on Public Works.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ANFUSO (by request):

H. R. 8504. A bill for the relief of Felix E. Dayrit; to the Committee on the Judiciary.

By Mr. ANFUSO:

H. R. 8505. A bill for the relief of Juan Moscoso; to the Committee on the Judiciary.

By Mr. BROYHILL (by request):

H. R. 8506. A bill for the relief of Worthington Oil Refiners, Inc.; to the Committee on the Judiciary.

By Mr. CARLYLE:

H. R. 8507. A bill for the relief of Dionisios Vasiliou Tsiros; to the Committee on the Judiciary.

By Mr. CLARK:

H. R. 8508. A bill for the relief of Susanne Ingebord Bernhard; to the Committee on the Judiciary.

H. R. 8509. A bill for the relief of Mr. Francesco Bautti; to the Committee on the Judiciary.

By Mr. FJARE:

H. R. 8510. A bill for the relief of Roelof van den Berg; to the Committee on the Judiciary.

By Mr. GRANAHAN:

H. R. 8511. A bill for the relief of Georgios Eleftherakis; to the Committe on the Judiciary.

By Mrs. GREEN of Oregon:

H. R. 8512. A bill for the relief of Gertrud Charlotte Samuelis; to the Committee on the Judiciary.

By Mr. HESS:

H. R. 8513. A bill to provide relief for Clopay Corp.; to the Committee on the Judiciary.

By Mr. HINSHAW:

H. R. 8514. A bill for the relief of Mary Hummel; to the Committee on the Judiciary.

H. R. 8515. A bill for the relief of Nena Ethline Strickland; to the Committee on the Judiciary.

H. R. 8516. A bill for the relief of Lolita O. Eccles; to the Committee on the Judiciary.

By Mr. HYDE:

H. R. 8517. A bill for the relief of Lydia Konshin and Olga Konshin; to the Committee on the Judiciary.

By Mr. LANE:

H. R. 8518. A bill for the relief of Biagio D'Agata; to the Committee on the Judiciary.

By Mr. McMILLAN:

H. R. 8519. A bill for the relief of Fouad George Baroody; to the Committee on the Judiciary.

By Mr. MAILLIARD:

H. R. 8520. A bill for the relief of Lt. Col. Timothy E. Robinson; to the Committee on the Judiciary.

By Mr. MARSHALL:

H. R. 8521. A bill for the relief of Gerald Waytashek; to the Committee on the Judiciary.

By Mr. SHEPPARD:

H. R. 8522. A bill for the relief of Margaret Shand (Chanslor); to the Committee on the Judiciary.

By Mr. POLK:

H. R. 8523. A bill for the relief of Mrs. Barbara Mary Atkins; to the Committee on the Judiciary.

By Mr. POWELL:

H. R. 8524. A bill for the relief of Risto Saari; to the Committee on the Judiciary.

By Mr. ROONEY:

H. R. 8525. A bill for the relief of Deeb Abu Gheido; to the Committee on the Judiciary.

H. R. 8526. A bill for the relief of Antoni Zyczynski; to the Committee on the Judiciary.

By Mr. SAYLOR:

H. R. 8527. A bill for the relief of Edith Ilse Hausmann; to the Committee on the Judiciary.

By Mr. THORNBERRY:

H. R. 8528. A bill for the relief of the estate of Mrs. Frank C. Gregg; to the Committee on the Judiciary.

By Mr. UTT:

H. R. 8529. A bill for the relief of Claudio Vargas Gonzalez (alias Jose Ramirez Orozco); to the Committee on the Judiciary.

By Mr. WRIGHT:

H. R. 8530. A bill for the relief of William N. Scocos; to the Committee on the Judiciary.

By Mr. WALTER:

H. Con. Res. 202. Concurrent resolution favoring the granting of the status of permanent residence to certain aliens; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

431. By Mr. BUSH: Petition of residents of Canton, Bradford County, Pa., favoring passage of legislation to prohibit transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air; to the Committee on Interstate and Foreign Commerce.

432. Also, petition of citizens of Athens, Sayre, and Bradford County, Pa., favoring the passage of legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air; to the Committee on Interstate and Foreign Commerce.

433. By Mr. FORAND: Petition of Mary M. Eldridge, legislative director of the Woman's Christian Temperance Union of Rhode Island and 25 others from Rhode Island, urging enactment of legislation to get alcoholic beverage advertising off the air and out of the channels of interstate commerce; to the Committee on Interstate and Foreign Commerce.

434. By Mr. HINSHAW: Petition of citizens of California to prohibit the transportation of alcoholic beverage advertising in interstate commerce, and its broadcasting over the air; to the Committee on Interstate and Foreign Commerce.

435. By Mr. SHORT: Petition of Rev. Coy Dickey, and other citizens of Springfield, Mo., protesting alcoholic beverage advertising in newspapers and magazines; to the Committee on Interstate and Foreign Commerce.

436. Also, petition of Rev. John W. Vertz, Mountain Grove, Mo., protesting alcoholic beverage advertising on the air and television; to the Committee on Interstate and Foreign Commerce.

437. By the SPEAKER: Petition of Richard B. Mossman, Bettendorf, Iowa, relative to demanding that action be taken on his redress of grievance now pending in the House Judiciary Committee; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include my newspaper column, Keenotes, on the subject of the French elections and the resurgence of Western Germany. The column follows:

KEENOTES

(By Representative ELIZABETH KEE)

World history took a strange turn in the first week of the New Year. Just a few days ago the first uniformed German soldiers since World War II entered the United States to take training in modern arms and destructive weapons. The French elections have resolved themselves into a victory for no one. The chance of a stable government in that unhappy nation now seems more remote than before. These two events are very closely related, although one did not depend upon the other.

The facts are that, for better or worse, the hopes of the free world on the European Continent ride with the West German Republic. It is not a state of affairs that many people like, but the truth is, there is nothing anyone can do about it. While we must admire the great spirit of democracy that enables every Frenchman to vote for the party which reflects his own particular frame of mind, the tendency of the House of Deputies to be divided six ways from Sunday in all directions makes every French Government a temporary instrumentality that must depend upon the personalities of individuals rather than the will of the people. This is not to be construed as criticism of the Republic of France. It's their country and they can run it as they see fit. We wouldn't want them coming over here and trying to tell us what to do. We have no right to give them advice. However, when they step out into the arena of international relations, their position is considerably weakened by the inability of any government to stay in office long enough to effect a long range program. Cooperation of other nations with France is necessarily limited by this knowledge.

In Western Germany, there is no such problem. Chancellor Konrad Adenauer has built a mighty bulwark against the tide of communism. The continued growth of the German free enterprise system must be a source of great discomfort to the Soviet Union and their cronies in East Germany. I have heard some talk of the Germans as being unreliable in the face of a Russian offer to trade the eastern parts of Germany in exchange for the Bonn Government giving up its ties to the free nations. There is no sign that any such offer would be acceptable in any way to Mr. Adenauer or his political opponents, the Social Democrats. The talk in the Social Democratic Party a few months ago about neutralism and a co-existence policy with the Soviets has given ground to the realization that Russia's only interest in West Germany is to take it over. Of course, the German people still have a lot to answer for. The world has not forgotten the cruelties of World War II so soon, but the Germans are making a great effort to overcome this heritage from the years of the Nazis and it is to be hoped that, in time, they wil be able to sit down at the council table with all nations of the free world as a complete equal, made equal by their own effort. But this is a moral issue only and international politics is the great arena for the realist. The west Germans do not have to take a back seat to anyone in the fields of economics and politics. I can find only admiration for the splendid job they have done of rebuilding their nation. We can hope for them that soon their country will be united and free.

But even a divided Germany presents a more united front today than France. She has been weakened by her own sense of democracy, and democracy like all good things must be carefully administered and properly done, so that the voices of the erratic few do not drown out the wishes of the more sensible majority. And in France, I am afraid that is exactly what has happened.

Censorship—Washington Style

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address I delivered over station WMEX, Boston, Mass., Saturday, September 17, 1955:

It is a strange state of affairs when the American Government is so fearful that its own people should know certain truths, that foreign governments often know more about our own national business than the American people do.

This might be described as "political censorship," to cover up shortcomings and blunders that would have an adverse effect on public opinion.

In any case, its puts the spotlight on the problem as to what should be withheld for the sake of national security, and what should be revealed under the fundamental right of Americans to know what their Government is doing, whether it is good or bad.

The most recent instance was the Dixon-Yates arrangement, where private power interests were trying to scuttle public power. When the news leaked about the cozy huddle between private banking interests and Government officials, that put the brakes on a sly maneuver. Dixon-Yates was quickly abandoned. A smokescreen was thrown up to cover the retreat.

Article 1 of the Bill of Rights guarantees freedom of the press, * * * among other freedoms.

This does not merely mean that the press shall be free to publish the facts that it gathers without censorship on the part of Government.

It implies as well, that the press shall have access to information concerning the operations of Government, within the limits of security.

That word "security" is sometimes used as an excuse for denying to the people, those facts that they have very right to know.

We have been led to expect, by constant reassurances from the Department of Defense, that our Air Force was substantially ahead of the Russians, not only in the performance of planes actually in use, but in research, development, and production time.

On May Day, however, the Soviets staged an air parade that revealed advanced models every bit as good as ours, and proved that they were able to develop them, from the blueprint stage, to actual flight, in much faster time than we have been doing.

Again, it was through private news sources, rather than the Government, that we learned of this success on the part of the Soviets. Perhaps this knowledge, now public, will prod the Department of Defense into getting better results for the vast sums we are appropriating in order to have an Air Force superior at all times to that of the Russian Communists.

We have not seen the end of this, for the cat is out of the bag.

There is a never-ending contest going on between the press and the presidency, no matter what administration is in power.

Newsmen have to dig up stories, as well as report routine events.

Oftentime, and with some justification, they believe that Government agencies hide the facts.

Government officials, on the other hand, would rather have the newsmen accept their press releases, without embarrassing them with probing questions. They are very sensitive to criticism, and sometimes conduct themselves as if they were running a private business, instead of a public agency that should be accountable at all times to the people.

Insiders knew for a long time that Russian pilots and Russian tankmen were fighting against our forces in Korea, but this information, for reasons that no one could comprehend, was classified as secret, and was withheld from the American people.

In the meantime, Russian propaganda was blasting us around the world for intervening in Korea, while we had a comeback that we decided not to use.

A prime example of "dead-end" censorship.

The Washington Post and Times Herald said editorially on June 21 of this year, concerning the news policies of the Federal Government, and I quote: "But their philosophy, even in a period of cold war, is a dangerous one for a country in which the successful operation of government depends on public enlightenment. For the idea that information is something that belongs to the Government to use as it sees fit comes perilously close to the concept of government for government's sake."

When government wraps itself in a mantle of secrecy, there is no way of discovering incompetence, neglect, and corruption, of exposing such deterioration and correcting it.

Some people think that the strict censorship of a dictatorship gives it an advantage. This is not so. The bureaucrats in Soviet Russia have made many serious and continuing blunders that were covered up by censorship for too long. The breakdown in their agricultural program at last came to light because they had to admit it before disaster overtook them. Now, instead of criticizing everything in the United States as a failure, they want to send people over here to find out why our agricultural methods work to produce abundance, while theirs only produce scarcity. The Iron Curtain of secrecy they erected around their own empire, and its operations, has produced an economic crisis. If communism had given away to a free form of government, with an independent press, legislative body, and an informed public, the people of Russia would not be suffering as they are now.

There is in this a clear warning for the people of the United States. It is not enough for us to elect a National Government, and then lose ourselves in our own private lives until the next election rolls around. We must have a continuing flow of

reliable information concerning the job our Government is doing. In between elections, this is the only opportunity we have to check up on our public stewards, and to prevent them from making the wrong decisions.

We can never afford to have a few men in high places decide what we shall know, or what we shall not know.

The security and the progress of our Nation is dependent upon the participation of all our people, utilizing the wisdom and the resources of the whole that we call public opinion.

In this connection, the press itself has a great responsibility.

In the transmission of news, it must avoid the temptation to feature those reports that fit its editorial policies, and to bury those that contradict it.

As long as we have thousands of news outlets, and laws to protect us from monopoly in the gathering and dissemination of news, there is little to fear from the press.

It is the Government that we must watch.

Washington is the news center of the world.

Here is the nerve center of a vast and powerful Government whose policies and actions have a bearing upon the lives and fortunes of every American.

As citizens, we are all shareholders in that Government, and we have the superior right to know how it is being managed, and what it is actually doing.

No one advocates the release of information concerning special weapons and their performance, which the experts believe are unknown to the Kremlin.

But the cult of secrecy is extended far beyond practical caution.

It is used as a pretext to conceal mismanagement, fraud, and injustice.

It becomes the tool of intolerance.

Officials, to hide their own mistakes, would like to classify everything as confidential, secret, or top secret, so that the words themselves cease to have any meaning.

A Senate investigation into military procurement reveals how corruption thrives in secrecy.

This has led to the proposal that the United States Government should establish an Office of Inspector General, with a staff of highly trained investigators to ferret out fraud and corruption in the Federal service.

This proposal, as well as other investigations of Government operations that have become epidemic in recent years, would be unnecessary if the Government did not try to hide so much.

A government with little to conceal from its own people would have no occasion to give evasive answers to the press.

Even today, for instance, we have no reliable information concerning the dangers of radioactive fallout, or what we should do to protect ourselves against it.

The bungling of the Salk vaccine program; and the mystery surrounding the peacetime uses of atomic energy; are as nothing compared with the secret diplomacy that has always been favored by our State Department.

Based on the assumption that the less people know about these matters, the less criticism there will be for those on the top.

A convenient policy for leaders who want to have their own way, but hardly an American policy.

The larger and more complex our Federal Government becomes, the greater the danger that it will consider itself to be more important than the people from whom it derives its powers and its responsibilities.

Newspapers, radio, TV—plus individual Senators and Representatives—are alert to this trend.

Whenever they seek the facts about Government policies and operations, they often find themselves stopped by the invisible wall of censorship. Buckpassing is the most convenient device. But Federal officials are relying more and more upon the excuse that the information sought is classified as secret, to stop the search in its tracks.

The solution?

We had a good system of voluntary censorship during World War II.

This did not depend on withholding information from the press, or clamping down on it. Instead, the press in this country (free from certain restrictions that were necessary in the combat areas) was given access to much information. It was then put upon its honor not to publish anything that might jeopardize the national security.

Perhaps we might develop a similar working arrangement between representatives of the press—and Government—today. So that there will be no barriers in the way of legitimate news.

The freedom of information committee of the American Society of Newspaper Editors is disturbed by this tightening up on news sources. As it stated, and I quote: "The criticism of some recently released material has left officials, the press, and the public without any standard of release upon which they can rely to defend the disclosure of technical information. Unless this attitude is clarified, it is bound to have a profound and paralyzing effect upon the flow of information to the American public.* * * Only the most strenuous exertions of those who understand the degree to which information is vital to our liberty will preserve it against those who think secrecy is vital to our safety."

The American people have the right to know, up to the highest limit consistent with genuine security, the facts about the operations of their Government. And without whitewash.

No administration is justified, on the basis of personal and political reasons, for keeping them in the dark.

National Printing Week Observance

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. LOVRE. Mr. Speaker, I wish to place in the RECORD an editorial concerning National Printing Week. As you know, National Printing Week is being observed at the present time. The influence the American press has made in establishing and fostering of our freedoms cannot be measured. The impact on the people by the press is so strong that if every newspaper in this country were to shut down operations tomorrow, it would be difficult to describe the disastrous results that most certainly would follow.

Too often we minimize the value of something we take for granted, and observance of National Printing Week rightfully calls attention to the major role newspapers have played in upholding what we are proud to refer to as the American way of life. Still the presses of America, and you stop the heartbeat of the Nation. Today the American press represents one of the strongest institutions continually carrying on the struggle to protect the rights of the individual.

This applies to the smallest as well as the largest of newspapers, and is illustrated by the thoughtful comment of Mrs. Sid Davison, who assists her husband in publication of the weekly newspaper, the Miner County Pioneer, at Howard, S. Dak., Mrs. Davison's comment follows:

This newspaper is a personal diary of the life of our community. Throughout the columns of this paper are printed the interesting and important doings of our residents from year to year. This paper is free to express our opinions or your point of view on any issue or question of public interest, subject only to the reservations imposed by libel laws. This country's smaller newspapers are a tremendous asset on the side of freedom.

Adequate Highways: How and When

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. McGREGOR. Mr. Speaker, may I quote from President Eisenhower's state of the Union message to Congress January 5, 1956:

In my message of February 22, 1955, I urged that measures be taken to complete the vital 40,000-mile interstate system over a period of 10 years at an estimated Federal cost of approximately $25 billion. No program was adopted.

Continuing my quote from the President's message, and I quote:

If we are ever to solve our mounting traffic problem, the whole interstate system must be authorized as one project to be completed approximately within the specified time. * * * Furthermore, as I pointed out last year, the pressing nature of this problem must not lead us to solutions outside the bounds of sound fiscal management. As in the case of other pressing problems, there must be an adequate plan of financing. To continue the drastically needed improvement in other national highway systems, I recommend the continuation of the Federal Highway Act.

That, ladies and gentlemen, was a statement of the President of the United States and I am in accord with it 100 percent. I want to make it perfectly clear that I favor and will do everything I can to put into a law an adequate highway program, both for the interstate and the intrastate and I will be for a reasonable program whether it goes into effect as a one-package bill, or the interstate and intrastate in separate pieces of legislation.

The 1954 Highway Act, which it was my privilege to author, is a biennial highway authorization and it expires June 30, 1956. This bill authorized $315 million primary; $210 million secondary; $175 million urban, and $175 million interstate plus various amounts for forest highways, roads and trails, parkways, Indian reservation roads, and so forth. This total amount approximately equals the amount of revenue brought in by the 2-cent per gallon Federal gas tax.

This authorization is financed by taxes now in existence and no additional taxes would be necessary if the existing law, 1954 Highway Act, Public Law 350, would

be reenacted. Additional amounts or allocations could be added to each system, possibly $100 million total and we would still be within the limits of the revenue brought in by existing taxes. I am of the firm conviction that this law could be reenacted with very little opposition. You know the history of the Clay committee bill as well as the so-called Democrat or Fallon bill that was before the last session of Congress. Both bills were defeated and, in my opinion, because of the financing involved. Some refused to accept the Clay committee bond recommendation which called for $25 billion worth of bonds for highway purposes extending over a period of years. The Congress also defeated the so-called Democrat or Fallon bill because many felt that the revenue raising features or taxes were not equitable. Regardless of the arguments pro or con, the program was defeated. Regardless of the merits or demerits of the interstate-highway program, which is to be financed by an entirely new financial program, the question arises, Shall the interstate system, with a new financial program requiring additional taxes, be incorporated in the same legislation that includes the intrastate system primary, urban, and secondary roads when the financing is already established and no new taxes are necessary?

I hear the same arguments, and some new ones, on the floor of Congress and on the Hill that I heard last August. No one seems to object to the intrastate bill but most everyone seems to object to the interstate proposal financing program. Most everyone, with some exceptions, wants an interstate highway but they want the other person to pay for it. I hear some old arguments renewed, with more emphasis relative to financing the highway program and I am referring to the governor's conference group, and others, insisting that the roads, both interstate and intrastate, should be financed from revenue derived by the Federal Government from existing excise taxes on automotive products paid by highway users. A very fetching appeal. I would like, however, to point out some of the facts of life regarding this approach. Excise taxes levied by the Federal Government have been and are now levied and justified as a source of revenue for the general support of government. I know as well as you that while the Federal gas tax was never levied as a highway user charge, that developments over the past 10 years have more and more led to its being accepted as such and I think we all understand the reasons behind this acceptance. The excise-fuel tax yields approximately $1 billion a year. The total excise yield to the Government from this and related automotive excises now reaches $2.5 billion. I question seriously whether we are entitled to consider these excise taxes as highway user charges, certainly those taxes beyond the Federal fuel tax and lubricating oil taxes. I question the physical soundness of a move in this direction, at least beyond the Federal fuel tax. The other excises can, by no stretch of the imagination, be considered a fair measure of highway use. Congress at no time by legislative action has ever identified these excise taxes as highway user charges.

To earmark the total yield of the automotive excise taxes for highway purposes, as some are recommending, would deprive the general revenue now used for support of the Government of an additional $1½ to $2 billion over and above the fuel tax yield. This would unbalance our Federal budget to the tune of $1½ to 2 billion and would have to be made up from other tax sources if the budget is to be balanced and, ladies and gentlemen, the budget is balanced for the first time in many years. I am asking you would you deplete our existing general revenue fund by that amount of money to build highways? If you would, what tax would you recommend to take its place to make up this deficit? Would you want me to support or would you, if you were in my position, support an increase in the income tax, for example? Faced with this choice, it would seem to me—and I hope that you will agree—to be a sounder financial procedure to consider the levying of additional equitable charges on the highway users, who are the direct beneficiaries of a greatly expanded system, in some manner related to the benefits they derive.

May I again quote from the President, who has said on numerous occasions, and I quote:

> A sound Federal highway program, I believe, can and should stand on its own feet with highway users providing the total dollars necessary for improvements and new construction.

Another important factor should be considered when we are even thinking of depleting the general revenue fund. We all know that the general tax funds of all levels of our Government—Federal, State, and local—are presently drained nearly dry and with our tremendous increase of population, the burden placed on the revenues in the foreseeable future will require all the talent and ingenuity we have to prevent the complete destruction of our various government structures. The increasing demand for schools, hospitals, welfare, social security, sanitation, public buildings, and playgrounds presents us with a general revenue problem of staggering proportions. So, before your organizations or any of you individually proposes to deplete the revenue fund by $1½ to $2 billion for highway purposes, give consideration to the other urgent and, yes, vital needs.

It is never possible to devise a tax acceptable in full degree to those upon whom the tax is imposed. No tax that this Congress or any other Congress may devise will be completely painless to that individual or group upon whom the increase falls. I, personally, believe that there is equity and fairness in the theory that the highway user charge principle should be applied on the basis of benefits derived. I state positively and publicly that I do not believe that such a user charge should be punitive. The justification of levying a tax is to soundly finance an adequate highway program and not to exterminate or discriminate unfairly against a legitimate highway user.

I have endeavored to explain my position relative to a new financing program. You can readily see that it is controversial and subject to a great deal of discussion but remember, one thing ladies and gentlemen, if you are going to build highways somebody has to pay for them.

The controversial subject of financing the new program for the interstate system is not applicable to the existing law which was passed by nearly a unanimous vote of the Congress in 1954 and which I authored. It is known as the Highway Act of 1954. It expires June 30, 1956. I have previously given to you the amount of money that it spends for highways. It can be renewed and no new tax required over the existing taxes. I repeat, why jeopardize this new program now in effect by incorporating in the same legislation a 10- or 15-year highway construction program newly and entirely differently financed and which, in my opinion, will jeopardize the passing of the existing law.

I firmly believe in an adequate highway program, including the interstate system as well as the intrastate system but I do not want the existing highway program destroyed and scuttled because of the insistence of some to incorporate into the legislation, soon to be before the Congress, new ideas including financing and distribution. I think the interstate system is strong enough to stand on its own merits in its own legislation and I think the proponents of the interstate system are weakening their position when they are attempting to have it carried in the program of the existing law. Let us not jeopardize the existing program that is working so well. Let us have a 10 year or 12 year interstate program in separate legislation and let us continue our intrastate highway program, bringing it before Congress once every 2 years for a look-see by the membership of Congress at that time.

Constructive Medicine in Aging: Problems of the Mind in Later Life

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. HESS. Mr. Speaker, in view of the Nation's growing interest in problems of the aging, I would like to call attention to a conference which was held in Cincinnati last Friday.

The 1-day meeting, titled "Constructive Medicine in Aging: Problems of the Mind in Later Life," is the second annual symposium on gerontology sponsored by the William S. Merrell Co., of Cincinnati. Several hundred doctors heard eight of America's leading physicians tell of the most recent developments in mental problems of the aging.

The importance of this field of medicine is evidenced by the fact that there are approximately 14 million persons in

the United States over 65 years of age. This number is currently increasing at the rate of about 400,000 a year. Of all new admissions to mental hospitals, 38 percent are in the 60-year and older group and 27 percent of all new admissions are older patients with senile psychoses and cerebral arteriosclerosis.

The general theme of the Merrell-sponsored symposium has as its primary objective the improvement of the state of health of persons who reach old age, and the improvement of the diagnosis and treatment of the infirmities of the old. The symposium will integrate basic research with its practical application to clinical medicine and will focus public and professional attention on the growing problems of our older citizens.

Merrell, producers of medicines since 1828, is recognized as a leader in the field of gerontological research, and is directing over 50 percent of its research activities toward the development of new and better drugs for our aging population.

Natural Gas Legislation

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an editorial published in the Washington Post and Times Herald of January 13, 1956, together with certain comments of mine on the editorial.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

THE PRICE OF GAS

The attempt by Senators MONRONEY and FULBRIGHT to penalize the Washington Gas Light Co. for its opposition to the Harris-Fulbright natural gas bill is wholly unwarranted and assumes the nature of a punitive act. The gas company has every right to oppose the Harris-Fulbright bill without being subjected to special harassment by Congress. To single it out, as Senators MONRONEY and FULBRIGHT would do, and to require it to publish on its bill a breakdown of gas costs, would be to punish the company for acting in what it regards as the public interest.

The truth is that the company seems to be speaking more in the public interest than Messrs. MONRONEY and FULBRIGHT, who are asking Congress to exempt gas producers from utility-type regulation. Everett J. Boothby, president of the Washington Gas Light Co., said he opposed the exempting legislation because it would make it possible "for the few thousand gas producers to get substantial windfall profits from millions of gas users." He is supported in that contention by a good deal of evidence and by what appears to be nearly half the Senate.

When the Harris bill passed the House last year, it seemed to this newspaper that there were sufficient safeguards in it to protect the consumer from spiraling gas prices. At least it seemed worth taking a chance on the bill in the interest of limiting the domain of Federal power and permitting free competition to have its play. But because of certain technical amendments which permit escalator clauses in contracts and because of other features that insulate the producers from price regulation, the opponents of the measure now seem to have the stronger argument. In a matter so complicated we recognize that there is room for honest difference of opinion and that it is almost impossible to arrive at a completely clear picture of what would happen under the proposed legislation.

However, the argument that the bill does not adequately protect the consumer and ought to be strengthened is backed by impressive testimony. Senator DUFF of Pennsylvania, who has had great experience in the oil business, is persuaded, for example, that "excessive increases in the price of gas might occur as the result" of this legislation. He adds:

"While it is true that the nature of the natural-gas business makes it exceedingly difficult of equitable regulation by yardsticks normally used in utility regulation, it is also true that serious abuses have arisen as the result of favored-nation, escalation, and spiral-escalation clauses that have resulted in millions of dollars of increased prices to the consumers by private negotiations and renegotiations in which the ultimate consuming public has had no representation and no voice whatever."

The proposed bill would not exempt the gas producers from all regulation but would strictly limit the FPC in its regulatory function. For example, it would authorize the Power Commission to establish reasonable market price in future contracts without defining the term or setting any standards for the guidance of the commission. In a field in which real competition is limited by the physical difficulties of moving pipelines, reasonable market price might reflect more what the producers thought they should have than any relation to cost of production.

The language of the bill also is obscure with respect to the escalation clauses, which say, in effect, that if a pipeline has a contract with Producer A and then offers to pay Producer B a higher rate he must also pay the higher rate to Producer A. The Senate, at least, should satisfy itself that FPC has full power to prohibit unjustified increases as a result of the escalation clauses. Senator DUFF and other opponents of the measure—including the Washington Gas Light Co.—do not believe that the bill as written provides sufficient safeguards.

If there should be excessive price increases for natural gas, industrial users might turn to other fuels. But residential consumers who had invested in equipment to heat their homes and cook their food with gas could not easily switch. The pipeline operators and local gas distributors are carefully regulated by public utility commissions. Can this regulation be effective—in view of the talk among producers of prices double those of today and 10 times those of 1946—unless the consumer interest is protected in the bargain made at the well-head?

STATEMENT BY SENATOR DOUGLAS

At the time of the House debate on the Harris bill last year, the Washington Post stated editorially that the bill was a compromise which seemed worth trying. The Natural Gas and Oil Resources Committee, propaganda agency for the gas industry, welcomed what it regarded as an apostate from the ranks of the opponents of the bill. Thousands of reprints of the editorial were distributed across the country, with the word that this was from a newspaper that had "switched sides." Perhaps it was more than thousands of copies, for that committee says it has distributed more than 5 million pieces of printed material in the effort to secure passage of this legislation.

Actually the editorial support for the bill was rather equivocal. But last Friday, January 13, 1956, the Washington Post dispelled the doubts which had arisen concerning its vision and devotion to the public interest on this issue with an editorial unequivocally condemning the attack on the Washington Gas Light Co. for its opposition to the natural gas bill. In part the editorial stated:

"The truth is that the company seems to be speaking more in the public interest than Messrs. MONRONEY and FULBRIGHT, who are asking Congress to exempt gas producers from utility-type regulation."

The editorial goes ont to point out why the bill is against the interest of the consumers of gas. Mr. President, recognizing that the Natural Gas and Oil Resources Committee will not undertake to distribute copies of this editorial to correct the record, and knowing full well that the gas consumers of the Nation have no fund with which to do so, and wishing the people of the country to know that this distinguished newspaper has not forsaken the public interest in this issue, I have asked unanimous consent for the printing of Friday's editorial in the RECORD.

Bicentennial of the Birth of Chief Justice John Marshall

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a very fine address delivered by the senior Senator from Pennsylvania [Mr. MARTIN] on September 22, 1955, at a convocation at the College of William and Mary marking the bicentennial of the birth of Chief Justice John Marshall.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT A CONVOCATION HELD AT THE COLLEGE OF WILLIAM AND MARY, WILLIAMSBURG, VA., MARKING THE BICENTENNIAL OF THE BIRTH OF CHIEF JUSTICE JOHN MARSHALL, SEPTEMBER 22, 1955

I deem it a great honor to address this distinguished convocation assembled at the historic College of William and Mary to honor the memory of the great Chief Justice, John Marshall.

It is always a pleasure to come to the great State so ably represented in the Senate by such outstanding statesmen as HARRY F. BYRD AND WILLIS A. ROBERTSON.

They are men of ability, courage and patriotism. Senator BYRD's resolute fight to reduce the size and cost of government, for sound fiscal policies, and the decentralization of governmental functions will long be remembered as a historic milestone in American legislative history.

In my own Commonwealth of Pennsylvania we recall with pride and gratitude the vast contribution made by our sister Commonwealth of Virginia to the growth and development of the American Republic.

In early Colonial times Virginians and Pennsylvanians worked and fought to uphold freedom and dignity of the individual. They fought side by side in the French and Indian Wars to establish British supremacy

on the American Continent. They suffered and sacrificed together in the War for Independence.

In the War Between the States they gallantly opposed each other on many bloody battlefields. The endurance, bravery and skill of that terrible and tragic struggle have never been equaled. Both sides fought with sublime valor for the cause in which they believed.

Yes, there is patriotic inspiration for every American in the proud history of the Old Dominion State, for traditional love of individual freedom and her firm allegiance of the ideals of liberty and independence.

Those sacred principles were woven into the fabric of our national existence by Virginia's illustrious sons. They were preserved and strengthened by the blood and sacrifice of her heroes.

Here the first permanent English settlement was established. Here the first representative legislative body in the New World was convened.

Here were taken the first courageous steps by American colonists in defiance of tryanny.

Here at Yorktown the heroes and patriots of the Revolution achieved final triumph over the armed might of the greatest power of that day.

The glory of Virginia shines forth brilliantly in such honored and revered names as George Washington, Thomas Jefferson, Patrick Henry, James Madison, James Monroe, George Mason, John Marshall, and those gallant soldiers, Robert E. Lee and Stonewall Jackson. Your many historic shrines and churches are rich in association with the glories of America.

Every American is proud of Virginia, today as always, a stronghold of self-reliance, a magnificent center of culture, and the home of deep religious devotion.

From the halls of this venerable college great leaders have gone forth to brilliant success in the service of their State and the Nation.

Three Presidents of the United States—Thomas Jefferson, James Monroe, and John Tyler—are among its distinguished alumni. It was here that John Marshall came to prepare for his outstanding legal career, attending a brief course of lectures given by the great scholar, jurist, and patriot, George Wythe.

Since it was established by royal charter in 1693, the College of William and Mary has made its influence felt in State and national history. How fortunate we are that it has survived numerous difficulties and stands today as a strong, vigorous, dynamic institution, combining the beloved traditions of its glorious past with the forward-looking, progressive spirit of these modern times.

In observing the bicentennial of the birth of John Marshall we pay tribute to a hero of war and peace.

As a soldier he placed his life in the balance in the cause of American independence. As a jurist he blazed a broad trail through the jungle of legal complexities so that succeeding generations might find the way to security and stability.

The enduring landmarks he erected will everlastingly guide Americans to a full measure of individual freedom under our system of constitutional government.

When John Marshall began his long and brilliant tenure as the fourth Chief Justice, the Supreme Court had been in existence 12 years.

Up to that time the Court had not yet advanced to its rightful place of importance in the system of government established by the Constitution. By 1791, when the Court moved from New York to Philadelphia, 2 of the 6 original Justices appointed by Washington had left the bench to take more attractive posts in their own States. Shortly thereafter, Chief Justice John Jay resigned to become Governor of New York.

So lightly was the Supreme Court regarded in relation to the other branches of the Government that John Jay refused the offer of President John Adams to return him to the Chief Justiceship. He declared that the Supreme Court lacked "the energy, weight, and dignity which are essential to its affording due support to the National Government."

The achievements of John Marshall stand out with dazzling brilliance because it was from this low point that he raised the Supreme Court to power and majesty as the guardian and interpreter of the Constitution. His invincible logic breathed life and vigor into the fundamental law and made it an unconquerable force for the protection of individual liberty.

The unparalleled growth and progress of the United States is proof of the wisdom of the Founding Fathers in establishing a government which placed the executive, legislative, and judicial branches on an equal footing, limited in their powers to those specifically granted in the Constitution.

The men who framed the fundamental law were men of deep learning and broad experience. Of the 55 members of the Constitutional Convention, 38 were lawyers. Others had served as State governors and as chief justices in their State courts. They were familiar with the long struggle for human freedom. They had a thorough appreciation of the blessings of liberty which they sought to secure for themselves and their posterity. They knew from their profound study of history that government can become oppressive. They recognized that usurpation of power by the executive or the legislature could encroach upon the liberties of the people and could destroy freedom of the individual.

The experience of the American Colonies in that regard had been set forth in the Declaration of Independence as one of the grievances against King George III, which stated, and I quote:

"He has made judges dependent on his will alone for the tenure of their offices and the amount and payment of their salaries."

Therefore, they sought to erect safeguards against that danger by creating an independent judiciary that would stand as a bulwark of the citizen, protecting the rights granted to him by the Constitution against the power of government.

They wrote into the Constitution the provision that judges of the Supreme and inferior courts of the United States shall hold their offices during good behavior and that their compensation shall not be diminished during their continuance in office.

Thus the courts and the judges who composed them were placed beyond the reach of political pressure, free to guard the liberties of the people, to protect the constitutional rights of the humblest citizen against violation by the Government itself, by the Congress, or the Chief Executive.

John Marshall's fame will endure forever because he expounded the doctrine that the Supreme Court is the final interpreter of the Constitution, with complete authority to declare null and void any act of Congress which does not come within the powers granted by the Constitution.

Marshall's rule for testing the constitutionality of legislative enactment is well known, but I think it should be impressed upon the minds of every member of every law-making body.

In his decision on the case of *McCullough* v. *Maryland*, we find this formula, and I quote:

"Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consistent with the letter and spirit of the Constitution, are constitutional."

It was in this case that the great Chief Justice gave expression to the observation which is perhaps more widely quoted than any other:

"The power to tax is the power to destroy."

Another quotation from John Marshall is worthy of everlasting preservation as expressing the supreme importance of an independent judiciary.

It is, of course, well known to this audience, but I feel it is worth repeating.

It came in debate during the Virginia convention, 1829–31, and I quote:

"Advert, sir, to the duties of a judge. He has to pass between the Government and the man whom the Government is prosecuting; between the most powerful individual in the community and the poorest and most unpopular.

"It is of the last importance that in the exercise of these duties, he should observe the utmost fairness. Need I press the necessity of this? Does not every man feel that his own personal security and the security of his property depends on that fairness?

"The judicial department," Marshall continued, "comes home in its effects to every man's fireside. It passes on his property, his reputation, his life, his all. Is it not to the last degree important that he should be rendered perfectly and completely independent, with nothing to influence or control him but God and his conscience?"

Let us review, in brief outline, the influences that shaped the career of John Marshall. His youth was spent in the wilderness of the Virginia frontier. His early home was a typical log cabin of the backwoodsman. There was little opportunity for him to gain an education, but he absorbed the few books that came into his hands.

For nearly 6 years he was a soldier in the Revolution, rising to the rank of captain. He fought at Brandywine, Germantown, Monmouth, and Stony Point. He endured the cruel hardships of Valley Forge in the bitter winter of 1777–78.

His experience in the War for Independence strengthened his patriotic love for America. It implanted deep into his consciousness the hope that out of the struggle and sacrifice of the Revolution there would emerge, not a mere collection of States, but a united nation, and a government "competent to its preservation."

This feeling he so well described many years later in his autobiographical letter to his good friend and associate, Joseph Story, in which he wrote:

"* * * I am disposed to ascribe my devotion to the Union, and to a government competent to its preservation, at least as much to casual circumstances as to judgment.

"I had grown up at a time when the love of the Union, and the resistance to the claims of Great Britain, were the inseparable inmates of the same bosom; when patriotism and a strong fellow feeling with our suffering fellow citizens of Boston were identical; when the maxim, 'United we stand, divided we fall,' was the maxim of every orthodox American.

"And I had imbibed these sentiments so thoroughly that they constituted a part of my being. I carried them with me into the army, where I found myself associated with brave men from different States, who were risking life and everything valuable in a common cause, believed by all to be most precious; and where I was confirmed in the habit of considering America as my country, and Congress as my Government."

Schooled in the stern realities of war Marshall entered upon his career at the law which was to contribute so greatly to the preservation of the Constitution and the greatness of the United States.

With no formal legal training except the course of law lectures which he attended here for a period of several months, he gained admission to the bar of Virginia.

His success was immediate, not only in the courts, but in political affairs. He served in the legislature and gave strong support to the ratification of the Federal Constitution.

The qualities of leadership which he possessed brought him into prominence as a champion of the Federalist cause in Virginia. He defended the policies of Federal Government under Washington and the strong financial measures of Alexander Hamilton.

A brief venture into diplomacy brought him a measure of national fame as a member of the XYZ mission to France.

It was at the urging of George Washington that Marshall agreed to become a candidate for Congress in 1798. He was elected, but before he had completed his term President John Adams appointed him Secretary of War, but Marshall declined. Adams then named him Secretary of State, which he accepted and continued in office for a month after he took the oath as Chief Justice.

He was then 45 years of age and had never filled a judicial office.

Thus it became his responsibility to expound the Constitution in the most critical period of its history. It was given to him to preside over the Supreme Court when it was called upon to decide four cases of vital importance: *Marbury* v. *Madison*, *McCulloch* v. *Maryland*, *Cohens* v. *Virginia*, and *Gibbons* v. *Ogden*.

In each of these cases it was Chief Justice Marshall who wrote the opinion of the Court. In each case the continued existence of the Federal system, established by the Constitution, depended on the action of the Court. In each case the Court adopted a principle which is generally considered to be essential to the preservation of the United States as a Federal state.

Now for a moment let us consider some of the dangers that confront us as a Nation and some steps that we can take to defend America. Let us do this with the same unselfish courage that John Marshall met the fundamental issues of his day.

1. We have too much public and private debt. It now reaches the staggering figure of more than $600 billion.

2. Some taxes are almost at the level of confiscation. Thirty percent of gross income is a very high price to pay for self-government.

3. The rapid increase in the size of government is alarming. The payroll of Government employees is greater than all the steel mills of this Nation and twice that of the railroads. There is too much duplication in Government.

4. Local government is self-government. It is home rule. It should be preserved and strengthened. Local government should have adequate taxes under its own control to maintain its proper functions. Grants from the higher level of Government to the lower level mean some loss of local contol, which is not good or economical.

5. We must keep each of the three levels of Government in a sound fiscal position through balanced budgets, equitable taxation and honest service. Excessive debt destroys the purchasing power of the dollar.

6. Our people must realize that Government cannot assure security. That depends upon the individual. Government has nothing to give except that which is first given to it by the people.

7. A republic to survive must have a citizenship of high morals and a deep appreciation of the meaning of free government. The decay of character through dishonorable efforts, even within the bounds of law, can soon destroy the strongest republic.

A republic can be no stronger than the virtues of its people. Corruption in Government and the failure of people to take part in their Government are more dangerous than those who plot against the Government.

8. Unbridled emotionalism is destructive and means the end of orderly governmental procedure. John Milton said that order is "Heaven's first law". Unbridled emotionalism makes a republic an easy prey for designing demogogs. They operate by inflaming the masses and by organizing dangerous pressure groups. They promise things which can only be given by endangering the stability of the Government.

9. We must all appreciate the orderly procedure that the Founding Fathers conceived in our Constitution. The people themselves cannot legislate. In a republic they select their legislators but the legislator cannot administer. The administrator or executive cannot judge. This is left for the third branch of Government, the judicial. None but those strongly imbued with American ideals and principles should be given these places of honor and trust.

To avoid these dangers every American must be on guard and have the courage of John Marshall. He must understand Americanism and be proud to say: "I am an American."

In this day and age when human freedom is being blotted out in large areas of the world, every American should acknowledge, in praise and gratitude, our debt to John Marshall.

Because of his wisdom and courage generations far into the future will enjoy the blessings of government of laws and not of men.

No dictator will arise amongst us so long as we are guided by the philosophy of individual freedom expounded by the great Chief Justice.

Because of his strength and character every American, regardless of his station in life, will forever be secure in his inalienable right to life, liberty, and the pursuit of happiness.

The Founding Fathers, among whom Virginia was so ably represented, held these rights to be of Divine origin, the most precious gift bestowed upon mankind by Almighty God.

Let us live by that doctrine.

Let us be ever ready to uphold and defend the Constitution, as did John Marshall, and America will go on to a greater glory under God, true to its destiny as a free Nation of free men, with liberty and justice for all.

Let's Remove the Patronage Tumor

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. WRIGHT. Mr. Speaker, I have today introduced a bill to do away with the outmoded and unattractive practice of political patronage appointments in the postal and classified civil service.

The terms of my proposal would place postmasters in the competitive civil service, and would bring to an end the prevalent practice of obtaining political clearance either from Congressmen or from political party committees for appointees to civil-service jobs.

I am convinced that the American people both desire and deserve this type of reform, and that it is long overdue.

The Government of the United States is undoubtedly one of the most immense employment organisms on earth. It employs a working force of 4½ million and hires approximately a half-million new people annually to fill job vacancies of one sort and another.

To maintain this Government in all of its operations costs the average taxpayer about $350 a year in taxes.

For his $350 investment he would like—and he has every reason to expect—the assurance that this Government which belongs to him will be operated with the maximum of efficiency and the minimum of political job making.

He has every reason to expect that the people employed to conduct his affairs for him will be selected on the basis of ability and not in payment of political obligations.

Admittedly, positions of Cabinet rank and top policymaking stature must be filled by people in harmony with the governmental philosophy of the administration in office. My bill, therefore, does not disturb the existing relationship of Presidential appointment and Senate confirmation for positions of this type.

Yet there can be no logical reason or defense for requiring the President to appoint and the Senate to confirm local postmasters in the 40,000 communities they serve, except it be to create or perpetuate a nationwide political machine founded upon patronage.

In this specific connection, the Hoover Commission Task Force on Personnel and Civil Service said:

> The present system of selecting first-, second-, and third-class postmasters is a hybrid between political appointment and a true merit system. It is incompatible with a businesslike management of the largest civilian business that the Government operates. It does not invite genuine competition from well-qualified persons and offends the American ideal of equal opportunity on the basis of character and ability. By reserving the key posts for patronage, it limits the incentive to enter the postal service as a career, and discourages postal employees from trying to go ahead on their merits.

The average American has shown again and again that he has nothing but contempt for the spoils system and everything that distasteful term implies.

The sole purpose of public employment should be to promote the most efficient possible conduct of the affairs of our Government, not to provide jobs for members of any party machine.

Millions of Americans voted for General Eisenhower in 1952 because they were convinced that he would usher in an administration which would clean up what they regarded as a mess in Washington.

"The single choice, the single standard," he had assured the Nation in a speech at Duluth, Minn., "shall be merit and not political reward."

Granting the personal sincerity of the President, it must be disappointing to him as it is to many of us of both parties in the Congress that the administration which surrounds him has fallen considerably short of living up to that expectation.

Many public positions are today being filled with strictly partisan political appointments.

It would be unbecoming of me as a Democrat to say that the Republican

Party is behaving more crassly in this regard than my own may have done in the past. I realize that decency and honor and integrity wear no partisan party label.

As a first-term Member, it would be presumptious of me to say that present practices are worse than they have formerly been, for I have never before enjoyed this vantage point of observation.

But I do think it is fair to say that I have been shocked and keenly disappointed by the very partisan political complexion of certain job-placement policies presently in vogue in our Federal Government.

That it may have been going on for years makes it no less reprehensible. That the other party on occasion may have been guilty of the same objectionable practice is no defense.

Some of these practices display what appears to be a brazen contempt for the principles which motivated civil-service reform and the Hatch Act.

The Pennsylvania State Republican Committee last spring sent an official delegation to Washington to confer with the White House and the National Republican Committee on patronage jobs.

Writing at the time in the Washington Star, columnist Joseph Young quoted a spokesman for the group as saying:

> The situation is vital to our staying in political power. It is the precinct workers and the rank-and-file political aids back home who win elections for us, and we've got to take care of them as far as jobs are concerned.

Which brings up the question: What is the purpose of Federal employment—to perform necessary government functions? or to win elections?

A year or so ago, under what came to be known as the Willis order, Federal agencies were directed by the administration to cooperate with the Republican Party by finding jobs and winning promotions through government for people with GOP political backing. In its original form, the order applied to all jobs, without exception, including presumably under civil-service protection.

The order required Federal agencies to notify the Republican National Committee of job vacancies on forms to be supplied by the party committee. All jobs paying $9,600 or better were to be frozen for a period of 30 days, presumably to allow the Republican committee time to clear prospective appointees.

In a strongly worded statement of indignation over this policy, the 74-year-old, nonpartisan National Civil Service League stated:

> A career system of civil service by definition and by its nature cannot be part of a political spoils system or a reservoir of political patronage. The only means of keeping a career civil service permanently useful is to keep it scrupulously nonpartisan.

When the plan became publicly known, it aroused a storm of protest, and has since been modified.

But the pattern was made clear. It has also been made clear in the pronouncements of local party chairmen over the country who are openly stating that the first qualification they will consider in filling an opening is whether or not the applicant had a reliable record of Republican Party activity.

Let me make myself clear. Such party activity should certainly not mitigate against a person's being considered, but it is definitely not a qualification for handling difficult administrative duties.

Public employees are not paid by any political party; they are paid by the people of the United States.

Yet the present party, and some of its spokesmen in the administration, have not been content merely to fill the vacancies which normally arise with people to whom they owe patronage favors.

There is considerable evidence to indicate that they are feverishly trying to clear out as many career servants as they possibly can from present employment in order to make room for more political appointments.

One such disturbing development is the recent action in removing deputy United States marshals from the competitive service, against the strong recommendations of both the Hoover Commission and the nonpartisan National Civil Service League.

Another such development was brought to light during the last session by the gentleman from Texas [Mr. RUTHERFORD], who sounded the alarm on a move in the Treasury Department under which career Bureau of Customs employees, living and working for years in El Paso, had been given notice of transfer to such distant points as Vermont, Maine, and North Dakota.

Obviously, their long service and valuable experience with the customs problems of the Mexican border could not be expected to qualify them for any increased contribution to the service in any such distant points. We might as logically send an expert on far eastern customs procedures to Greenland.

Mr. Rutherford reported that one such employee, upon finally deciding to accept such an assignment, was quietly told that what was really expected was his resignation.

Senator MONRONEY has said that "Postmasters with years of truly distinguished service are being highballed out of office on the flimsiest of pretexts." The only conceivable explanation seems to be to clear another place at the pork barrel.

Some effective protection against these practices can be afforded for the conscientious career servant by abolishing the pork-barrel method of selecting his successor.

Senator JOHNSTON of South Carolina has expressed concern over reports of job selling in the Post Office Department, involving appeals from party officials conveying the strong suggestion that applicants for local postmasterships contribute certain stipulated sums to the State political organizations.

As to these and similar disturbing reports from over the Nation, I cannot attest with any certain knowledge concerning the motivations behind them. This much, however, can be said with sure conviction:

The widespread use of public positions as political patronage to reward the faithful or punish the erstwhile opposition, by whatever party or individual it may be practiced, is inconsistent with our finest American ideals of clean government.

It is an unnecessary and unhealthy growth upon the body politic. Like a tumor, it serves no useful purpose, but can grow to grotesque proportions. The bill I have proposed would be the corrective surgery necessary to remove it.

Such surgery is long overdue. There can be no better time than now.

Our Postal Operations

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an article in regard to post office operations, written by Hon. Arthur Summerfield, Postmaster General, and published in the January 1956 issue of Nation's Business.

The Post Office Department, with its over 500,000 employees, handles over 50 billion pieces of mail annually. Under the very able direction of Postmaster General Summerfield, much modernization has taken place and many improvements have been made. As a result of congressional action last year, through passage of the increased pay and reclassification act, morale among the employees has been greatly improved.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The United States Post Office Department has a new look—and a new spirit.

The new look is dramatized by the eye-catching red, white, and blue colors which now modernize mail boxes and postal trucks.

But the improvements taking place in the postal establishment—which serves more of our citizens more intimately and more frequently than any other Government department—are far more fundamental and much more significant than this new color scheme.

Never before have the post offices of the United States handled so much mail volume, so quickly, so efficiently, so economically.

Deficits are lower. The postal deficit of $362,700,000 for the 1955 fiscal year is less than half of the alltime high reported deficit of $727 million for fiscal 1952.

When our team of executives recruited from industry assumed responsibility for the management of the Post Office Department January 20, 1953, we found:

The post office had no certified public accountants on its payroll although its financial transactions exceeded $20 billion a year.

There was no modern personnel department to meet the needs of 500,000 employees.

No training program was being used.

The salary structure contained innumerable inequities and offered no real incentives for advancement to supervisory positions.

Although the Post Office Department handled more than 50 billion pieces of mail annually, it had no materials-handling engineers.

The worst highway safety record in Government.

No public information services were being used to help the public help itself to better

mail service or to provide communication channels between management and employees.

No basic review of its transportation policies and methods had been made in 25 years.

Nearly 40,000 postmasters reported directly to Washington on even the most trivial problems.

Management control tools and methods were so completely lacking that when I first called for a financial report on the previous months' operations, I was told that such data would not be available for 18 months; that such reports were considered historical documents and never intended for management control purposes.

In 3 years the Post Office Department has been overhauled and reorganization is nearly complete.

Tried and proven concepts of modern business management have been introduced and the results are becoming increasingly apparent to the public.

The faster, more efficient, and more economical mail service is due in part to these improvements.

Mailers and postal patrons benefit from more than 70 changes in procedures. Post offices in most major cities are open longer and mail is collected later. More than 5,000 city letter carrier routes are being added annually. Modern rural delivery service is being expanded constantly. New services are being added—and others simplified. The new certified mail provides important benefits of registered mail, including proof of delivery, at lower cost. A new money order procedure eliminates forms and reduces time spent in line. New pamphlets help the public help itself to better mail service.

The internal procedures of handling money, bookkeeping, and finanical reporting have been greatly streamlined. Payrolls are being handled by modern punchcard checks and equipment in 15 centralized locations. The daily task of processing and accounting for 1,500,000 paid money order forms is centralized in the new Kansas City Money Order Center which will ultimately use the most modern electronic equipment. Simpler financial procedures generally will achieve a total reduction of 5,000 positions from the overhead. This program relieves postmasters of unnecessary paper work, gives them modern business methods, and enables them to concentrate on the major job of moving the mail.

A nationwide safety program has already reduced motor vehicle accidents from 13 to 8 per 100,000 miles. Even better results are anticipated.

Broader and better use is being made of all types of transportation by employing the one best equipped to do the individual job speedily, efficiently, and economically. This means expanded use of trucks and tractor-trailers, bus lines, highway-post offices, and air cargo carriers; using the unused space on scheduled airliners for the experimental movement of 3-cent mail; a better coordination with railroad operations; and revision of schedules to deliver the mail on the day it arrives at destination-post offices.

With the opening soon of the Wichita, Kans., Regional Office, postal operations will be decentralized into 15 regions and 91 districts, and operated on a home-rule basis.

The first coordinated progressive personnel program in the Department's history has been established. The installation of a sound salary structure, based on position evaluation, provides 508,000 postal employees with fair wages, incentive to advance in the career service, and compensation related directly to duties performed.

The Department has leased more than 900 new postal buildings, valued at approximately $45,000,000, through its commercial leasing activities from January, 1953, to Nov. 15, 1955. The new lease-purchase program by which buildings are bought out of rent, includes 27 further projects approved as of Nov. 15, 1955. This will create $14,000,000 in new construction. Both programs use the financing and construction capacity of private industry.

Close cost control has been established over the 85,000 motor vehicles the Post Office Department uses (of which 25,000 are owned by the government). Postmasters are charged for the use of this equipment and personnel to make them cost-conscious. A Post Office Department fleet is being developed consisting of four basic standard production-line trucks which will do the same job better than the seven types of special built, often hand-made vehicles formerly purchased. The estimated savings are 20 percent in purchase prices and 20 percent or more in operating cost.

Practical training programs aimed at improving personnel and mail service—involving ten courses of instruction ranging from tying bundles of letter mail to executive development—have been launched. The Suggestions and Incentive Awards program has been modernized, and the Department received, in 20 months ending Nov. 15, 1955, double the number of employe suggestions offered in the previous five years, with savings estimated at $2,261,000. Uniforms are being redesigned, standardized and brightened effective this month, although employes having garments of the previous design in good condition will be permitted to wear them until January, 1957.

Unnecessary service units are being eliminated. Approximately 3,000 small post offices have been closed, at a saving of more than $4,000,000, with the patrons generally getting better service through rural delivery.

Practical experiments and research are being carried on continuously. Those now under way include: 1, a variety of motorized conveyances for city carriers; 2, an automatic mail facing machine; 3, automatic sorting by electronic scanning; 4, self-service equipment for post office lobbies; and, 5, mechanical parcel post sorting.

The first nationwide effort to attract desirable new career employees into the postal service was launched in December 1955. Display posters in 10,000 post offices and on 16,000 Air Force recruitment billboards in 3,000 communities are being used for a 30-day period, outlining salaries and benefits of postal employment.

Despite the progress made in modernizing the mail service and reducing its cost, the Post Office Department faces two serious problems.

One is the inadequacy and the deterioration of its physical plant. Many post offices were built 50 or even more years ago. Far too many of our postal facilities are badly rundown, outgrown, outmoded.

In some larger cities, facilities are so inadequate that mail is sorted outside post office on the sidewalks or in the alleys, rain or shine. At numerous points, trucks cannot squeeze into the small post office loading and unloading areas. Many post offices and mail terminals are dingy, badly in need of renovation and better lighting, and completely lacking in modern equipment to speed mail distribution.

To correct these conditions will take time and money. We cannot continue to ignore these needs, particularly since they grow increasingly worse as the mail volume of this dynamic and growing country is constantly increasing. It is now 45 percent greater in volume that it was 10 years ago.

The other and more serious problem concerns the fiscal plight of the Post Office Department. The postal deficit accumulated since World War II—during a period of unprecedented prosperity—has now reached $4,600,000,000 and is costing taxpayers more than $100 million a year in interest alone.

Despite the efficiencies and economies we have been able to make, the Post Office Department now faces a yearly deficit of about $500 million. Nearly $200 million of this is the cost of the recently enacted pay raises and other employee benefits.

Basically, our failure to operate on a more nearly break-even basis is due to the fact that postage rates today are essentially the same as they were in 1932. Meanwhile, the cost of nearly everything the Department buys or uses has more than doubled, as have most household or business expenses.

That is why we are recommending moderate increases in postage rates on first-, second-, and third-class mail to Congress.

We believe Congress and the American people appreciate the need for reasonable rate increases so that their Post Office Department may improve its services and facilities and operate on a self-supporting basis as do the postal establishments of most major nations. Our neighbor, Canada, for example, has shown losses in only 3 of the past 20 years with an over-all surplus for these 2 decades of $89,523,932.

Many Members of Congress have polled their constituents on this question of postage rates. So has the Post Office Department. In all parts of the country, the people queried indicated that they favor, usually by margins of at least 3 to 1, increasing postal rates to make the Post Office Department self-supporting. Public opinion here is apparently no different than in Europe where competent observers state that a postal deficit would not be tolerated.

If these rate increases are granted, we can complete the job the Post Office Department set out to accomplish nearly 3 years ago—provide better service—lower costs—reduce the postal deficit—and operate on a break-even basis.

Then the Post Office Department can provide the most efficient service possible to meet the constantly expanding needs of this most prosperous Nation on earth.

Hon. Martin P. Durkin

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. KLUCZYNSKI. Mr. Speaker, one of the Nation's most outstanding labor leaders, Martin P. Durkin, died on November 13, 1955. His passing was a great loss to the labor movement, which he so ably represented, and to his legion of friends.

The parents of Martin P. Durkin were Irish immigrants, and his father was an ardent trade unionist and head of a large family.

Martin P. Durkin was born and reared in the back-of-the-yards district on the southwest side of Chicago, the district which it is my privilege to represent. After attending elementary school and high school, he then went to night school to further his education. He started to work as an apprentice steamfitter, a trade which he followed during his lifetime.

In 1933, during the dark days of the depression, Gov. Henry Horner appointed Martin Durkin as director of labor for the State of Illinois. At that time I was a member of the General Assembly of the State of Illinois and served on the labor committee in the house.

It was during that time that I really got to know Martin Durkin and his great work in recommending legislation for the benefit of the laboring man.

To Martin P. Durkin belongs a great deal of credit for the passage in the State of Illinois of the minimum-wage law—an 8-hour working day for women—a law establishing the public-employment service and providing for unemployment compensation. He assisted greatly in obtaining improvements to the State workmen's compensation law. Under his leadership the Department of Labor for the State of Illinois became a model and example for the rest of the country to follow.

In 1953 Martin Durkin was selected by President Eisenhower to become a member of his Cabinet as Secretary of Labor, a position which he filled with distinction.

Martin Durkin had many outstanding characteristics, but to me his greatest virtue was his deep humility. He was a very religious man, and would never sacrifice principle.

To his widow, Anne McNicholas, and their sons, Martin and William and John, I wish to extend my genuine and sincere sympathy.

More About Our Declining Strength

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. PRICE. Mr. Speaker, recently there appeared in the press of the Nation two articles by Mr. Joseph Alsop and Mr. Stewart Alsop, pointing out that the only reason we do not have military strength equal to that of the Communist countries is our unwillingness to spend the money to provide that strength—to spend money on research, first, and on the production of the new weapons research gives us. Meanwhile the Russians move rapidly ahead, building up a modern air force not merely equal to ours but in many ways better.

Today, I refer to another in the series of brilliant articles the Alsop brothers are publishing in an effort to awaken Americans to the danger which is being hidden from them with all the skill and the talents the Pentagon can command.

The rates of production of advanced aircraft types shows the Soviets well ahead of us in the buildup of their air force. The difference in the rates shows the Soviets steadily forging further ahead in numbers and in strength. About the time we expect to have our 137-wing Air Force fully equipped, in 1957, the Soviets' strategic air force will be able to deliver a punch of which our own Strategic Air Command will be incapable. Today we are fully capable of building long-range B–52's which do not require overseas bases for combat operations, but we are gambling on the future use of overseas bases by medium-range bombers. If Russia strikes us, it will be from her own bases, and with long-range aircraft excelling in number our own B–52's. General LeMay's request for an urgent program to provide 1,900 B–52's was rejected, for budgetary and therefore political reasons.

Mr. Speaker, our strength is being overtaken rapidly, and declining needlessly; and the danger is that in a campaign year, politics will be played even more furiously with the vital problem of national defense. The American people need as never before to be fully informed of what is happening. Their own survival is at stake. I would like to call my colleagues' attention to an insertion in the RECORD of January 9, page 239, by the Honorable STUART SYMINGTON, of Missouri, of the third article by the Alsops in this stimulating but disheartening report on our declining strength. Every Member of Congress should read these articles.

Fiftieth Anniversary of Pure Food and Drug Law

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. PRIEST. Mr. Speaker, this year marks the 50th anniversary of the enactment of the first Federal Pure Food and Drug Act and the Meat Inspection Act. Both of these acts were signed by President Theodore Roosevelt on June 30, 1906. In order to commemorate this important event, a 50th anniversary committee has been formed on which serve representatives of the food, drug, and cosmetic industries, Federal, State, and local food and drug control officials, and consumer organizations.

For the purpose of bringing to the attention of the American people the importance of these laws, the committee conceived the idea of celebrating the 50th anniversary year by holding appropriate meetings and other events from coast to coast through the year.

In launching this series of observances, the committee held a luncheon at which I was privileged to give a brief talk on the changes which have taken place in the legislative picture during the 50 years which have elapsed since the enactment in 1906 of the first Federal legislation in this field.

ADDRESS OF CONGRESSMAN J. PERCY PRIEST, CHAIRMAN, COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, AT LUNCHEON COMMEMORATING PASSAGE OF FIRST FEDERAL FOOD AND DRUG LAWS IN 1906, FEDERAL ROOM, HOTEL STATLER, WASHINGTON, D. C., JANUARY 11, 1956

The opening of this 50th anniversary year commemorating the passage of the first Federal Pure Food and Drugs Act is indeed a significant occasion. I am honored to speak at this luncheon and I accept that honor in behalf of my colleagues of the House Committee on Interstate and Foreign Commerce. Our committee has had the primary responsibility through the years of drafting revisions and amendments to this important legislation, and the committee is very proud of this excellent opportunity to be of service to our people.

It is a particular pleasure to be here today because my friend Gene Holeman, Superintendent of the Food and Drug Division of Tennessee, is serving this year as president of the Food and Drug Officials of the United States. Gene Holeman is also the chairman of the 50th anniversary committee which is providing the information and inspiration for this luncheon and similar activities designed to bring to the attention of the country the importance of our food and drug laws.

Actually, June 30 will mark the birthday of both the Wiley Pure Food and Drug Act and the Meat Inspection Act, which President Theodore Roosevelt signed on the same day. However, the idea of celebrating a 50th anniversary year instead of a birthday seems to me an excellent one. This law—the pure food and drug law—means so much to so many different people and organizations all over our country that a single anniversary observance would hardly do it justice. So today I am happy to join with you in launching a series of observances that will take place from coast to coast and last throughout the year.

Others are much better qualified than I am to talk about the enforcement of food and drug legislation. I would like to review with you very briefly how the legislative picture has changed since the year 1906 when the efforts to enact Federal legislation in this field finally succeeded after many years of hard campaigning. This legislative picture today reflects a basic change in the attitude of the public. The American public today has come to accept completely the need for consumer protection with regard to food and drugs.

When in 1890, Edgar Richards, a chemist in the Department of Agriculture, reported such practices as the watering of milk and butter, mixing of lard with cheese, adding cottonseed oil to olive oil, soapstone and sand to tea, and coloring of pickles with copper salts, he commented on the attitude of the public toward such things as follows: "The average American repudiates the idea of a paternal Government supervision over his affairs or anything trained with that idea. * * * We would * * * regard with apathy any general law that would guarantee to the public the liberty of purchasing pure food with a reasonable certainty that they were not imposed upon in their purchase."

It took another 16 years before Richards' chief, Dr. Harvey W. Wiley, finally succeeded in overcoming this general apathy. In the 27 years from 1879 to 1906, more than 100 food and drug bills were introduced in the Congress. One bill actually passed the Senate in 1890. However, the issues involved were very controversial. Many compromises had to be made.

In recommending the enactment of the Hepburn bill which became the 1906 act, the House Committee on Interstate and Foreign Commerce stated frankly that the bill might be ineffective in some respects, that it might not go far enough in some particulars while in others it might go too far. The committee, however, was emphatic that the bill represented its earnest thought and work, that it was not drawn to aid any special interests, that it had not been framed by, or at the behest of, any class of trade which will be specifically benefited thereby.

However, the committee felt that enactment of this legislation was badly needed because, and I quote from the committee report, "The sand with which our forefathers are reputed to have adulterated their sugar, while a fraud upon the purchaser, was doubtless comparatively harmless. The adulterations of the present day are neither so clumsy nor, as a rule, so harmless.

In a strongly worded minority report, the dissenting members argued that the Federal Government was without power to enact this legislation and that the bill was an attempt of exercising police power within the States under the pretense and guise of regulating commerce. As a substitute for the Hepburn bill, the minority offered a bill which would have subjected food products or drugs shipped in interstate commerce to the police laws of the various States whenever they are transported into the States for sale or use in the same way that spirituous liquors and beer were made subject to the laws of the States by the act of August 8, 1890, when transported into the States for use or consumption.

The 1906 law established the basic principle that Government—the Federal Government as well as the State governments—should protect the consumer by barring from the channels of trade foods or drugs which are adulterated or misbranded.

The act of 1906 was a strong law for its times, but eventually it became obsolete and had to be replaced. Instead of a quarter of a century, however, it took 5 years this time to develop and enact the present law which was passed in 1938. Again, there were many controversial issues which had to be resolved, but most of these were issues of method, rather than of principle.

Interestingly enough, again we find minority views expressed signed by 6 members of the committee on both sides of the aisle. However, what a change since 1906. While the minority in 1906 argued vehemently against the constitutionality of the Wiley Act, the minority in 1938 was in complete agreement with the objective of the bill. The minority in 1938 merely disagreed with a particular feature of the bill reported by the majority. Thus, by 1938, the powers of the Federal Government to regulate interstate commerce in food and drugs had come to be accepted completely by the public and as a matter of law.

Since 1938 the law has been amended several times. I would like to mention just three of the most important of those amendments: First, the 1945 amendment to provide for the testing and certification of penicillin, followed by later amendments extending this requirement to several other antibiotics. Second, the Durham-Humphrey amendment of 1951 which defined the classes of drugs which require medical supervision for safe use and which under the law may only be sold upon a doctor's prescription. Third, the Miller Pesticide Amendment of 1954 which provides a procedure for establishing safe tolerances for residues of pesticide chemicals on raw food crops. All three of these important amendments have one thing in common—each of them was made necessary by the progress of science and industry in developing new products—products which presented new problems of regulation to protect the consumer.

Each of these amendments applied the basic principles of the law to a specific, highly technical problem, or to a set of problems. These amendments illustrate a point that I would like to emphasize—that our food and drug legislation today is no longer concerned with the basic principle of consumer protection, for this principle has been accepted. Instead, the writing of new food and drug legislation today is generally concerned with designing methods and procedures to deal with some new situation.

The design of such legislation requires expert knowledge. Members of our committee aided by its professional staff and the office of the legislative counsel have devoted endless time and effort to legislative problems such as those raised by the amendments I have mentioned. Even so, we could never have produced the legislation without the intimate knowledge and guidance of the experts from industry and the Food and Drug Administration.

Our contribution has often been to prod the representatives of industry and Government to compromise extreme positions—and to find solutions which will accomplish the desired objectives without sacrificing principle or causing unnecessary hardship. In such legislation we are engaged in a cooperative enterprise together with the executive branch and with industry representatives.

Some of the bills now pending before our committee fall into this class of bills designed to provide consumer protection in a special new area—the area of food additives. I, myself, have introduced several bills which would solve in different ways the procedural problems involved in determining what chemical additives may safely be used and what additives shall be excluded as dangerous to the public health. The issues raised by these bills are of the kind which require a cooperative approach in order to bring about legislation which will give the consumer the protection to which he is entitled without imposing unnecessary hardships on the producers of the food additives and the food processors who are using these additives.

In closing, I would like to express to you the good wishes of the House Committee on Interstate and Foreign Commerce and our hope that this 50th anniversary year will contribute greatly to a better understanding of the significance of our pure food and drug laws, local, State, and national. We hope it will also emphasize the importance of adequate support for the administration of these laws.

Finally, we believe that this anniversary should help the American public to appreciate the achievements of our food, drug, and cosmetic industries, under the food and drug laws, in raising the quality of their products. Nowhere in the world is there such a standard of living as we have in the United States, and our food, drug, and cosmetic industries are surely making a great contribution to that standard of living.

Dual Observance Marks the 50th Anniversary of the Organization of the Polish Citizens Club, Du Bois, Pa., and the 176th Anniversary of the Death of Count Casimir Pulaski, Who Commanded the Famous Pulaski Legion in the Revolutionary War

---

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. VAN ZANDT. Mr. Speaker, it was my privilege on October 9, 1955, to deliver the principal address at a banquet of the Polish Citizens Club, Du Bois, Pa., in my congressional district, at which time the 50th anniversary of the founding of the club was celebrated and the 176th anniversary of the death of the illustrious Polish patriot Casimir Pulaski was commemorated.

The Polish Citizens Club of Du Bois which was organized in 1905 with 30 charter members now has a total membership of 750 which indicates the growth and progress of this fine organization which plays such an important part in the fraternal and social life of Du Bois, Pa.

The anniversary banquet was held in Pulaski Hall, constructed by the Polish Citizens Club in 1929, and was attended by several hundred members.

The program for the occasion and my address follow:

PROGRAM

National anthem.

Introduction: Frank Kosempa, president, Polish Citizens' Club.

Invocation: Rev. Louis Kozlowski.

Master of ceremonies: Michael E. Nowak.

Address: Hon. Pat. B. Dillman, mayor, Du Bois, Pa.

Address: Rev. Louis Kozlowski.

Address: Hon. Frank O'Niel, representative to Pennsylvania State Assembly.

Musical selection.

Address: Rev. John Piathowski, Sykesville, Pa.

Address: John Cherry, Esq., club attorney.

Club progress for 50 years: Anthony Monikowski.

Musical selection.

Address: Frank Kosempa, president, Polish Citizens' Club.

Address: Hon. James E. Van Zandt, House of Representatives, Washington, D. C.

America.

Polish national hymn, Boze Cos Polske.

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE 50TH ANNIVERSARY DINNER OF THE POLISH CITIZENS' CLUB, OCTOBER 9, 1955, PULASKI HALL, DU BOIS, PA.

I am honored to be given the opportunity of commemorating two notable anniversaries—the 50th anniversary of the Polish Citizens' Club and the 176th anniversary of the death of Count Casimir Pulaski.

You, the members of the Polish Citizens' Club are to be congratulated for the 50 years of building American citizenship and the contribution you have made in the preservation of the American way of life.

Your ancestors were God-fearing people who loved freedom and instilled such love in the hearts of their sons and daughters.

That is why, in every war in which this Nation has been engaged, and particularly in World War I, World War II, and the Korean conflict, Du Bois has been represented by many courageous young Americans of Polish descent.

This observance of your 50th anniversary is a happy occasion, for it reflects over a half century of love and service to your community, State, and Nation.

In many respects the celebration of the 50th anniversary of the Polish Citizens' Club and the 176th anniversary of the death of Count Casimir Pulaski is highly significant, mainly because they symbolize the strength and the durability of the Polish tradition in our American civilization.

Probably more than any other Pole Count Casmir Pulaski holds a place of endearment in the heart of the American people.

Every American, every schoolchild, has at one time in his life been inspired by the dramatic life of this great Polish soldier.

I know whenever I leave Capitol Hill and going down Pennsylvania Avenue past the statue of Pulaski in downtown Washington, I momentarily reflect upon the great service this Polish nobleman rendered toward the winning of American independence.

As a personality Casimir Pulaski was indeed a remarkable man.

Born and bred in the finest traditions of Polish culture he was a nobleman and a courageous soldier who won the respect of both his enemies and his friends.

Count Casimir Pulaski was to the Poles what Lafayette was to the French. To Americans both were and continue to be something special, something apart from the ordinary war hero. And rightly so, for both

fought for the worthiest of ideals, freedom and national independence.

Fearless in battle, extraordinarily courageous, resourceful, and confident, Pulaski brought to war-weary armies of General Washington a dash and boldness that must have electrified all who saw him in action.

Pulaski's contributions to the American cause were great.

At the time of the Revolution the American conception of the cavalry was not clearly and accurately formed.

A trained soldier and an outstanding horseman the young Polish count gave freely of his skills and knowledge in the organization of the American cavalry.

As General Washington said of Pulaski when he recommended the young Pole in the Continental Congress he was "a man of real capacity, experience, and knowledge."

Thus as a leader in the American cavalry, Pulaski became the first of the great cavalry commanders that sparkle across the pages of American history, men like General Sheridan, of the Union Army, the Confederate cavalryman, Jeb Stuart, Theodore Roosevelt's Rough Riders of 1898, and finally, General Patton of World War II fame.

In the role of cavalry commander of the Continental Army and later as commander of the famous Pulaski Legion, the young Polish count established for himself a remarkable war record, fighting in such historic battles as Brandywine, Germantown, Egg Harbor, Charleston, and finally, the ill-fated battle of Savannah. At that memorable battle, Pulaski was killed in action on October 9, 1779.

In all these battles of the Revolutionary War Pulaski displayed in full the heroism and gallantry for which he was universally known.

His finest hour at the siege of Savannah was indeed his last.

A martyr of liberty, he died a hero's death.

He gave his life for freedom's sake and for the sake of American national independence.

Undoubtedly the supreme tragedy in the life of Casimir Pulaski was his untimely death which prevented him from returning to his native Poland, and like Kosciuszko, another great Polish soldier in the American Revolutionary War, to take up arms again for the freedom and independence of the Polish nation.

But if Pulaski was not with Kosciuszko and his comrades in being, he was certainly with them in spirit, because the ideals for which Pulaski fought and gave his life were the same ones that inspired the Polish nation to fight for its independence in the closing years of the 18th century.

More than that, these same ideals inspired the Polish people to rise in revolt in the 1830's and the 1860's in an effort to throw off the Russian yoke of imperialism.

When at last the Polish Republic was reestablished after World War I and the Polish nation was again free and independent, the success that was Poland's was also in a sense the success of Casimir Pulaski.

And then when Poland underwent the supreme tests of World War II, it was again the same spirit of Casimir Pulaski, the spirit of freedom and national independence, which manifested itself and sustained the Polish nation at a time of deadly peril.

Yes, my friends, the name Casimir Pulaski emblazoned on the record of world history has meant for both the American people and the people of Poland freedom and national independence.

And when we hold Poland today, caught up in the Communist tyranny, it is a source of great sadness.

All America feels the loss of Poland to the free world for through men like Pulaski and the many sons and daughters of Poland who, since the close of the 19th century, came to America to begin life anew, a strong bond of affection has been established between the two nations.

America never has nor can she ever be indifferent to oppression wherever it occurs and I am proud of the work of our American Congress in exposing not only Communist oppression in Poland but in exposing every form of Communist aggression and tyranny.

One of the most shocking outrages committed by the Soviet Communists against the Poles was the Katyn Forest massacre.

The congressional investigation of this massacre under the able leadership of my good friend and colleague Congressman MADDEN, of Indiana, exposed to the world the dreadful slaughter of thousands of Polish officers by the Soviet Government.

Nowhere was the true nature of communism, the sheer brutality and ruthlessness of this way of life, revealed with such shocking clarity as in the evidence submitted at this congressional investigation.

When this investigation was undertaken members of the committee conducted hearings here in the United States and in Europe and before the investigation itself was completed the committee had accumulated an imposing collection of documented material showing conclusively that the Russians had committed this horrible crime against humanity.

Eyewitnesses to the massacre reported in detail how the Russian soldiers and NKVD (the notorious Soviet secret police) had tied the hands of the doomed Polish officers with wire and, stuffing sawdust in their mouths, shot them in the head.

While many of the thousands so executed died immediately, many others were actually buried alive.

Rather than shoot some of them the Soviet authorities threw them into the mass grave to suffocate.

The massacre at Katyn Forest first came to the attention of the world in 1943 when the German Government announced to the world that it had found mass graves of Polish officers numbering into the thousands.

At the time the free world read of this account as a purely Nazi propadanga trick.

During the war many Americans did not want to face the realities of Soviet brutality and discounted much of what had been published.

The Germans, however, went to great pains to show this massacre was a Russian affair.

They requested the International Red Cross to investigate all the circumstances.

In addition, they had neutral newsmen inspect the remains of the massacre and the evidence. They even went so far as to bring an American and a British officer, both imprisoned in a German prisoner-of-war camp, to the scene of the crime.

At first these men were convinced this was another Nazi propaganda trick. They went to the Katyn Forest, certain in their own minds, that this was a Nazi crime and not a Russian crime.

However after the graves were opened, both officers came to the independent conclusion that what they had seen was in fact the work of the Russians and not the Germans.

In his testimony before the committee, Col. John H. Van Vliet, Jr., the American officer, said that he noticed that the clothing on the unfortunate Polish officers was new clothing and that their boots and shoes were likewise new and gave no indications of wear.

Colonel Van Vliet, who had been a prisoner himself for many months and realized the wear and tear a prisoner's clothing receives, stated in his oral testimony:

"If those Polish officers had been alive and in prison camp until the Germans overran the Polish prison camps, and if the Germans had in fact killed these Polish officers, then by the very virtue of the fact that their clothes had been worn and their shoes had been walked in, they would show much more wear."

Strangely enough the Germans did not notice this bit of evidence that struck the British and American officers.

Yet this was the evidence that convinced both men that these atrocities were committed by the Russians.

As Lt. Col. Donald B. Stewart, of the British Army, stated:

"The decision I reached I can never forget. My decision was that those (Polish) men were killed by the Russians while they were prisoners of the Russians."

And Colonel Van Vliet arrived at a similar conclusion when he observed:

"The sum of circumstantial evidence, impressions formed at the time of looking at the graves, what I saw in people's faces—all force the conclusion that Russia did it."

As a result of this, as well as other evidence uncovered by the House committee, the committee itself concluded that Katyn was truly a Russian crime.

Now I want to read briefly from the conclusions of the committee's report:

"This committee unanimously finds—beyond any question of reasonable doubt—that the Soviet NKVD (Russia's secret police) committed the mass murders of the Polish officers, and intellectual leaders in the Katyn Forest.

"The evidence, testimony, records, and exhibits recorded by this committee through its investigations and hearings during the last 9 months, overwhelmingly will show the people of the world that Russia is directly responsible for the Katyn massacre.

"Throughout our entire proceedings there has not been an ounce of proof or even any remote circumstantial evidence presented that could indict any other nation in this international crime."

Ladies and gentlemen, such was the manner in which the Soviet leaders tried to destroy the Polish officer corps.

But, it was in fact, their own undoing, because when the Germans invaded Russia in June 1941 Polish and Russian interest, heretofore antagonistic, had joined in common accord.

Both wanted to defeat the Nazis and liberate the occupied areas of their respective countries.

When attempts were made in Russia to organize Polish army units questions were asked about the officers who were to be in command.

On one occasion, Lavrenti Beria, head of the notorious Russian secret police, was said to have remarked in answer to the question why the Soviets did not enlist the officers from the Soviet prison camps for the proposed Polish army he said:

"We have committed a great blunder. We have made a great mistake."

Yes, the Russians committed a great blunder, they had made a great mistake, but their blunder and their mistake could not compare to the enormity of their crime against humanity.

Today as we stand on what may be the threshold of a new era called peaceful coexistence with the Soviet Government, and with communism in general, it might be well to read the evidence of the Katyn massacre.

This investigation is only one of many congressional efforts to call attention of the world to the Communist threat.

Noteworthy also for doing excellent work in laying bare the facts of Communist aggression in Poland, the Baltic States, and elsewhere in eastern Europe was the work of the House Select Committee on Communist Aggression.

This committee of the House of Representatives, under the very capable leadership of former Congressman Charles Kersten, did a service of great value in exposing Communist aggression.

Extensive hearings were held in the United States and in Europe.

And again, as in the Katyn massacre investigation, a huge amount of documented

evidence was accumulated to prove conclusively the imperialistic nature of the Soviet Union.

Through these highly important congressional investigations the bold facts of Communist tyranny have been placed before the world.

They are now a matter of permanent record.

This is, I believe, very important because in the days ahead the Soviet Government will continue to do much to persuade the free world that the Soviet Union wants to live in peace and that it desires to coexist peacefully with the West.

Only the future will reveal whether the Communist leaders sincerely desire peace.

But at least the Katyn massacre and Soviet aggression in Poland are now part of the historical record of not only the American Nation but also part of the historical record of the world.

The record will stand for all ages, and for those who desire to see communism for what it is, let them look at this record and ponder upon it thoughtfully.

Tyrannies have risen and fallen since Casimir Pulaski was mortally wounded on the battlefield of Savannah.

But history is a living drama in which the tyrant will perhaps be always present to play his part.

However, so long as men like Casimir Pulaski, men who are dedicated to truth, virtue, honor, and liberty, rise among us the tyrant will not long endure and at length, peace, harmony, and freedom will prevail.

Over 175 years ago the world lost a great patriot and fighter when it lost Casimir Pulaski.

The ideals for which this courageous young Pole died did not die when he was stricken in battle.

Rather they emerged triumphant as a result of the War of American Independence and were carried to broader horizons by the Nation for whom he gave his life.

The hope of all America today is that the same ideals for which Pulaski fought and died, freedom and national independence, will be extended to Poland, the land of his birth, so that one day in the future Poland can take her rightful place among the free and independent nations of the world.

The Leading Question

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. FORAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast over the CBS radio network January 8, 1956, 10:30 to 11 a. m., the Leading Question. Guests: the Honorable JOHN W. MCCORMACK, United States House of Representatives, Democrat, of Massachusetts; the Honorable LESLIE C. ARENDS, United States House of Representatives, Republican, of Illinois. The leading question: "What will happen to the President's program?"

Mr. NOVINS. This week the 84th Congress returned to open its 2d session. Three days ago President Eisenhower sent his state of the Union message to Capitol Hill, outlining his program for this final period, and the leading question is: What will happen to the President's program?

The two gentlemen who will help us try to find an answer to that question are extremely well equipped to do so, for they are both charged by their parties with responsibility for seeing that their parties' policies are translated into legislative action.

Congressman JOHN W. MCCORMACK, Democrat, of Massachusetts, is the House majority leader. Congressman LESLIE C. ARENDS, Republican, of Illinois, is the House minority whip.

Gentlemen, we are going to try to preview in a half hour what Congress is going to take many months to try to settle, but let me ask each of you: How do you appraise the President's message?

Congressman MCCORMACK, would you start?

Mr. MCCORMACK. The President's message was rather long. On domestic affairs, it contained recommendations and observations that the Congress is thoroughly acquainted with because we have had them up in various forms in the past years. Most of his internal or domestic recommendations were simply embracing the New Deal of the late Franklin D. Roosevelt, and the Fair Deal of former President Harry S. Truman, and, of course, we Democrats welcome him into the fold in this respect. We are glad to see that he is converted to good Democratic principles.

If these recommendations on the domestic field, in the main, go through, it will be because of Democratic support, because his greatest difficulty would be with his own party. I am sure Congressman ARENDS would be better qualified to state what support the President might get from his own party in the House on the progressive recommendations that he has made, the President has made, which are strictly Democratic policy.

Mr. NOVINS. Well, let's ask Congressman ARENDS how he feels about the speech, and then perhaps he will answer your question, too.

Mr. ARENDS. Well, first let me say I am very pleased to be here with my good friend Majority Leader JOHN MCCORMACK to discuss this question of what this Congress might do, the last session of the 84th Congress.

I thought the President's message was rather lengthy, too, yes. But it did cover some things that needed to be talked about.

First, I think he mentioned several things which this past session of the Congress failed to do, namely, the shortcomings of the Congress under Democratic leadership, which should have been taken care of in the first session of the Congress.

And he reemphasized the needs on the part of the country to have these particular legislative proposals gone into, and something done about them. I believe this Congress will, because of the attitude as expressed by Congressman MCCORMACK this morning, that while he thought some of it was New Deal legislation—and if such is the case, then we can expect better cooperation from the standpoint of the Majority side of the aisle in this session of Congress to fulfill the recommendations of the President. I think we will have a pretty constructive Congress this year, if they will just go ahead and do that.

Mr. MCCORMACK. Well, it is rather interesting to hear the remarks of my good friend, Congressman ARENDS, whom I deeply respect and for whom I express a very happy New Year, and successful in every respect. I do that without limitation.

Of course, we all know that there is going to be Democratic success next fall, but the record shows that in the last 3 years of the Eisenhower administration, that the President has received far more support from the Democrats on domestic matters and on foreign affairs, too, clearly on foreign affairs, than he has from his own party.

I hope the Republicans will get together behind an effective road bill and vote for one, and a pay-as-you-go policy, not the one that will give the bankers of the country about eleven to eleven and a half billion dollars of taxpayers' money over the next 30 years.

And that is about the only bill that I know of that didn't pass last year, but the Republicans wanted to put through a bill that would cost the taxpayers eleven to eleven and a half billion dollars more over the next 30 years than the Democrats. We wanted the pay-as-you-go policy to save that eleven to eleven and a half billion dollars. The school construction bill has gotten the farthest it ever has. It got out of the committee, and it ought to come up in the near future.

Mr. ARENDS. I am very glad to have you discuss these two big items on which we failed to take action in the last session. You must constantly bear in mind you have majority votes in the House of Representatives, and the Republicans can't do anything unless you fellows are there to supply the vote.

On the question of the road bill, it is going to cost the American people money, regardless of how it is financed, one way or another, if we are going to build these very much needed roads. Now, then, the point is: how are we going to get an agreement on this question?

I think that the thing to do is, all of us forget for a moment about politics and not try to gain any political favor in building these roads, because all Americans need them and use them, and go right ahead and reach some compromise and do the job.

The same thing about the school program. I am sure that if we can get out of the Rules Committee, controlled, as it is, by your group, if we can get that bill out of the Rules Committee and on the floor, I am sure we will pass the school-construction bill, which I think will be helpful, as it is so vitally needed in this great country of ours.

Mr. NOVINS. Which of these issues is going to get priority action?

Mr. MCCORMACK. Well, I would think that the school construction, because it is out of committee and that is the furthest it has ever gotten in the House of Representatives. It came out toward the latter part of the last session, and it is in the Rules Committee, as Congressman ARENDS says.

Of course, there are four Republican members of the Rules Committee, and their votes are very helpful, or some of their votes, at times. And I think there should be bipartisan cooperation in connection with getting that rule and trying to get the bill through.

On the road bill, I would agree that it is going to cost the people money, but we Democrats were trying to save the people eleven to eleven and a half billion dollars that the Republican proposal wanted them to pay. And under our bill we would have saved that tremendous amount during the next 30 years, and I think the people are interested in a saving of eleven to eleven and a half billion dollars.

Mr. ARENDS. Mr. Congressman, can I just ask you a very simple question? Wasn't it amazingly surprising to you—it certainly was not to me because I anticipated it—that when the rollcall came on the question of whether taxes should be raised or not, by an overwhelming majority it was defeated in the House, not only by Republican votes but by Democratic votes, and I think the Democrats surprised themselves by voting against any increase in taxes?

Mr. MCCORMACK. Well, of course, the amazing thing to me was that after the President's proposal, which was opposed by the Comptroller General and by another commission appointed by him, that you Republicans overwhelmingly voted against the pay-as-you-go bill.

Now, the responsibility rests upon each individual Member. The rollcall shows that a far larger percentage of Democrats voted for the pay-as-you-go bill than you Repub-

licans. As a matter of fact, the pay-as-you-go bill was drafted in committee by a combination of Republicans and Democrats. The amazing thing to me is that we know most Republicans in the committee were opposed to the President's bill, and they helped draft the pay-as-you-go bill, and yet they voted for the President's bill as against the pay-as-you-go bill, which they helped draft.

Mr. ARENDS. As did a majority of the Democrats.

Mr. MCCORMACK. But the larger percentage, much larger percentage, of Democrats voted for the pay-as-you-go bill than did Republicans.

Now this year, with the experience of the last year, we ought to try and get together and get a bill through that the leadership of both parties as well as the President will support. If that is done, why, we ought to get legislation through. If not, we will get probably a straight authorization bill through.

Mr. ARENDS. Yes; we want no more stalemates. Let's get something through, that's right. It is needed.

Mr. MCCORMACK. We are all in harmony and agreement on that.

Mr. NOVINS. Let me ask about what kind of a something that is going to be, Congressman ARENDS. What form should the bill take?

Mr. ARENDS. I think the whole issue is still cloudy even as far as the members of the committee are concerned, because I have talked to them.

If it is a question of raising revenue, I think it should go to the Ways and Means Committee under public open hearings, and discuss how much tax is necessary to provide the funds for these roads, and let's bring it out before the American people and let's be equal and fair about the taxes that are to be levied.

Mr. NOVINS. Do you feel that the charge that Congressman MCCORMACK made a few moments ago is an incorrect one, this $11 billion——

Mr. ARENDS. Of course there is nothing new about financing things like that. We do repeatedly and have done it in the Federal Government repeatedly in the various agencies, like the building agencies, HOLC, RFC, and the different things, we have done that repeatedly over the different years.

In my State of Illinois, the first hard road building program we started with a $100 million bond issue, people sort of threw up their hands, but we paid off the bonds and the interest thereon and today, even after the first 20 years expiration date, we are still enjoying the uses of those many,many roads, and that was the way to do it at that time to get started.

Mr. NOVINS. Certainly one of the great and important issues that will be coming up in this session of Congress is the farm question, and I wonder what your opinions are on that.

Mr. MCCORMACK. Well, of course, I haven't got a farm in my district, but I have always supported farm legislation. I have some very strong views, but I assume that Congressman ARENDS has farms and farmers in his district. It would be very interesting to get his views.

Mr. NOVINS. I would like to get the views of both of you, but if you want to go ahead——

Mr. MCCORMACK. I mean coming from a farming district——

Mr. NOVINS. All right. Let him start.

Mr. ARENDS. I would be very glad to talk about it. Congressman MCCORMACK, I realize that you come from the city and so are not too close to the farm situation, and it is understandable, and I live right in the heart of a great farming area out in the plains of Illinois.

This is a terrific and most involved question, and from the standpoint of the domestic front, I think it is the most bothersome problem that we will have before this Congress. And it ought to be considered as expeditiously as possible for the welfare of agriculture.

Now, I am not so smart, although I think I rather well understand the farm question, because that is my business and I suppose, in this last recess of Congress, I was in at least 100 farm elevators; I talked to farmers over the fence, on the tractors, whatever they might have been doing, I called groups together to discuss the question, and not too much unanimity among the farmers themselves because no one knows which way to turn. But this problem is so vital to the economic welfare of the farmer and the country as a whole that we are just simply going to have to do something about it.

Now, as I well know about yourself and myself, we can forget our politics, and on this question of the farm program I hope and pray that those of us who are sincerely interested in the agricultural program for the future, that we will forget our politics and, for the best interests of the farmer, get busy and do something which will be helpful to them, not only immediately but in the long run. It is the most vital question that faces us at this time.

Mr. NOVINS. Congressman, as a practical matter, you really don't expect that the farm question will not be a political issue this year, do you?

Mr. ARENDS. Well, I am a little afraid about it, but I plead with all the sincerity of my heart that those of us who are intensely interested in agriculture do something about it.

Let me put it this way: I am in no position to legislate for a Republican farmer on one side of the road as against a Democrat farmer on the other side of the road, and vice versa. In other words, I am either going to have to legislate for the best interests of agriculture or against agriculture, and I want to constructively and objectively legislate for the welfare of agriculture.

Mr. NOVINS. How do you feel on the price-support program?

Mr. ARENDS. Well, I was one of those who have not only in this last Congress but in a previous Congress voted against rigid parity support prices, feeling in my own mind an honest belief that that was the beginning of some of our troubles, the rigid parity support prices, and flexible parities, knowing full well the flexible parities in itself was not the complete answer to the farm question.

And so I have been one of those who have adopted the principle of flexible, hoping that other things would follow, and I think they will in this session of Congress, which will in substance and in accumulative effect be beneficial to agriculture as such.

Mr. NOVINS. Congressman MCCORMACK.

Mr. MCCORMACK. Well, I said, Mr. Novins, that I haven't got a farm in my district, but during the entire 28 years I have been in Congress, I have always supported farm legislation.

Mr. NOVINS. You have consumers in your district.

Mr. MCCORMACK. I know, but politically my votes have sometimes been contrary to public opinion up my way, and I have consistently voted the way I have because I realize that the agricultural community of our country is a very important segment of American society, not only as human beings, but also economically, and an important segment of our national defense.

I don't apologize for any one of my votes. The farmer buys in a protected market, he sells his farm excess or surplus farm commodities on the world market, which is an unprotected market. Industry is protected through tariffs, and the farmer in the world of today has got to receive some kind of protection. And to me it is a fundamental question.

Now, let us see what has happened to the farmer. Parity ratio has reduced from 115 in 1947 to 85 for the first 10 months of this year, and to 87 for October of 1955, rather. The aggregate realized net farm income shows $10,600,000,000 for 1955 against a peak in 1947 of $17,200,000,000.

Mr. NOVINS. Congressman, if I may interrupt——

Mr. MCCORMACK. Yes. This, while we have a record economy in business.

Mr. NOVINS. There is, I think, general agreement that the plight of the farmer is not a happy one, and I think our problem is how do we solve this situation.

Mr. MCCORMACK. Well, I supported 90 percent of parity. In the Democratic platform we made a promise. The Republican platform promised 100 percent, or the President in his speeches, 100 percent parity at the market place. Now, if they call the flexible parity compliance with their party platform pledge, it is difficult for me to reconcile myself with it.

Mr. NOVINS. Are you saying that the Republican Party did not meet its campaign pledges to the farmers?

Mr. MCCORMACK. In my opinion, the pledge of the Republican Party in its platform and the speeches made by the candidates for President and other prominent Republicans in 1952 show a marked inconsistency with compliance.

Mr. ARENDS. Of course, I can't agree with that, Congressman MCCORMACK.

Mr. MCCORMACK. Well, the farmers will do their own deciding.

Mr. ARENDS. Well, I wouldn't get too excited about what the farmers are going to do politically.

Mr. MCCORMACK. I am not talking politically. I am talking on this question now.

Mr. ARENDS. They are very disturbed about this whole problem, and they want a solution regardless of who brings a solution about.

Mr. MCCORMACK. We give a solution.

Mr. ARENDS. Congressman, your 90 percent of parity support prices is not the solution. It has created the tremendous surpluses. It might interest you to know that the consumption of the production in this last year has been approximately on an even keel, but these huge surpluses hanging over our heads are the depressing effect on the market today, and we are going to have to do something about these surpluses.

Now, did you know, Congressman, that in this last year only approximately 25 percent of the people, farmers, have voluntarily gone into the program for support prices? Did you know that? Maybe in my district I would say it was a little bit more, but on the whole only 25 percent have voluntarily gone into this program, which is a strange thing indeed, because here we had the chance for these rigid parity support prices and they themselves know it is not the answer to the problem.

Mr. NOVINS. Will the Republican Party have a program for reducing some of this surplus?

Mr. ARENDS. Yes, we will; and next month the message will come up from the administration, and I suppose through the cooperation of Mr. Benson and those interested in the Agriculture Department down here who are going to make some very good recommendations to the Congress and to the country as to what we might think will help improve the situation materially, and very quickly.

Mr. NOVINS. Can you tell us something of the nature of those recommendations?

Mr. ARENDS. No; I am in no position to do it until the message is brought up, although I have some cognizance of what might be contained in the message.

Mr. NOVINS. Congressman MCCORMACK, does the Democratic Party have a solution for the surplus problem?

Mr. McCORMACK. We have put through bills in connection with that. We have given great authority in disposing of surplus farm commodities abroad and in the United States.

Mr. NOVINS. Given authority to the President, you mean?

Mr. McCORMACK. We have given authority to the administration, either the President or the Secretary of Agriculture. It is the administration.

The question of parity in my opinion is a very, very important one. Flexible provisions do not meet the situation. We Democrats have voted for something definite.

I don't like to see my friend from Illinois get himself on the side of Secretary Benson, and I am sure he is not on that side. I wouldn't want to put him on that side. But he has unconsciously and unintentionally placed himself on that side when he tries to defend the Republican position on flexible parity, which he knows has been a failure.

Mr. ARENDS. Let's not raise the personality question because, as I said earlier in this program, I am interested in solving this problem and no one man is going to do it. But the thing that bothers me so extremely about this thing, what are we going to do about these great surpluses?

And if you are willing to ask for rigid parity support prices and put the farmers in a complete straitjacket and put them under complete acreage and allotment controls, then I don't believe you quite understand the American farmer and what he wants.

Mr. McCORMACK. Well, I think that the American farmers have a very clear idea as to what they want. When they go under controls it is done in the democratic way, they vote for it. If they don't want it, they don't have to vote for it.

One thing is certain: The American farmer's plight is very bad, and I know that when the American farmer's plight is bad, the workers in the cities are going to be bad within a year or two.

Mr. ARENDS. That's right.

Mr. McCORMACK. The first indication of a coming business recession of a marked degree starts with the farmers. And they are a very important segment of our economic society as well as American society, and I agree with you, something should be done even if your party is doing it in the fourth year of its administration, with another election coming around.

Mr. NOVINS. Congressman, do you see those indications of a coming recession now?

Mr. McCORMACK. Well, indications among the farmers, it is there.

Mr. NOVINS. You feel that is the first step of a major recession?

Mr. McCORMACK. It always has been in every recession or depression we have had, the study of every one of them since our constitutional history, shows that it starts first among the farmers, and then it spreads to the cities where the workers are.

Mr. ARENDS. Congressman McCORMACK, with your responsibility as majority leader, I hope—and let me say that I am expressing this not only in my capacity as a Congressman and Representative of a fine agricultural district but as an American citizen terrifically interested in agriculture—that you will do your utmost to see that we get the farm question disposed of as expeditiously as it can be done.

Mr. McCORMACK. I don't know anyone who has more consistently supported farm legislation on the floor of the House on several occasions when Representatives from farming districts were undertaking to question me. I have challenged my record with their record.

Mr. NOVINS. Gentlemen, let's look at the state of the Union message again and in another area. The President made quite a point, and it is a very important issue, I think, before the American people, and that is the issue of continued and continuous foreign aid over at least the foreseeable period of time. I wonder how you feel about that.

Congressman ARENDS?

Mr. ARENDS. Well, of course, I think it must be continued. The economic aid, the military aid in particular, must be continued to some of our allies and our friends, and if need be, stepped up. I do not think the American people will object to that particular angle of aid.

I am always sorry that they call this foreign aid, use those terms, because I think it is more than that. I think it is the kind of aid which makes possible the friendships and the carrying forward of the objectives of free people and free nations of the world, to the end that we finally solve these problems and all of us remain as free individuals. That is the big problem involved in this thing.

Mr. NOVINS. You tie it then as an integral part of the national security program?

Mr. ARENDS. I do. It certainly is.

Mr. NOVINS. Do you expect that we will get that kind of legislation in this session?

Mr. ARENDS. It is a question whether or not the attitude as expressed by many individual Members of Congress, whether it will be stepped up in sum. That I do not know, and I am not prepared to discuss it in detail until we really understand exactly the proposal that will be forwarded to us in such a message.

Mr. NOVINS. Let me ask you, in principle would you vote for a commitment, say, of 5 years of a continuous program?

Mr. ARENDS. If it can be shown to me after hearings by the proper committees of the House that that is a necessary part of our relationship with foreign nations, those of us on the side of free peoples of the world, why, then, I would be prepared to do so.

Mr. NOVINS. Fine.

Congressman McCORMACK?

Mr. McCORMACK. As a matter of fact, when foreign aid first came up, some years ago, and when the argument was made it would be a year-to-year basis, I made the statement on the floor in a speech that I had made that we might just as well face the fact that it is going to be at least 5 years, and probably longer.

I thoroughly agree with the substance of what Congressman ARENDS said. We of this generation, our duty and our responsibility is to preserve America. We have inherited from the past, from the Founding Fathers, the past generations. They built this country, and it is our job to preserve it.

And Americans are fighters. We are not quitters, and we are not going to let the Communist world killers dominate the world. And that doesn't mean war, but it means that we can be so strong as to deter them.

But, on the other hand, we must not only be strong militarily, but we must be strong morally, and we must do those things in the field of foreign affairs, not only in military aid but in economic aid that is for the national interest of our country.

The primary question before us at all times, whether a Member of Congress or not, as Americans, is what course of action is for the national interest of our country, and that transcends Republicanism or the Democratic Party.

Mr. NOVINS. Congressman, you said Americans are not quitters, and of course we agree, but I wonder if you would feel that the inability of Congress to pass a 5-year commitment, if there is such an inability, would be quitting.

Mr. McCORMACK. No, no. I would not say that, no.

Now, if a 5-year program is not put through, that would not fall within that category at all. If the evidence, as Congressman ARENDS well said, presented, justifies it, I would support it. I support it because I consider it to be for the national interest of my country that such legislation and appropriations be enacted into law. But if we should only extend the foreign aid for 1 year, there is nothing about that which would indicate weakness.

Mr. NOVINS. Gentlemen——

Mr. ARENDS. Do I have time to say this? I think, as we just discussed now, if the facts were brought forward, I think you will see no cleavage or difference on the Republican or Democratic side of the aisle as to what we ough to do in unity on this matter of foreign relations.

I think as one, for instance, went way back in the Democratic controlled Congresses, I voted for the so-called Marshall plan, which probably wasn't too popular a thing out in my part of the country. I voted for the aid to Greece and Turkey, and which today I think was a fine vote on those instances, because that was a beginning of a part of this whole program which we are trying to carry out in a unified way and in a bipartisan manner by this Congress.

Mr. McCORMACK. I might also say that as much discretion in carrying out the national policy of America should be given to the President as is possible. He is in a position to know by reason of information he has what things are necessary, more necessary.

And there are times he can't make them public, where at a later date he can. I am a great believer in the field of foreign affairs in delegating the necessary power and authority to carry out that power to the President.

Mr. ARENDS. Wouldn't you say, Mr. McCORMACK, that you feel there will be great unanimity again in this session of Congress on this matter of foreign affairs, as there was in the last?

Mr. McCORMACK. Exactly.

Mr. NOVINS. We are talking, of course, when we are talking about foreign aid, of things that cost money, and I wonder what your prognostications are as to the tax program. The President has suggested we should not try to cut taxes until we have balanced the budget and gotten a pretty good start on reducing the debt.

Mr. ARENDS. Frankly, I liked his approach to this question of taxes and balancing the budget. I have said repeatedly, and I did publicly in my district, when I was on this, that if the time comes in this fiscal year that we see we have a balanced budget, then I think we have a right to consider the matter of tax reduction, bearing in mind, of course, that some token payment on the national debt would be good. And therefore I particularly like that part of his message where I think he is on sound fiscal ground by taking the approach that he did.

Mr. NOVINS. Let me ask you again as a matter of practical predictability, will it happen? Will there be no tax cut this session?

Mr. ARENDS. That is projecting into the future, because no one knows what the spending rate will be between now and the last 6 months of this fiscal year, and therefore I think we just about have to withhold our judgment on that matter until we can see exactly what the income is and what the outgo has been.

Mr. NOVINS. Let me put the question another way. Do you think there is a possibility of a tax reduction before election?

Mr. ARENDS. Well, there are a lot of people who want one, and whether you are asking me for a personal opinion, I would say that I want to see the clear picture before I make my guess on what ought to be done.

Mr. NOVINS. All right, sir.

Congressman McCORMACK, what about your position on the tax question?

Mr. McCORMACK. Well, on the tax question I said that the last Republican tax bill should not have been passed. As a matter of fact, if we had greater revenue than outgo, it should have been used to reduce the national debt. I think that is the matter of primary importance, not a token payment, but substantial payments.

The present national debt is a constant threat to uncontrolled inflation, and in connection with the tax bill this year, why, if the President makes a recommendation, we Democrats will see that a tax bill is passed which considers low-income tax groups.

Mr. NOVINS. You are not expecting that the debt will be materially diminished before election day?

Mr. MCCORMACK. No.

Mr. NOVINS. So I would assume your position is there would be no tax cut, at least you favor that?

Mr. MCCORMACK. I would not say that. I would say that the reasonable probability is that there will not be. But I wouldn't want to commit myself definitely because we Democrats might do things where we can raise revenue and give the lower-income tax group the deserved consideration that the Republicans denied them 3 years ago, and at the same time lose no money for the Treasury.

Mr. ARENDS. Is the gentleman from Massachusetts suggesting that they are going to raise some more taxes? I hope not.

Mr. MCCORMACK. Oh, no; we might undo some of the inequities of the last Republican tax bill and bring in additional revenue and at the same time give consideration where it belongs.

Mr. ARENDS. I think in the last 3 years we have clearly demonstrated to the American people that we are following a sound fiscal policy in this country. Inflation has disappeared. There is some economic stability, and here we are today talking about a balanced budget, which is good.

Mr. NOVINS. Thank you both, Congressman ARENDS, Congressman MCCORMACK, for helping us with this preview of what will happen to the President's program, this week's leading question.

Indians and Industry

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. METCALF. Mr. Speaker, a steadily growing population on an already overcrowded land area is resulting in increasing poverty for Indians of our reservations.

Present population of our Indian reservations is placed at 400,000 persons, a 60 percent increase since the turn of the century. Economic resources of most of the reservations—excepting those few with valuable oil or timber resources—have long been strained to the limit. As a result, Indian welfare costs have been rising and now the Federal Government is spending $96 million on Indians in 1 year—a 50 percent increase in 5 years.

Relocation assistance for those Indians who want to leave the reservations would help the limited reservation resources to more nearly meet the needs. At the same time, it would give the Indian the opportunity to become independent.

Those Indians who desire to leave the reservations should be aided in such adjustment. The assistance they are receiving now is not sufficient. I stress that such assistance should be provided only to those who desire to leave the reservations. Those who feel unprepared to relocate off the reservations must not be forcibly moved; they have a right to remain where they are.

Relocation officers are being provided to aid our Indians in the transition from reservation to independence. But there are far too few relocation officers.

In Montana, 1 relocation officer, grevious overworked, serves 7 reservations.

Despite the handicap of insufficient time to keep up with relocation applications he reported about 94 percent success last year with those who were relocated. Only about 25 percent of the persons he places are individuals; the remainder are family units. Most are unskilled workers and go into apprenticeship in factory work.

The Government pays transportation costs to the relocation center and provides household and living expenses until the Indians receive their first checks.

Despite the costs of transportation, initial housing and paying initial living expenses, the relocation program saves money for the Government. Without relocation, many of the families would become welfare recipients.

But a single relocation officer for 7 scattered reservations simply cannot keep up with the demand of those Indians who want to strike out on their own. He reports there is always a backlog of relocation applications all the time.

In concert with Senators MURRAY and MANSFIELD, I recently addressed the following letter to the Bureau of Indian Affairs advocating the placement of one trained relocation officer on each Indian reservation in the United States:

Mr. GLENN L. EMMONS,
Commissioner, Bureau of Indian Affairs, Department of the Interior, Washington, D. C.

DEAR COMMISSIONER EMMONS: During hearings and meetings with Indian leaders this summer we became aware of the need for the assistance and guidance which only relocation officers can give Indians desirous of leaving their reservations.

We heard of many Indians who left their reservation only to return in a short time because they had had no or inadequate briefing on what to expect outside.

Such incidents are unfortunate, because they discourage other Indians from leaving the reservation to take their rightful place in our society. As you know, the Indian land base is so small that it complicates the general problem of continuing to care for our Indians on reservations.

At the other end of the line is the community in which the Indian locates. There, too, a lack of knowledge of our ways on the part of the Indian, an inability to support himself in many cases because he had no vocational guidance, creates a welfare burden.

A relocation program would help both the Indian and the community in which he locates.

The one trained relocation officer in Montana is grievously overworked. There should be one on each reservation in the United States.

Very truly yours,

JAMES E. MURRAY,
United States Senate.
MIKE MANSFIELD,
United States Senate.
LEE METCALF,
Member of Congress.

I believe such a policy would pay great dividends to the Indians, both those who are relocated and those who remain on the reservations; to the communities in which the relocated Indians settle and to the Federal Government and Nation as a whole.

In that connection I believe my colleagues also will be interested in reading the following article which appeared in the Wall Street Journal of December 28, 1955:

INDIANS AND INDUSTRY—FACTORIES REACH FOR RESERVATION RED MEN TO EASE LABOR PINCH—TREK TO CITIES RISES 200 PERCENT SINCE 1952—GARRETT CORP., SEARS, AND HOLLYWOOD—SIOUX, FLATHEADS, APACHES

(By Thomas Bush and Ed Cony)

LOS ANGELES.—Casper Thunder Hawk effortlessly swings 20 feet of green lumber onto a truck at a Food Machinery Corp. plant here, where he came to work just this month as a helper.

The 237-pound Mr. Thunder Hawk, a full-blooded Sioux, is right off the Standing Rock Reservation in North Dakota where he eked out an existence as a part-time farm hand and construction worker. His new job pays him more than twice as much as he's ever made before.

A few miles away, at a Chrysler Corp. plant, Asa Chalepah, a full-blooded Apache, gives a mighty shove with his 249 pounds and pushes the body of a new Dodge onto a final assembly line. He too is taking home twice as much pay as he ever did as a farmhand on the Oklahoma reservation he called home until a year ago.

LABOR SHORTAGE HELP

Except for their size, Mr. Thunder Hawk and Mr. Chalepah are not exceptional cases. Altogether more than 500 companies in the Los Angeles area are putting to good industrial use the skills of 6,500 Indians, many of whom were living on primitive reservations as Government welfare cases just a few months ago. Companies in other cities in the Far West, Midwest, and Southwest are reaching out for the Red Man to help solve labor shortage problems.

Of course, there have long been large numbers of citizens in business and industry who have some Indian blood. But relatively few of their Indian ancestors ever saw a reservation; the reservation system wasn't set up until after the Indian wars of the mid-1800's when the Federal Government put the remnants of the vanquished tribes, mostly full-blooded Indians, on these defined preserves. Since 1924, the reservation Indians have had full citizenship rights, including voting privileges. Although they've been free to leave their reservations, a notable exodus occurred only with World War II. The migration has grown sharply in the past few years.

About 10,000 will make the switch this year, according to the Interior Department's Bureau of Indian Affairs. That's a hefty 40 percent jump over last year's migration and a 200 percent increase over that of 1952 when some 3,000 Indians left reservations to cope with city traffic hazards, assembly-line jobs, and monthly payments on TV sets.

Los Angeles is the No. 1 attraction for city-bound Indians. Over 50 percent of this year's migrating tribesmen were drawn to the southern California metropolis, the Indian Bureau estimates. Geographical proximity is a likely explanation for Los Angeles' popularity; a fourth of the country's 400,000 Indians live in the barren wastes of Arizona and New Mexico, to the east of Los Angeles.

TREK IN MIDWEST

Chicago, Denver, and Minneapolis are also attracting Indians in some numbers. Over 5,000—mostly Chippewas and Sioux—reside

in Chicago, for instance, and almost half of them are recent migrants from reservations.

This "new invasion" is of interest to taxpayers, as well as to employers and sociologists. The United States Government is spending $96 million on Indians this year, a 50 percent increase over 1950. Most of it goes for services on reservations, where 3 of every 4 Indians still live.

Why is Uncle Sam's Indian bill mounting? For one thing, instead of vanishing, the red man is multiplying in numbers. The 400,000 population is a 60 percent increase over the turn of the century.

This steady growth has strained the limited economic resources of most reservations, increased the poverty of Indians living on them and made them more dependent than ever on Government help.

An Indian Bureau official says: "Most of the land on reservations is of poor quality. It is estimated conservatively that less than three-fifths of the Indians now living on reservations could be supported on a decent standard of living from resources available on the reservations."

NAVAHOS AND CHIPPEWAS

Some 70,000 Navahos, for instance, are trying to exist on 25,000 square miles of barren, arid reservation tucked away in the remote wildness where New Mexico, Arizona, and Utah meet. The Indian Bureau says the land is capable of providing a decent living for only about 40 percent of the tribe.

Over a thousand miles to the north, close to the Canadian border in North Dakota, some 9,000 Chippewas huddle together on the tiny, 2-square-mile Turtle Mountain Reservation, "which provides the tribe a little firewood and a squatting place—and that's about all," a Bureau official says.

But this year enough Indians are migrating to town to cancel out any gain in reservation population, and 1955 may mark the turning point in the long, steady rise in reservation population.

What happens to the Indian when he leaves familiar surroundings to strike out on his own?

A young Navaho couple recently arrived in Los Angeles, straight from the reservation. Mrs. Begay—that's not her real name, but among Navahos it's the equivalent of Jones or Smith—carried her baby strapped to her back on a cradleboard. She wore long, heavy braids, a blue velvet jacket and a long, rose satin skirt—a Navaho costume unchanged since the 1840's.

Two weeks later, she'd cut her hair short, was pushing the baby around in a stroller and was dressed like any teen-ager—including bobby sox and saddle shoes.

And her husband was getting interested in buying a television set. "We used to count the number of TV sets bought each month by new arrivals," says an Indian Bureau official in Los Angeles. "But they became so common we gave up counting them. I'd say 50 percent of the Indian families buy a set soon after they arrive; and after 6 months to a year, practically all have them."

Abrupt transitions like the Begay's aren't always successful. One Indian of every eight who tries city life finally returns to the reservation, the Indian Bureau estimates.

Among pale face customs which sometimes confuse newly arrived Indians are those surrounding labor-management relations. For example, one brave thought he was acting correctly during an aircraft strike in Los Angeles. But he soon learned differently. He had been walking the picket line during the day, then after a quick dinner at home, was reporting for his swing-shift job, unconcernedly crossing the picket line.

During the same strike, another Indian came to work but soon ran out of material to fabricate because workers on either side of him weren't at their machines. The Indian quietly went over to the idle machines, began to operate them and soon had his own one-man assembly line operating. "He'd never said 'boo' to anyone, and it's the first time we had any idea he could run any machine but his own," recalls his supervisor.

THE RELOCATION SERVICE

Indians arriving in Los Angeles frequently get help from Mrs. Mary Gamble who heads the local office of the Indian Bureau's Relocation Service which tries to find jobs for Indians in Los Angeles and help them adjust to city ways.

The Relocation Service attempts to help the Indian in the first, difficult days of adjustment in the city. And back on the reservation, the Relocation Service is also ready to help Indians who express a desire to move into town. On 14 reservations, Relocation representatives will give the Indian advice on what he needs to bring to the city, and what to do when he arrives. The Service will also give him a physical exam and in some cases help out financially with moving expenses.

Mrs. Gamble explains that many "blanket Indians" have never before been off their reservations. Riding on streetcars, shopping at supermarkets and using dial telephones are entirely new adventures for them.

"We have a saying around here," says the motherly Mrs. Gamble: "If the phone rings and you hear heavy breathing, you know it's an Indian right off the reservation—and he's in trouble. Otherwise he wouldn't have dared to pick up the phone."

SOME HIGH HURDLES

Many Indians, once they leave the reservation, have to go to schools operated by the Indian Bureau to learn the three R's—and to learn to speak English. On the Navaho Reservation in Arizona, about 45,000 of the 70,000 tribal members couldn't read or write, as recently as 1947. And almost as many couldn't speak English. While schooling on the reservation has improved in the last 8 years, literacy is still far short of 100 percent.

Some also arrive in Los Angeles suffering from malnutrition. A North American Aviation spokesman says: "More than once, we've placed Indians under a doctor's care to build them up so they can pass our stiff medical requirements and come to work for us."

Few Indians are skilled workers when they leave the reservation. But despite these handicaps, Indians have found and kept jobs in Los Angeles where they've had help from cooperative employers and the Indian Bureau.

North American Aviation, for instance, has between 450 and 500 Indians working in its Los Angeles plants.

"I was awful scared the first month on the job, but I'm getting along fine now," says stocky 21-year-old Stan Begay as he stops work for a minute on a hydraulic line he's putting into one of North American's F–100 super-Sabres.

His supervisor agrees: "Stan's an awful good worker. When he's out of something to do, he comes around for more."

After work, Stan heads for night school where he's taking blueprint reading; he soon hopes to go on to mechanical engineering courses.

MR. ZOOK'S VIEW

Indians at North American start out at relatively unskilled jobs, but "because of their handicraft skill and manual dexterity" most of them work into better jobs paying between $300 and $400 a month, an official says.

North American's attitude toward hiring Indians is summed up by Dwight Zook, head of employment: "We look on Indians as a great untapped source of workers in a tight labor market."

Listen to Mrs. Peggy Koester who has a dozen Indians among the workers she supervises at Cole of California's swimsuit plant in Hollywood: "Indians have terrific finger dexterity and they're proud of their work."

At Bethlehem Pacific Steel Corp.'s Los Angeles plant, Peter Pflough, of the Flathead Tribe in Montana, works for $1.84½ an hour as an electric furnace tender. His foreman sums up his performance in three words: "He's the shovelingest."

And at Garrett Corp., where a Sioux named Ben Gullikson works as an electrical assembler, comes this praise from a company official: "If you have more like Gullikson, send 'em out."

BANKS, RETAIL STORES

Los Angeles industrial plants aren't the only ones to employ Indians. Walk into the Security-First National Bank, Sears, Roebuck stores, Los Angeles public schools, and city and county offices, and you'll find copper-hued employees working alongside lighter-skinned workers. And at least one Indian has found his way to Hollywood.

Felix Noriego left the Papago reservation in Arizona a couple of years ago to work in a Los Angeles aircraft plant. But shortly after he arrived here, Hollywood put out a call for "an Indian 6 feet tall, 21 years old, with a face like that on the buffalo nickel."

Mr. Noriego got the job and ever since has been busy appearing in "To Hell and Back," "Drum Beat" and "Battle Cry." The job is fairly easy, he says: "They just want me to act like an Indian."

Among the Indians who didn't take to metropolitan life was Ben Gullikson's brother. He tried living in Los Angeles, got fed up with the noise and the traffic "and has gone back to the Rosebud reservation in North Dakota for good."

But the Indians who stay on in the cities are quick to use their increased purchasing power to grab the same variety of consumer goods as any American—autos, furniture, appliances, to name some.

Take Adolph "Bronc" Nagurski, a 31-year-old Navajo, who is a sheet metal worker at Douglas Aircraft Co. Mr. Nagurski—named after the famous Chicago Bears fullback by a teacher who had trouble spelling and pronouncing his Indian name (Chechinezhesue, or "grandson of a tall brave")—has recently bought an $11,000 house.

In addition to his swing shift job at Douglas, Mr. Nagurski works days as an airplane mechanic at Long Beach airport. He's using some of this extra money to finance flying lessons. "I don't have my pilot's license yet, but I expect to get it this summer," he says.

"I hope to buy a home here soon, like my older brother did," says Bill Thorpe, son of the great Indian athlete, Jim Thorpe. Bill works at North American where his sure hands guide a machine which cuts into aluminum, stainless steel and titanium to form airplane parts.

The Government, of course, benefits too from the Indians' increased purchasing power. A survey last year in one Los Angeles industrial plant showed the average Indian worker was paying $210 a year in withholding taxes. Instead of being a recipient of Government help as a "ward of the Government," the Indian working in industry pays his share of the tax burden.

Of course, on a few rich reservations—where oil has been discovered or where valuable timber resources are owned by the tribe—the brave forks out a substantial tax payment. But consider some of the poorer reservations.

Take the 7,400 Papagoes, who live on a reservation at Sells Agency, Ariz. A report to a congressional committee at the end of 1952 showed the average family income to be $1,500 with a fourth of the families earning less than $100 a year per capita.

Obviously there was little income-tax revenue from the Papagoes.

Or take another Arizona reservation, the San Carlos Apache Reservation, where some 4,000 Apaches are trying to exist on 1.6 million acres.

Tribal leaders, anxious to develop "our own resources" and "to train our people to help themselves," asked Stanford Research Institute to look into the reservation's economic resources.

Here are some of the findings submitted to the tribal council last year:

About 20 percent of the tribe's labor force was unemployed. One reason for the unemployment—the Apaches' reliance on livestock raising as a chief occupation.

"Except during the semiannual roundup and auction periods, relatively few persons are required for livestock operations," the report notes. War and postwar prosperity enabled the Indians to make a living without working consistently. "The consequent idleness and lack of opportunity to find constructive outlets for their energies led to such serious social problems as excessive drinking, breakdown of family relationships, and a relatively high suicide rate."

The institute came up with some suggestions as to how the Apaches might better utilize their resources—range improvement, expanded lumber operations, and additional irrigation. But the researchers also agreed: "There are no easy economic solutions to the problems with which the San Carlos people are faced."

Hon. Lyndon Johnson Presents His Legislative Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. TEAGUE of Texas. One of the first, if not the first major political speech made by the able majority leader of the Senate, the Honorable LYNDON JOHNSON, following his recuperation from a recent heart atack was delivered in Whitney, Tex., on November 21, 1955.

In his speech, Senator JOHNSON outlined in some detail the legislative program for the second session of Congress for which he as Democratic majority leader of the Senate would work.

We are all happy that Senator JOHNSON is back with us after his illness as his friendship and the esteem in which he is held by his colleagues goes far beyond any personal considerations:

The speech follows:

SPEECH OF SENATOR LYNDON B. JOHNSON BEFORE FUND RAISING DINNER, DEMOCRATIC ADVISORY COMMITTEE OF TEXAS, WHITNEY, TEX., NOVEMBER 21, 1955

Fellow Texans, fellow Democrats, we meet here tonight after 3 years of a Republican administration. And to Americans, 3 strikes are out.

In 1952, a lot of Texans—in fact a majority—voted for a Republican administration. It was supposed to have something to do with an issue called tidelands.

Well, we got a Republican administration. We think we got at least a part of our tidelands back. And that is the last time the Republicans have looked our way.

They gave our Air Academy to Colorado.

They are trying to give Fort Hood to Louisiana.

They are trying to give Fort Bliss to Oklahoma.

And today the Republican Secretary of the Interior is in Texas to dedicate our Big Bend Park. I hope some of our Eisenhower Democrats are out there to keep him from giving it away to old Mexico.

Personally, I think we should be grateful to the old guard Republicans. They have taught us a lot. And they have made more Democrats in 3 years than we could make in a lifetime.

Do you remember the fine flush of enthusiasm that swept the country with the "great crusade?" Even those of us who had held firm for the banner of democracy were impressed. We were going to get: 100 percent of parity, a balanced budget, tax relief for the little fellow, a strong America, more soil conservation and more rural electrification, a Government free of corruption.

It was a fine program—one of the best ever stolen from the Democrats.

There was only one mistake from their point of view. It was a program with a heart and the heart is something the Republican Party just did not have.

Most Republicans realized they had a program they didn't want. Once they got in, they returned it to us.

And that is when the voters started returning the Government to the Democrats.

It would not be hard to catalogue the misdeeds and failures of the Republican Party. But I am not interested in talking about what the Republicans have not done.

I have never believed that a political party should ask for votes because its opponent has shortcomings.

The American people are tired of wrecking crews. They want builders—people who construct. They will entrust their affairs to the party that is constructive. They will turn their backs on the party that is destructive.

We are here because we are Democrats. But even before we are Democrats, we are Americans. We know that what is bad for America is bad for the Democratic Party. We know what is good for America is good for the Democratic Party.

On that principle, we cannot compromise—not even with General Motors.

As a political party, we seek the support of the American people. But we can gain that support only if we try as hard to deserve it as we do to win it.

The Democratic Party has been in existence for at least 150 years. There is no secret about the reason for its vitality.

It is simply that ours is the party with a heart—the party that is concerned with 160 million Americans. It is the party that holds forth hope for men and women and children who want to march forward—to make life better for all.

I have never questioned the patriotism or integrity of my friends who subscribe to another political faith. But even the most rock-ribbed Republican will admit that his party responds a little faster to the fat cats than to the folks.

In the last 3 years, the American people have had a perfect demonstration of the difference between the two parties. In 1952 they selected a Republican President with a Republican Congress, and in 1954 a Republican President with a Democratic Congress.

I don't believe there are very many Americans who have failed to learn the lesson. They found that the Democratic Party—whether in the majority or in the minority—put the country before partisanship. They always thought more about the next generation than they did about the next election.

I will never forget the first conference of Democratic Senators after the 1952 election. The Democrats were in the minority and the future looked bleak. It was the same situation that had tempted the Republicans to wild criticism and irresponsibility for 20 years.

But the situation was so bad that my friends urged me not to become Democratic leader. They said the Democratic Party would be torn with factional strifes and forced into the position of a carping, dissenting and unpopular minority.

I disagreed. When I addressed the Democratic Senators I said:

"I am a Democrat out of conviction—not out of habit. I believe that the Democratic Party is now—and always has been—the party that is best for America. I believe there are forces holding our party together greater than the issues over which we may squabble for the moment.

"Working together, I think we can do more than merely preserve the gains of the past 20 years. I think we can go forward with a positive program—a program that is pro-American and not just anti-Republican. And if we go forward as positive Americans—and not negative oppositionists—I am convinced that the time is not too far distant when the Democratic Party will again be in the majority."

That statement was made in my acceptance speech to the Democratic conference on January 2, 1953.

Two years later, the Senators met again in conference—this time to organize the Senate as the majority party.

It is even more important tonight that we be responsible. There is the smell of victory, and it is keen and unmistakable.

Since 1952, the Democratic Party has won every major contest.

The people have entrusted to us both branches of Congress; 9 governorships that once belonged to our opponents; 7 State legislatures that we took from the Republicans. Even rock-ribbed Indiana has turned city after city over to Democratic mayors.

We can lose in 1956 only if we stop to lick our chops while the Republicans divide us or we divide ourselves.

I have never found it within myself to hate my fellow Democrats—even when I disagree with them. I would rather spend my time uniting Democrats and inviting them back to the party than driving them out. If you run off enough or run out enough you can stay in the minority for a long, long time.

Speaking as a Texan, I hope and believe that Texas will send a delegation to the national convention ready to abide by the decision of the majority and prepared to fight for the election of our nominee.

I do not know who the Democratic presidential nominee will be in 1956. And, in case any of my fellow Texans are wondering, I repeat what I have stated so often: I am not a candidate of any description for any office in 1956. I am not running for anything except complete recovery of my health.

As far as I am concerned, the people who make up our party will select the candidate. And once a majority has spoken, that candidate will have my enthusiastic support.

I will go a step further and predict that he will have the enthusiastic support of the American people. The party that can produce a record of service to the people can also produce a candidate who will appeal to our people.

The Democratic Congress is producing the record, and the delegates to the Democratic convention will produce the candidate.

My prediction of victory has nothing to do with the Republican candidate. I do not believe that the Republican candidacy matters.

The present President is the best the Republicans have to offer. I do not question his integrity or his patriotism. But, I do question his taste in political parties.

To say he is the best the Republicans have to offer is hardly a compliment. And even the greatest men in our history could not have borne the dead weight of the present Republican Party.

But I want to stress that even though I am confident of winning, the next election is no pushover. It would still be possible for us to snatch defeat from the jaws of victory.

The American people will weigh very carefully the qualifications of those who seek to guide their destiny. A party that is overly partisan, overly quarrelsome, and obsessed solely with politics, will lose. The party that is the least partisan and the most patriotic will win.

The American people have rejected the extreme of the left and the extreme of the right. They want to proceed along the path of constructive program and responsible legislation. We cannot permit one party to be torn to pieces by those who are more interested in excluding than, including people.

In calmer times, fiery debate over fine points might be entertaining. But we have a job to do and the quicker we come to the conclusion that we must all unite against Republicans rather than divide against each other, the quicker we will get that job done.

Good Democrats avoid trivialities. We must concentrate on the substantial.

Love of liberty and devotion to the long-range interests of our beloved America dictate that we warn all pressure groups of whatever blend—Democratic, Republican, independent, farm, employer or employee—that the term "public servant" means the servant of the public and not the servant of some organized pressure propaganda outfit. He who truly serves all the public, the public will also serve.

We are meeting tonight in a rural area. I see throughout this room my friends who earn their living from the soil.

Search your hearts and ask yourselves which party shows the most genuine concern about your future and the future of your children.

The question answers itself.

To this gathering have come average businessmen from surrounding counties. I ask you to search your hearts and ask yourselves the same question.

Again, it will answer itself.

There are working men in this audience—people whose toil and sweat have made life easier for all of us. Do any of you need to spend endless hours answering this question?

Of course not!

There may be some of you who will remember my Daddy. He was a public servant and a successful politician. He was successful because he had a short—but simple—formula.

"Take care of the people and the election will take care of itself," he told me.

That thought might be expressed more elegantly. But there can be no better advice for the Democratic Party.

The job before us now is not to select a candidate but to complete a program upon which the candidate can run. And the program will be effective only if it is based upon genuine concern for the needs of all Americans.

During the fall recess I have been in contact with Democratic leaders throughout the Nation, including practically all of the men being considered for the Democratic nomination. I am grateful to them for their kindness in visiting me at the hospital and out at the ranch.

We have spent a great deal of time at the hospital and at the ranch and by correspondence talking about the legislative program for the next session. Out of these talks certain areas evolved which should be high on the agenda. In the last session of Congress, we have a record unequalled in the memory of legislative experts. The Senate passed 1,325 bills and, of these 880 received the approval of both branches and of the President.

In the Senate we confirmed nearly 40,000 Presidential nominations and wound up with our calendar of business practically clean. In the next session, we must carry on that record if the needs of our people—the genuine human needs—are to be met. It is my intention to ask the Democratic Policy Committee of the Senate to consider the following subjects in the hope that they can be brought before the Senate, considered, and acted upon by the Senate:

PROGRAM WITH A HEART

1. A Social Security bill reducing the age limit for women and extending coverage to most self-employed groups.

2. A tax revision to benefit the low-income groups—probably along the line of that previously offered by Senator WALTER F. GEORGE of Georgia increasing exemptions.

3. A health program to aid medical research and to include larger grants for hospital construction at least to the level authorized under the original Hill-Burton Act.

4. A school construction program to meet the needs of our children.

5. A public roads program, probably similar to the Gore bill. The question of taxes to pay for highway programs is part of the general tax program—and I hope it can be handled separately.

6. A farm program which will restore 90 percent of parity supports; extend the benefits to additional products; and possibly include a soil rental program.

7. A natural-gas bill which will preserve free enterprise and of course provide legitimate protection to consumers.

8. A housing program designed for America's families who are yearning to build or rent dwellings they can afford.

9. A water resources program with specific consideration to a higher dam at Hell's Canyon, the Fryingpan-Arkansas project, Niagara development, the Upper Colorado Basin project, the Washita-Oklahoma project, the Ventura, Calif., project, the Passamoquoddy tidal survey project, a New England development project.

10. A program to relieve critical depressed areas on the basis of Federal and State cooperation, including tax measures to encourage industry; additional public works; supplementary unemployment insurance; and surplus food grants.

11. Amendments to the Immigration and Naturalization laws to insure that they are fair and just.

12. A constitutional amendment eliminating the poll tax.

13. Disaster insurance to protect our people from the ravages of nature.

I want to make it clear that this list is not all-inclusive. Some of the measures—after due consideration—may not be passed; others will be modified.

The final form which they will take is not clear. More may be added on the basis of mature consideration of men who will seek to find the best course to serve our people.

This meeting tonight is a moving occasion for me. I can look about this hall and see the faces of old and trusted friends—men and women who are as close to my heart as my neighbors in the Johnson City hills along the flowing Pedernales.

They are the people who came to my help with their thoughts and their prayers a few weeks ago when there was little to preserve my life except prayer. I will always be grateful.

I am not, however, now indulging in a purely personal mood for the sake of sentimentality. What I am trying to say is that the spirit which moved you to prayer is the same spirit which has made the Democratic Party strong and great.

It represented human concern for a fellow human who was in distress. It was an effort to bring comfort and strength to a man who was in need.

And it was completely unselfish.

To me, the Democratic Party has always been the party of human concern. It has always been the party of people who seek to bring comfort and strength to those in need.

I am very proud to be a member of that party. I am very proud of the honor that you are according me tonight.

Like every other human organization, we frequently fail to live up to our ideals. We have our extremes and we have our people who are "just tol'able."

But underlying the whole history of our party is the fact that Democrats at their worst are better than others at their best. They are not necessarily better as individuals but as members of an organization they share the hope and the dream—and frequently the weaknesses—of the American people.

And I pledge you we will always try to do our best.

The motto of my 1924 graduating class at Johnson City High School was: "Give to the world the best that you have, and the best will come back to you."

The Democratic Party would do well to have that as its guiding policy. We will follow that course and we will serve our people and deserve their support.

SENATE

TUESDAY, JANUARY 17, 1956

(Legislative day of Monday, January 16, 1956)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

The Chaplain, Rev. Frederick Brown Harris, D. D., offered the following prayer:

Eternal Father, who art the light behind life's shadows, the love behind life's sorrows, shine in morning splendor upon these darkened lives of ours groping in a maze of uncertainty and perplexity. We cannot lean upon our own might—our flesh is too fragile, our hearts too evil, our wills are too wayward. Coming for this noontide tryst to this altar of our democracy, we would not catalog the sins and shortcomings of others. We would not exalt that we are not as other men. We come as sinners in the white light of Thy searching, praying for Thy forgiveness and Thy cleansing. Then as we face these tragic days that overtax our capacity and understanding, we ask only for light enough for the next step, courage enough to face the present duty, truth enough for today's decisions, as into Thy hands we commit our ways. We ask in the dear Redeemer's name. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Monday, January 16, 1956, was dispensed with.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States submitting a nomination was communicated to the Senate by Mr. Miller, one of his secretaries.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, its reading

clerk, announced that the House had passed the bill (S. 1689) to authorize the Secretary of the Interior to execute a repayment contract with the Yuma Mesa Irrigation and Drainage District, Gila project, Arizona, and for other purposes, with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the following bills and joint resolution, in which it requested the concurrence of the Senate:

H. R. 604. An act to provide port of entry and related facilities on the Alaska Highway at the Alaska-Canadian border in the Territory of Alaska, and for other purposes;

H. R. 1614. An act to amend the Veterans Regulations to provide an increased statutory rate of compensation for veterans suffering the loss or loss of use of an eye in combination with the loss or loss of use of a limb;

H. R. 1821. An act to provide that checks for benefits provided by laws administered by the Administrator of Veterans' Affairs may be forwarded to the addressee in certain cases;

H. R. 3084. An act to amend certain provisions of the laws relating to the prevention of political activities to make them inapplicable to State officers and employees;

H. R. 5205. An act to extend to members of the Armed Forces the same protection against bodily attack as is now granted to personnel of the Coast Guard;

H. R. 5556. An act authorizing a preliminary examination and survey of McGirts Creek, Fla., for flood control;

H. R. 6256. An act granting the consent of Congress to the States of Kansas and Oklahoma to negotiate and enter into a compact relating to their interest in, and the apportionment of, the waters of the Arkansas River and its tributaries as they affect such States;

H. R. 6769. An act to amend the act entitled "An act to provide better facilities for the enforcement of the customs and immigration laws," to increase the amounts authorized to be expended;

H. R. 7596. An act to provide for the disposal of federally owned property at obsolescent canalized waterways and for other purposes; and

H. J. Res. 194. Joint resolution to designate the General Grant tree (known as the Nation's Christmas Tree) in Kings Canyon National Park, Calif., as a national shrine.

HOUSE BILLS AND JOINT RESOLUTION REFERRED

The following bills and joint resolution were severally read twice by their titles and referred as indicated:

H. R. 604. An act to provide port of entry and related facilities on the Alaska Highway at the Alaska-Canadian border in the Territory of Alaska, and for other purposes; and

H. J. Res. 194. Joint resolution to designate the General Grant tree (known as the Nation's Christmas Tree) in Kings Canyon National Park, Calif., as a national shrine; to the Committee on Interior and Insular Affairs.

H. R. 1614. An act to amend the Veterans Regulations to provide an increased statutory rate of compensation for veterans suffering the loss or loss of use of an eye in combination with the loss or loss of use of a limb; and

H. R. 1821. An act to provide that checks for benefits provided by laws administered by the Administrator of Veterans' Affairs may be forwarded to the addressee in certain cases; to the Committee on Finance.

H. R. 3084. An act to amend certain provisions of the laws relating to the prevention of political activities to make them inapplicable to State officers and employees; to the Committee on Rules and Administration.

H. R. 5205. An act to extend to members of the Armed Forces the same protection against bodily attack as is now granted to personnel of the Coast Guard; to the Committee on the Judiciary.

H. R. 5556. An act authorizing a preliminary examination and survey of McGirts Creek, Fla., for flood control;

H. R. 6769. An act to amend the act entitled "An act to provide better facilities for the enforcement of the customs and immigration laws," to increase the amounts authorized to be expended; and

H. R. 7596. An act to provide for the disposal of federally owned property at obsolescent canalized waterways, and for other purposes; to the Committee on Public Works.

COMMITTEE MEETINGS DURING SENATE SESSIONS

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Permanent Subcommittee on Investigations of the Committee on Government Operations was authorized to meet during the session of the Senate today.

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Committee on Foreign Relations was authorized to sit during the session of the Senate today.

Mr. ELLENDER. Mr. President, I ask unanimous consent that the Committee on Agriculture and Forestry be permitted to meet during the sessions of the Senate during the remainder of this week and on next Monday.

The PRESIDING OFFICER. Is there objection?

Mr. JOHNSON of Texas. Mr. President, I have no objection, but under our procedural agreement, I should like first to consult the distinguished minority leader. We have agreed that when requests of this kind are made, we will present the requests to each other, so that a check may be made with Members on the respective sides of the aisle. I wonder if the Senator from Louisiana would be willing to limit the request to today, so that I might check with the minority leader.

Mr. ELLENDER. The committee is not going to sit today. The committee has arranged a schedule of meetings for the remainder of the week. Quite a few witnesses are coming from long distances. That is why I wanted to be certain the committee would have permission to sit.

Mr. JOHNSON of Texas. The Senator from Texas has no objection, but in accordance with his agreement with the minority leader, he must protect the latter. If the Senator will withhold his request, I shall confer with the Senator from California as soon as possible and then I shall advise the Senator from Louisiana.

Mr. ELLENDER. Very well.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to consider executive business.

EXECUTIVE MESSAGE REFERRED

The PRESIDENT pro tempore laid before the Senate a message from the President of the United States submitting the nomination of John J. Muccio, of Rhode Island, to be Ambassador Extraordinary and Plenipotentiary to Iceland, which was referred to the Committee on Foreign Relations.

EXECUTIVE REPORTS OF COMMITTEES

The following favorable reports of nominations were submitted:

By Mr. KUCHEL, from the Committee on Interior and Insular Affairs:

Walter A. Gordon, of California, to be Governor of the Virgin Islands.

By Mr. GEORGE, from the Committee on Foreign Relations:

Max Waldo Bishop, of Arkansas, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to Thailand; and

Elbridge Durbrow, of California, and sundry other persons, for appointment and promotion in the Foreign and Diplomatic Service.

By Mr. JOHNSTON of South Carolina, from the Committee on Post Office and Civil Service:

Jack Rohe Howard, of New York, to be a member of the Advisory Board for the Post Office Department.

The PRESIDENT pro tempore. If there be no further reports of committees, the clerk will state the nominations on the Executive Calendar.

UNITED STATES TARIFF COMMISSION—NOMINATIONS PASSED OVER

The Chief Clerk read the nomination of William E. Dowling, of Michigan, to be a member of the United States Tariff Commission, which nomination had been passed over.

Mr. JOHNSON of Texas. Mr. President, I ask that the nomination go over.

The PRESIDENT pro tempore. The nomination will be passed over.

The Chief Clerk read the nomination under New Reports, of James Weldon Jones, of Texas, to be a member of the United States Tariff Commission.

Mr. JOHNSON of Texas. Mr. President, I ask that the nomination go over.

The PRESIDENT pro tempore. The nomination will be passed over.

COLLECTOR OF CUSTOMS

The Chief Clerk read the nomination of Charles J. Walker, Sr., of Texas, to be collector of customs for customs district No. 22.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

Mr. JOHNSON of Texas. I ask that the President be notified forthwith of the nomination today confirmed.

The PRESIDENT pro tempore. Without objection, the President will be notified.

NOTICE OF HEARING ON NOMINATION OF JOHN J. MUCCIO TO BE AMBASSADOR TO ICELAND

Mr. GEORGE. Mr. President, as chairman of the Committee on Foreign Relations, I desire to announce that the Senate received today the nomination of John J. Muccio, of Rhode Island, a Foreign Service officer of the class of career minister, to be Ambassador of the United States to Iceland, to which office he was appointed during the last recess of the Senate. I give notice that this nomination will be considered by the Committee on Foreign Relations at the expiration of 6 days.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

ORDER FOR TRANSACTION OF ROUTINE BUSINESS

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that immediately following the quorum call there may be the customary morning hour for the transaction of routine business, under the usual 2-minute limitation on speeches.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. JOHNSON of Texas. I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator from Texas will state it.

Mr. JOHNSON of Texas. Under the previous order, I understand that we are to have the usual morning hour for the introduction of bills and other measures, the submission of reports, and the transaction of other routine business, subject to a 2-minute limitation on statements; is that correct?

The PRESIDENT pro tempore. It is.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following communication and letters, which were referred as indicated:

REPORT OF ADVISORY COMMITTEE ON WATER RESOURCES POLICY

A communication from the President of the United States, transmitting the report of the Advisory Committee on Water Resources Policy, which was read, and, with the accompanying report, referred to the Committee on Interior and Insular Affairs, as follows:

JANUARY 17, 1956.

THE PRESIDENT OF THE SENATE.

THE SPEAKER OF THE HOUSE OF REPRESENTATIVES.

SIRS: I herewith transmit for the consideration of the Congress the report of the Advisory Committee on Water Resources Policy, consisting of the Secretary of Agriculture, the Secretary of Defense, and the Secretary of the Interior. The report is the result of a detailed study of our water problems and of the present powers and activities of the various Federal establishments engaged in water resource development. The Department of Commerce, the Department of Health, Education, and Welfare, the Bureau of the Budget, and other agencies, including the Department of Justice participated in its preparation.

The policies set out in the report embody a framework within which the Federal Government, with State and local governments and other non-Federal interests, may cooperate to develop our water resources. These policies will reconcile many practices among Federal agencies that are now in conflict.

A planning organization along the lines proposed in the report will provide a continuing mechanism for settling unresolved problems that are not specifically covered in it or that may arise in the future. The report recognizes fully the responsibilities of the Federal Government for leadership, guidance, and action in this field. At the same time, it recognizes that there are a multitude of water developments which are more appropriate for regional, State, or local activity.

The report points out that the principles which recognize water rights as property rights should be accepted, and that determinations as to disposition of water should recognize such rights. It recommends that a study be made under the leadership of the Federal Government in collaboration with the States and local entities with reference to property rights to water and the social and economic development of the Nation and the area.

Set forth in the report is a pattern for the widest possible public participation in water resources projects. Organizational changes are recommended to coordinate more closely Federal and non-Federal activity and to make possible more effective Executive guidance. The intent of these proposed changes is to provide the States and local water resources agencies a more adequate voice in the planning and development of projects and facilitate joint participation by all of the affected Federal interests. By this type of cooperative effort we should be assured that all possible uses of water are adequately considered.

The policies we adopt for the development of our water resources will have a profound effect in the years to come upon our domestic, agricultural, and industrial economy. I commend the fundamental purposes and objectives of this report, and I earnestly recommend that the Congress give prompt attention to its proposals.

Sincerely,

DWIGHT D. EISENHOWER.

REPORT OF FEDERAL EXTENSION SERVICE

A letter from the Secretary of Agriculture, transmitting, pursuant to law, a report of the Federal Extension Service, for the fiscal year ended June 30, 1955 (with an accompanying report); to the Committee on Agriculture and Forestry.

AMENDMENT OF CAREER COMPENSATION ACT OF 1949, RELATING TO REFUND OF REENLISTMENT BONUSES

A letter from the Under Secretary of the Navy, transmitting a draft of proposed legislation to amend the Career Compensation Act of 1949, as amended, in relation to the refund of reenlistment bonuses (with an accompanying paper); to the Committee on Armed Services.

CONSTRUCTION OF AERONAUTICAL RESEARCH FACILITIES BY NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS

A letter from the Executive Secretary, National Advisory Committee for Aeronautics, transmitting a draft of proposed legislation to promote the national defense by authorizing the construction of aeronautical research facilities by the National Advisory Committee for Aeronautics necessary to the effective prosecution of aeronautical research (with an accompanying paper); to the Committee on Interstate and Foreign Commerce.

REPORT ON PAYMENT OF CLAIMS FOR DAMAGE CAUSED BY VESSELS OF COAST GUARD

A letter from the Acting Secretary of the Treasury, transmitting, pursuant to law, a report on the payment of claims for damage caused by vessels of the Coast Guard, during the period January 1 through December 31, 1955 (with an accompanying report); to the Committee on the Judiciary.

GRANTING OF STATUS OF PERMANENT RESIDENCE TO CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders granting the applications for permanent residence filed by certain aliens, together wtih a statement of the facts and pertinent provisions of law as to each alien and the reasons for granting such applications (with accompanying papers); to the Committee on the Judiciary.

SUSPENSION OF DEPORTATION OF CERTAIN ALIENS

Three letters from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders suspending deportation of certain aliens, together with a statement of the facts and pertinent provisions of law as to each alien and the reasons for ordering such suspension (with accompanying papers); to the Committee on the Judiciary.

REPORT ON PROFESSIONAL AND SCIENTIFIC POSITIONS ESTABLISHED BY DEPARTMENT OF DEFENSE

A letter from the Secretary of Defense, transmitting, pursuant to law, a report on professional and scientific positions established in the Department of Defense, for the calendar year ended December 31, 1955 (with an accompanying report); to the Committee on Post Office and Civil Service.

WESTINGHOUSE ELECTRIC CORP. STRIKE—RESOLUTION

Mr. KENNEDY. Mr. President, a few days ago, the Massachusetts House of

Representatives adopted a resolution urging that the Westinghouse Electric Corp. and the International Union of Electrical, Radio, and Machine Workers, AFL–CIO, accept the proposal of Joseph F. Finnegan, Director of the Federal Mediation and Conciliation Service, that there be set up a factfinding panel to make nonbinding recommendations in the prolonged strike of Westinghouse employees. The strike is now in its fourth month.

I present the resolution of the House of Representatives of Massachusetts and ask unanimous consent that it be printed in the RECORD, together with a statement issued earlier by the Senator from Illinois [Mr. DOUGLAS], the senior Senator from Montana [Mr. MURRAY], the Senator New York [Mr. LEHMAN], the Senator from Minnesota [Mr. HUMPHREY], the Senator from Oregon [Mr. MORSE], the junior Senator from West Virginia [Mr. NEELY], the Senator from Michigan [Mr. MCNAMARA], the senior Senator from West Virginia [Mr. KILGORE] the junior Senator from Montana [Mr. MANSFIELD], and the Senator from Wyoming [Mr. O'MAHONEY]. It should be recorded that the striking union immediately accepted Mr. Finnegan's proposal but that it was rejected by the company.

There being no objection, the resolution and statement were ordered to be printed in the RECORD, as follows:

RESOLUTIONS PROPOSING A MEANS OF SETTLEMENT OF THE CURRENT LABOR DISPUTE BETWEEN THE WESTINGHOUSE ELECTRIC CORP. AND THE INTERNATIONAL UNION OF ELECTRICAL, RADIO, AND MACHINE WORKERS, AFL–CIO

Whereas over 50,000 employees of Westinghouse Electric Corp., including several thousand in Springfield, Mass., have been on strike for 3 months; and

Whereas collective bargaining has so far failed to effect a settlement of this dispute; and

Whereas the Governors of Pennsylvania, Maryland, and New York have appealed to both sides to submit the dispute to final and binding arbitration, and this request has been supported by a number of Members of Congress from districts where striking employees live, by the mayors of over 15 cities, and by the clergy and other civic leaders; and

Whereas the Director of the Federal Mediation and Conciliation Service has declared that "the economic effects of this work stoppage have had a serious adverse effect on many thousands of other workers and upon other related industries"; and

Whereas the Federal Mediation and Conciliation Service had declared that the conciliation efforts have not proven successful and has recommended that the corporation and the union submit all of the disputed issues in this strike to a factfinding board, which board shall report its findings of fact and recommendations to the parties to serve as a basis for negotiation by the parties for an honorable settlement; and

Whereas the public interest demands that every reasonable means be resorted to by the parties in an attempt to resolve this dispute: Therefore be it

Resolved, That it is hereby declared to be the sense of the House of Representatives of the General Court of Massachusetts that the recommendations of the Federal Mediation and Conciliation Service is fair and equitable and in the interest of proper labor relations, and that said factfinding board should be established forthwith, and that the Westinghouse Electric Corp. and the International Union of Electrical, Radio, and Machine Workers, AFL–CIO should submit the issues which brought about the present strike to said board so that the controversy may be settled with honor and dignity at the earliest possible time; and be it further

Resolved, That a copy of these resolutions shall be transmitted by the State secretary to said Westinghouse Electric Corp. and the International Union of Electrical, Radio, and Machine Workers, AFL–CIO.

STATEMENT BY SENATORS DOUGLAS, MURRAY, LEHMAN, HUMPHREY, MORSE, NEELY, MCNAMARA, KILGORE, MANSFIELD, AND O'MAHONEY

The largest strike of the year—with more employees on strike and more plants closed down in more areas of the country than in any other strike of 1955—is now in its 12th week. This is the strike of over 50,000 employees of the Westinghouse Electric Corp.

The Governors of 3 States in which plants are located have become so concerned over the strike in the past 10 days that they have appealed to both sides of the controversy voluntarily to submit all issues to final and binding arbitration. Several members of Congress from Districts where striking employees live or where there are Westinghouse plants have done the same. The mayors of many cities within whose limits there are plants have made similar appeals. Church and civic leaders have also voiced their anxiety in like terms.

The arbitration proposal, advanced separately in the first instance by the three Governors—George Leader of Pennsylvania, Theodore McKeldin of Maryland, and Averell Harriman of New York—was rejected by President Gwilym Price of Westinghouse. It was accepted by President James B. Carey, head of the principal striking union, the International Union of Electrical, Radio and Machine Workers, AFL–CIO.

Westinghouse is the 13th largest corporation in our Nation. In addition to producing consumer appliances, its manufacture of heavy electrical equipment makes it a significant factor in the continued expansion of our basic industries, both for defense and peacetime purposes.

The deeply disturbing circumstances of the Westinghouse strike at this juncture—the apparent failure of collective bargaining despite many weeks of discussion—cause us to feel that the public interest requires an early Senate inquiry into the dispute. The stalemate seriously harms not only the best interests of the company, its stockholders and employees, but also the welfare of the country as a whole.

RESOLUTIONS OF AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD, and appropriately referred, two resolutions adopted by the American Association for the Advancement of Science at its meeting in Atlanta, Ga., during the last week of 1955.

There being no objection, the resolutions were referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Following are the two resolutions adopted by the American Association for the Advancement of Science at its meeting in Atlanta during the last week of 1955:

"Be it resolved, That the American Association for the Advancement of Science endorses the efforts being made to amend the McCarran-Walter Act to remove those provisions that limit the travel of recognized foreign scholars and scientists to this country, for limitation on the free interchange of knowledge constitutes a serious impediment to scientific progress."

"Be it resolved, That the American Association for the Advancement of Science favors the use of funds of the United States through the National Science Foundation and other appropriate Government agencies to supplement the travel costs of United States citizens to attend scientific meetings and congresses in foreign countries on the ground that the interchange of information resulting greatly strengthens our own scientific competence."

Sincerely,

DAEL WOLFLE,
Executive Officer.

ELIMINATION OF REGULATION OF COMPANIES CARRYING NATURAL GAS TO MINNESOTA—RESOLUTIONS AND TELEGRAM

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD, and appropriately referred, a number of resolutions adopted by city and village councils, and a telegram from the Retail Clerks International Local 789, expressing strong opposition to the Harris bill, H. R. 4560, and the Fulbright bill, S. 1853, which would eliminate regulation of companies carrying natural gas to Minnesota.

There being no objection, the resolutions and telegram were ordered to lie on the table, and to be printed in the RECORD, as follows:

VILLAGE OF MOUNTAIN LAKE,
Mountain Lake, Minn.

Hon. HUBERT H. HUMPHREY,
United States Senate,
Washington, D. C.:

This is to advise that at a regular meeting of the Council of the Village of Mountain Lake, Minn., held on the 10th day of January, 1956, said council went on record by formal resolution as being opposed to Fulbright bill (S. 1853); and directing the village clerk to transmit notice of such action to above-named addressee.

Dated January 11, 1956.

HARVEY GOOSSEN,
Village Clerk.

At a regular meeting of the City of Council of the City of Mankato held on January 9, 1956, it was unanimously resolved as follows: "That the Harris and Fulbright bills, as amended, are contrary to the best interests of the gas-consuming public in the city of Mankato"; be it further

Resolved, That the Council of the City of Mankato, Minn., record its full and complete opposition to the Harris bill, as amended, and also to the Fulbright bill and respectfully request that the Senators and Congressmen from the State of Minnesota exercise their utmost efforts to defeat these bills; be it further

Resolved, That a copy of this resolution be transmitted to the honorable Senators from the State of Minnesota and to the Honorable Congresman JOSEPH P. O'HARA, from the Second District.

Unanimously adopted by the council January 9, 1956.

E. A. HODAPP, *Mayor.*

Attest:

H. J. MATSON,
Secretary of the Council.

VILLAGE OF LAKEVILLE,
Lakeville, Minn., January 10, 1956.
Hon. HUBERT HUMPHREY,
Washington, D. C.:

Resolved by the Village Council of the Village of Lakeville, Dakota County, Minn., That we hereby urgently request you to exercise your utmost efforts to defeat this legislation, which we feel is not in the public interest.

Adopted by the council, January 9, 1956.
V. E. LORENTSON, *Clerk.*

VILLAGE OF LAUDERDALE, MINN.,
January 10, 1956.
Senator H. HUMPHREY,
Senate Office Building,
Washington, D. C.

DEAR SIR: At our regular council meeting January 10, 1956, the Harris bill and its companion the Fulbright bill were discussed to some extent, and be it hereby known that the Village of Lauderdale Council wants to go on record as opposing the Harris bill and the Fulbright bill; be it further

Resolved, That the Village of Lauderdale Council of Ramsey County hereby again urgently requests the Senators and Congressmen from the State of Minnesota to exercise their utmost efforts to defeat this legislation which is not in the public interest.

Adopted by the council January 10, 1956.
HELMA GUNDERSON,
Village Clerk.

VILLAGE OF WELCOME,
Welcome, Minn., January 11, 1956.
Senator HUBERT HUMPHREY,
Washington, D. C.

DEAR SENATOR: The Village Council of the Village of Welcome wishes to express its opposition to the Fulbright bill and urgently request your support in defeating this bill.

We believe natural gas to be one of our countries greatest natural resources and that it should benefit all citizens and not a favored few. We believe this can best be done by Federal regulation which will allow the producers a fair and reasonable rate of return so that the industry may expand but that it should not penalize the consumers. We believe that if regulation is removed from the industry it would be contrary to the best interests of our citizens who are users of natural gas and that there would be a variation between rates in different communities and a generally higher rate would result.

Respectfully,
CLARENCE ROLOFF, *Mayor.*
E. R. STAUFFER, *Clerk.*

ST. PAUL, MINN., *January 16, 1956.*
Hon. HUBERT HUMPHREY,
Senate Chamber,
Washington, D. C.:

We urge you to oppose the Fulbright bill S. 1853. We sincerely hope that you will fight against this bill for the complete protection for the consumers of natural gas which is one of the greatest natural resources of our Nation and a resource that belongs to all of the people and not to the favored few.

THE SERVICE AND PRODUCTION TRADES COUNCIL, ST. PAUL RETAIL CLERKS INTERNATIONAL LOCAL 789,
ANTHONY P. SANDYS, *Secretary.*

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. JOHNSTON of South Carolina, from the Committee on Post Office and Civil Service:

S. Res. 164. Resolution authorizing the Committee on Post Office and Civil Service to employ a temporary additional clerical assistant; without amendment (Rept. No. 1398).

By Mr. JOHNSTON of South Carolina, from the Committee on Post Office and Civil Service; with an amendment:

S. Res. 153. Resolution extending the time for an investigation of the administration of the civil-service system and the postal service (Rept. No. 1400); and

S. Res. 154. Resolution extending the time for a study of the Government employees security program (Rept. No. 1399).

EXTENSION OF THE TIME FOR FILING REPORT BY SUBCOMMITTEE ON DISARMAMENT, COMMITTEE ON FOREIGN RELATIONS (S. REPT. NO. 1396)

Mr. HUMPHREY. Mr. President, from the Committee on Foreign Relations, I report an original resolution, recommending that the Subcommittee on Disarmament be continued until July 1, 1956, and I submit a report thereon.

The PRESIDING OFFICER (Mr. MCNAMARA in the chair). The report will be received and printed, and the resolution will be placed on the calendar.

The resolution (S. Res. 185) was placed on the calendar, as follows:

Resolved, That the subcommittee (as authorized and directed by S. Res. 93 of the 84th Cong., 1st sess., agreed to July 25, 1955) of the Committee on Foreign Relations is authorized under sections 134 (a) and 136 of the Legislative Reorganization Act of 1946, as amended, and in accordance with the jurisdiction of the Committee on Foreign Relations specified by rule XXV of the Standing Rules of the Senate, to examine, investigate, and make a complete study of any and all matters pertaining to the international control and reduction of armaments, as further described in Senate Resolution 93, 84th Congress.

SEC. 2. For the purposes of this resolution the committee, from February 1, 1956, to July 1, 1956, inclusive, is authorized (1) to make such expenditures as it deems advisable; (2) to employ upon a temporary basis, technical, clerical, and other assistants and consultants; and (3) with the prior consent of the heads of the departments or agencies concerned, and the Committee on Rules and Administration, to utilize the reimbursable services, information, facilities and personnel of any of the departments or agencies of the Government.

SEC. 3. The committee shall report its findings, together with its recommendations for legislation as it deems advisable, to the Senate at the earliest practicable date, but not later than July 1, 1956.

SEC. 4. Expenses of the committee, under this resolution, which shall not exceed $35,000, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

INTERIM REPORT ENTITLED "CONTROL AND REDUCTION OF ARMAMENTS" (S. REPT. NO. 1397)

Mr. HUMPHREY. Mr. President, pursuant to Senate Resolution 93, 84th Congress, 1st session, from the Committee on Foreign Relations, I submit a report entitled "Control and Reduction of Armaments" and ask that it be printed.

The PRESIDING OFFICER. The report will be received and printed, as requested by the Senator from Minnesota.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CLEMENTS:

S. 2945. A bill for the relief of Gertrud Kreen; to the Committee on the Judiciary.

S. 2946. A bill to amend section 5 of the Civil Service Retirement Act of May 29, 1930, as amended, with respect to credit for service in post offices which are reclassified from third to fourth class;

S. 2947. A bill relating to the computation of hourly rates of compensation in the case of employees converted from positions under the Classification Act of 1949 to positions under prevailing rate systems in accordance with section 202 (7) of such act, as amended; and

S. 2948. A bill to provide preference in Government employment for persons who incur permanent disabilities while serving as civilian employees of the Government; to the Committee on Post Office and Civil Service.

By Mr. AIKEN (for himself, Mr. YOUNG, Mr. THYE, Mr. HICKENLOOPER, Mr. MUNDT, and Mr. SCHOEPPEL):

S. 2949. A bill to provide for the protection and conservation of national soil, water, and forest resources and to provide an adequate, balanced, and orderly flow of agricultural commodities in interstate and foreign commerce, and for other purposes; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. AIKEN when he introduced the above bill, which appear under a separate heading.)

By Mr. WILEY:

S. 2950. A bill to amend the Agricultural Act of 1954 to provide for acceleration of the brucellosis eradication program; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. WILEY when he introduced the above bill, which appear under a separate heading.)

By Mr. ERVIN:

S. 2951. A bill for the relief of Mrs. Ethel B. Blanton; to the Committee on Finance.

By Mr. HUMPHREY:

S. 2952. A bill for the relief of Shiu Ming Ma; to the Committee on the Judiciary.

By Mr. KENNEDY:

S. 2953. A bill for the relief of Maria Cedrone De Rubeis;

S. 2954. A bill for the relief of Christina Arutunian; and

S. 2955. A bill for the relief of Anna Justine Cakste; to the Committee on the Judiciary.

By Mr. MAGNUSON:

S. 2956. A bill for the relief of Robert Lin-Yuan Lin;

S. 2957. A bill for the relief of Luis L. Oh; and

S. 2958. A bill for the relief of Elisabeth Hollas; to the Committee on the Judiciary.

By Mr. MCCARTHY:

S. 2959. A bill for the relief of Edith Johanna Augusta Kienest; to the Committee on the Judiciary.

By Mr. MORSE (for himself, Mr. ROBERTSON, Mr. SPARKMAN, Mr. LEHMAN, Mr. BUSH, Mr. PURTELL, Mr. COTTON, Mr. MARTIN of Pennsylvania, Mr. PAYNE, Mr. BEALL, Mr. IVES, Mr. DUFF, Mr. KUCHEL, Mr. BENNETT, and Mr. SMITH of New Jersey):

S. 2960. A bill to amend the Small Business Act of 1953, as amended; to the Committee on Banking and Currency.

(See the remarks of Mr. MORSE when he introduced the above bill, which appear under a separate heading.)

By Mr. WILEY:

S. J. Res. 121. Joint resolution authorizing the President to issue posthumously to the late Col. William Mitchell a commission as a major general, United States Army, and for other purposes; to the Committee on Armed Services.

(See the remarks of Mr. WILEY when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. ANDERSON:

S. J. Res. 122. Joint resolution providing for the filling of a vacancy in the Board of Regents of the Smithsonian Institution, of the class other than Members of Congress;

S. J. Res. 123. Joint resolution providing for the filling of a vacancy in the Board of Regents of the Smithsonian Institution, of the class other than Members of Congress; and

S. J. Res. 124. Joint resolution providing for the filling of a vacancy in the Board of Regents of the Smithsonian Institution, of the class other than Members of Congress; to the Committee on Rules and Administration.

IMPLEMENTATION OF ADMINISTRATION'S AGRICULTURAL RECOMMENDATIONS

Mr. AIKEN. Mr. President, on behalf of the Senator from North Dakota [Mr. YOUNG], the Senator from Minnesota [Mr. THYE], the Senator from Iowa [Mr. HICKENLOOPER], the Senator from South Dakota [Mr. MUNDT], the Senator from Kansas [Mr. SCHOEPPEL], and myself, I introduce, for appropriate reference, a bill to implement the agricultural recommendations of the President. I ask unanimous consent to have the text of the bill printed in the body of the RECORD, so as to be available to all Members, together with the letter of transmittal from the Secretary of Agriculture to myself, stating briefly the provisions of the President's agricultural program and the provisions contained in the bill.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and letter will be printed in the RECORD.

The bill (S. 2949) to provide for the protection and conservation of national soil, water, and forest resources and to provide an adequate, balanced, and orderly flow of agricultural commodities in interstate and foreign commerce, and for other purposes, introduced by Mr. AIKEN (for himself and other Senators), was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc.—

TITLE I—SOIL BANK ACT

Declaration of policy

SEC. 101. This title may be cited as the "Soil Bank Act," and the term "this act" when used in this title shall mean the Soil Bank Act.

SEC. 102. The Congress hereby finds that the production of excessive supplies of cultivated agricultural commodities depresses the prices and income of farm families; constitutes improper land use and brings about soil erosion, depletion of soil fertility, and too rapid release of water from lands where it falls, thereby adversely affecting the national welfare, impairing the productive facilities necessary for a continuous and stable supply of agricultural commodities, and endangering an adequate supply of water for agricultural and nonagricultural use; overtaxes the facilities of interstate and foreign transportation; congests terminal markets and handling and processing centers in the flow of commodities from producers to consumers; depresses prices in interstate and foreign commerce; disrupts the orderly marketing of commodities in such commerce; and otherwise affects, burdens, and obstructs interstate and foreign commerce. It is in the interest of the general welfare that the soil and water resources of the Nation be not wasted and depleted in the production of such burdensome surpluses and that interstate and foreign commerce in agricultural commodities be protected from excessive supplies. It is hereby declared to be the policy of the Congress and the purposes of this act to protect and increase farm income, to protect the national soil, water, and forest resources from waste and depletion, to protect interstate and foreign commerce from the burdens and obstructions which result from the utilization of farmland for the production of excessive supplies of cultivated agricultural commodities, to provide for the conservation of such resources and an adequate, balanced, and orderly flow of such agricultural commodities in interstate and foreign commerce. To effectuate the policy of Congress and the purposes of this act programs are herein authorized to assist farmers to divert a portion of their cultivated cropland from the production of excessive supplies of cultivated agricultural commodities, and to carry out a program of soil, water, and forest conservation. The activities authorized under this act are supplementary to the acreage allotments and marketing quotas authorized under the Agricultural Adjustment Act of 1938, as amended, and together with such acreage allotments and marketing quotas, constitute an overall program to prevent excessive supplies of cultivated agricultural commodities from burdening and obstructing interstate and foreign commerce.

SUBTITLE A—ACREAGE RESERVE PROGRAM

Terms and conditions

SEC. 103. Notwithstanding any other provision of law, the Secretary of Agriculture (hereinafter referred to as the "Secretary") is authorized and directed to formulate and carry out an acreage reserve program for the 1956, 1957, 1958, and 1959 crops of wheat, cotton, corn, and rice, respectively (hereinafter referred to as "the commodity") under which producers shall be compensated for reducing their acreages of the commodity below their farm acreage allotments established under the Agricultural Adjustment Act of 1938, as amended. To be eligible for such compensation the producer (a) shall reduce his acreage of the commodity below his farm acreage allotment within such limits as the Secretary may prescribe, (b) shall specifically designate the acreage so withdrawn from the production of such commodity (hereinafter referred to as the "reserve acreage"), and (c) shall not harvest any crop from, or graze, the reserve acreage unless the Secretary determines that it would be in the national interest to permit grazing and gives consent thereto. The reserve acreage shall be in addition to any acreage devoted to the conservation reserve program authorized under subtitle B of this act. In the formulation and administration of the acreage reserve program the Secretary shall provide adequate safeguards to protect the interests of tenants and sharecroppers, including provision for sharing, on a fair and equitable basis, in the certificates issued pursuant to section 105 hereof. The acreage reserve program may include such terms and conditions, in addition to those specifically provided for herein, as the Secretary determines are desirable to effectuate the purposes of this act and to facilitate the practical administration of the acreage reserve program.

Extent of participation in program

SEC. 104. For purposes of the acreage reserve program the Secretary shall establish a national reserve acreage goal for the 1956, 1957, 1958, and 1959 crops of wheat, cotton, corn, and rice, respectively, of not to exceed 30 percent of the national acreage allotment established for such commodity under the Agricultural Adjustment Act of 1938, as amended. The limits within which individual farms may participate in the acreage reserve program shall be established in such manner as the Secretary determines is reasonably calculated to achieve the national reserve acreage goal and give producers a fair and equitable opportunity to participate in the acreage reserve program, taking into consideration their acreage allotments established under the Agricultural Adjustment Act of 1938, as amended, the supply and demand conditions for different classes, grades, and qualities of the commodity, and such other factors as he deems appropriate.

Compensation of producers

SEC. 105. Producers shall be compensated for participating in the acreage reserve program through the issuance of negotiable certificates which the Commodity Credit Corporation shall redeem in the commodity or in cash in accordance with regulations prescribed by the Secretary. Such compensation shall be at such rate or rates as the Secretary determines will provide producers with a fair and reasonable return for reducing their acreage of the commodity, taking into consideration the loss of production of the commodity on the reserve acreage, any savings in cost which result from not planting the commodity on the reserve acreage, and the incentive necessary to achieve the reserve acreage goal. Commodities delivered to producers in redemption of such certificates shall not be eligible for tender to Commodity Credit Corporation under the price-support program.

Sales of CCC stocks

SEC. 106. The Commodity Credit Corporation is authorized to sell at market prices, without regard to sales price limitations which would otherwise be applicable, a quantity of the commodity equal in sales value to the cost of redeeming certificates in cash. Such sales shall be made at such times, in such manner, and in such quantities as will minimize any adverse effect of such sales upon market prices.

Reduction of set-aside

SEC. 107. The quantities of cotton and wheat in the commodity set-aside established pursuant to the Agricultural Act of 1954 shall be reduced by the estimated quantities of such commodities which would have been produced on the reserve acreage if such reserve acreage had been devoted to the production of such commodities.

Effect on acreage allotments and quotas

SEC. 108. (a) In the future establishment of State, county, and farm acreage allotments for wheat, cotton, corn, and rice, respectively, under the Agricultural Adjustment Act of 1938, as amended, reserve acreages applicable to the commodity shall be credited to the State, county, and farm as though such acreage had actually been devoted to the production of the commodity.

(b) In applying the provisions of paragraph (6) of Public Law 74, 77th Congress (7 U. S. C. 1340 (6)), and sections 326 (b) and 356 (g) of the Agricultural Adjustment Act of 1938, as amended (7 U. S. C. 1326 (b), 1356 (g)), relating to reduction of the storage amounts of wheat and rice, the reserve acreage of the commodity on any farm shall be regarded as wheat acreage or rice acreage, as the case may be, on the farm.

SUBTITLE B. CONSERVATION RESERVE PROGRAM

Terms and conditions

SEC. 109 (a) To effectuate the purposes of this act the Secretary is hereby authorized to enter into contracts with producers determined by him to have control of the farms for the period covered by the contract wherein the producer shall agree:

(1) To establish and maintain for the contract period protective vegetative cover (including but not limited to grass and trees) or water storage facilities on a specifically designated acreage of cultivated cropland in the farm.

(2) To devote to conserving crops or uses, or allow to remain idle, throughout the contract period an acreage of the remaining land in the farm which is not less than the acreage normally devoted only to conserving crops or uses or normally allowed to remain idle on the entire farm.

(3) Not to harvest any crop from the acreage established in protective vegetative cover.

(4) Not to pasture the acreage established in protective vegetative cover prior to January 1, 1959, or such later date as may be provided in the contract, unless the Secretary determines that it would be in the national interest to permit pasturing thereon and gives consent thereto; and if such acreage is pastured at the end of such period, to pasture such acreage in accordance with sound pasture management.

(5) Not to adopt any practice, as specified by the Secretary in the contract, tending to defeat the purposes of the contract.

(6) To forfeit all rights to further payments or grants under the contract and refund to the United States all payments or grants received thereunder upon his violation of the contract at any stage during the time he has lost control of the farm if the Secretary determines that such violation is of such a nature as to warrant termination of the contract, or to make such refunds or accept such payment adjustments as the Secretary may deem appropriate if he determines that the producer's violation does not warrant termination of the contract.

(7) To such additional provisions as the Secretary determines are desirable and includes in the contract to effectuate the purposes of this act and to facilitate the practical administration of the conservation reserve program.

(b) In return for such agreement by the producer the Secretary shall agree:

(1) To bear such part of the cost (including labor) of establishing and maintaining vegetative cover or water storage facilities on the designated acreage as the Secretary determines to be necessary to effectuate the purposes of this act, but not to exceed a maximum amount per acre or facility prescribed by the Secretary for the county or area in which the farm is situated; and

(2) To make an annual payment to the producer for the term of the contract upon determination that he has fulfilled the provisions of the contract entitling him to such payment. The rate or rates of the annual payment to be provided for in the contracts shall be established on such basis as the Secretary determines will provide producers with a fair and reasonable annual return on the land established in protective vegetative cover or water storage facilities, taking into consideration the value of the land for the production of commodities customarily grown on such kind of land in the county or area, the prevailing rates for cash rentals for similar land in the county or area, the incentive necessary to obtain contracts covering sufficient acreage for the substantial accomplishment of the purposes of the conservation reserve program, and such other factors as he deems appropriate. Such rate or rates may be determined on an individual farm basis, a county or area basis, or such other basis as the Secretary determines will facilitate the practical administration of the program. No annual payment to any person with respect to land in any one State shall exceed $5,000.

(c) The Secretary, with the approval of the President, shall determine annually the scope of the program to be conducted under this subtitle B: *Provided*, That no action shall be taken pursuant to this subsection (c) which would cause impairment of any contract existing as of the time such annual determination is made.

Authorized period of contracts and expenditures

SEC. 110. (a) The Secretary is authorized to formulate and announce programs under this subtitle B and to enter into contracts thereunder with producers during the 5-year period 1956–60 to be carried out during the period ending not later than December 31, 1969.

(b) The period covered by any contract shall not exceed 10 years.

Termination and modification of contracts

SEC. 111. (a) The Secretary may terminate any contract with a producer by mutual agreement with the producer if the Secretary determines that such termination would be in the public interest.

(b) The Secretary may agree to such modification of contracts previously entered into as he may determine to be desirable to carry out the purposes of this act and to facilitate the practical administration of the conservation reserve program.

Conservation materials and services

SEC. 112. (a) The Secretary may purchase conservation materials and services and make such materials and services available to producers under the conservation reserve program to aid them in establishing vegetative cover or water storage facilities under contracts authorized by this subtitle B, may reimburse any Federal, State, or local government agency for conservation materials and services furnished by such agency, and may pay expenses necessary in making such materials and services available, including all or part of the costs incident to the delivery, application, or installation of materials and services.

(b) Notwithstanding any other provision of law, in making conservation materials and services available to producers hereunder, the Secretary may make payments, in advance of determination of performance by the producers, to persons who fill purchase orders covering approved conservation materials or who render services to the Secretary in furnishing to producers approved conservation materials or services for the establishment by the producers of vegetative cover or water storage facilities under contracts authorized by this subtitle B. The price at which purchase orders for any conservation material or service are filled may be limited, if the Secretary determines that it is necessary in the interest of producers and the Government, to a fair price fixed in accordance with regulations prescribed by the Secretary.

Effect on other programs

SEC. 113. Notwithstanding any other provision of law—

(1) insofar as the acreage of cropland on any farm enters into the determination of acreage allotments and marketing quotas under the Agricultural Adjustment Act of 1938, as amended, the cropland acreage on the farm shall not be decreased during the period of any contract entered into under the conservation acreage program by reason of the establishment and maintenance of vegetative cover or water storage facilities under such contract; and

(2) the acreage on any farm which is determined under regulations of the Secretary to have been diverted from the production of any commodity subject to acreage allotments or marketing quotas in order to carry out the contract entered into under the conservation acreage program shall be considered acreage devoted to the commodity for the purposes of establishing future State, county, and farm acreage allotments under the Agricultural Adjustment Act of 1938, as amended.

Protection of tenants and sharecroppers

SEC. 114. In the administration of the conservation reserve program, the Secretary shall provide adequate safeguards to protect the interests of tenants and sharecroppers.

Geographical applicability

SEC. 115. (a) This subtitle B shall apply to the continental United States, and, if the Secretary determines it to be in the national interest, to one or more of the Territories of Alaska and Hawaii, the Commonwealth of Puerto Rico, and the Virgin Islands, and, as used in this subtitle B, the term "State" includes Alaska, Hawaii, Puerto Rico, and the Virgin Islands.

SUBTITLE C—GENERAL PROVISIONS

Certificate of claimant

SEC. 116. Payment or compensation authorized by this act may be made upon the certificate of the claimant, in such form as the Secretary may prescribe, that he has complied with all requirements for such payments and that the statements and information contained in the application for payment are correct and true, to the best of his knowledge and belief.

Utilization of local and State committees

SEC. 117. In administering this act in the continental United States, the Secretary shall utilize the services of community, county, and State committees established under section 8 of the Soil Conservation and Domestic Allotment Act, as amended.

Financing

SEC. 118. (a) The Secretary is authorized to utilize the facilities, services, authorities, and funds of the Commodity Credit Corporation in discharging his functions and responsibilities under this act, including payment of costs of administration for the programs authorized under this act. There is hereby authorized to be appropriated such sums as may be necessary to make payments to the corporation for its actual costs incurred under this section.

(b) All funds available for carrying out the purposes of this act shall be available for transfer to such agencies of the Federal or State governments as the Secretary may request to cooperate or assist in carrying out this act; and for technical assistance in formulating and carrying out the programs authorized by this act. The Secretary may make such payments in advance of determination of performance.

Finality of determinations

SEC. 119. The facts constituting the basis for any payment or compensation, or the amount thereof, authorized to be made under this act, when officially determined in conformity with applicable regulations prescribed by the Secretary, shall be final and conclusive and shall not be reviewable by any other officer or agency of the Government. In case any producer who is entitled to any payment or compensation dies, becomes incompetent, or disappears before receiving such payment or compensation, or is succeeded by another who renders or completes the required performance, the payment or compensation shall, without regard to any other provisions of law, be made as the Secretary may determine to be fair and reasonable in all the circumstances and so provide by regulations.

Regulations

SEC. 120. The Secretary shall prescribe such regulations as he determines necessary to carry out the provisions of this act.

TITLE II—MISCELLANEOUS PROVISIONS AND AMENDMENTS

SEC. 201. Section 334 (e) of the Agricultural Adjustment Act of 1938, as amended (7 U. S. C. 1334 (e)), is amended to read as follows:

"(e) Notwithstanding any other provision of this act, the Secretary shall increase the farm-marketing quotas and acreage allotments for the 1956 crop of wheat for farms located in counties in the States of California, Minnesota, Montana, North Dakota, and South Dakota, designated by the Secretary as counties which (1) are capable of producing durum wheat (class II) and (2) have produced such wheat for commercial food products during 1 or more of the 5 years 1951 through 1955. The increase in the wheat acreage allotment for any farm shall be conditioned upon the production of durum wheat (class II) on such increased acreage. The increased allotment shall be determined by adding to the allotment established without regard to this subsection (hereinafter referred to as the 'original allotment'), less the reserve acreage of wheat established under subtitle A of the Soil Bank Act, an acreage equal to two times the acreage by which the original allotment, less the reserve acreage of wheat under such subtitle A, exceeds the 1956 acreage on the farm of classes of wheat other than durum wheat (class II) (hereinafter referred to as 'other wheat'), but such increased allotment shall not exceed the smaller of the cropland on the farm well suited to wheat or the wheat acreage on the farm: *Provided*, That for the purposes of this subsection (e), the original allotment, less the reserve acreage of wheat under such subtitle A, for each farm shall be not less than 15 acres, and varieties of durum wheat (class II) known as 'golden ball' and 'peliss' shall be regarded as other wheat.

"The increases in wheat acreage allotments authorized by this subsection shall be in addition to the national, State, and county wheat acreage allotments, and the acreage of durum wheat (class II) on such increased allotments shall not be considered in establishing future State, county, and farm acreage allotments.

"The provisions of paragraph (6) of Public Law 74, 77th Congress (7 U. S. C. 1340 (6)), and section 326 (b) of the Agricultural Adjustment Act of 1938, as amended (7 U. S. C. 1326 (b)), relating to the reduction of the storage amount of wheat shall apply to the allotment for the farm established without regard to this subsection (e) and not to the increased allotment under this subsection."

SEC. 202. Section 335 (e) of the Agricultural Adjustment Act of 1938, as amended (7 U. S. C. 1335 (e)), is amended effective beginning with the 1957 crop by changing the first sentence thereof to read as follows:

"If, for any marketing year, the acreage allotment for wheat for any State is 240,000 acres or less, the Secretary, in order to promote efficient administration of the act and the Agricultural Act of 1949, may designate such State as outside the commercial wheat-production area for such marketing year."

SEC. 203. Section 358 of the Agricultural Adjustment Act of 1938, as amended (7 U. S. C. 1358), is amended by deleting the proviso at the end of the last sentence of subsection (a).

SEC. 204. Section 201 (c) of the Agricultural Act of 1949, as amended, is amended by changing the last sentence to read as follows:

"For the period beginning September 1, 1954, and ending June 30, 1955, not to exceed $50 million, for the fiscal year ending June 30, 1956, not to exceed $60 million, and for each of the two fiscal years in the period beginning July 1, 1956, and ending June 30, 1958, not to exceed $75 million of funds of the Commodity Credit Corporation shall be used to increase the consumption of fluid milk by children in nonprofit schools of high-school grade and under."

SEC. 205. (a) Section 403 of the Agricultural Act of 1949, as amended, is amended by striking out the last sentence thereof.

(b) Section 3 (a) of the act of August 29, 1949 (7 U. S. C. 1301 (b)) is repealed.

SEC. 206. Section 407 of the Agricultural Act of 1949, as amended, is further amended:

(a) By revising the third sentence thereof to read as follows: "The Corporation shall not sell any basic agricultural commodity or storable nonbasic commodity at less than the current support price for such commodity, plus reasonable carrying charges".; and

(b) by adding at the end of the section the following:

"Notwithstanding the foregoing restrictions, the Corporation may sell annually not to exceed 100 million bushels of less desirable milling quality wheat for feeding purposes, provided that in establishing the sales price of such wheat due consideration shall be given to the feeding value of wheat and to the effect that such sales of wheat will have on the price of feed grains."

SEC. 207. (a) Strategic materials acquired by the Commodity Credit Corporation as a result of barter or exchange of agricultural commodities or products, unless acquired for the national stockpile established pursuant to the Strategic and Critical Materials Stockpile Act (50 U. S. C. 98–98h), or for other purposes, shall be transferred to the supplemental stockpile established by section 104 (b) of the Agricultural Trade Development and Assistance Act of 1954 (7 U. S. C. 1704) if within the limits determined for the supplemental stockpile pursuant to such section 104 (b).

(b) Strategic materials acquired by the Commodity Credit Corporation as a result of barter or exchange of agricultural commodities or products may be entered, or withdrawn from warehouse, free of duty.

SEC. 208. Section 304 of Public Law 480, 83d Congress (68 Stat. 454) is hereby repealed.

SEC. 209. The Secretary of Agriculture is authorized to appoint an agricultural surplus disposal administrator, at a salary rate of not exceeding $15,000 per annum, whose duties shall include responsibility for activities of the Department, including those of Commodity Credit Corporation, relating to the disposal of surplus agricultural commodities.

SEC. 210. Chapter 32, subchapter A, part III, subpart A, of the Internal Revenue Code of 1954, is hereby amended by adding at the end thereof a new section 4084, reading as follows:

"Sec. 4084. Refunds on certain sales to farmers: Under regulations prescribed by the Secretary or his delegate, any farmer who shall use gasoline for any purpose in agriculture other than propelling motor vehicles on the public highways and who shall have paid the tax imposed under this subpart on such gasoline, either directly or indirectly or by having the tax added to the price of such fuel, shall, beginning January 1, 1956, be repaid the amount of such tax upon presenting a claim for refund within 30 days after June 30 of each year in a form prescribed by the Secretary or his delegate."

The letter presented by Mr. AIKEN is as follows:

JANUARY 14, 1956.

Hon. GEORGE D. AIKEN,
United States Senate.

DEAR GEORGE: I am sending with this letter a draft, dated January 14, 1956, of a proposed bill to provide for the protection of national soil, water, and forest resources, and to provide an adequate, balanced, and orderly flow of agricultural commodities in interstate and foreign commerce.

This bill has been prepared to implement the special message on agriculture sent to the Congress by President Eisenhower on January 9, 1956. The bill, in conjunction with certain measures already pending in the Congress, covers the points in the message for which the President urged immediate legislative action to help our farmers in their valiant efforts to reverse the severe 5-year decline that has taken place in our farm economy.

More specifically, the bill covers the soil bank, consisting of the acreage and conservation reserve programs; provisions for making our surplus disposal efforts more effective; amendments to strengthen commodity programs, especially with respect to corn, wheat, cotton, rice, peanuts, and dairy products; and changes in existing law to help reduce farmers' operating costs by refunding the Federal tax on gasoline which the farmer now has to pay on fuel used in his farming operations.

Among the measures now pending in the Congress on which the President emphasized the need for urgent action, are legislation to renew the Sugar Act of 1948; to relieve farmers from wheat marketing penalties if all the wheat grown on their farms is used for food, feed, or seed; and the rural development program designed to help those millions of low-income farm families, as recommended to the Congress in the President's messages of January 11, 1954, and April 26, 1955.

The President also urged expanded programs for research, especially in the fields of new uses and markets for agricultural products and for developing new crops. Research proposals are covered in more detail in his budget message of January 16, 1956. He also recommended that the Congress consider shifting from acreage allotments to quantity allotments on cotton, beginning with the 1957 crop, as well as similar action for other crops under marketing quotas. He also asked the Congress to consider placing limits on the amount of price support loans made to any one individual or farming enterprise.

On January 11, 1956, the President sent to the Congress a report dealing with the special problems in the Great Plains area. Within a short time we shall forward to you a draft of such legislation as appears necessary to implement that report.

As I am sure you know, the Department of Agriculture is ready at any time to give such assistance to the Congress as it can in the consideration of all problems affecting agriculture.

The Department has been advised by the Bureau of the Budget that legislation along these lines would be in accord with the program of the President.

With all good wishes, I am,

Sincerely yours,

EZRA T. BENSON,
Secretary.

BRUCELLOSIS ERADICATION PROGRAM

Mr. WILEY. Mr. President, I introduce, for appropriate reference, a bill which would provide a larger amount of funds for the eradiction of brucellosis, or Bangs disease, from cattle in the United States for the current fiscal year. The bill would also provide increased funds for the fiscal years 1957 and 1958.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2950) to amend the Agricultural Act of 1954 to provide for acceleration of the brucellosis eradication program, introduced by Mr. WILEY, was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

Mr. WILEY. Mr. President, this proposed legislation would amend the Agricultural Act of 1954 by increasing the authorization of Commodity Credit Corporation funds allocated to the brucellosis eradication program by $10 million for this year, and would provide $30 million annually—an increase of $15 million over present funds—for the 2 fiscal years beginning July 1, 1956 and ending June 30, 1958.

This program is expanding so rapidly and effectively that the existing funds will be exhausted before the end of the current fiscal year. Unless additional authorization is provided, the program will be crippled by lack of money to employ veterinarians, to pay indemnities for infected cattle, and generally will be unable to operate at present rate of expansion.

A curtailment or stoppage of the program at this time would allow this disease again to spread among the cattle herds of the country, and result in a loss of years of work and expense.

The director of the department of agriculture for the State of Wisconsin, Mr. D. N. McDowell—an enthusiastic pioneer in this program for Wisconsin and other States—has written to me pointing out that this legislation is urgently needed "to insure adequate funds to continue the great brucellosis program now in an accelerated drive throughout the entire United States."

Mr. McDowell emphasized that if additional money is made available now, "we are going to free our State of this disease and the economic loss which our farmers have experienced, and yet far more important, eliminate a potential health hazard for not only our citizens but for the consumers throughout the United States who now consume 85 percent of all milk and milk products produced in Wisconsin."

I hope that the Senate Committee on Agriculture and Forestry, and the Senate, will give this proposed legislation early and favorable consideration.

STATE-FEDERAL COOPERATION IN IMPLEMENTING PROGRAM

I want to make it clear that the States are making a great contribution in money and administrative effort to implement the program, and that the Federal funds are only supplemental support.

A fine example of State effort is contained in a report on the progress of the program in Wisconsin, sent to me by Mr. H. L. Ahlgren, associate director of the cooperative extension service in agriculture and home economics at the University of Wisconsin. This survey of the brucellosis program in Wisconsin was prepared through cooperative efforts of the cooperative extension services, the animal health advisory committee, and the staff of the State Department of Agriculture of Wisconsin.

I request unanimous consent that this report be printed in the RECORD at the conclusion of my remarks.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

THE EXTENSION STORY ON WISCONSIN BRUCELLOSIS ERADICATION

The story of the cleanup of brucellosis in cattle (Bangs disease) in Wisconsin the leading dairy State is a long, long story. Wisconsin is the first major dairy State to go entirely on plan A. Plan A means complete elimination of brucellosis in our cattle herds. We are now in the final stage of elimination of this disease. We may attain brucellosis-free status for the entire State by July 1, 1956.

It is a story of long continued, successful research by the college of agriculture which developed the sound information about the disease and how to control it.

It is a story of relentless effort on the part of the State department of agriculture cooperating with the United States Department of Agriculture.

It is a story of persistent, united backing from the farm organizations, breed associations, and leadership of the cattlemen of Wisconsin.

It is a story of the cooperation of the veterinary folks in the department, on the college staff and those in practice out in the counties.

It is a story of the interest in human health protection expressed by the folks in the department of health and in city administrations.

It is a story of wholehearted backing from the dairy industry which processes and markets milk.

It is a story of continued financial support from our State legislature.

Chapters could be written about these contributions to this outstanding Wisconsin achievement in disease eradication. It is, however, the purpose of this review to present only the work done by the county agricultural extension service in building up local sentiment for Bangs control and their final effort that put the counties and the entire State on plan A.

Forgetting the long years of preliminary work before July 1, 1951, when the present procedures for control and eradication were developed, based upon the ring test, we have a continuous story of information, promotion and persuasion in the use of calfhood vaccination, the ring test followed by the blood test to complete the job. The extension workers were the close contact men out in the counties developing the teamwork to put the job over.

Let us examine first the summary of what county extension did in the period from July 1, 1951 to July 1, 1955, when the legislature proclaimed the entire State plan A.

Based on reports of county extension agents the following figures represent the extension job over the State:

Total days spent by county extension people	2,689
Number of meetings where the program was discussed	1,951
Attendance at these meetings	107,310
Number of new stories	1,353
Number of radio broadcasts	614

The final push for getting counties signed up for plan A was intensified beginning on July 1, 1954, when the Federal Government provided funds sufficient to promote plan A signups on a large scale in additional counties. Agents were given the go-ahead sign. They set up the local organization to get farmers informed and developed teams to secure the petition signups. State department and college specialists worked with county agents in the counties. County petitions bearing the necessary 75-percent signups came in at a rapid rate and when the legislature witnessed the landslide toward plan A they passed legislation extending plan A to the entire State.

Summary of this spurt of effort by extension in putting counties over on plan A reveals this tabulation of effort:

Activity of extension agents on plan A, July 1, 1954, to July 1, 1955

Total days spent on plan A	1,655
Number of meetings held	1,103
Attendance at these meetings	61,536
Number of news stories	876
Number of radio broadcasts	542

Unique in this intensive drive for petition signups was the effective county organization for the drive perfected by the agents. Gratifying also was the generous response of farm leaders in volunteering to carry the petitions to their neighbors for signature.

There was a wide variation in the organizational procedure for getting signups but the sequence was generally uniform:

1. Approval of project by the agricultural committee.
2. Acceptance by county board if opportunity was present for their consideration.
3. Informational meetings for cattle owners.
4. Getting volunteer petition solicitors.
5. Training these leaders on procedures and prepared forms.
6. Signup.
7. Checking and verifying petitions.
8. County hearing.
9. Forwarding to State department.
10. Arrival of veterinarians and county-wide blood tests.

In the conduct of signup campaigns the organizational ability of the extension staffs was evident. Approximately 7,500 farm leaders rallied behind the extension agents and volunteered to carry petitions for signup on plan A. They were trained for their job and went out and put it over.

In Dane County with the largest cow population and where many thought local sentiment was none too favorable, the signup was successfully conducted by county leadership mobilized by extension. It is now a Bangs free county.

Winnebago with a fine organization completed signup in 14 days.

LaCrosse secured a signup of 85 percent in 10 days.

Sauk County with a closely knit township by township team under a township captain put over the job in a very short time.

Dunn got most of the required names at township meetings.

Pepin County got a 91.4 percent signup with the help of 66 true and tried leaders, many of whom were cooperators in the agent's farm-management group.

Price County used township assessors to carry petitions.

In Crawford County 10 meetings and the help of 99 petition circulators did the trick for the agent of that county.

In Shawano County, with no outside help, the agent rallied the support of 190 leaders and completed the job in 1 month.

Racine enlisted the help of the Pure Milk Association which was interested in having its members qualify for the Chicago market.

Rock County used an intensified informational program with 350 interested farmers at one meeting.

Taylor County had an attendance of 1,500 at their informational meetings.

Marathon County got a 90-percent signup in less than a month.

Langlade got a 84-percent signup in a week's time.

Burnett County got a lot of fine help from town chairmen in solicitation.

Kewaunee used a central committee of 25 men.

Wood County used 22 meetings and a 30-day signup period.

Columbia County had much help from the breed associations.

Adams County used their Farm Institute to sell plan A.

Vilas County reports only one dissenting farmer.

Walworth initiated its drive with a meeting attended by 400.

The township was the unit of organization in Calumet County.

Nine hundred and sixty Brown County producers attended informational meetings prior to the signup drive.

Only 5 days' time was required by the agent of Iron County to put over plan A.

In Marquette County the local Farm Bureau worked with the agent to put over plan A.

Fond du Lac County town chairmen picked the soliciting committee for their township.

Richland County was one of several where the county board by resolution directed the extension office to proceed with plan A.

Pierce County made use of farm organizations, breed associations, even homemakers' groups to get out the information on plan A.

Lincoln County was one of several counties where the agent was pleasantly surprised that county sentiment for plan A was favorable.

Ten—12 men on each—teams from each township did the job for Ozaukee County.

One hundred and twenty-two farmers worked on the signup in Portage County.

Twenty meetings attended by 600 producers paved the way for the signup in Eau Claire County.

Only 10 days were required by solicitors in Green Lake County to put over plan A.

Clark County is a large county with a lot of cows, the county staff spent 110 days in putting over plan A.

Washburn County went on plan A with a minimum of effort—2 days of the agent's time.

Nineteen meetings attended by 1520 people with the agents spending 38 days on the program, put over plan A in Juneau County.

Town chairmen helped the agent materially in Polk County in the plan A signup.

Bennett in the Menominee Reservation signed up all 15 of his cattle owners personally.

Breed associations helped a lot in Jackson County.

The Pure Milk Association and the Kenosha Milk Producers carried a big part of the workload in Kenosha County.

"This was one of the most satisfying projects that this county agent ever worked on because of the wonderful cooperation we had from farmers," said the St. Croix county agent.

Marinette County agent says that the going was tough but wound up with 83 percent signup.

Two weeks were required for the signup in Outagamie County.

Oconto County farm bureau helped circulate petitions for plan A.

Manitowoc County had an attendance of 1450 at 13 informational meetings.

Township captains secured school district solicitors to cover Monroe County in the signup for plan A.

The Buffalo County agent says he enjoyed very much the work of the plan A signup—60 meetings with 2500 attending.

Trempealeau County spent 10 days on plan A, going strong on the informational phase followed by solicitation.

AMENDMENT OF SMALL BUSINESS ACT OF 1953, RELATING TO DISASTER LOANS

Mr. MORSE. Mr. President, I desire to make this announcement while the Senator from Connecticut [Mr. BUSH] and the Senator from Virginia [Mr. ROBERTSON] are present.

The Small Business Subcommittee of the Senate Banking and Currency Committee has agreed on a bill to be introduced by myself and other Senators. The bill has to do with disaster loans. The bill is a combination of the Thye, Bush, and Morse bills. The bill is being introduced this afternoon, and on the bill the cosponsors of the Thye, Bush, and Morse bills will be shown as joining in introducing the new bill.

I should like to have the attention of the majority leader for just a moment. Time is of the essence in the matter of disaster loans.

It is expected that the full Banking and Currency Committee will take action on the bill Thursday morning. We should very much like to have the bill come before the Senate before the week is over, because, in view of the great disasters which have been occurring in our country, I think the Senate of the United States should demonstrate that it can act expeditiously and quickly. We are confident that, because of the great support for the bill in the committee, the bill will pass the Senate unanimously. So I ask permission to introduce the bill, and ask unanimous consent to have a release in explanation of it printed in the RECORD, so the Senate will have it available tomorrow.

Mr. ROBERTSON. Mr. President, will the Senator yield?

Mr. MORSE. I yield to the Senator from Virginia.

Mr. ROBERTSON. Is it not true that the Small Business Administration is without 3 percent disaster loan funds?

Mr. MORSE. The Small Business Administration is without 3 percent disaster loan funds. It has a deficit of $3,300,000.

Mr. ROBERTSON. Is it the opinion of the full committee that the bill will be passed without objection?

Mr. MORSE. It is.

Mr. JOHNSON of Texas. Will the Senator from Oregon yield?

Mr. MORSE. I yield.

Mr. JOHNSON of Texas. I have great confidence in the Senator from Oregon and in the Senator from Virginia, and I want to assure them that any bill which comes out from the Banking and Currency Committee with unanimous approval of that committee, and which is of such great appeal, will be considered promptly.

Mr. MORSE. Mr. President, on behalf of myself, the Senator from Virginia [Mr. ROBERTSON], the Senator from Alabama [Mr. SPARKMAN], the junior Senator from New York [Mr. LEHMAN], the senior Senator from Connecticut [Mr. BUSH], the junior Senator from Connecticut [Mr. PURTELL], the Senator from New Hampshire [Mr. COTTON], the senior Senator from Pennsylvania [Mr. MARTIN], the Senator from Maine [Mr. PAYNE], the Senator from Maryland [Mr. BEALL], the senior Senator from New York [Mr. IVES], the junior Senator from Pennsylvania [Mr. DUFF], the Senator from California [Mr. KUCHEL], the Senator from Utah [Mr. BENNETT], and the Senator from New Jersey [Mr. SMITH], I introduce the bill, for appropriate reference, and ask unanimous consent that a release in explanation of the bill, prepared by me, be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the release will be printed in the RECORD.

The bill (S. 2960) to amend the Small Business Act of 1953, as amended, introduced by Mr. MORSE (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Banking and Currency.

The release presented by Mr. MORSE is as follows:

Senator MORSE, chairman of the Small Business Subcommittee of the Senate Banking and Currency Committee, announced today that his subcommittee has agreed on a bill to increase the funds available to the Small Business Administration for disaster loans.

The bill will be introduced by Senator MORSE for himself and other Senators and contains the following provisions:

1. It combines the disaster loan fund of the SBA (now $25 million) and the business loan fund (now $150 million) into a single fund for both purposes.

2. It increases this total fund by $35 million, thus raising the funds available for both disaster loans and business loans from $175 million to $210 million.

3. It fixes a maximum interest rate of 3 percent on all disaster loans made by the Small Business Administration.

4. It increases from 10 years to 20 years the maximum term on disaster loans made to small businesses.

5. It makes a minor technical revision in the existing statute which makes no substantive change in the law.

Senator MORSE stated that although the amount of the increase is not as large as he would prefer, he is pleased with the work of the subcommittee and hopes that this bill will be passed by the Senate as quickly as possible.

PROPOSED COMMISSIONING OF THE LATE COL. WILLIAM MITCHELL AS MAJOR GENERAL

Mr. WILEY. Mr. President, "Will this Nation survive or will it perish?" The answer is, of course: "We must and will survive." Yes, the greatest single problem of this Republic is self-preservation; that is, survival.

For our own good, for the good of all mankind, we must endure, and we will endure.

But for us to survive will require that we do more than merely hope or exercise wishful thinking. We must do a great many constructive things at home and abroad to strengthen our own and our allies' defenses against the menace of international communism.

I introduce, for appropriate reference, a joint resolution which may in some small measure serve to spotlight this problem. It may in a small but significant way point up the absolute need

for American supremacy, particularly in the sky.

This joint resolution is, by the standards of much of the great legislation of the 84th Congress, relatively modest. Why? Because its purpose is literally to correct the military record of only one man by elevation of his rank posthumously. And yet, in its symbolic meaning, in its larger meaning, this is a very important bill, indeed.

Senators may have guessed its purpose. It is to give to the great aviation pioneer of America, Brig. Gen. William Mitchell, the posthumous rank of major general.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred.

The joint resolution (S. J. Res. 121) authorizing the President to issue posthumously to the late Col. William Mitchell a commission as a major general, United States Army, and for other purposes, introduced by Mr. WILEY, was received, read twice by its title, and referred to the Committee on Armed Services.

Mr. WILEY. Mr. President, I present a statement, prepared by me, by way of elaboration of the joint resolution, and I ask unanimous consent that it be printed in the RECORD at this point as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FULFILLING THE SAGA OF BILLY MITCHELL

(Statement by Senator WILEY)

The fight to honor the memory of this immortal aviation crusader is not a new fight, so far as I am concerned.

It dates virtually from the time when I first entered the Senate in January 1939, when the war clouds were already gathering in Europe.

It was not too long before I began to point out to the Senate that this Nation had to look to its air defenses. Obviously, we were miserably unprepared for emergencies.

Regrettably, my own and others' warnings went unheeded. And so, unfortunately, the Pearl Harbor attack came, launched from enemy naval aviation. And it came in a manner predicted with uncanny accuracy by Wisconsin's Billy Mitchell.

HISTORY VINDICATED MITCHELL "THE HARD WAY"

The battling Badger has unfortunately long been mouldering in the grave, but his spirit has gone marching on.

The fact that he proved accurate on the prediction of a Pearl Harbor attack, just as he was accurate on the then future use of paratroops, accurate on the use of aerial torpedoes, and aerial bombardment of surface craft—accurate on the peril to Alaska, accurate on the overall danger in the Far East—the fact that all these predictions came true, would not have brought satisfaction to Billy.

After all, he was not interested in having his beloved country learn the "hard way" that he was right.

Billy loved this country, and he wanted it to survive. He tried to warn it in time. He did not want his warnings to be ignored, and later to come true by a terrible enemy onslaught.

Be that as it may, history has vindicated Billy Mitchell. History has proven that the court-martial of Billy Mitchell was a blind, shameful, and vindictive episode in this country's history.

MITCHELL'S "HEIRS"—OUR AIR FORCE LEADERS

Fortunately, the crusade which Billy conducted served as an inspiration to a whole generation of air crusaders who followed him. It is a fact that some of them were held down deliberately by the same type of vengeful, narrow-minded forces which court-martialed Billy. But fortunately for our country, a great many of these air crusaders rose through the ranks so that they emerged as the foremost aviation leaders of America.

But Billy himself must not go unhonored. Fortunately, America has awakened to his contribution, thanks in large part to our informative media of communication, including of course the miracle of a new motion picture.

THE MEANING OF GREATNESS

But some folks may still ask, "Why all this fuss about a man who long since has departed? Just who was Mitchell?"

He was the son of a great United States Senator from Wisconsin. He was a man who personally came up through the ranks from a private and became the youngest American officer under fire in World War I. He was the first American flying officer to cross the German lines, just 16 days after our entrance into that war. He commanded the AEF Air Force in France. Mitchell was the brilliant prophet who, 20 years ahead of his time, advocated undreamed of military and aerial innovations.

Even then, he warned us of the Japanese peril to Alaska, to the Hawaiian Islands, and the Philippines. He was the man who had the courage to denounce certain "swivel chair" generals and admirals, who did not really have the slightest conception of the full meaning of aviation in modern military science. This was Mitchell, whose advocacy of airpower launched the bitterest controversy among top Army and Navy officers. It led to his trial and conviction of insubordination, and to his being suspended from the service. It led to his death—death of a broken heart.

MY PAST BILLS FOR MITCHELL

Fifteen and a half years ago, June 21, 1940, I introduced my joint resolution at least to restore Billy Mitchell's one-star brigadier generalship. I stated: "If we are really to vindicate Mitchell, we must erect a monument to his memory in the sacred shrine of a new concept of security."

In the 77th Congress, on May 20, 1941, I introduced a similar resolution which finally passed the Senate, but could not be enacted by the House because of adjournment.

Again, in the 78th Congress, on January 7, 1943, I offered the bill. The Senate not only acted to restore Billy's one star, but did itself the proud honor of acting to confer on him—in the official records—the rank of major general, as I am proposing today. Again, the House proved the stumbling block.

On February 19, 1945, on the ninth anniversary of Billy's death, I introduced Senate Joint Resolution 35. Once more, it passed the Senate unanimously, only to expire in the House Military Affairs Committee which still reflected some anti-Mitchell sentiment dating from Billy's long battle against certain War Department brass.

THE WILSON BILL TO ELEVATE RANK

In this 84th Congress, legislation (H. J. Res. 364) is being offered by Representative BOB WILSON, of California, to elevate Mitchell's rank. I understand that the Department of Defense is at long last giving a favorable reaction to this joint resolution, and I trust that it will soon, therefore, be enacted into law.

I am fighting this fight, not simply as a United States Senator, interested in the survival of this Republic, but naturally as senior Senator from the State of Wisconsin, the State of Billy Mitchell and of Billy Mitchell's family.

WISCONSIN WILL NEVER FORGET MITCHELL

Wisconsin has never forgotten Billy. Billy Mitchell Field in Milwaukee is but one symbol of the devotion of my State to him.

But Billy Mitchell lives on, as well, in the spirit of Wisconsin Air Cadets, Wisconsin members of the Civil Air Patrol, Wisconsin Veterans of the United States Air Force, the Naval Air Force, the Marine Air Arm, Army Tactical Aviation, and Strategic Aviation, as well as Wisconsin members of the Air Force Association.

Let us therefore pass this joint resolution. Let us forever wipe out the stain of the Billy Mitchell court martial.

ACT TO PRESERVE THE REPUBLIC

But most important of all, let us so act that we answer that great question—"Will America survive or will it perish"—in the resounding sort of way in which our enemies will truly note our answer. Let us so strengthen our air arm, including our guided missile program, that our enemies will forever be deterred from a rash act of attack.

Each passing day brings dramatic developments in United States aviation. There is talk today of "nuclear air bases" in the sky, that is, of an United States air armada, flying tens of thousands of feet high in the sky, and capable—24 hours a day—of almost instantaneous receipt of orders to retaliate against possible enemy attack.

There are constant developments as well in air-borne radar, in aerial transport of troops, by helicopter and vast sky ships; there are developments in carrier aviation and land-based aviation; there is constant redesign of jet aviation, which has now broken the sound barrier, and which is aiming at breaking the successive heat barriers.

CONCLUSION

This then is the background of my Billy Mitchell joint resolution which must, and I trust will pass, before the end of this year.

FAMILY HOUSING FOR CHAIRMAN OF JOINT CHIEFS OF STAFF—RECOMMITTAL OF BILL

Mr. STENNIS. Mr. President, I ask unanimous consent that the bill (S. 2603) to authorize the providing of family housing for the Chairman of the Joint Chiefs of Staff, which is Order No. 1086 on the calendar, be recommitted to the Committee on Armed Services. I think any consideration of this matter should have a new start by the full committee.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Mississippi? The Chair hears none, and it is so ordered.

THE ADMINISTRATION'S SCHOOL-CONSTRUCTION BILL—OPPORTUNITY FOR ADDITIONAL SPONSORS

Mr. SMITH of New Jersey. Mr. President, on Thursday, January 12, I introduced in the Senate the administration's school-construction program. Since Thursday, I have sent to all Senators on both sides of the aisle copies of the bill, an explanation of the bill, and tables showing the breakdown for each State of the allotment and efforts test factors under the administration bill.

At the present time the following Senators are listed as cosponsors: the junior Senator from New Jersey [Mr. CASE], the junior Senator from Pennsylvania [Mr. DUFF], the junior Senator from Maine [Mr. PAYNE], the senior Senator from Minnesota [Mr. THYE], the junior

Senator from South Dakota [Mr. CASE], and the junior Senator from Vermont [Mr. FLANDERS].

I remind Senators that the bill, S. 2905, will be open for additional cosponsors until the close of business tomorrow, Wednesday, January 18.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. KNOWLAND:

Address delivered by him before the Economic Club of New York, in New York City, on January 16, 1956.

By Mr. MARTIN of Iowa:

Address delivered by him before the American Mining Congress at Las Vegas on October 12, 1955.

By Mr. McNAMARA:

Documents detailing efforts to obtain arbitration in the strike by the International Union of Electrical Workers against the Westinghouse Electric Corp.

MIGRATORY BIRD CONSERVATION COMMISSION

The PRESIDING OFFICER. The Chair has been requested by the Vice President to announce the appointment of the Senator from Missouri [Mr. HENNINGS] as a member of the Migratory Bird Conservation Commission, to fill the vacancy thereon caused by the resignation of the Senator from Virginia [Mr. ROBERTSON].

INADEQUATE AIRLINE SERVICE AT ST. LOUIS

Mr. SYMINGTON. Mr. President, St. Louis is the ninth largest city in the United States, the second largest railroad center, and one of the major economic hubs of our great and growing economy. Yet the airline service in and out of the metropolis of St. Louis cannot be compared favorably with that offered far smaller towns many years ago. Apparently those responsible for running some of our airlines and some of those responsible for deciding in the CAB what airlines go where are determined to keep St. Louis a "tank town" with respect to adequate air service.

The situation is unrealistic, Mr. President. For example, St. Louis has no direct air service to anywhere in the entire Pacific Northwest. It has inadequate service to New York, Boston, and even to Chicago. It has totally inadequate service to the South and Southeast. More service, better schedules, and, in some cases, decent, modern equipment are needed.

Petitions to correct these unfortunate situations have long been filed before the CAB.

The city and State grow, but the air service does not. How can anyone justify such a situation? Why should the people of St. Louis and Missouri be virtually grounded in such a manner by the Federal Government?

Mr. President, one airline defended its exceptionally poor service to St. Louis on the grounds it took no subsidy from the Government. But the taxpayers pay a part of the subsidies to other airlines which gives people service to other American cities.

In addition, this particular airline is not correct in its statement, because the greatest subsidy of all is an exclusive monopoly on a particular route.

Another defense used was that rail service was poor from St. Louis to a particular locality. But two wrongs never made a right; and if the airline is correct in criticizing the rail service, it simply means that adequate schedules on its part would give it more traffic.

The more I study this situation, the more astonishing are the findings.

I have discussed the matter with the chairman of the Committee on Interstate and Foreign Commerce, my colleague, the distinguished senior Senator from Washington [Mr. MAGNUSON], and he has assured me of his deep interest in the matter, as also has the chairman of the Aviation Subcommittee, the distinguished junior Senator from Oklahoma [Mr. MONRONEY].

I hope all of it is looked into by the Congress, and to this end, I am asking the committee to find out why incredibly poor airline service is extended to the people of St. Louis and Missouri.

Mr. President, I ask unanimous consent to insert in the body of the RECORD six articles from the St. Louis Globe-Democrat, which are the result of increasing interest in this problem, as expressed by that great newspaper and its able publisher, Richard Amberg.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the St. Louis Globe-Democrat of January 9, 1956]

IS ST. LOUIS A TANK TOWN IN THE AGE OF AIR TRAVEL?

(By Con Kelliher)

St. Louis pays a healthy chunk of the Nation's air travel bill, but carriers touching down here treat the city like a tank stop on the airlanes.

That is the opinion of many St. Louis businessmen who fly either because their work tempo demands it, or because they just simply like to go everywhere by air.

They complain about inconvenient schedules in and out of St. Louis, and about the equipment used on St. Louis flights, as compared to planes serving other cities.

"Many model T Fords still run, and run well. But who wants to go to Florida in one of them?" United States Senator STUART SYMINGTON recently asked in a caustic letter to one airline.

The carriers, in a few decades of operations, have brought flying to a point that, in 1956, it may become the Nation's biggest commercial passenger traffic medium. They have done this chiefly through aggressive salesmanship, service, courtesy, and recognition of America's almost hypnotic devotion to speed.

The airlines, therefore, are stung by the criticisms voiced by some of their St. Louis clients. The carriers can offer stout, and often convincing defense of their service to St. Louisans.

The issue is not likely to be immediately resolved because St. Louisans never seriously sought, until recently, the facts needed to support their appraisal of the air service offered here.

But study of timetables and discussions with passengers and airlines representatives indicate agreement may be approached on these points:

1. While other major cities were fighting for and getting improved and expanded air service in this aviation age, St. Louis did little from 1944 until a few months ago to improve its own position.

2. Certain airlines have a monopoly on some routes out of St. Louis, or on nonstop service. St. Louis air passengers argue that a line enjoying a monopoly on a St. Louis route is inclined to use its best equipment and offer its best service on non-St. Louis routes, where it is battling competing airlines for business. The carriers having the local monopolies vigorously deny the contention.

3. Air service is good to cities within a 300-mile radius of St. Louis, including Chicago, Kansas City, Tulsa, Memphis, Indianapolis, and Louisville. The nonstop service previously offered to Cincinnati has slipped back to one-stop flights.

4. Trans-World Airlines, TWA, has a monopoly on nonstop service between here and New York. It is the longest, most profitable, noncompetitive nonstop route in the world. Two other airlines want the Civil Aeronautic Board's permission to give TWA some competition on the nonstop service.

5. St. Louis has no direct service to anywhere in the entire Pacific Northwest.

6. The Delta Airlines has a monopoly on the St. Louis-New Orleans route. Delta's best planes, the DC–7 Royal Caribes, flying between New Orleans and Chicago, speed over St. Louis without ever landing.

7. Eastern Air Lines has a monopoly on the St. Louis-Miami route. All 4-engine planes used by Eastern on this route have 5 seats abreast instead of the usual 4. First-class fare is charged on one of these planes, on which meal service is offered.

Experienced air passengers declare all of these 4-engine craft are tourist equipment, including the first-class fare plane, which has 35 of its 60 seats arranged 5 abreast. Eastern firmly denies the allegation as to the one plane.

The St. Louis air travel volume would expand greatly if additional carriers came into the city, and if present schedules were expanded, assert many local buyers of air tickets. The airlines claim that existing service adequately covers the St. Louis demand.

While this chicken-or-the-egg type of debate goes on, there are some comparisons that indicate St. Louis is being outdistanced in the air transportation race.

St. Louis ranks 9th among the Nation's cities in population. Control tower reports for the year ending last June show that we rank 17th in air-carrier operations (landing and takeoffs).

Kansas City, Atlanta, and Dallas are among the cities having higher traffic airports than St. Louis. And while St. Louis is 9th in population, Kansas City ranks but 17th, Atlanta 23d, and Dallas 34th.

[From the St. Louis Globe-Democrat of January 10, 1956]

ST. LOUIS' WINGS CLIPPED AS OTHER CITIES FLY HIGH

(By Con Kelliher)

Commercial aviation soared to new records in the last 2 years, bringing more airlines or major routes to many cities throughout the Nation—but not to St. Louis.

In 1954, air traffic topped the railroad-coach travel volume. Last year, the country's air traffic shot above the long-haul bus traffic, for the first time.

If commercial aviation's trend continues at the 1955 pace, this year will see air traffic topping all rail-passenger traffic, both coach and pullman, but excluding the commuter business.

How is centrally located St. Louis, the Nation's eighth largest city, shaping up, wingwise, in this era of expanded air travel?

Surveys show that the city ranks 17th in the Nation in air-carrier landings and takeoffs; 13th in miles traveled by its passengers, and 12th in the number of passengers taking off from or ending their travels here.

Many St. Louisans who are regular patrons of the airlines declare the city would develop into a leading air-traffic center if service were improved by more competitive routes, expanded routes, and better equipment.

Improved air-transportation service was granted during the last 5 years to virtually all cities comparable in size to St. Louis, and many smaller municipalities also advanced their travel facilities.

During the same period, St. Louis could boast of few improvements in air travel, except that Ozark Airlines started operations with its headquarters here.

The Civil Aeronautics Board, which determines what airlines, routes, and types of service a city shall have, last month granted Central Air Lines the right to operate between here and Fort Smith, Ark., via Harrison and Fayetteville, Ark.

St. Louis business and civic leaders who are air travelers say the following conditions help keep the city from becoming a big air hub:

St. Louis does not have any direct air service to anywhere in the Pacific Northwest; 1 carrier has the monopoly on the nonstop service between St. Louis and New York; routes to the South and Southeast are also monopolies, each flown by 1 carrier.

These airline patrons say that more traffic would be generated here if additional airlines were permitted to serve the city, and that competition on all routes would result in better schedules and use of better equipment on many St. Louis flights.

An airline having a monopoly route at one city, it is argued, offers its best equipment and schedules on other routes where it competes with rival lines.

The air carriers now serving St. Louis emphatically do not agree with these conclusions. The airlines' stand is, generally, that the city is not being discriminated against in the matter of equipment, and that the present service is adequate to the demand.

The two transcontinental lines routed through here are Trans-World Airlines (TWA) and American Airlines. The regional lines are Delta Air Lines, Eastern Air Lines and Braniff Airways. Local service is provided by Ozark, with Central soon to start its St. Louis operation. Slick Airways is an airfreight line exclusively.

Those who criticize the airlines or CAB, or both, for St. Louis' undistinguished place in the Nation's air-travel picture, frankly acknowledge the citizens themselves failed for a decade to fight for its rightful position.

It is generally believed in aviation circles that when Ozark's operating permit came up for examination by the CAB about 2 years ago, St. Louis was less diligent than any other municipality on Ozark's routes in emphasizing the need for the carrier.

Although intervening petitions had been filed in various CAB cases, some St. Louis observers say they can't recall aggressive followup action from 1944 to 1954.

One reason why comparatively few St. Louisans got excited about the air-travel future apparently was because this city is the Nation's second largest railroad center, with good surface transportation available in all directions.

The determination to do something about the city's inadequate air links seized St. Louis leaders about the same time they decided that the city had to get rid of its blighted areas and start a vast public improvements program. As a result of the concerted drive to improve St. Louis, the plaza-bond issue and the $110 million public improvements bond issue were voted.

Spearheading the drive for better air service are two groups, the St. Louis Chamber of Commerce and the city administration, through its Airport Commission. They are being aided by United States Senator STUART M. SYMINGTON, who is gravely concerned about the type of service the airlines are giving St. Louis.

Those active in the chamber of commerce air program include Howard F. Baer, president of A. S. Aloe Co. and former chairman of the chamber's board; Aloys P. Kaufmann, president of the organization; Milton Kinsey, chief engineer of the Bi-State Development Agency and chairman of the chamber's air board; Edwin J. Spiegel, board chairman of Gaylord Container Corp., and Edgar M. Queeny, board chairman of Monsanto Chemical Co.

Mayor Raymond R. Tucker appointed an airport commission which, with City Counselor Samuel H. Liberman has been working with the chamber of commerce group on air-service problems. The commission includes Baer, Vincent T. McMahon, president of McMahon Pontiac Co.; John Fabick, president of John Fabick Tractor Co.; Russell E. Gardner, Jr., of Reinholdt & Gardner, investment brokers; Sidney Maestre, board chairman of Mercantile Trust Co.; Walter E. Burtelow, executive vice president of the Bank of St. Louis, and Conway Briscoe, director of Public Utilities.

AIR TRAVELERS AT SEA HERE OVER INDIFFERENT SERVICE

(By Con Kelliher)

On land or in the air, St. Louis airline passengers are at sea in trying to understand the carriers' apparent indifference about keeping service standards high.

That was the tenor of telephone calls and letters received yesterday from air travelers reading the Globe-Democrat's articles on St. Louis' inadequate plane routes and schedules.

"Ask a railroad conductor why there's a delay, and he'll tell you," said one exasperated woman visitor. "But with the airlines—it's a military secret."

The practice of telling callers that incoming planes are flying on schedule when they actually are not, allegedly poor reservation operations, and poor luggage handling were common complaints.

Some of the service flaws observed at Lambert-St. Louis Municipal Airport, such as the luggage handling, could be blamed in varying degrees on the present overcrowded terminal facilities. The city's new $7 million terminal, now under construction and regarded by many architecural critics as being the Nation's most beautiful air station, will open in March.

The lack of competition on certain routes out of St. Louis was regarded by many of the passengers as being the chief reason for displeasing service standards.

As previously related, there is only one airline operating on each of the routes to the South and Southeast, while another has a monopoly on nonstop service to New York. St. Louis does not have a direct route to any point in the entire Pacific Northwest.

A woman caller, who identified herself as Mrs. George Jackson, said she frequently uses planes in and out of St. Louis, and declared the airlines generally were showing "inability to keep on schedule."

"And when you come from Florida into St. Louis, the plane lands out in left field," she declared. "You get out into the cold and just see there's nothing but vacant space between you and the administration building. But Eastern (Air Lines) has to park near Robertson Airport.

"Then you take the long walk up to the baggage counter and fight to get your luggage. You have to have a red ribbon tied on it so those blind mice can see it."

Roger L. Schwab, who buys about 35,000 miles of air travel annually from the carriers, agreed that baggage service is unusually slow at the airport, as compared to the service in other cities.

Schwab, sales manager for Weil-Kalter Manufacturing Co., 317 North 11th Street, added:

"What surprises me is that passengers' wives, who drive out to the airport to meet their husbands, don't rebel. The airlines just absolutely refuse to give you the right information about whether a plane is on time."

Schwab said a caller invariably is informed that an incoming plane will arrive on time, although it may be 90 minutes or 2 hours late.

"A wife will then drive out to the airport and wait around—and the facilities for waiting are poor, indeed. And if she has to take along a couple of kids, she's really got her hands full."

Schwab said misinformation is frequently given to outbound passengers, who present themselves at the airport at the appointed hour, only to have to wait unusually long before the plane arrives.

"The airlines have so much business that it is hard for them to keep equipment on schedule," he said. "I judge that my flights run late about 90 percent of the time. But the basic reason for all this poor service is the lack of competition on the routes. Any organization, including airlines, does a better job when it must compete for the business."

James S. Legg, vice president of Heydays Shoes, Inc., 2032 Locust Street, who travels by air from 25,000 to 50,000 miles annually, said:

"You are so right saying that when an exclusive route is given to one company, its service lags—and when two others merge, like Delta and C. & S., the lag becomes a sag."

Legg said he was irked by hard-pressed reservations clerks who answer the telephone with, "Reservations are busy, wait, please."

"Before you can say a word, you're all alone on the phone," Legg said. "The voice comes back 3 to 5 minutes later with a very polite thank-you, and 'what can I do for you?'

"Now, in this you have an outfit selling you from $75 to $250 worth of their merchandise, and not interested enough in your time to say for example, 'Busy just now, please let me have your name and number—we'll call you shortly.'

"If the reservations clerk would do that, a man could get back to work instead of spending time and patience holding a receiver and tying up a telephone line thereby possibly be causing inconvenience to his own firm's clients."

Legg said he was unimpressed with airline arguments that additional service is not provided to St. Louis because there is no demand for it.

"It's like a shoe dealer saying he can't sell a certain type of shoe, and then acknowledging he doesn't have the model in stock," Legg said. "How does anyone know he can't sell something when he's not even offering it for sale?"

[From the St. Louis Globe-Democrat of January 12, 1956]

UNITED HAS TRIED 13 YEARS TO GIVE AIR SERVICE TO CITY

(By Con Kelliher)

The gigantic United Air Line, a farflung system extending from New York to Honolulu—via Chicago—and northward to Van-

couver, B. C., has been trying for 13 years to get into St. Louis.

Entry of United here by a route from Denver would open up the entire Pacific Northwest to St. Louis. The city presently does not have any direct commercial airline service to any point in that vast area.

"United Air Lines is deeply interested in being certificated to provide service to St. Louis," Robert E. Johnson, of Chicago, vice president and assistant to United president William A. Patterson, told the Globe-Democrat yesterday. Patterson presently is in Jamaica.

"The depth of that interest," said Johnson, "is shown by the fact that we have filed applications (with the Civil Aeronautics Board) to serve St. Louis on four different occasions, dating back to 1943. Three of these applications have been denied by CAB, and the fourth is awaiting a hearing."

Johnson declared, "United has always regarded St. Louis as a major air traffic center, and is most desirous of the privilege of serving its travelers and shippers."

If authorized to serve St. Louis, United would provide the city with its first direct one-carrier service to cities in the Rocky Mountain area and the great industrial, lumbering, shipping, and agricultural centers of the Pacific Northwest.

In addition, United would offer new competitive service to the industrial East and major cities of the Atlantic seaboard.

The CAB's prior refusals to give a St. Louis gateway to United yesterday caused one flying businessman to declare bitterly: "The CAB has cut off St. Louis from the Northwest with an 'aluminum curtain'."

Investigation discloses, however, that St. Louis itself has never intervened in a single United application before the CAB, to help the airline to get a main route here.

The last of four United applications was filed with the Government agency in 1953. As stated before in this series, St. Louis had not shown, during the decade preceding 1955, any serious concern about its deteriorating position in the Nation's air travel position.

This lack of alertness in the past has been partly responsible, observers believe, for the fact the city now suffers from inadequate air schedules and equipment, with only one airline each holding the monopoly on routes to the South and Southwest. Another line has the monopoly on nonstop flights to New York.

A high CAB spokesman, asked yesterday about the rulings which have kept United out of St. Louis, said:

"The CAB awards are made to various applicants on the basis of what is most in the public interest." The decision in each case would have to speak for itself, he said.

In St. Louis, a leader in the movement to get more air service here said the city would undoubtedly intervene in the pending United case to show it is greatly in the interest of this area to be served by the airline. The intervening petition, he said, will probably be filed when a hearing date is set.

Kansas City, which has always been aggressive in seeking expanded air service, received United service in the same CAB action that knocked St. Louis out of consideration.

In February 1943, the carrier applied for a route from Denver to New York via Kansas City, St. Louis, Indianapolis, Dayton, Cincinnati, Columbus, and Pittsburgh. The CAB eventually refused to consider the application as to cities east of Kansas City, which includes St. Louis. On last November 14, CAB added Kanas City and Pittsburgh to United's main line.

United ranks second among domestic United States scheduled airlines, with 13,250 route miles. It was second largest in revenue passenger miles last year, having carried 5,572,000 passengers a total of 3,985,000,000 revenue passenger miles.

United also was top mail carrier in 1955, with 26,400,000 ton-miles, and second in air express and freight with 53,000,000 ton-miles.

[From the St. Louis Globe-Democrat of January 13, 1955]

WILTED WIVES FRET ABOUT LONG DELAYS AT AIRPORT

(By Con Kelliher)

Nonflying housewives who wait at the municipal airport for "ships" that never come in on time with their traveling husbands had their say yesterday about St. Louis' plane service.

The complaints were apparently voiced in response to a businessman's observation quoted in an earlier article in this series.

Wives telephoning the airlines, he charged, are usually told a flight is coming in on schedule, although it actually is delayed. The women drive out to the airport in north St. Louis County to meet their husbands, and then may have to wait around for as long as 90 minutes or 2 hours.

The man said it was a wonder they didn't rebel. That seemed to be the ladies' cue to telephone the Globe-Democrat about the plight of those who merely stand and wait.

The wives asked to remain anonymous, and frequently indicated they were entering the forum of public opinion without their husbands' knowledge. Some hinted that reunion with spouse at the airport is not as joyous as might be anticipated, what with the weary traveler being grumpy, about the delays and the wife somewhat wilted by her vigil.

One wife confided: "I can't tell you my name because my husband is a railroad man who does a lot of traveling by air." She said he favored United Air Line's pending application for a St. Louis route because he likes United, and often, when going East, flies to Chicago to transfer to a United plane, instead of taking an east-bound plane here.

"I don't fly, but I sure meet airplanes," declared one Webster Groves housewife. "Did you ever try to park out there? It's almost impossible."

Several of the callers complained about the need of additional parking space at Lambert-St. Louis Municipal Airport. There are lots with a total capacity of 637 spaces, used by both airport workers and the public. The parking area around the new terminal building, to open in March, will accommodate about 400 more cars.

"It's not so bad when you merely drive out to drop off someone who is taking a plane out," said this housewife. "But when you have to meet your husband, it's different. Perhaps you have to go down around the Remmert-Werner offices to find a parking space.

"Then you have to take a long walk to get to the gate to meet the plane, which may be 20 minutes to an hour late. After papa gets his baggage, he can't carry it the long distance to the car, and he can't go after the car to bring it to the luggage, because he doesn't know where the car's parked. So mama takes another long walk to get the car while papa guards the luggage and broods over airplane service."

"My husband bought railroad tickets to Milwaukee for 6 people and they went out of the (Wabash) Delmar Station today," another caller advised. "He said there's no worry about handling luggage at the Chicago station, but the airlines always do a poor job of it. His group decided to go by train.

"The real reason for his decision, I believe, was the fact that when he was trying to get out of New York the other day, the airline canceled two flights. He came home like a wild man."

The wife said her husband related how, during the flight, the pilot used the plane's public amplifier to tell his passengers that the plane was traveling more than 300 miles an hour.

The husband concluded the story with: "Just think of all the inventive genius needed to build a thing that will go 300 miles an hour—and then those people get it bogged down at both ends of the trip."

Another caller said the airlines had always reported, except one time, that her husband's plane was on time, and it was always late. On the one occasion the carrier advised the plane was late because of a delay along the line.

"So I went out late to the airport, and guess what had happened," she said. "They had made up the lost time, and my husband was standing around wondering where I was."

[From the St. Louis Globe-Democrat of January 15, 1956]

POOR AIRLINE CONNECTIONS WASTE ST. LOUISANS' TIME

(By Con Kelliher)

A St. Louis businessman flying to Chicago to make connections there with late afternoon planes probably will find himself hedgehopping across Illinois instead of going through on a nonstop flight.

That is because the one slow local flight has the best arrival time in Chicago for the busy executive whose trip will continue beyond that point.

Whether the St. Louisan takes the local or 1 of the 5 nonstop afternoon flights offered by 2 airlines, one fact is certain: The 251-air-mile trip will cause him to lose virtually an entire afternoon's work at his desk, because of the ill-timed departure hours.

American Airlines runs the local flight which, if made nonstop and given accordingly, a later takeoff hour, could remedy the situation. But that flight, No. 484, is the one American chooses to touch down both at Peoria and Springfield, Ill.

Instead of making the trip to Chicago in about an hour and 25 minutes, like the nonstops, 2 stops, No. 484, takes 2 hours and 12 minutes.

Here is how the present scheduling affects a St. Louisan going, for example, to Boston.

The passenger wants to make the Chicago-Boston leg on American's nonstop, the *New Englander*, a plush DC–7 that leaves Chicago at 5:35 p. m. and arrives at Boston at 9:25 p. m.

The St. Louisan's problem is to get the flight out of here which will let him, before departure, put in the most working time at his desk. Delta's nonstop, flight 462, leaving here at 3:10 p. m., lands at Chicago at 4:34 o'clock—but at the new O'Hare Airfield. The Boston flight takes off from Midway Field 61 minutes later, so a bad transfer problem pops up.

During the rush hours, a traveler had better allow himself an hour's auto travel time to get from O'Hare to Midway. Delta's 462, therefore, cuts the transfer time too fine for the ease of mind of a man wanting to board the *New Englander*.

Delta's next flight out of St. Louis is at 6:20 p. m., which is too late. American has an 85-minute nonstop flight out of here at 12:30 p. m., but that's too early for the man going to Boston. The same is true of Delta's 84-minute nonstop flight leaving at 1:10 p. m. American has another nonstop flight leaving here at 4:30 p. m. and landing at O'Hare Field at 6 o'clock but, again, that's too late for the transfer passenger.

Bracketed by the nonstops is American's two-stop No. 484, leaving here at 1:33 and landing at Midway at 3:45 o'clock. That's the one the Boston-bound passenger is likely to take.

His afternoon, therefore, is shot at the St. Louis end, and he'll also have to wait around Midway nearly 2 hours between planes, an unpleasant prospect.

It is true that, during that time, he can watch a lot of planes land and take off at that busy airport, but after awhile it becomes pretty tiresome watching planes, especially those other than the one he wants to board.

The grounded St. Louisan may begin to figure that the total elapsed time, both flying and standing by, for the short St. Louis-Chicago journey was 4 hours and 2 minutes.

He may even start to wonder why American does not give St. Louis, the eighth largest city in the Nation, a fast late-afternoon nonstop flight into Chicago, arriving just in time to allow transfers to the "after-5" departing flights.

If he seems to selfishly disregard the ambitions of Peoria and Springfield businessmen to get to Chicago for afternoon plane transfers, each city can be considered in its proper perspective in the commercial aviation picture.

The ideal time for a plane departure is shortly after 5 p. m., at the close of the working day, and every businessman wants to be able to board the planes at his home port at that time. But obviously a flight cannot take off from more than one point at a certain hour.

As between the four points mentioned, Chicago had the largest plane passenger volume, in 1955, according to the air traffic reports of the United States Department of Commerce. The total in the fiscal year report was 3,335,074 passengers.

Chicago is classed as a "large hub" in the report, and so is St. Louis. The ratings, made according to number of passengers boarded, are large, medium, and small hubs, and non-hubs. Both Peoria and Springfield are small hubs, two ranks down from St. Louis and Chicago.

The St. Louis businessman can understand why the Chicago man should have the advantage of "after-5" takeoffs in his home city, because Chicago has the largest traffic volume.

But the St. Louisan also figures he should have the next best travel accommodation, a connecting flight that puts him into Chicago with the least possible loss of working time at his office. Such a flight would not stop at Springfield, Peoria, or any other intermediate point.

St. Louis boarded in fiscal 1955, according to the traffic report, 574,544 passengers. During the same period, Peoria boarded 28,708 passengers, and Springfield, 25,719 travelers. Considering these figures, the St. Louisan is likely to snort at the old adage that rank has its privileges, when applied to the type of service the commercial airlines give his city.

Asked about the stop-and-go scheduling of flight 484, an American sales representative in St. Louis said he hesitated to discuss a phase of airline operations not handled by his office. He observed that the Civil Aeronautics Board "requires" American to serve Peoria and Springfield, Ill.

But what requires American to pick flight 484 for a puddle-jumping journey into Chicago at the inconvenience of St. Louisans still remains a mystery.

STATEMENT OF COMMISSIONER CLAUDE L. DRAPER ON NONCONCURRENCE IN COMMISSION REPORT ON THE FULBRIGHT BILL, S. 1853

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a very excellent statement in opposition to the Fulbright bill. The statement was made by Commissioner Claude L. Draper, of the Federal Power Commission. I may say, Mr. President, that Mr. Draper has served longer on the Federal Power Commission than has any other member. He is a most valued public servant, with great experience in the oil and gas industry. I believe his very excellent statement should be studied by all Members of the Senate and should receive the widest possible circulation in the country.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EXPLANATORY STATEMENT OF COMMISSIONER CLAUDE L. DRAPER ON NONCONCURRENCE IN COMMISSION REPORT ON FULBRIGHT BILL, S. 1853

The majority of the Commission have endorsed with very little qualification the Fulbright bill, S. 1853, as they did the Harris bill, H. R. 4560, which the Fulbright bill substantially resembles. I did not concur in the majority's endorsement of the Harris bill and I find it necessary likewise to record my dissent from its endorsement of the Fulbright bill. Because of the extensive and vital importance of this proposed legislation to the consumer public and the national economy, I desire to state the principal reasons which require me once again to dissent.

Since the majority's approval of the Harris bill, hearings totaling some 4 weeks have been had on that bill. The issues involved and the arguments for and against regulation of the prices charged by producers and gatherers for their interstate sales of natural gas have been presented at length. It is hard to imagine that anything of importance relative to this matter could have been left unsaid. Those hearings confirm my previous judgment and to my mind compel the conclusion that Federal regulation of the prices charged for interstate sales of natural gas by major producers and gatherers is required by the public interest and that legislation exempting producers' sales or regulating them indirectly by limiting prices paid to them by pipeline companies to a "reasonable market price"—which is in reality no regulation—would be contrary to the public interest and detrimental to the welfare of millions of consumers throughout the Nation.

Any attempt to solve the problem sought to be treated by the Fulbright and similar bills must start with the fact that the Federal Power Commission has the authority, under the law as decided in the Phillips case, *Wisconsin* v. *Phillips Petroleum Co.* (347 U. S. 672), to regulate the sales in interstate commerce of producers and gatherers of natural gas. Nothing would be gained by reciting the background of that decision here or entering into a discussion of the merits of that case. The Phillips decision is law. Until Congress changes that law the decision must be followed by those sworn to administer the Natural Gas Act. Thus, the real issue posed is whether or not the authority which the Commission now possesses should be continued. And determination of this issue, in turn, hinges upon whether such regulation is in the public interest or whether that interest would best be served by removing those sales from the Commission's price-fixing power. Accordingly, it is to this issue that most of my remarks will be addressed. Preliminary, however, it is necessary to return for a moment to fundamentals and reexamine briefly the guiding principles and considerations which should be of decisive importance in resolving this issue.

There can by now be no question as to the power of Congress to provide for the fixing of the price at which natural gas is sold in interstate commerce for resale. That power was affirmed by the Supreme Court in *F. P. C.* v. *Natural Gas Pipeline Co.* (315 U. S. 575), in which the constitutionality of the Natural Gas Act was upheld, and has been frequently reaffirmed since.

The Supreme Court said in the *Natural Gas Pipeline Co.* case, supra, at page 582:

"The authority of Congress to regulate the prices of commodities in interstate commerce is at least as great under the 5th amendment as is that of the States under the 14th to regulate the prices of commodities in intrastate commerce."

And the test of the propriety of the exercise of that authority is whether the activities in question—the sales to pipeline companies—are affected with a public interest. If they are, Congress can and should regulate such sales, just as it has in time past regulated the sale of coal, *Sunshine Coal Co.* v. *Adkins* (310 U. S. 381) (which upheld the constitutionality of the Bituminous Coal Act of 1937), of milk, *U. S.* v. *Rock Royal Co-op.* (307 U. S. 533) (which upheld the constitutionality of the Agricultural Marketing Agreement Act of 1937), and of a variety of other commodities entering the interstate stream.

There is nothing novel in this concept of regulating private property and of placing limitations upon its free use, including the fixing of the price at which it is sold, if the public interest demands. It is as old as our law. It has found frequent judicial sanction in decisions of the Supreme Court of the United States from *Munn* v. *Illinois* (94 U. S. 113 (1877)), to *Nebbia* v. *N. Y.* (291 U. S. 502 (1934)).

The real issue lies in determining what the public interest demands. In connection with the problem of regulating the interstate sales of producers and gatherers of natural gas, the public interest involves the oftentimes conflicting interests of the investor, the producer, or gatherer, the pipeline and distributing companies, and the consumer. Economic and social interests involving such matters as the preservation of a free and healthy economy and the conservation of a valuable, limited natural resource are also present. This diversity of interests and the necessity of assaying their relative weight makes solution of the problem doubly difficult. It must be kept in mind, however, that if, as is unfortunately sometimes the case, one interest must be sacrificed to some degree to enable the protection of another, it is the lesser interest which must give way. The minority must be subordinate to the majority and the desires of the few must, within constitutional limitations, yield to the needs of the many. As the Supreme Court said in the Nebbia case, supra, at pages 538–539:

"The Constitution does not secure to anyone liberty to conduct his business in such fashion as to inflict injury upon the public at large, or upon any substantial group of the people."

In 1938, because of the pressing need disclosed in the exhaustive Federal Trade Commission investigations, the Natural Gas Act was enacted and the Federal Power Commission was given jurisdiction to regulate the transportation in interstate commerce and the sales in interstate commerce of natural gas for resale by "natural-gas companies" as defined in that act. Natural-gas companies have now been held by the Supreme Court to include producers and gatherers.

Consumers of natural gas now constitute a captive market unable to secure protection against whatever prices producers and gatherers choose to charge except by Federal regulation of the field price of gas. This condition has come about by reason of the historic development of the industry. At the time of the passage of the act relatively small quantities of natural gas were moving into the stream of interstate commerce. Natural gas was then largely a by-product of the search for oil. It was often flared and vented at the wellhead because of a lack of markets to utilize it. Contracts could be made for unlimited supplies at 2 to 4 cents per thousand cubic feet. In the twenties and thirties to some extent, but principally after World War II, large pipeline companies were organized to transport this low-cost product to distant markets, consumer markets. Distributing companies, upon consideration of the prices at which

such gas was offered, expended millions of dollars to ready their systems for the use of natural gas. Additional millions were expended by all classes of consumers for appliances and conversions to burn such gas. Millions of consumers were attracted by the advantages of gas and the rates which then made it economical. The lines were built and the gas was turned on.

So the producer, transporter, and distributor were linked together in a chain which almost irretrievably committed the consumer, particularly the residential customer, to the use of natural gas. Distributing companies and consumers alike now find their hands tied by their investments and by their dependency upon this source of fuel. Over 20 million consumers are linked by bands of steel to the pipelines which in turn are linked to the producers and these links cannot now be disjoined without irreparable damage. Not only does the gas flow uninterruptedly from well to burner, but likewise the first price charged by the producer is passed on as a part of the consumer's final bill.

This development has been advantageous to the consumer. It has made natural gas with its many advantages available all over the country on a large-scale basis and frequently at favorable rates. But it should be kept in mind that this expansion of consumer markets has also made possible the development of a highly profitable industry and the utilization of valuable natural resources previously wasted on a staggering scale. Thus, the users of natural gas are not the only ones who have benefited. The producers of natural gas and the economies of the gas-producing States have also profited by it. Accordingly, it is appropriate that, if sacrifices are necessary to solve the difficulties created by this development, all the beneficiaries should be called upon to contribute their just share in working out a solution to the problem.

It is claimed that competition among several thousand producers of natural gas affords the consumer ample protection from excessive prices but this claim, in my opinion, is erroneous. To the extent that there is competition it is competition among buyers for relatively limited supplies of natural gas. It is the pipelines that are competing to purchase gas and there is little, if any, competition among producers. And when buyers compete, prices go up. This has been demonstrated time and again in recent years as pipelines have expanded their facilities to meet the growing demands of their markets. There was a time when gas was freely available at 5 cents per thousand cubic feet. Today, prices as high as 20 and 25 cents are being quoted in some areas.

In addition, a large part of the gas in the large producing areas is already under contract. Pipeline companies desiring large supplies must accumulate them from several areas and producers, which further weakens their bargaining position. A pipeline company must lay a pipeline into a field in order to make connections and transport natural gas to distant markets. Pipelines are expensive. Once the pipeline is in the ground the buyer is committed to taking gas accessible from that area. If price conditions change adversely to him, he can't abandon his expensive facilities and turn elsewhere for gas, nor can he move his line about freely between prospective sources of supply.

This seller's market situation is aggravated by the fact that, generally speaking, neither the distributing companies nor the consumers are in a position to bargain directly with the producers who are the ultimate suppliers of natural gas. A distributing company purchasing coal or oil can and does negotiate with and buy from producers, but it can bargain with many different producers; thus, competition can function and the ultimate price be the result of free bargaining. This is not true in the case of purchases of natural gas. There the distributing company for all practical purposes is required to bargain directly with the pipeline company. It has no part in the negotiations between the pipeline company and the producer, although the prices the pipelines pay are passed on to it. And, unfortunately, the pipeline company, with the knowledge that it will be allowed its costs, plus a reasonable return on its investment, may have no very strong incentive to bargain vigorously for lower prices.

The extent to which competition exists in the production and gathering of natural gas cannot be judged solely on the basis of the extent to which a relatively few companies control a large percentage of the production, although on this basis alone grave doubts arise as to the existence of effective seller competition. Thus, according to one witness, in the Southwestern States a mere 20 companies produce 49 percent of the gas moving interstate, 50 produce 69 percent, and 100 produce 80 percent. (Statement of Dr. John Bonbright before House Interstate and Foreign Commerce Committee, delivered March 25, 1955, p. 38.) The facts disclose that in at least one instance a single producer commands an almost complete monopoly of a large geographic area with a large population, involving a very substantial market. Ninety-five percent of the consumers in the State of Wisconsin are dependent upon a single producer, Phillips Petroleum Co., for their natural-gas requirements, according to the chairman of the Wisconsin commission.

Further, the existence in producer-pipeline contracts of the various types of escalation clauses effectively restricts or eliminates competition and substitutes a completely artificial method of determining price while insuring that prices will go ever upward but never downward. Under one type of favored-nation clause, for example, a price increase comes about by reason of the payment of a higher price for gas by another pipeline to another producer in the same field. Obviously, such an event has no relationship to any change in the particular producer's costs, or in the value of the gas to the ultimate consumer, or to any known regulatory standard. Such clauses thus introduce a wholly arbitrary element into the pricing of gas. No orderly planning of the distribution of gas to ultimate consumers is possible so long as these clauses are permitted to operate. And although it is impossible to say precisely how much prices would be increased by them over the life of the contracts, the total would undoubtedly assume very consequential proportions.

The story of the increase in the price of natural gas in the past decade has been told many times and need not be related here. Prices charged by producers to pipeline companies have tended steadily upward. Pipeline prices to distributing companies have continued to go up. And although the advent of natural gas at first resulted in savings to the consumer in some areas over the cost of manufactured gas, rate increases sought recently, and particularly within the past year, clearly foretell the shape of things to come.

Under the prevailing conditions as I have delineated them above, it is idle to contend that prices to the consumer will decrease or remain at present levels. Inevitably they will be forced higher and higher to whatever the market will bear. Although the levels they will attain cannot be predicted with any exactitude, the extent of their increase can be inferred from the fact that, since producer rates were frozen by the Commission after the Phillips decision, some 2,400 applications for rate increases have been filed totaling over $29 million annually, which over the life of existing contracts will aggregate many times that amount. Increases which the Commission has allowed to go into effect will increase the annual bills to distributing companies by more than $18 million.

It has been estimated that there are close to 20 million residential meters receiving natural gas. Of course the aggregate population dependent on such service for heating and cooking purposes is much greater. In addition there are countless thousands of industrial users. Small consumers and industrial users alike have invested huge sums in gas-burning equipment in reliance on prices which appeared reasonable and offered the prospect of continued reasonableness. The capital investment of the small consumer in a gas stove, water heater, and gas furnace may constitute a relatively substantial amount.

Distributing companies, industrial purchasers and residential consumers alike have turned to the use of this fuel, made the necessary expenditures to utilize it and committed themselves physically, financially and otherwise to the use of natural gas. By so doing most of them became bound to continue to use it. It would be unjust and unreasonable to require them now to pay unreasonable charges or, in the alternative, to sacrifice their substantial investments to turn to other forms of fuel.

It has been argued that since the wellhead price of natural gas is but a fraction of the price to the consumer at the burner tip, regulation of the price in the field is of minor consequence since small increases in the field would not substantially affect the ultimate consumer. But an increase of only 1 or 2 cents per thousand cubic feet in field prices may well result in the loss of large volumes of industrial load. Obviously the increase to remaining customers would have to be much greater than the few pennies increase in field prices in order to cover not only the increased cost of purchased gas but also to recover from remaining sales the fixed costs which previously had been distributed over a much larger volume of sales.

It is said that regulation of producers would stifle the incentive for exploration. However, in fixing the rates of independent producers allowance can be made for costs of exploration, for dry holes, and for all other legitimate costs incurred in running the business just as the Commission has done in fixing rates of pipeline companies producing their own gas. As to this element of risk and speculation which has been the subject of so much testimony, the Commission has in the past made allowance for the expenditures of dry-hole drilling and certainly may be expected to continue to do so. And my understanding of the exercise of discretion contemplates the allowance of a rate of return sufficiently high to compensate for whatever element of risk is involved.

Turning to the bill currently under consideration, it has already been noted that it is substantially similar to the Harris bill, H. R. 4560, differing from that proposal principally in the inclusion of certain amendments advocated by industry spokesmen. I took a definite stand against the Harris bill because of my conviction that exemption of sales by independent producers and gatherers was not consistent with the policy declaration of section 1 (a) of the Natural Gas Act.

S. 1853 seeks, by amending sections 2, 5, and 7 of the Natural Gas Act, to accomplish the following principal objectives: first, to exempt completely producers and gatherers of natural gas and their sales in interstate commerce from the direct jurisdiction of the Federal Power Commission; second, to restrict the jurisdiction of the Commission over producers' charges to interstate pipeline companies to those to be paid under new or renegotiated contracts, and as to such charges to permit the disallowance of

part of them only in rate proceedings involving pipeline companies; third, to make the test of the propriety of such producer charges to interstate pipeline companies the reasonable market price of such natural gas in the field where produced, subject also to certain additional qualifications.

As to the first of these objectives, I have already set forth my reasons for believing that total exemption from Federal control of sales in interstate commerce by producers and gatherers is contrary to the public interest. I might add that although the bill is apparently based on the idea that regulation should be achieved by competition, it does nothing to insure that anything like true competition will prevail.

Apart from the merits of this objective of the bill, and as a technical matter of statutory draftsmanship, it seems very uncertain that the two new paragraphs to be added to section 2 of the act would accomplish this purpose. The new paragraphs relate to transportation and sales "in or within the vicinity of the field or fields where produced." In point of fact, some delivery points to pipeline companies are as much as 40 or 50 miles from the production fields. Would such sales be in the vicinity of the fields? Use of this ambiguous language would make administration of this section difficult and uncertain and would present fertile fields for litigation.

Secondly, there are a number of serious objections to the proposal contained in proposed new subsection (b) of section 5 of the act, to give the Commission limited power over the price to be paid by pipeline companies to producers and gatherers. This provision relates only to new or renegotiated contracts between producers and interstate pipelines and would not apply to contracts in existence at the time of the passage of the bill. In fact, the Fulbright bill carries an amendment proposed by industry representatives to make expressly clear that a price change resulting from provisions in existing contracts shall not constitute a new or renegotiated contract. This means that producers' rate increases under automatic escalation clauses in existing contracts would not be subject to any control. Nothing is done to invalidate or limit the effect of these long-term contracts. On the contrary, such clauses would continue in effect without restriction for the life of the contract. Thus, the whole host of escalation clauses—including automatic periodic escalation, favored-nation escalation triggered by increased prices in other contracts between the same parties or by increased prices paid to others in the same field or area, or triggered by increases in specified indices or commodities, or triggered by higher rates allowed to the purchasing pipeline at the other end of its line, or otherwise—could be invoked as provided in the contracts. In effect, legislative sanction is given to all these escalation clauses, even those which have been described by the Commission in Order No. 174–B as not in the public interest. Can a mortal agency by approving today a contract which by its own terms will result in a certain higher figure 20 years from now know with such omniscience that that higher figure will be the reasonable rate at that future time?

Further, this proposed amendment contains no provision relative to a reduction in the price charged by a producer, nor would it prevent an undue preference, discrimination, or advantage to a particular purchaser or against a particular producer. Sections 4 and 5 of the Natural Gas Act, which would still apply to natural-gas companies, prohibit undue discrimination or preference or unreasonable differences in rates, service, or facilities. The omission in regard to sales by producers of these safeguards, which are in harmony with recognized principles of fairness, is in sharp contrast with their inclusion in the present act and in other statutes.

Third, the standard of "reasonable market price in the field where produced" as the measure of costs to be allowed to an interstate pipeline for purchases from producers provides no basis for effective and rational regulation. Of paramount importance, this standard provides no real protection to the purchasers of natural gas. If, as seems likely, the "reasonable market price" is to be determined by the Commission by an examination of the most recent contracts freely entered into without coercion, there would be no real regulatory limit on the price, aside from the rather ineffective limit resulting from examination to determine if fraud or affiliation was present, for price agreed upon in the very transaction under scrutiny would be the measure of its own lawfulness. The going price would thus be the reasonable market price and the sky would be the limit insofar as regulation is concerned.

Moreover, under this provision the Commission itself might, in determining the reasonable market price in a particular field, trigger increases called for in favored nation escalation clauses, with the result that the latest and probably the highest price in a given field would be controlling for all other pipeline companies.

Furthermore, this standard is new, vague and incapable of precise application. On the last day of the hearings on the Harris bill, some attempt was made to define this concept. It was stated that under it the Commission would, subject to constitutional limitations, have flexible authority to make the determination of what a reasonable price would be, concerning all the facts of a particular case including the quality of the natural gas being purchased, the level of prices currently established by generally comparable contracts, prices in different fields and producing areas, whether the contract price was established by arm's-length bargaining, variations in the competitive market and "any other" relevant factors. The mere statement of these diverse considerations is a sufficient comment on the impracticability of this formula as a guide to reasonable regulation. It would take years of administrative and judicial interpretation to evolve definitive guiding principles under this test; and at best those principles would remain uncertain and unprecise in their application. Under this standard, guesswork would be substituted for facts. The effect of proposed new section 5 (c) of the act, which carries verbatim a proposed amendment to the Harris bill suggested by industry spokesmen, is to require the Commission to determine upon application by a pipeline company whether the price to be paid by it to a producer under a new or renegotiated contract meets the "reasonable market price" and other requirements of the preceding subsection. The Commission would thus be required to pass in advance upon each and every executory contract entered into between pipeline companies and producers, for it is not to be supposed that a pipeline company would bind itself to a gas purchase contract without getting a stamp of approval. The administrative burden of having to issue a declaratory order passing upon the lawfulness under the act of all these contracts would be staggering. In addition, procedural prerequisites are left unspecified. Even more important, in practical operation this procedure could well give the parties an inducement initially to agree upon a higher price than they thought would be acceptable to the Commission and then, if necessary, by successive steps to reduce it to the permitted level. As to prices paid the producer, this would turn the present standard of the act requiring the "lowest reasonable rates" upside down, substituting instead the "highest reasonable rates."

By proposed section 5 (d) of the bill, the Commission would be required to allow as an operating expense for natural gas produced by a pipeline company or its affiliate the reasonable market price of such natural gas in the field where produced. If this is not precisely the "average field price" formula permitted by the Commission in *Panhandle Eastern Pipe Line Co.* (3 P. U. R. (3d) 396), it is sufficiently like that formula to render it subject to the same infirmities I detailed in my dissent to the Panhandle decision. Also, at least under the Panhandle decision the Commission recognized that some of the field prices would be above the average and required an averaging of high and low prices. The instant proposal, however, does not recognize any differences and apparently would require acceptance of the most recent and perhaps highest market price.

If I may be permitted an epilog to this already far too lengthy statement, I should like to reiterate my expressed belief that Representative HESELTON's proposed bill, H. R. 4924, which would simply set a minimum figure of total annual sales below which independent producers and gatherers would be exempted from the provisions of the Natural Gas Act, would accomplish relief to the small producers far better than bills of the nature of S. 1853 and H. R. 4560. Such an exemption, I am advised, would eliminate from Federal Power Commission jurisdiction approximately 80 percent of the individual producers and gatherers in the industry while retaining jurisdiction over some 90 percent of the natural gas flowing in interstate commerce.

VISIT TO WASHINGTON OF DELEGATION FROM THE NATIONAL FARMERS' ORGANIZATION

Mr. SYMINGTON. Mr. President, a group of four farm citizens from the Midwest came to Washington last week to make the first official appearances here for the new National Farmers' Organization.

This 3-month-old organization has created a great deal of interest, for it is clearly one of the spontaneous agrarian movements born of hard times on the farm.

It has already enrolled nearly 72,000 members since it was organized last October.

It was my pleasure to meet with the four officers of the National Farmers' Organization on their first day here. I was deeply interested in that meeting, and in the type of men this new farm protest movement sent to Washington to represent it.

They were met by a number of Senators in their offices and at the Senate Agricultural Committee's session last Thursday.

I am sure you found them, Mr. President, as I did, splendid, educated men, vigorous in their protest against the present economic mistreatment of the farmers, and impressive because all of them are good American farmers petitioning their Government for consideration, which they deserve.

The ills of agriculture are indeed serious when substantial farm citizens such as Oren Lee Staley, Harry Grundman, John D. Warin, and Ed Glenn are impelled to leave their farms in the hands of others, and to make protest against national farm and economic policies their first order of business.

Because the appearance of this organization is so significant, Mr. President, I ask unanimous consent to have inserted in the RECORD three documents which the group prepared and used while they were here. The first is a page of notes for the press and radio, identifying the organization, the men who were here, and stating the purposes of their visit. The second is a brief statement they prepared for presentation to the Senate Agriculture Committee, but which I understand was not used in this form because of the conference nature of the committee's meeting. The final document is a letter they sent to Secretary of Agriculture Benson, following an interview with him, restating the points they made in their meeting with him.

There being no objection, the notes, statement, and letter were ordered to be printed in the RECORD, as follows:

NOTES FOR THE PRESS AND RADIO, JANUARY 12, 1955

1. Name of organization: National Farmers' Organization. Organized in October 1955. Headquarters are at Corning, Iowa. Present membership: 71,816. Membership limited to persons operating a farm and the majority of whose income is derived from farming. Organization now operating in 7 States: Iowa, Missouri, Nebraska, Colorado, Illinois, Montana, and Kansas.

2. Persons attending meetings in Washington:

Oren Lee Staley, president, Rea, Mo. Operates 327 acres—hogs, cattle, and grain.

Harry W. Grundman, vice president, Prescott, Iowa. Operates 220 acres—hogs, cattle, and grain.

John D. Warin, director, Maloy, Iowa. Operates 727 acres—cattle and grain.

Ed Glenn, director, Louisiana, Mo. Operates 360 acres—hogs, cattle, and grain.

3. Purpose of Washington trip: To appear as witness before Senate Committee on Agriculture and Forestry. This is a baptism of fire before any governmental group. To meet with congressional delegations from the States in which the organization operates. Expect to make a personal appeal, particularly with the Iowa delegation, to ask that a personal plea be made to the President of the United States. A conference with the Secretary of Agriculture has also been requested.

4. Position on recent recommendations for a farm program by the President. Whereas many parts of the President's recommendations have merit, we do not believe that any of the recommendations are designed to provide effective emergency relief, which we feel is required now, to deal with the present urgent critical condition facing our farmers.

STATEMENT OF OREN LEE STALEY, PRESIDENT OF THE NATIONAL FARMERS' ORGANIZATION, TO THE SENATE COMMITTEE ON AGRICULTURE AND FORESTRY, JANUARY 12, 1956

Mr. Chairman, members of the committee, I am Oren Lee Staley, president of the National Farmers' Organization. My home is in Rea, Mo., where I operate a diversified farm of 327 acres.

In behalf of the members of the National Farmers' Organization, I wish to express our sincere appreciation for this opportunity to state to this committee the seriousness of the problems of our American farmers as we see them and are experiencing them.

Our organization is only 3 months old. It had its modest beginning in the small town of Carl, Iowa, at a township meeting of farmers. It was started by a group of farmers, who were and are seriously worried and concerned about not only their own welfare, but the welfare of all farmers and of the entire national economy. The organization has grown almost miraculously and has been spread largely through the voluntary efforts of farmers themselves, who felt the same urgency and who are determined that the American public be alerted to the dangers inherent in this farm problem, and that appropriate emergency measures be started now to halt the onward rush of trouble, and start the farm economy back on the road to prosperity in equality with all other segments of our population.

As of today, our organization has spread into 7 States; has a membership of 71,816, and it continues to grow at an accelerated pace.

One of the principles upon which this organization is established prohibits the officers and directors from establishing or endorsing any policy or program of a permanent or long-range nature. Because of the limited time available to us, no referendum of our membership has been taken relating to such a program or policy. We are, therefore, limiting our appearance here today to an expression of the disastrous economic conditions which our members are currently facing and recommendation for immediate action designed to get results now, pending the time when longer range action could take effect. Unless such action is taken now, which will enable our people to survive the immmediate future, the consideration of a long-range program would only be of secondary importance to them.

In many areas, the purchasing power of our income is closely comparable to that in the depths of the depression in the early thirties.

We are here to ask that immediate emergency measures be undertaken to establish a floor of approximately $20 per hundredweight on butcher hogs, and approximately $30 per hundredweight on good to choice cattle, and comparable levels for all other farm products. The goal of our organization is 100 percent parity for all agriculture.

Recognizing that there is no substitute for price, we also recommend that adequate emergency farm credit be made available immediately, pending the time when farm income has been restored to a satisfactory level.

In conclusion, we cannot stress too strongly the urgency of the present situation and the necessity for taking action now.

Mr. Chairman, this concludes our statement, and we again wish to express our appreciation for this opportunity to appear before you. We will be glad to try and answer any questions you may have.

NATIONAL FARMERS' ORGANIZATION,
Corning, Iowa, January 13, 1956.

The Honorable EZRA TAFT BENSON,
Secretary of Agriculture,
Washington, D. C.

DEAR MR. SECRETARY: In behalf of the National Farmers' Organization, I wish to express our appreciation for the conference with you this afternoon. As suggested by you, we wish to confirm the requests we made at that conference.

We wish again to stress the urgency of the situation, as we feel the most critical situation exists in the history of agriculture concerning the future of the young farmer and the family-size farm.

In many areas the purchasing power of agriculture is at or below the level of the early thirties. We base our opinion on the fact that hogs selling at 10 cents to 11 cents per pound, cows at $60 to $80 per head, and good to choice cattle at $15 to $19 per hundredweight will purchase no more than prices received in the early thirties, because at that time you could buy the necessities of farm production at one-fourth of today's prices. Today under modern methods of production and our standard of living, we are forced to buy more than in those years.

Our recommendations to you are:

1. We believe there should be started immediately a live hog and cattle buying program. This program should be sufficient in size to restore live butcher hog prices to approximately $20 per hundredweight, and live good to choice cattle prices to approximately $30 per hundredweight.

2. We recommend that the school lunch program be changed so as to utilize fresh meat.

3. Adequate emergency farm credit should be provided immediately and until such time as farm prices are restored to equitable levels.

We wish to emphasize that bold, aggressive and adequate action (not halfway) along these lines needs to be taken now in order to meet the critical emergency which is facing our farmers.

We recognize that there may be administrative and procedural difficulties in carrying out some parts of this recommended program, but we feel that the economic consequences to our Nation of failure to so act will far outweigh any such problems.

We want to assure you of our wholehearted cooperation in carrying out an emergency program such as we have recommended.

Respectfully yours,
NATIONAL FARMERS' ORGANIZATION,
OREN LEE STALEY, *President.*

RETIREMENT INCOME FOR THE SELF-EMPLOYED

Mr. WILEY. Mr. President, one of the highest priority tasks of this session of the Congress is to complete action on legislation to provide a tax break for the self-employed so as to help them save up retirement income in their later years.

On several occasions, I have pointed out that there has been pending before the Congress what are known as the Jenkins-Keogh bills—H. R. 9 and H. R. 10—wisely designed to permit self-employed doctors and lawyers to build up their savings for their later years, rather than have such savings taxed at peak rates during their most productive years.

I am sure that everyone will agree that there are few groups of people in our country more significant to our national well-being than those who constitute the medical and legal professions.

I have been pleased to hear from the American Medical Association and from the American Bar Association on behalf of the Jenkins-Keogh bills.

I send to the desk the texts of the messages from Dr. Elmer Hess and from E. Smythe Gambrell, of the associations, respectively. I ask unanimous consent that the texts of these messages be printed at this point in the body of the CONGRESSIONAL RECORD. I trust that they will serve to stimulate action in the Senate Finance Committee on this important subject.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

AMERICAN MEDICAL ASSOCIATION,
Chicago, Ill., January 9, 1956.

Hon. ALEXANDER WILEY,
United States Senate,
Washington, D. C.

DEAR SENATOR WILEY: At the beginning of this new session of Congress, I am writing to call to your personal attention the unfair manner in which our income tax system discriminates against the Nation's more than 10 million self-employed taxpayers. The American Medical Association has joined

with over a score of other national organizations in supporting a tax revision designed to give these persons essentially the same opportunity to provide for themselves in their declining years as is now afforded employed persons.

Existing pension and profit sharing plans cover over 20 million employed persons, and will furnish them with retirement income in their old age. The contributions made by employers to these plans are not currently taxable as income to participating employees, although they are deductible as business expenses by the employers. Over $3 billion annually is paid by employers into more than 26,000 Treasury-approved plans.

If the enactment of this tax provision in 1942, encouraging employees to provide for their own retirement through the mechanism of deferred compensation, was sound it is equally sound to permit the self-employed to enjoy this privilege. The self-employed desire only a comparable oportunity to provide for their own old age with pre-tax rather than post-tax dollars.

As a part of an omnibus tax bill, the Committee on Ways and Means last July approved an amended version of the Jenkins-Keogh bills (H. R. 9 and H. R. 10) designed to relieve this inequity. As a matter of simple fairness to the more than 10 million Americans who were forgotten in 1942, I solicit your support of these proposals and your assistance in correcting this unfortunate oversight during this session of Congress.

Sincerely yours,

ELMER HESS, M. D.,
President, American Medical Association.

AMERICAN BAR ASSOCIATION,
Chicago, Ill., January 6, 1956.

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: The American Bar Association has taken an official position in support of legislation which would give the self-employed opportunities somewhat comparable with those of corporation executives and employees in making provisions for their old age.

More than 20 million persons are now covered by corporate plans which will furnish them with income when they retire. The employers' annual contributions are deductible as a business expense to them, and are not currently taxable income to employees covered by the plans. More than $3 billion a year is being paid by American employers annually into the more than 26,000 approved pension and profit-sharing plans.

We submit that if it is sound public policy to grant tax encouragement to these corporate plans approved by the Treasury Department, a similar opportunity should be granted to the self-employed to postpone taxes until retirement on reasonable amounts set aside to provide income in old age.

On July 18, 1955, the House Ways and Means Committee approved an amended Jenkins-Keogh proposal (H. R. 9 and H. R. 10) for inclusion in the omnibus tax bill. In accordance with the official position taken by the American Bar Association, I urge you to give favorable consideration to the legislation embodied in these bills when it comes before you during the second session, 84th Congress. It is a matter of elementary justice that the present tax discrimination against provision of retirement income for more than 10 million self-employed taxpayers should be removed. The self-employed desire only that the tax laws be amended to make it feasible for them to save their own money for their own retirement. There is nothing socialistic in this proposal; quite the contrary, it encourages thrift and the laying up of private funds for old age under more reasonable tax provisions.

We hope you will be able to support this legislation.

With warm personal regards, I am

Yours sincerely,

E. SMYTHE GAMBRELL,
President.

AMENDMENT TO THE NATURAL GAS ACT, AS AMENDED

Mr. WILEY. Mr. President, later on in the course of the debate on the natural gas bill I shall submit a detailed statement regarding the economic, legal, and other dangers of the legislation which is now pending before the Senate.

Today, however, I shall make but a few brief comments by way of introduction to presenting the sentiments of the people of my State.

Mr. President, I oppose the Harris-Fulbright bill 100 percent.

I have always opposed evil legislation of this type which would leave consumers helpless and at the mercy of monopolistic natural gas forces. Those greedy forces have shown that they are ready, willing, and eager to skyrocket already high rates still higher, as the traffic will bear.

The State of Wisconsin recognizes the danger of this legislation.

There is probably no State of the Union which has fought so long and so well to protect the consumers of America as we of the Badger State have fought.

In the long history of the Phillips case—from battles in the hearings in Bartlesville, Okla., to battles before the Federal Power Commission and the United States Supreme Court in Washington—the names of Wisconsin leaders will always be found listed on the side of the people.

In the long battle against the Kerr bill, the dangerous predecessor to the Harris-Fulbright bill, Wisconsinites were similarly arrayed in defense of the people.

BADGER STATE SUPPORTS SENATOR WILEY

In the pages of the CONGRESSIONAL RECORD during the Kerr bill battle, there will be found grassroots messages from all over America, and particularly from my State, saying substantially this:

Senator WILEY, we are with you completely in your battle to protect Wisconsin and to protect America. Keep up the good fight. We know that you will continue to battle—to speak, to vote for the rights of consumers.

WISCONSIN DELEGATION SHOULD HAVE BEEN UNITED

It is a source of regret to me that, unfortunately, my own party, the Republican Party is not fully united against the dangerous Harris-Fulbright bill.

After all, every single vote counts on an issue with respect to which a hairline margin could determine victory or defeat.

Let me say in all frankness that it is a particular source of regret that the Republican delegation from my own State has been disunited on this issue, even though the thinking Republican electorate of Wisconsin, like its Democratic fellow voters, are wisely united almost to the man against this proposed legislation.

I wish that 100 percent of our Badger congressional delegation were to cast its vote against the Harris-Fulbright bill. I wish, moreover, that these voters were accompanied by action, dynamic action such as I personally have sought to provide.

It is not merely token votes against the bill, not token speeches that count, but action—action in amending the bill, action in floor and committee efforts, action in going to the grassroots and awakening the people.

CRUCIAL AMENDMENTS COMING UP

I pledge my continued battle along all of these lines.

Crucial amendments will shortly be presented. Every amendment to protect our people will have my vigorous support.

That is what Wisconsin expects, and that is what it will receive. We of Wisconsin were among the first to give America the concept of vigorous State regulation of utilities. We do not propose to abandon that tradition of public service and public protection, while assuring investors a fair return on their earnings.

But now, let the people speak for themselves.

GRASSROOTS MESSAGES

I send to the desk two categories of items. The first is a series of excerpts from individual citizens of my State commending my battle to protect them. I am including only a few of many such messages.

The second is a series of messages to me from mayors and other officials all over Wisconsin, factually stating the case against the dangerous Harris-Fulbright bill.

These municipal officials speak along the same sound lines as do our State officials at Madison, including, of course, our able chairman of the State public service commission, the Honorable James R. Durfee.

Likewise, the mayor of our largest city, Milwaukee, the Honorable Frank P. Zeidler, has, as followers of these Senate debates know, constantly been in the fore of efforts to alart our people.

I ask unanimous consent that both categories of messages to me be printed at this point in the body of the RECORD.

There being no objection, the excerpts and letters were ordered to be printed in the RECORD, as follows:

From Milwaukee: "It is a satisfaction to hear over radio that you are opposed to the Harris-Fulbright bill. Please do all you can for the defeat of this bill. The producers of natural gas should not be exempt from price regulation any more than electric and telephone companies, etc."

INDIVIDUAL CITIZENS' MESSAGES

From Milwaukee: "Congratulations on your fight against the Harris-Fulbright bill. It certainly is in the best interest of Wisconsinites to retain Federal price regulation of natural gas."

From Ripon: "This is only to assure you that I am behind you 100 percent in your fight to prevent another graft—this time to producers of gas. We consumers are the forgotten men on all fronts under the present set-up, in which wealth grabs more

wealth and the public pays. More power to you."

From Milton: "A big commendation to you for standing on your own feet in regard to the legislation about natural gas. We agree with you on this. We protest this measure.

"But don't call some of the pros—Democrats who are for this measure. No good Democrat is interested in a deal like that. Or a good Republican, either. Or a good Independent, for that matter. We are little people who get tired of constantly watching the big guys have everything their own way. And my father is a voter. My mother is a voter and I'm a voter. We may not be important, but, brother, do we vote."

From Watertown: "I wish to thank you for the stand you took on the control of natural gas."

From Madison: "I congratulate you again on your effort to kill the Fulbright-Harris bill. Keep up your good work."

From Kenosha: "I certainly want to protest that gas bill that is coming up next week. Surely our gas bills are too high now and cannot afford any more boosting of prices."

From Racine: "I write to thank you for your opposition to the Harris-Fulbright natural gas bill and to ask you to continue a vigorous opposition when the bill comes up. Natural gas was sold to us on the understanding that its price was to be controlled by responsible Government agencies. Unless there is Federal control at the source price increases can continue indefinitely. We, the consumers, being the ultimate victims—please continue the effort to protect the people of Wisconsin against the proposal to remove wellhead controls."

From Milwaukee: "We wish to express our appreciation for the stand that you are taking in opposing the Harris-Fulbright bill in the Senate. We hope that you will convince your colleagues in the Senate to also oppose this bill, because it is against the consumers and definitely favors big business—the producer of natural gas.

* * * * *

"Recently I have been selected to head the political action program for our union local in Milwaukee for the year 1956. I was very gratified to hear the position you took on the Harris-Fulbright bill.

"Our local union represents approximately 1,700 members and their families, who recently went on record in opposition to this bill. If there is anything we as a union can do; do not hesitate to inform me."

MILWAUKEE, WIS., *January 9, 1956.*

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: The city of Milwaukee is vitally interested in securing the defeat of the Fulbright bill, S. 153, which will come up for consideration by the Senate in the early part of this session of Congress. The passage of this bill will cost gas consumers in Milwaukee and Wisconsin many millions of dollars each year.

Recently, because of regulations by the Federal Power Commission, we secured a substantial reduction in gas rates in Milwaukee and an actual refund of $2½ million to Milwaukee consumers. The Milwaukee Gas Light Co. is sending refund checks to its customers, pointing out that these refunds are largely due to a reduction in the wholesale price of gas to the company, retroactive to October 1, 1951.

The Attorney General's Office participated with the Milwaukee city attorney's office and with other municipal representatives throughout the State in opposing the Harris bill, H. R. 645, the companion bill to the Fulbright measure. In our opposition to the Harris bill we pointed out that its enactment into law would cut the heart out of the Natural Gas Act by repealing the provisions requiring gas producers to charge a just and reasonable price. It lets them charge anything they want.

The National Institute of Municipal Law Officers, which includes a membership of nearly 1,000 American cities, at its 1954 convention in San Francisco, by an overwhelming majority vote of city representatives present, adopted a resolution strenuously opposing the Harris bill and its companion, the Fulbright bill. A tremendous lobby representing the natural-gas producers attempted in vain to block the passage of the resolution at this city attorneys' convention. At the recent convention of the National Institute of Municipal Law Officers held last month in Miami, Fla., the producers' lobby likewise was present but did not succeed in having the institute rescind its 1954 resolution opposing the Fulbright bill.

Should the Fulbright bill be passed by the Senate, the consumers throughout the Nation will be forced to pay increases of up to at least $800 million or more a year, or approximately $50 per year per consumer. This increase is a carefully calculated figure based upon the increase reasonably expected to flow from the Harris-Fulbright proposals of 15 cents per 1,000 cubic feet. You can see the terrific impact that the passage of this bill will have upon Wisconsin consumers. That is why we are trying to point out to you what a staggering annual increase in gas rates will mean to your constituents.

Proponents of the Fulbright bill are seeking unregulated sales for their captive customers. These consumers will become absolutely dependent upon the gas producers who now seek to take advantage of the situation. Under our deeply ingrained principles of free enterprise, this type of business is and should be regulated, and since cities are by law and tradition the legal representatives of local consumers, we feel that our views should be transmitted to you.

We have mustered the support of as many governmental agencies as we could reach, urging their active support to defeat the bill and to point out to the members of the Senate the dangers in the bill and the fact that it is definitely against the public interest. In spite of our active opposition, and no doubt as a result of the tremendous gas producers' lobby, the bill was squeezed by the house committee by 1 vote and was only passed by 6 votes by the house.

While our opponents are spending millions to get the bill enacted into law, the cities' consumers have only their legal representatives to rely upon to represent them as they have no money to spend. All of the gas consumers in the country are urging you and all other Senators to help stop this $800 million yearly increase to the consumers of natural gas.

With kindest personal regards, I remain,

Very truly yours,

WALTER J. MATTISON,
City Attorney.

HARRY G. SLATER,
First Assistant City Attorney.

RACINE, WIS., *January 12, 1956.*

In re Fulbright bill S. 1853.

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: This letter is being written to you for the purpose of stating the position that the city of Racine, Wis., is taking with respect to the above-referred-to bill. We urge you to carefully consider this legislation and hope that you will oppose passage of the same. This bill will destroy the protective provisions of the Natural Gas Act.

Over the years our city has maintained a constant position of opposition to any attempt to remove controls of natural gas at the wellhead. The State of Wisconsin through the office of the attorney general and the public service commission has long been engaged in this struggle over regulation of natural gas producer prices. We have heard every type of argument that can be imagined raised as to why producer prices should not be regulated. The flag of free enterprise has been raised, lowered, and waved in all directions. The argument of the producers ofttimes simmers down to a statement of this nature; take us out from under the regulatory power of the Federal Power Commission; we will only charge fair and reasonable prices; we will not charge too much; trust us; have faith in us; we will treat you fairly. At the same time they express fear that they will not be able to a get a fair rate of return from the Federal Power Commission.

If controls were removed the consumers would have no recourse with respect to producer prices at the wellhead. They would only have recourse through the various State regulatory bodies with respect to matters wholly intrastate. This is equivalent to trying to put a halter on a horse who has already run away.

It has been generally accepted that where the people through their various units of government have authorized utilities to operate on a monoplistic basis, that they must submit to regulation. The regulation has been twofold in nature, in that it has assured the utilities of a fair return on its investment, as well as protected the consumer from excessive or unjust rates.

The natural gas producers when they first came to the State of Wisconsin extolled the virtues of natural gas; what it would mean to our people; what it would mean ratewise, pointing up the fact that natural gas would be less costly, and in general sought assistance from everyone for the purpose of gaining public acceptance. The State of Wisconsin did permit the pipeline companies to come in. Cities authorized manufacturing gas plants to convert their facilities to natural gas. To a great extent the gas manufacturing facilities have been destroyed. For example, the plant formerly located at the city of Racine served eight communities, all of which are wholly dependent upon natural gas. The cities in the nonproducing States are wholly at the mercy of the producer States. The need for regulation exists and will continue to exist as long as natural gas is sold in interstate business.

As a lawyer you are familiar with the practice of some pressure groups; if they cannot win in a courtroom, they take the matter to the legislative body and change the law. The Fulbright bill and the Harris bill will destroy the decision of the United States Supreme Court in the Phillips Petroleum Co. case. That decision and the Natural Gas Act are the protective bulwark for millions of our people against the possibility of unfair and unjust charges for natural gas.

We would appreciate it very much if you would give careful consideration to this legislation and urge you not only to vote against it, but also to use all of your abilities and influence to bring about the defeat of the Fulbright and Harris bills. If it would not inconvenience you too greatly, please give us your views with respect to this legislation and the position which you intend to take.

Very truly yours,

JACK H. HUMBLE,
Mayor.

THOMAS P. CORBETT,
City Attorney.

WEST ALLIS, WIS., *January 11, 1956.*
Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: I am herewith submitting my protest against the pending natural-gas bill known as the Fulbright-Harris bill. It is my belief that this measure should be defeated as a means of protecting consumers against rate increases.

Sincerely yours,
ARNOLD H. KLENTZ, *Mayor.*

STEVENS POINT, WIS., *January 12, 1956.*
Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: As mayor of Stevens Point, I am speaking for the people of our fair city. We are definitely opposed to the passage of the Harris-Fulbright bills.

I hope you will give Wisconsin your hardy support and oppose these bills.

Yours truly,
LEONARD L. SORENSON, *Mayor.*

BARABOO, WIS., *January 12, 1956.*
Senator ALEXANDER WILEY,
Washington, D. C.

DEAR SENATOR WILEY: I would like to register with you the hope of our city that you will oppose the passage of the Harris-Fulbright bills. We feel that these would be extremely detrimental to the natural-gas business in our State.

Very truly,
DUANE PECK,
Mayor.

CHILTON, WIS., *January 11, 1956.*
Hon. ALEXANDER WILEY,
United States Senator,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR: The United States Senate bill 1853, known as the Fulbright bill, is on the present United States Senate Calendar, and the companion bill, known as the Harris bill 6645, which is already passed by the United States House of Representatives, and are now known as the Harris-Fulbright bills, which would restore unregulated monopoly of basic supply and prices of natural gas in our State.

These bills are contrary to the public interest of the people of our city and we urge that you vote against these bills in order to protect the natural-gas consumer of our State and our city from possible unregulated monopolistic exploitation.

Trusting that you will do everything possible to fight against these bills.

Very truly yours,
EDWARD H. HEIMANN,
Mayor.

APPLETON, WIS., *January 12, 1956.*
Hon. ALEXANDER WILEY,
United States Senate,
Washington, D. C.

DEAR SENATOR WILEY: I am writing this letter in regard to the bill known as the Fulbright bill, which I understand is due to come up for a vote in the Senate in the near future.

I am asking you to oppose this bill because I feel that if the control of natural-gas prices did not remain in the hands of the Federal Government and if there was no control, it would have a serious effect on many of the citizens of Wisconsin cities and villages.

The League of Municipalities, of which the city of Appleton is a member, is, as you know, made up of hundreds of cities and villages in the State of Wisconsin. At the league convention in Madison last fall, the delegates to the convention adopted a resolution opposing and decontrol of natural gas prices.

With this in mind and knowing how many of the citizens of Wisconsin feel, I sincerely hope that you will oppose this bill.

Yours truly,
R. L. ROEMER, *Mayor.*

BEAVER DAM, WIS., *January 12, 1956.*
Subject: H. R. 6645, S. 1853.
Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: We wish to have you personally aware that we are adding our voice as the representative of 12,000 citizens, as being unalterably opposed to the passage of the 2 bills subject above.

We ask that you guard our rights, as potential consumers of natural gas, to see that S. 1853 is killed in its entirety and that no "watered down" substitute be offered to your austere body.

There must be Federal regulation of natural gas producer prices by the Federal Power Commission and no other alternative.

Yours very truly,
THOMAS E. DURKIN,
Mayor.

WAUKESHA, WIS., *January 11, 1956.*
Hon. ALEXANDER WILEY,
Senator from Wisconsin,
United States Senate,
Washington, D. C.

DEAR MR. WILEY: I understand that Senate bill S. 1853, known as the Fulbright, bill, is on the present United States Senate calendar.

This bill, as you know, will exempt the natural gas producers from Federal regulations governing the prices they charge to the pipeline companies who distribute natural gas to different municipalities. In this Wisconsin territory they are supplied by the Michigan Wisconsin Pipe Line Co. It seems to me that it is only right and just that the suppliers of natural gas to the pipeline companies should be regulated by Federal authority. By this regulation, of course, we would have prices that are fair to the distributors as well as to the ultimate consumer.

I understand that there was a companion bill known as the Harris bill, H. R. 6645, which was adopted by the House of Representatives last July.

I hope you will do everything possible to kill the Fulbright bill so that we can continue to have public regulations on this essential product.

Yours truly,
C. C. SMITH,
Mayor.

FOND DU LAC, WIS., *January 13, 1956.*
Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.:

January 13 resolution requesting that you oppose Fulbright bill S. 1853 was unanimously adopted by the mayor and commissioners of the city of Fond du Lac, this date.

EDWIN F. WEIS,
Mayor.

JANESVILLE, WIS., *January 11, 1956.*
Senator ALEXANDER WILEY,
Washington, D. C.:

To protect the natural gas consumers of the city against possible unregulated monopolistics exploitation by the producers of natural gas, I sincerely urge that you oppose passage of the Harris Fulbright bills.

GEORGE FORSTER,
City Manager.

MERRILL, WIS., *January 12, 1956.*
Senator ALEXANDER WILEY,
United States Senate Chambers,
Washington, D. C.:

Our city being a potential user of natural gas herewith voice our opposition to Senate bill S. 1853, and ask that you take measures to oppose same.

G. B. COTTER,
Mayor.

BURLINGTON, WIS., *January 12, 1956.*
Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.:

City of Burlington opposes Harris-Fulbright bill, vote against same.

RALPH LARSON,
Mayor.

EAU CLAIRE, WIS., *January 11, 1956.*
The Honorable ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR WILEY: On behalf of the members af the Common Council of the City of Eau Claire, I want to advise you that the council members, at the meeting held this morning, unanimously expressed their opposition to Senate bill S. 1853, known as the Fulbright bill. Council has also expressed its disapproval of the companion bill known as the Harris bill, H. R. 6645, and which was adopted by the United States House of Representatives last July by a vote of 209 to 203.

The State of Wisconsin, through the attorney general and the public service commission, began the fight for Federal regulation of natural gas producer prices back in 1951 before the Federal Power Commission. The State was successful when the United States Supreme Court decided the case of the *State of Wisconsin et al.* v. *The Phillips Petroleum Co. et al.*, in 1954. In that case, the court held that under the present Federal Natural Gas Act, producer prices for sale to pipeline companies for resale in interstate commerce are subject to regulation by the Federal Power Commission.

We are opposed to the Harris-Fulbright bills because if finally adopted, the people of Wisconsin would lose the fruits of the victory we won in the Phillips case above referred to. At the present time, our Wisconsin utilities that sell, or will sell, natural gas in cities of our State each have a monopoly by franchise, but their monopoly is subject to State regulation by our State public service commission.

The Michigan-Wisconsin Pipe Line Co. has a monopoly of about 95 percent of the present Wisconsin natural-gas market. This monopoly is subject to Federal regulation by the Federal Power Commission under the Federal Natural Gas Act. Under this act, the Phillips Petroleum Co., which has a monopoly of natural-gas supply from its gas wells in Texas and Oklahoma to the Michigan-Wisconsin Pipe Line Co., is now also subject to regulation by the Federal Power Commission.
